**Quaternary.** The Aluminum-Rich Mixed-Crystal Range in Quaternary System Aluminum-Magnesium-Silicon-Zinc (Das aluminiumreiche Mischkristallgebiet im Vierstoffsystem Aluminium-Magnesium-Silizium-Zink). W. Sander and K. L. Meissner. *Zeit. für Metallkunde*, vol. 16, no. 1, Jan. 1924, pp. 12-17, 9 figs. Based on investigations, authors present their views on process of refining in self-refining aluminum alloys and describe refining phenomena observed in certain aluminum alloys.

**Ternary.** The Constitution of Ternary Alloys of Aluminum (Ueber die Konstitution von Dreistofflegierungen des Aluminiums). V. Fuss. *Zeit. für Metallkunde*, vol. 16, no. 1, Jan. 1924, pp. 24-25, 3 figs. Determination of structure of 15 alloys with respect to influence of additional metals on basic aluminum.

**Treatment Process.** Investigation of the Z-D Process for Treatment of Light Alloys to Inhibit Corrosion, to Minimize Porosity and to Effect Desired Physical Properties. A. C. Zimmerman and S. Daniels. *Air Service Information Circular*, vol. 5, no. 448, Mar. 1, 1924, 22 pp., 15 figs. Results of investigations show that process prevents corrosion of aluminum and its alloys more effectively and efficiently than any other inorganic coating process, but is not so effective in minimizing porosity as Norton process.

#### AUTOMOBILE ENGINES

**Balancing.** Practical Methods of Engine-Balancing. L. L. Roberts. *Soc. Automotive Engrs.—Jl.*, vol. 14, no. 4, Apr. 1924, pp. 452-456, 8 figs. Author divides into three major groups units of automobile that require particular attention and treatment to assure smooth-running mechanism and gives details of actual methods employed by Packard Motor Co. to balance parts that constitute each group.

**Carburetors.** See CARBURETORS.

**Cooling Systems.** Engine-Cooling Systems and Radiator Operating Characteristics. N. S. Diamant. *Soc. Automotive Engrs.—Jl.*, vol. 14, no. 4, Apr. 1924, pp. 396-406, 14 figs. Quantitative comparison of air, water and oil-cooled cylinders as it relates to subject of heat transfer and temperature drop; comprehensive discussion of radio-condenser type of cooling is given under headings of steam cooling systems and characteristics, cooling capacity of radiators used to condense steam and present state of development; discussion of performance of operating characteristics of radiators from viewpoint of car, truck or tractor designer.

**Eight-in-Line.** Excelsior Offers New Eight-in-Line Overhead Valve Engine. *Automotive Industries*, vol. 50, no. 13, Mar. 27, 1924, pp. 715-717, 4 figs. Product of Chicago concern has nine-bearing crankshaft, aluminum rods and pistons and high-pressure lubricating system; is reported to develop 93 b.h.p. at 2500 r.p.m.; bore is 3 3/4 in. and stroke 4 1/2 in.

**Heavy-Oil.** The Engines for Motor Vehicles, with Special Regard to the Bagulo Engine (Oelmotoren für Kraftfahrzeuge unter besonderer Berücksichtigung des Bagulo-Motors). L. Hausfelder. *Wirtschafts-Motor*, vol. 6, no. 2, Feb. 1924, pp. 1-8, 5 figs. Discusses different types of oil engines used in automobiles, and describes Bagulo engine as example of satisfactory solution of problem of automobile engine for heavy oils.

**Manifolds, Distribution in.** Intake-Manifold Distribution. H. W. Asire. *Soc. Automotive Engrs.—Jl.*, vol. 14, no. 4, Apr. 1924, pp. 387-395, 22 figs. Investigation to determine following questions: (1) how bad is distribution; (2) how do different types of manifold compare; (3) why is liquid distribution in some manifolds poor; (4) how can trouble be corrected.

**Radiators, Honey as Anti-Freeze.** Honey as Anti-Freeze for Automobile Radiators. T. P. G. Shaw and G. L. Robertson. *Car. Chem. & Metallurgy*, vol. 8, no. 3, Mar. 1924, pp. 63-64. Discussion from standpoint of viscosity at low temperatures and crystallization-point angles, giving results of experiments.

**Simson.** Small High Speed Engine Used in New German Car. B. R. Dierfeld. *Automotive Industries*, vol. 50, no. 13, Mar. 27, 1924, pp. 726-730, 5 figs. Simson car has 4-wheel brakes, connected diagonally in pairs; 4-cylinder power plant is overhead valve type, carries two camshafts, and has two inlet and two exhaust valves for each cylinder; wheelbase is 118 in.

#### AUTOMOBILE FUELS

**Alcohol-Gasoline Mixtures.** Alcohol-Gasoline Mixtures. A. C. Zimmerman. *Air Service Information Circular*, vol. 5, no. 450, Mar. 1, 1924, 3 pp., 5 figs. Investigation of properties of mixtures of aviation gasoline and 100-proof alcohol which has been denatured with 1 per cent of aviation gasoline.

#### AUTOMOBILE MANUFACTURING PLANTS

**Chevrolet Bodies.** Chevrolet Tarrytown Plant Assembles 600 Complete Cars a Day. H. Chase. *Automotive Industries*, vol. 50, no. 12, Mar. 20, 1924, pp. 666-671, 3 figs. Plant for building, enameling, and trimming all open bodies required; most operations are performed on continuously moving conveyors; tunnel baking ovens employed; maximum temperature held at 350 deg. Fahr.

#### AUTOMOBILES

**Air Resistance.** The Automobile in Air Current (Das Auto im Luftstrom). R. Rümpler. *Zeit. für Flugtechnik u. Motorluftschiffahrt*, vol. 15, no. 3-4, Feb. 26, 1924, pp. 22-25, 9 figs. Discusses progress made in recent years in application of airplane theories to automobile design; introduction of streamline automobile developed by author in 1921; results of experiments carried out at Aerodynamic Experimental Station in Göttingen. See also article entitled Air Resistance and High-Speed Automobiles (Luftwiderstand und Schnellkraftwagen). A. Persu, pp. 25-27, 3 figs., discussing future design of streamline automobiles.

**Body Finishes.** Egyptian Lacquer Develops New Nitrocellulose Automobile Finish. H. Chase. *Automotive Industries*, vol. 50, no. 15, Apr. 10, 1924, pp. 828-829. Differs from other products in same general class by employing priming, filler and glaze coats which have same pyroxylin base and quick air-drying qualities as final colors; exceptional durability and rapid completion of work among chief claims made.

**More Durable Car Finishes Are Making Their Appearance.** *Automotive Industries*, vol. 50, no. 14, Apr. 3, 1924, pp. 777-779, 5 figs. Cellulose nitrate coating is said to last as long as vehicle and retains permanent luster; better undercoats double life of ordinary varnish jobs; black and color enamels, when dulled, are easily restored by rubbing and polishing.

**Wood Framed Bodies Finished in High Bake Enamel by New Process.** W. L. Carver. *Automotive Industries*, vol. 50, no. 13, Mar. 27, 1924, pp. 718-720. Special coating, placed on frame prior to enameling, protects wood members from intense heat; commercial use of China wood oil makes possible this method, known as Oxovar system.

**Brake-Testing Apparatus.** Special Apparatus Tests Rickenbacker Brakes on Assembly Line. *Automotive Industries*, vol. 50, no. 11, Mar. 13, 1924, pp. 621-623, 2 figs. Rods are adjusted to permanent length which is not altered during road test; equipment involves set of power-operated drums which contact with wheels and elevating mechanism.

**Brakes.** Automobile Brakes (Le freinage des automobiles). Vie Technique & Industrielle, vol. 6, no. 52, Jan. 1924, pp. 226-234, 12 figs. Notes on problem and difficulties of braking; principles of servo brakes, and advantages of Hallot system of servo brakes; effect of Hallot automatic regulator on automobile brakes; Perrot, Birkigt and Isotta-Fraschini brake systems; control of brakes in Renault automobile.

**Difficult Problems Involved in Power Braking for Motor Vehicles.** P. M. Heldt. *Automotive Industries*, vol. 50, no. 12, Mar. 20, 1924, pp. 656-666, 8 figs. Describes Westinghouse air-brake equipment for rail cars and Simplex vacuum brake for passenger cars and trucks; problems involved in design of efficient power-braking systems.

**Hydraulic Brake Operation.** *Autocar*, vol. 52, no. 1482, Mar. 14, 1924, pp. 465-467, 6 figs. Consideration of a system, remarkable for its simplicity and efficacy, which was first tried over 12 yrs. ago.

**New Hydraulic Brake System.** *Automotive Industries*, vol. 50, no. 11, Mar. 13, 1924, p. 615, 1 fig. New 4-wheel hydraulic-brake system worked out by Mattington Automatic Valve Co. of St. Louis, claimed to possess advantage that if connection to any of four brake cylinders should break or otherwise become seriously defective, remaining three brakes will not be prevented from functioning.

**The Hallot Servo Brakes for Automobiles (Le servo-frein Hallot, pour automobiles).** Génie Civil, vol. 84, no. 9, Mar. 1, 1924, pp. 212-213, 2 figs. Discusses action of servo brakes and describes Hallot brake which is one of most widely used of this type.

**Chassis Lubrication.** Chassis Lubrication. F. H. Gleason. *Soc. Automotive Engrs.—Jl.*, vol. 14, no. 4, Apr. 1924, pp. 422-430 and 445, 12 figs. Classification of means generally employed for chassis lubrication; referring to respective characteristics of grease and of oil, those of oil are summarized and preferred; describes centralized oil-lubrication system, composed of central oil reservoir and pump, main-supply line and delivery tubes; advantages of system.

**Charcoal-Producer-Gas-Burning.** The Burning of Charcoal Producer Gas in Automobile Engines (L'alimentation des moteurs d'automobiles au gaz pauvre). A. Caputo. *Technique Moderne*, vol. 16, no. 4, Feb. 15, 1924, pp. 116-118, 8 figs. Describes Berliet system of installing charcoal gas producer in rear of car.

**Eric Campbell.** The Eric Campbell Cars. *Auto-Motor Jl.*, vol. 29, no. 11, Mar. 13, 1924, pp. 225-228, 13 figs. Description of a light, fast and efficient small vehicle; good road-holding and gallon-mileage properties are features; 4-cylinder monobloc engine; bore 66 mm. and piston stroke 109.5 mm.

**G. W. K. The 1924 G. W. K. Car.** *Auto-Motor Jl.*, vol. 29, no. 10, Mar. 6, 1924, pp. 203-206, 12 figs. Efficient friction-drive car; 4-cylinder monobloc engine; 10.8 hp., with bore of 66 mm. and piston stroke of 100 mm.

**Gwynne "Eight."** The Gwynne "Eight." *Auto-Motor Jl.*, vol. 29, no. 13, Mar. 27, 1924, pp. 265-268, 12 figs. Particulars of light car, capable of speed of from 55 to 60 m.p.h., yet at normal running it can cover 45 to 50 miles to a gallon of fuel; 4-cylinder engine.

**Maxwell.** Maxwell Practice Illustrates a New Method of Engine Mounting. P. M. Heldt. *Auto-*

*otive Industries*, vol. 50, no. 14, Apr. 3, 1924, pp. 761-763, 4 figs. Vibration is reduced in new Maxwell car; at rear power plant has swivel support on frame about which it is free to move, since it is not secured rigidly at forward end.

**Morris-Cowley.** The 11.9 H.p. Morris-Cowley Chassis. *Automobile Engr.*, vol. 14, no. 187, Mar. 1924, pp. 64-72, 13 figs. Four-cylinder engine, with cylinders cast in block with upper half of crankcase, is bolted to 3-speed gear box, power being transmitted to bevel-driven rear axle through enclosed propeller shaft; frame is intended to take four-seater body.

**Overland.** Overland Cars. *Auto-Motor Jl.*, vol. 29, no. 12, Mar. 20, 1924, pp. 245-248, 9 figs. Particulars of latest models. Four-cylinder high-speed engine with 3 1/2-in. bore and 4-in. stroke.

**Producer-Gas Plants.** A Compact Producer Gas Plant. *Motor Transport (Lond.)*, vol. 38, no. 996, Mar. 31, 1924, p. 385, 2 figs. Brief particulars of Berliet-Imbert apparatus with which satisfactory demonstrations have been given before French military and civic authorities; in this case plant was fitted to a 15.9-hp. Berliet touring car; does not use steam in production of gas.

**Rear Axles.** Maxwell Methods of Making Rear Axle Parts. F. H. Colvin. *Am. Mach.*, vol. 60, no. 16, Apr. 17, 1924, pp. 569-572, 8 figs. Drilling, boring and reaming fixtures; inspection gages, and running-in of complete rear end.

**Springs.** See SPRINGS, Automobile.

**Trailers.** A Dumping Trailer for Use With a Light Car. G. A. Luers. *Am. Blacksmith & Motor Shop*, vol. 23, no. 3, Mar. 1924, pp. 19-20, 4 figs. Describes trailer for use with light passenger automobile; capacity 1 cu. yd., which in gravel is about 1800 lb.

**Transmissions.** Continuously Variable Transmission Developed in America. *Automotive Industries*, vol. 50, no. 12, Mar. 20, 1924, pp. 674-675, 2 figs. Weiss invention has driving member in form of hemispherical shell within which is body known as motor; latter unit is of ring, wheel, or disk form and rotates about its own axis on anti-friction bearing; stops car on hill without use of brakes.

**Variable Transmission.** *Autocar*, vol. 52, no. 1485, Apr. 4, 1924, p. 602, 3 figs. Describes device now under test to simplify gear box and back axle of car.

**Wheel Manufacture.** Oakland Concern Manufactures Disk Wheels. *West. Machy. Wld.*, vol. 15, no. 3, Mar. 1924, pp. 95-96 and 108, 7 figs. Notes on manufacture of wheels produced by Westgate Metal Products Corp. of Oakland, Cal., engaged in quantity production of disk wheels for light and heavy passenger cars, trucks and tractors.

**Willys-Knight.** The Willys-Knight Car. *Auto-Motor Jl.*, vol. 29, no. 14, Apr. 3, 1924, pp. 285-288, 12 figs. Sleeve-valve 4-cylinder engine with cylinders of 3 1/2-in. bore and 4 1/2-in. piston stroke, developing, on the brake, 40 hp.

#### AVIATION

**Net-Cost Calculation.** The Net Cost of Aerial Transportation (Le prix de revient des transports aériens). V. Carle. *Aéronautique*, vol. 6, no. 56, Jan. 1924, pp. 5-12, 8 figs. Method of calculating cost and studying influence of elements of cost, such as depreciation, volume of traffic, speed, etc.

#### AXLES

**Fractures.** Axle Fractures and Their Causes (Ueber Achsbrüche und die Erforschung ihrer Ursachen). M. Bermann. *Organ für die Fortschritte des Eisenbahnwesens*, vol. 78, no. 10, Oct. 15, 1923, pp. 198-202, 1 fig. Deals with fractures in case of uniform and non-uniform steel; fractures caused by steel of unequal chemical composition.

**Ruckstell Two-Speed, Manufacture of.** Manufacturing the Ruckstell Two-Speed Axle. H. P. Armson. *Can. Machy.*, vol. 31, no. 14, Apr. 3, 1924, pp. 31-35, 5 figs. Producing and heat treating housings, ring gears, bronze supports, sliding and plate gear clutches, for passenger car and truck axles, at plant of Russel Gear and Machine Co., Toronto, Can.

## B

#### BEARING METALS

**Hardness.** Rate of Cooling Determines Hardness of Alloy. *Automotive Industries*, vol. 50, no. 13, Mar. 27, 1924, p. 723. Results of researches into structure of ternary bearing-metal alloys by Dr. L. Kaul; it is shown that rate of cooling rather than pouring temperature determines hardness of alloy.

#### BEARINGS

**Paper-Mill Machinery.** The Most Efficient Type of Bearing for Paper Machinery. G. H. Spencer. *Paper Mill*, vol. 48, no. 15, Apr. 12, 1924, pp. 65-66, 68, 70 and 72f, 13 figs. Construction of plain babbit bearing; functions and operations on paper machines of anti-friction bearing. Paper read at Tech. Assn. Pulp & Paper Industry.

#### BEARINGS, BALL

**Automobile, Manufacture.** Making Ball Bearings for Automobiles. H. R. Simonds. *Abrasive Industry*, vol. 5, no. 4, Apr. 1924, pp. 85-89, 10 figs. Use of angular contact; manufacture of radial bearings at plant of U. S. Ball Bearing Mfg. Co., Chicago, Ill.

**Housings.** Design of Ball Bearing Closures. T. C. Delaval-Crow. *Am. Mach.*, vol. 60, no. 13, Mar. 27, 1924, pp. 453-457, 39 figs. Description of a variety of ball-bearing housing arrangements to prevent leakage of lubricant and entrance of foreign matter.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volumes

**Loads.** Ball-bearing Loads. Machy. (Lond.), vol. 23, no. 597, Mar. 6, 1924, pp. 738-739, 3 figs. Details of new formula for determining ball-bearing loads in pamphlet issued by Tormo Mfg. Co., London; no actual formula is given, necessary data being supplied by three charts.

#### BEARINGS, THRUST

**Pad Type.** Thrust Bearings of Pad Construction, F. Johnstone-Taylor. Machy. (N. Y.), vol. 30, no. 8, Apr. 1924, pp. 619-621, 5 figs. Construction of pad thrust collars; pad system applied to thrust washers; thrust washer for vertical shaft; end thrust bearings of pad construction; etc.

#### BELT DRIVE

**Principles.** Power Transmission by Belting, J. E. Rhoads. Paper, vol. 33, no. 21, Mar. 13, 1924, pp. 11-12. Some of the principles entering into power transmission by belting.

#### BELTING

**Leather.** Slip, Friction and Stretch Tests for Leather Belting, L. C. Morrow. Am. Mach., vol. 60, no. 13, Mar. 27, 1924, pp. 469-471, 8 figs. Describes tests performed in plant of J. E. Rhoads & Sons, Philadelphia, Pa.

#### BOILER EXPLOSIONS

**Locomotives.** Boiler Explosion Caused by Failure of Crown Sheet. Boiler Maker, vol. 24, no. 3, Mar. 1924, pp. 76-78, 4 figs. Particulars regarding Chicago & North Western locomotive No. 2455 explosion at Belle Plaine, Iowa, July 1923; indicates importance of equipping boilers with water columns to check water level.

#### BOILER FEEDWATER

**Measurement.** Measuring the Feed Water in a Boiler Test, J. W. Gavett, Jr. Power, vol. 59, no. 15, Apr. 8, 1924, pp. 567-568, 3 figs. Discusses arrangement of apparatus for measuring feedwater; necessary apparatus; best method of computing quantity of water from readings of head.

#### BOILER PLANTS

**Coaling and Ash Removal.** Coaling and Ash Removal in Boiler Houses (Kesselhausbekohlung und -entaschung), R. Baumann. Wärme, vol. 47, nos. 6 and 7, Feb. 8 and 15, 1924, pp. 51-63 and 63-65, 16 figs. Describes boiler-house coaling plant with tipping and gripping devices of great efficiency and requiring little attendance; and method for removal, cooling and loading into ash car of red-hot ashes; points out cleanliness and economy of method.

#### BOILERS

**Benson High-Pressure.** Steam Generation at the Critical Temperature. Chem. & Industry, vol. 43, no. 10, Mar. 7, 1924, pp. 249-250. Describes Benson 3200-lb. pressure boiler.

The Benson Boiler. Electrician, vol. 92, no. 2391, Mar. 14, 1924, p. 324. Theoretical principles of steam generator with a working pressure of 3200 lb. per sq. in.

**Crown Stay Angles, Sine Determination.** Method of Finding the Sines of the Angles Formed by Crown Stays, E. Hall. Boiler Maker, vol. 24, no. 3, Mar. 1924, pp. 80-81, 1 fig. Shows how sine of each of the different angles which crown stays make with vertical axis of boiler may be found and how to use value so found in formula where term  $\sin \alpha$  is used.

**Flue Replacement.** Saving Time and Labor on Flue Jobs, C. A. Chincholl. Boiler Maker, vol. 24, no. 3, Mar. 1924, pp. 78-79 and 91-92, 1 fig. Construction and usefulness of three devices necessary wherever boiler flues are replaced in boilers, viz., a flue swaging machine for 2-in. flues, a flue cutter for cutting flues to length and an attachment for an air motor to cut flues in front end.

**Excess Air, Effect of.** Effect of Excess Air on Flue Temperatures and on Efficiency, A. K. Bak. Power, vol. 59, no. 17, Apr. 22, 1924, pp. 634-636, 8 figs. Variation in air quantity has direct effect upon mass of gas discharged and also gives rise to changes in flue-gas temperature; air quantity thus has important bearing on boiler losses and efficiency. Results of tests made at Connors Creek to establish relation between excess air and stack-gas temperature for particular boiler and setting.

**Large.** Large Steam Boilers and Steam Storage in Germany. Power Engr., vol. 19, no. 216, Mar. 1924, pp. 86-89, 5 figs. Review of German technical publication by Fried. Münzinger, on American and German large steam boilers.

**Marine.** See MARINE BOILERS.

**Testing.** Importance of Boiler Plant Test, H. Seymour. Electrician, vol. 92, no. 2392, Mar. 21, 1924, pp. 351 and 357. How to conduct a test to find out how well boilers are doing their work.

**Types.** Steam Boiler Manufacture in Germany and America. La. Planter & Sugar Mfr., vol. 72, no. 11, Mar. 15, 1924, pp. 216-217. Different types of boilers used in various manufacturing concerns. Translation of article by K. Schiebl in Centralblatt für die Zuckerindustrie.

**Water-Circulating Apparatus.** Increasing the Efficiency of Boiler Plants (Zur Leistungssteigerung von Dampfkesselanlagen), P. Fessler. Wärme-u. Kälte-Technik, vol. 26, no. 4, Feb. 15, 1924, pp. 23-25, 4 figs. Study of water circulation; it is shown that artificial water circulation through so-called water-circulating apparatus is effective in increasing efficiency of boiler and at same time increasing economy of plant.

#### BOILERS, WATER-TUBE

**Clayton.** The Clayton Water-Tube Boiler. Eng. & Boiler House Rev., vol. 37, no. 9, Apr. 1924, p. 328, 1 fig. Notes on boiler which is development of Clayton & Shuttleworth, Ltd.; made in two distinct types, straight-tube sectional and curved-tube drum type.

#### BRAKES

**Freight-Train.** Hand Brakes on Goods Trains, E. Choquet. Int. Ry. Congress Assn.—Bul., vol. 6, no. 3, Mar. 1924, pp. 220-238, 5 figs. Solution of problem of hand brakes for goods trains which consists in determining, for a train of any composition, weight which must be braked in order that stops may be made from any given speed within a certain distance, gradients of line being taken into consideration.

#### BRAKING

**Regenerative.** The Characteristics of a D. C. Series Machine Self-Excited by Rectified Current for Purposes of Regenerative Control, R. D. Archibald. Instn. Elec. Engrs.—Jl., vol. 62, no. 327, Mar. 1924, pp. 233-242, 11 figs. Discusses present position of regenerative control for street cars and describes method of self-exciting field of series motor with low-voltage rectified current transformed from a.c. tapplings in armature; calculations for finding conditions of sparkless commutation of rectifier, and tests which corroborate calculations; practical application of device.

#### BRASS

**Extrusion of Rods.** The Extrusion and Drawing of Brass Rod, J. Williams. Am. Mach., vol. 66, no. 14, Apr. 3, 1924, pp. 497-498, 3 figs. Process of cold-drawing of brass rods as practiced by Bridgeport Brass Co., in production of commercial rods.

**Properties, Determination of.** Methods of Determining Physical Properties of Brass, A. A. Baldwin. Brass Wld., vol. 20, no. 3, Mar. 1924, pp. 77-79, 9 figs. Physical properties of brass, and tests for each.

#### BRASS FOUNDRIES

**Record Keeping.** Controlling Brass Shop Detail, F. W. Rowe. Foundry, vol. 52, no. 6, Mar. 15, 1924, pp. 226-229, 7 figs. Close tab on weights, mixtures and other data is checked on operations in non-ferrous foundry; charts shown which help to record operations and metal compositions and properties.

#### BRONZES

**Characteristics.** Mechanical Bronzes, E. G. Jarvis. Brass Wld., vol. 20, no. 3, Mar. 1924, pp. 81-83. Discussion of characteristics of various bronzes.

## C

#### CALCULATING MACHINES

**Monroe.** Every Machine Piece Given Hardness Test, L. S. Love. Iron Age, vol. 113, no. 12, Mar. 20, 1924, pp. 854-856, 3 figs. Describes some machining operations in manufacture of Monroe calculating machine built by Monroe Calculating Machine Co., Orange, N. J.; carbonized parts subject to test before assembly in machine.

#### CAR WHEELS

**Foundry Practice.** Twin Cupolas Melt Wheel Iron, P. Dwyer. Foundry, vol. 52, no. 8, Apr. 15, 1924, pp. 287-293 and 322, 10 figs. Describes new process introduced in Albany plant of Albany Car Wheel Co., consisting in melting iron in twin cupolas, allowing it to collect in central chamber and tapping it therefrom into mixing ladle; to insure continuous operation two pairs of cupolas have been installed.

#### CARBON MONOXIDE

**Detector and Alarm.** Notes on a Carbon-Monoxide Detector and Alarm, J. A. Vaughan. S. African Instn. Engrs.—Jl., vol. 22, no. 7, Feb. 1924, pp. 98-103, 2 figs. Describes instrument intended for automatic detection of small traces of CO in atmosphere, so arranged that a bell is caused to ring when small traces, such as one part in two thousand, or even less, are present in atmosphere supplied to instrument.

#### CARBURETORS

**Beach.** Beach Carburetor is Constant Vacuum Type. Automotive Industries, vol. 50, no. 12, Mar. 20, 1924, p. 671, 1 fig. Carburetor of variable venturi or constant-vacuum type with wood float located in float chamber concentric with mixing chamber; makes use of float valve consisting of ball of tin bronze.

**Heavy-Oil.** The B. M. W. Heavy-Oil Carburetor (Der B. M. W.-Schweröl-Vergaser), B. Katz. Allgemeine Automobil-Zeitung, vol. 25, nos. 7-8 and 9, Feb. 16 and 26, 1924, pp. 28-29 and 31-32, 3 figs. Describes two types of BMW carburetors which have given excellent results when used in trucks, omnibuses and motor boats.

**Zenith.** High-Speed Petrol and Paraffin Engines, J. Okill. Gas & Oil Power, vol. 19, no. 222, Mar. 6, 1924, pp. 107-108, 4 figs. Describes Zenith and Claudel-Hobson carburetors.

The Zenith Carburetor with Graded Atomization (Der Zenith-Vergaser mit stufiger Zerstäubung). Automobil-Rundschau, vol. 23, no. 1, Jan. 1924, pp. 7-8, 1 fig. Describes new Zenith carburetor and principle upon which design is based.

#### CARS

**Dynamometer.** Dynamometer Car Used on the Great Western Railway, Ry. Engr., vol. 44, no. 572, Dec. 1923, pp. 466-472, 8 figs. Description of design, equipment and use of car for determining factors in working of locomotives and trains.

New Dynamometer Car, New York Central R. R. Ry. Rev., vol. 74, no. 15, Apr. 12, 1924, pp. 687-691, 6 figs. Special car contains modern devices for recording locomotive performance.

**Repairing, Welding and Cutting in.** Welding and Cutting in Connection with Car Repairs, H. W.

L. Porth. Acetylene Jl., vol. 25, no. 6, Dec. 1923, pp. 286, 288 and 290. Welding of car parts by oxy-acetylene process, and use of cutting torch in car repairing.

**Steel, Scrapping.** Scrapping Steel Cars by Electric Arc Process, A. M. Candy. Ry. Mech. Engr., vol. 98, no. 4, Apr. 1924, pp. 217-219, 4 figs. Facilities and methods which are applicable where large number of cars are to be handled.

#### CARS, FREIGHT

**Transformer-Transportation.** New Transformer Cars for the New York, New Haven & Hartford R. R. Ry. Rev., vol. 74, no. 15, Apr. 12, 1924, pp. 683-685, 2 figs. 70-ton capacity steel underframe transformer cars built by Standard Steel Car Co.; designed to carry load of 150,000 lb. uniformly distributed over length of 24 ft. at center of car.

**Truck Frames.** Washburn Side Frame for Arch Bar Trucks. Ry. Age, vol. 76, no. 19, Apr. 12, 1924, pp. 937-949, 4 figs. Describes frames of unique design used by Baltimore & Ohio on box and gondola cars.

#### CARS, PASSENGER

**Steel Suburban.** Steel Suburban Cars for Missouri Pacific. Ry. Mech. Engr., vol. 98, no. 4, Apr. 1924, pp. 220-222, 7 figs. Unique seating arrangement provides for 117 passengers with weight of 1000 lb. each.

**Ventilation.** Ventilation and Heating of Railway Passenger Cars, K. F. Nystrom. Can. Ry. Club—Proc., vol. 23, no. 2, Feb. 1924, pp. 24-62 and (discussion) 62-75, 13 figs. Influence of occupants on temperature and humidity; CO<sub>2</sub> content in relation to ventilation; mechanical refinements required for ideal ventilation; factors essential to economical and efficient ventilation; ventilating systems now in use. Heat losses; heat requirements; radiation surface and fuel required for heating.

#### CARS, TANK

**Development and Manufacture.** Modern Tank Car is Industry's Bucket that Goes to the Well, A. S. Taylor. Compressed Air Mag., vol. 29, no. 3, Mar. 1924, pp. 813-818, 15 figs. Notes on origin, development, and manufacture.

#### CASE-HARDENING

**Case-Depth Measurement.** What Is Case Depth, S. P. Rockwell and F. Downes. Am. Soc. Steel Treating, vol. 5, no. 3, Mar. 1924, pp. 285-295 and (discussion) 295-301, 4 figs. Shows variations which are normally obtained by various methods of measuring carburized case depths, using five standard steels under two different lengths of time, handled according to good hardening shop practice; shows necessity for more accurate specifications as regards case depth.

#### CAST IRON

**Decomposition by Acid.** Acid Decomposes Cast Iron. Foundry, vol. 52, no. 5, Mar. 15, 1924, p. 231-232, 3 figs. Chemical and physical peculiarities noted in casting which has been subjected to corrosive influence of dilute sulphuric solution covering long period.

**Gray, Growth of.** Studies Growth of Gray Iron, T. E. Hull. Foundry, vol. 52, no. 7, Apr. 1, 1924, pp. 253-254. Experimental work of Moissan with graphite reviewed and theory for growth of cast iron under repeated heating and cooling is evolved; graphite in iron absorbs gases.

**Heat-Treatment Experiments.** Some Experiments on Cast Iron, J. W. Donaldson. West of Scotland Iron & Steel Inst.—Jl., vol. 31, part 4, Jan. 1924, pp. 54-57 and (discussion) 58-62, 1 fig. Experiments carried out with view to determining what effect low-temperature heat treatment had on good cylinder iron and on irons of similar composition containing small additions of various elements.

**Tests.** Physical Tests for Cast Iron, J. Shaw. Foundry Trade Jl., vol. 29, nos. 396 and 397, Mar. 20 and 27, 1924, pp. 226-227 and 262-263, 2 figs. Discusses tests made; present-day specifications; new railway specifications; American conditions; comments on tensile testing; chemical analysis.

#### CASTING

**Green Sand Cores, with.** New Methods for the Production of Castings with Green Sand Cores (Neue Wege in der Herstellung von Gusstücken mit grünen Kernen), F. Freytag. Giesserei-Zeitung, vol. 21, no. 4, Feb. 15, 1924, pp. 62-65, 11 figs. A new method for production of electric-motor casings with cast-on webs and flanges, according to which not only casing core, but also flange core is set in green sand mold and boxes are decanted in green state.

**Lead Alloys.** Casting Lead Alloys in Endless Strips. Machy. (N. Y.), vol. 30, no. 8, Apr. 1924, pp. 610-612, 2 figs. Method used by Hazlett Storage Battery Co., Cleveland, Ohio, in manufacture of grids for storage batteries that is applicable in other fields of industry.

#### CASTINGS

**Efficient Design.** Efficient Casting Design, F. C. Edwards. Engineering, vol. 117, no. 3040, Apr. 4, 1924, p. 423. Points out that to be really efficient, casting design should tend to reduce operation of molding to its simplest possible terms consistent with ultimate purpose of casting.

**Production.** Some Necessary Adjustments between the Foundry and Drawing Office, E. Ronceray. Foundry Trade Jl., vol. 29, no. 393, Feb. 28, 1924, pp. 180-183 (discussion) 183-184, 11 figs. Discusses points for common interest of both foundryman and engineer; requirements of engineer, internal strains in castings, real object of making castings without feeding heads, defects, strength of cast iron, etc.

#### CENTRAL STATIONS

Devon Station, Conn. Devon Station Marks For-

# Manufactured by Advertisers **CLASSIFIED LIST OF MECHANICAL EQUIPMENT** Alphabetical List on page 156

**Conveying Systems, Powdered Coal**

Grindle Fuel Equipment Co.

**Conveyor Systems, Pneumatic**

- Allington & Curtis Mfg. Co.
- Sturtevant, B. F. Co.

**Conveyors, Belt**

- Brown Hoisting Machinery Co.
- Chain Belt Co.
- Gandy Belting Co.
- Gifford-Wood Co.
- Link-Belt Co.

**Conveyors, Bucket, Pan or Apron**

- Brown Hoisting Machinery Co.
- Chain Belt Co.
- Gifford-Wood Co.
- Jones, W. A. Fdry. & Mach. Co.
- Link-Belt Co.

**Conveyors, Chain**

- Brown Hoisting Machinery Co.
- Chain Belt Co.
- Link-Belt Co.

**Conveyors, Ice**

- Chain Belt Co.
- Gifford-Wood Co.
- Link-Belt Co.

**Conveyors, Portable**

- Gifford-Wood Co.
- Link-Belt Co.

**Conveyors, Screw**

- Chain Belt Co.
- Gifford-Wood Co.
- Link-Belt Co.

**Cooling Ponds, Spray**

- Cooling Tower Co. (Inc.)
- Schutte & Koerting Co.
- Spray Engineering Co.

**Cooling Towers**

- Burhorn, Edwin Co.
- Cooling Tower Co. (Inc.)
- Spray Engineering Co.
- Wheeler, C. H. Mfg. Co.
- Wheeler Condenser & Engrg. Co.
- Worthington Pump & Machinery Corp'n

**Copper, Drawn**

- Roebbing's, John A. Sons Co.

**Copper Converting Machinery**

- Allis-Chalmers Mfg. Co.
- Worthington Pump & Machinery Corp'n

**Counters, Revolution**

- American Schaeffer & Budenberg Corp'n
- Ashton Valve Co.
- Bristol Co.
- Crosby Steam Gate & Valve Co.
- Veeder Mfg. Co.

**Countershafts**

- Builders Iron Foundry
- Hill Clutch Machine & Fdry. Co.
- Royersford Fdry. & Mach. Co.
- Wood's, T. B. Sons Co.

**Couplings, Pipe**

- Byers, A. M. Company
- Central Foundry Co.
- Crane Co.
- Lunkenheimer Co.

**Coupling, Shaft (Flexible)**

- Allis-Chalmers Mfg. Co.
- Brown, A. & F. Co.
- Falk Corporation
- Fawcett Machine Co.
- Hill Clutch Machine & Fdry. Co.
- Jones, W. A. Fdry. & Mach. Co.
- Medart Co.
- Nordberg Mfg. Co.
- Nuttall, R. D. Co.
- Smith & Serrell

**Coupling, Shaft (Rigid)**

- Allis-Chalmers Mfg. Co.
- Brown, A. & F. Co.
- Chain Belt Co.
- Cumberland Steel Co.
- Falls Clutch & Machinery Co.
- Farrell Foundry & Machine Co.
- General Electric Co.
- Hill Clutch Machine & Fdry. Co.
- Jones, W. A. Fdry. & Mach. Co.
- Link-Belt Co.
- Medart Co.
- Royersford Fdry. & Mach. Co.
- Smith & Serrell
- Wood's, T. B. Sons Co.

**Couplings, Universal Joint**

- Wood's, T. B. Sons Co.

**Coverings, Steam Pipe**

- Carey, Philip Co.
- Johns-Manville (Inc.)

**Cranes, Electric Traveling**

- Palmer-Bee Co.
- Whiting Corporation

**Cranes, Floor (Portable)**

- Lidgerwood Mfg. Co.

**Cranes, Gantry**

- Brown Hoisting Machinery Co.
- Link-Belt Co.
- Whiting Corp'n

**Cranes, Hand Power**

- Brown Hoisting Machinery Co.
- Clyde Iron Works Sales Co.
- Palmer-Bee Co.
- Whiting Corp'n

**Cranes, Jib**

- Brown Hoisting Machinery Co.
- Palmer-Bee Co.
- Whiting Corp'n

**Cranes, Locomotive**

- Brown Hoisting Machinery Co.
- Link-Belt Co.

**Cranes, Locomotive (Crawler)**

- Link-Belt Co.

**Cranes, Pillar**

- Brown Hoisting Machinery Co.
- Whiting Corp'n

**Cranes, Portable**

- Brown Hoisting Machinery Co.
- Clyde Iron Works Sales Co.
- Link-Belt Co.

**Crucibles, Graphite**

- Dixon, Joseph Crucible Co.

**Crushers, Clinker**

- Farrell Foundry & Machine Co.

**Crushers, Coal**

- Allis-Chalmers Mfg. Co.
- Brown Hoisting Machinery Co.
- Gifford-Wood Co.
- Link-Belt Co.
- Pennsylvania Crusher Co.
- Smidth, F. L. & Co.
- Worthington Pump & Machinery Corp'n

**Crushers, Hammer**

- Pennsylvania Crusher Co.

**Crushers, Jaw**

- Farrell Foundry & Machine Co.
- Worthington Pump & Machinery Corp'n

**Crushers, Ore and Rock**

- Farrell Foundry & Machine Co.
- Nordberg Mfg. Co.
- Pennsylvania Crusher Co.

**Crushers, Roll**

- Link-Belt Co.
- Pennsylvania Crusher Co.
- Worthington Pump & Machinery Corp'n

**Crushing and Grinding Machinery**

- Allis-Chalmers Mfg. Co.
- Farrell Foundry & Machine Co.
- Pennsylvania Crusher Co.
- Smidth, F. L. & Co.
- Worthington Pump & Machinery Corp'n

**Cupolas**

- Bigelow Co.
- Whiting Corp'n

**Cutters, Bolt**

- Landis Machine Co. (Inc.)

**Cutters, Milling**

- Whitney Mfg. Co.

**Dehumidifying Apparatus**

- American Blower Co.
- Carrier Engineering Corp'n

**Desaturators**

- United Machine & Mfg. Co.

**Derricks and Derrick Fittings**

- Clyde Iron Works Sales Co.
- Lidgerwood Mfg. Co.

**Diaphragms, Rubber**

- United States Rubber Co.

**Die Castings**

- (See Castings, Die Molded)

**Die Heads, Thread Cutting (Self-opening)**

- Jones & Lamson Machine Co.
- Landis Machine Co. (Inc.)

**Dies, Punching**

- Niagara Machine & Tool Works

**Dies, Sheet Metal Working**

- Niagara Machine & Tool Works

**Dies, Stamping**

- Niagara Machine & Tool Works

**Dies, Thread Cutting**

- Jones & Lamson Machine Co.
- Landis Machine Co. (Inc.)

**Diesel Engines**

- (See Engines, Oil, Diesel)

**Digesters**

- Bigelow Co.

**Distilling Apparatus**

- Vogt, Henry Machine Co.

**Drafting Room Furniture**

- Dietzgen, Eugene Co.
- Economy Drawing Table & Mfg. Co.
- Keuffel & Esser Co.
- New York Blue Print Paper Co.
- ParVell Laboratories
- U. S. Blue Co.
- Weber, F. Co. (Inc.)

**Drawing Instruments and Materials**

- Dietzgen, Eugene Co.
- Keuffel & Esser Co.
- New York Blue Print Paper Co.
- ParVell Laboratories
- U. S. Blue Co.
- Weber, F. Co. (Inc.)

**Dredges, Hydraulic**

- Morris Machine Works

**Dredging Machinery**

- Lidgerwood Mfg. Co.
- Morris Machine Works

**Dredging Sleeve**

- United States Rubber Co.

**Drilling Machines, Sensitive**

- Royersford Fdry. & Mach. Co.

**Drilling Machines, Vertical**

- Royersford Fdry. & Mach. Co.

**Drills, Coal and Slate**

- General Electric Co.
- Ingersoll-Rand Co.

**Drills, Core**

- Ingersoll-Rand Co.

**Drills, Rock**

- General Electric Co.
- Ingersoll-Rand Co.

**Drinking Fountains, Sanitary**

- Johns-Manville (Inc.)
- Murdock Mfg. & Supply Co.

**Dryers, Coal**

- Grindle Fuel Equipment Co.

**Dryers, Rotary**

- Bigelow Co.
- Farrell Foundry & Machine Co.
- Link-Belt Co.
- Sturtevant, B. F. Co.

**Drying Apparatus**

- American Blower Co.
- Carrier Engineering Corp'n
- Clamage Fan Co.
- Sturtevant, B. F. Co.

**Dust Collecting Systems**

- Allington & Curtis Mfg. Co.
- Allis-Chalmers Mfg. Co.
- Clamage Fan Co.
- Sturtevant, B. F. Co.

**Dust Collectors**

- Allington & Curtis Mfg. Co.
- Allis-Chalmers Mfg. Co.
- Sturtevant, B. F. Co.

**Dynamometers**

- American Schaeffer & Budenberg Corp'n
- General Electric Co.
- Wheeler, C. H. Mfg. Co.

**Economizers, Fuel**

- Green Fuel Economizer Co.
- Power Specialty Co.
- Sturtevant, B. F. Co.

**Ejectors**

- Schutte & Koerting Co.

**Electrical Machinery**

- Allis-Chalmers Mfg. Co.
- General Electric Co.
- Westinghouse Electric & Mfg. Co.

**Electrical Supplies**

- General Electric Co.
- Johns-Manville (Inc.)

**Elevating and Conveying Machinery**

- Brown Hoisting Machinery Co.
- Chain Belt Co.
- Gifford-Wood Co.
- Jones, W. A. Fdry. & Mach. Co.
- Link-Belt Co.
- Palmer-Bee Co.

**Elevators, Bucket & Chain**

- Gandy Belting Co.

**Elevators, Electric**

- American Machine & Foundry Co.

**Elevators, Hydraulic**

- Whiting Corp'n

**Elevators, Pneumatic**

- Whiting Corp'n

**Elevators, Portable**

- Gifford-Wood Co.
- Link-Belt Co.

**Elevators, Telescopic**

- Link-Belt Co.

**Emery Wheel Dressers**

- Builders Iron Foundry

**Engine Repairs**

- Franklin Machine Co.
- Nordberg Mfg. Co.

**Engine Stops**

- Schutte & Koerting Co.

**Engines, Blowing**

- Allis-Chalmers Mfg. Co.
- Mackintosh-Hemphill Co.
- Nordberg Mfg. Co.
- Worthington Pump & Machinery Corp'n

**Engines, Gas**

- Allis-Chalmers Mfg. Co.
- De La Vergne Machine Co.
- Ingersoll-Rand Co.
- Titusville Iron Works Co.
- Westinghouse Electric & Mfg. Co.

**Engines, Gasoline**

- Detroit Marine-Aero Engine Co.
- Sturtevant, B. F. Co.
- Titusville Iron Works Co.
- Worthington Pump & Machinery Corp'n

**Engines, Hoisting**

- Allis-Chalmers Mfg. Co.
- Clyde Iron Works Sales Co.
- Lidgerwood Mfg. Co.
- Morris Machine Works
- Nordberg Mfg. Co.

**Engines, Kerosene**

- Worthington Pump & Machinery Corp'n

**Engines, Marine**

- Bethlehem Shipbldg. Corp'n (Ltd.)
- Ingersoll-Rand Co.
- Johnson, Carlyle Machine Co.
- Nordberg Mfg. Co.
- Sturtevant, B. F. Co.
- Ward, Chas. Engineering Works
- Worthington Pump & Machinery Corp'n

**Engines, Marine, Oil**

- Bethlehem Shipbldg. Corp'n (Ltd.)
- Ingersoll-Rand Co.
- Nordberg Mfg. Co.

**Engines, Marine, Steam**

- Bethlehem Shipbldg. Corp'n (Ltd.)
- Nordberg Mfg. Co.

**Engines, Oil**

- Allis-Chalmers Mfg. Co.
- Bethlehem Shipbldg. Corp'n (Ltd.)
- De La Vergne Machine Co.
- Ingersoll-Rand Co.
- Nordberg Mfg. Co.
- Titusville Iron Works Co.
- Worthington Pump & Machinery Corp'n

**Engines, Oil, Diesel**

- Allis-Chalmers Mfg. Co.
- Bethlehem Shipbldg. Corp'n (Ltd.)
- Nordberg Mfg. Co.
- Worthington Pump & Machinery Corp'n

**Engines, Pumping**

- Allis-Chalmers Mfg. Co.
- Ingersoll-Rand Co.
- Morris Machine Works
- Nordberg Mfg. Co.
- Worthington Pump & Machinery Corp'n

**Engines, Steam**

- Allis-Chalmers Mfg. Co.
- American Blower Co.
- Bethlehem Shipbldg. Corp'n (Ltd.)
- Clamage Fan Co.
- Clyde Iron Works Sales Co.
- Cole, R. D. Mfg. Co.
- Engberg's Electric & Mech. Wks.
- Erie City Iron Works
- Harrisburg Fdry. & Mach. Wks.
- Ingersoll-Rand Co.
- Leffel, James & Co.
- Lidgerwood Mfg. Co.
- Mackintosh-Hemphill Co.
- Morris Machine Works
- Nordberg Mfg. Co.
- Ridgway Dynamo & Engine Co.
- Skinner Engine Co.

- Westinghouse Electric & Mfg. Co.
- Wheeler, C. H. Mfg. Co.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

ward Step in Development of New England Superpower. *Elec. World*, vol. 83, no. 12, Mar. 22, 1924, pp. 562-570, 12 figs. New base-load, high-tension plant of Conn. Light & Power Co. designed for 200,000-kva. rating; mechanical and electrical features.

**Motor-Truck Transportation.** "Gas" Trucks in Central-Station Service. *Elec. World*, vol. 83, no. 15, Apr. 12, 1924, pp. 721-724, 5 figs. Survey of representative practices in all parts of United States; trend toward standardization; data on costs, performances, types and uses.

**Output and Distribution, N. America.** Fourteen Systems with Output of More than a Billion Kilo-watt-Hours in 1923. *Elec. World*, vol. 83, no. 15, Apr. 12, 1924, pp. 715-719. Tabular data on output and peak load of largest generating and distributing companies in United States and Canada; 1923 detailed output and distribution data for North American Systems.

**Peoria, Ill.** New Station Under Construction at Peoria, Illinois. *Power*, vol. 59, no. 17, Apr. 22, 1924, pp. 630-633, 3 figs. Initial section of 5-unit plant consisting of two 20,000-kw. turbo-generators, each served by two 13,920-sq. ft. boilers burning pulverized coal, designed for 400-lb. pressure and 250-deg. superheat; closed feedwater system with automatic deaeration of water; other features.

**St. Louis, Mo.** Cahokia—A Masterpiece. F. J. Crolius. *Blast Furnace & Steel Plant*, vol. 12, no. 4, Apr. 1924, pp. 7-11, 6 figs. Superpower plant at St. Louis constitutes study in material handling; summary of principal equipment.

Cahokia Station, Union Electric Light & Power Company, St. Louis, Mo. *Power*, vol. 59, no. 14, Apr. 1, 1924, pp. 514-524, 15 figs. Uses pulverized fuel; preparation plant in same building as boilers and flue gases utilized to dry coal; each section of station containing 2 turbo-generators and 8 boilers is independent unit; steam pressure 300 lb., temperature 690 deg., natural draft, no economizers.

**Saxton, Pa.** Saxton Plant of the Penn Central Light & Power Company, A. Iddles. *Power*, vol. 59, no. 16, Apr. 15, 1924, pp. 592-599, 11 figs. Mine-mouth station designed for ultimate capacity of 100,000 kw.; first section 20,000 kw. installed; boilers equipped with economizers; house turbine and low-pressure evaporators; load on house turbine automatically controlled by temperature of boiler feedwater; data on principal equipment.

**Switzerland.** Statistical Data from Electricity Works in Switzerland for 1922 (Einige zusammenfassende Angaben aus der Statistik der Elektrizitätswerke der Schweiz für das Jahr 1922). Schweiz. Elektrotechnischer Verein—Bul., vol. 15, no. 2, Feb. 1924, pp. 64-67. Preliminary results of statistics now being compiled on power plants of Switzerland; comparison with statistics for 1919.

**Water Power vs. Steam Power.** Water Power Compared with Steam Power and Their Relation to Rural Service. G. C. Neff. *Nat. Elec. Light Assn. Bul.*, vol. 11, no. 3, Mar. 1924, pp. 152-154. States that only comparatively few of the hydroelectric stations of United States can successfully compete in low cost of generation with large modern well-located steam plants of today. Excerpts of address before Agricultural College of Univ. of Wis.

## CHARTS

**Nomograms.** Applications of a Type of Nomogram with Rectilinear Scales (Quelques applications d'un type de nomogramme à échelles rectilignes). J. Hak. *Annales des Ponts & Chaussées*, vol. 93, no. 6, Nov.—Dec. 1923, pp. 375-386, 5 figs. Describes methods of application.

## COAL

**Heat, Effect on.** Quantity and Nature of Gas Evolved by Solid Fuels under the Action of Heat or of a Vacuum: Coals (Sur la quantité et la nature des gaz dégagés par les combustibles solides sous l'action de la chaleur et du vide: Houilles). P. Lebeau. *Académie des Sciences—Comptes Rendus*, vol. 178, no. 4, Jan. 21, 1924, pp. 391-393. Study of effect of heat on ten different kinds of coal; gaseous evolution in all cases becomes rapid at 400 deg. (1 to 5 cu. m. per metric ton); most coals give, per metric ton, 15 kg. of hydrogen, anthracite giving 25 kg.

**Heating Values.** The Caloric Values of Coals, with Special Reference to the Coals of Nottinghamshire and Derbyshire. J. W. Whitaker. *Colliery Guardian*, vol. 127, no. 3299, Mar. 21, 1924, pp. 734-737, 6 figs. Results of analyses and calorific values of 38 samples of coal. Paper read before Midland Counties Inst. Engrs. See also *Iron & Coal Trades Rev.*, vol. 108, no. 2924, Mar. 14, 1924, pp. 427-428, 1 fig.

## COAL HANDLING

**Locomotive Plants.** Locomotive Coaling Plant Recently Installed by the Italian State Railway. G. F. Zimmer. *Indus. Mgt. (Lond.)*, vol. 11, no. 5, Mar. 6, 1924, pp. 133-135, 2 figs. Describes installation of stationary type, built entirely of mild steel, erected in duplicate, one at Foggia and one at Rimini, embodying latest developments of its type.

**Sizing.** The Sizing of Small Coal. Thos. Fraser. *Coal Industry*, vol. 7, nos. 2 and 3, Feb. and Mar. 1924, pp. 89-91 and 121-124. New conditions in sizing small fuel which have arisen; special shaker screens for small coal and coke; vibrating screens.

## COAL STORAGE

**Concrete Bins.** Concrete Coal Bunkers. F. Dawson. *Eng. & Boiler House Rev.*, vol. 39, no. 9, Apr. 1924, pp. 313-314, 2 figs. Leading features of reinforced-concrete construction. Notes on recent contract placed by Lond. County Council for new coal bunkers at Greenwich.

**Losses.** The Storage of Bituminous Coal. W. Seymour. *Eng. Jnl.*, vol. 7, no. 4, Apr. 1924, pp. 183-

185, 4 figs. Losses which may occur in storage coal and proposed remedies.

## COMPRESSED AIR

**Improvements.** Improvements in Compressed-Air Practice (Neuerungen im Pressluftbetrieb). Schiffbau, vol. 25, no. 10, Feb. 27, 1924, pp. 230-233, 8 figs. Improvements in compressors of small and medium output constructed by Frankfurt Maschine-Building Corp.; improvements in compressed-air piping, and in pneumatic tools.

## CONDENSERS, STEAM

**Tubes.** Manufacture of Condenser Tubes. W. R. Webster. *Iron Age*, vol. 113, no. 12, Mar. 20, 1924, pp. 871-872. How non-ferrous castings of hollow cylinders are transformed into tubes. Composition and heat treatment. Abstract of paper read before Metropolitan Sec. of A.S.M.E.

**Unit Heat-Transfer Determination.** Condenser Unit Heat Transfer Obtained from Chart. H. O. Michael. *Power*, vol. 59, no. 13, Mar. 25, 1924, pp. 488-489, 1 fig. Gives chart with which operating engineer may very quickly learn condition of condenser, and explains its use. Based on general principle that all central stations and other well-regulated plants maintain a fairly constant steam pressure and temperature; because of this, B.t.u. rejected to condensers per lb. of steam is nearly constant, varying slightly with vacuum.

## CONNECTING RODS

**Machining.** Hollow Connecting Rods in the Making. F. H. Colvin. *Am. Mach.*, vol. 60, nos. 9 and 10, Feb. 28 and Mar. 6, 1924, pp. 311-313 and 351-352, 16 figs. Feb. 28: Operations on connecting rods for Wright airplane engines; fixtures and methods for securing light weight, accuracy and ample strength. Mar. 6: Construction of inner rod and methods by which it is machined.

## CONVEYORS

**Cotton Mill.** A Conveyor System that Revolutionized a Cotton Mill. Rob. T. Kent. *Mgt. & Administration*, vol. 7, no. 4, Apr. 1924, pp. 411-416, 9 figs. Mechanical handling methods at Jackson Mills at Nashua, N. H.; system is designed to handle entire product from raw cotton to finished cloth with exception of movement between one or two operations, where hand labor is more economical.

## COOLING TOWERS

**Reinforced-Concrete.** The Dimensioning of Reinforced-Concrete Cylindrical Cooling Tower Walls (Bemessung von zylinderförmigen Kühlturmwänden aus Eisenbeton). E. Rausch. *Deutsche Bauzeitung*, vol. 57, no. 102-103, Dec. 22, 1923, pp. 117-120, 3 figs. Influence of wind forces and temperature; combined effect of wind and temperature stresses; practical example.

## COST ACCOUNTING

**Capital Control.** Capital Requirements and Control. J. H. Bliss. *Mgt. & Administration*, vol. 7, no. 4, Apr. 1924, pp. 405-410. Control of fixed property investments.

**Costs and Inventory Records.** Combined Record System for Costs and Inventory. Wm. L. Myles. *Am. Mach.*, vol. 60, no. 16, Apr. 17, 1924, pp. 575-578, 6 figs. All records of labor and material kept in visible index; description of forms; how costs are determined; purchasing index and payroll statistics.

**Depreciation.** A Statistical Theory of Depreciation, Based on Unit Cost. J. S. Taylor. *Mass. Inst. Technology—Pub.*, Dept. of Mathematics, Series 2, no. 71, Feb. 1924, pp. 1010-1023. Discusses methods of treating depreciation, dealing with "useful life" of machine, or number of years property will be used, and how depreciation charges are to be distributed over period of use. Reprinted from *Am. Statistical Assn.*, Dec. 1923.

## COUPLINGS

**Compression.** Making Couplings for Transmission of Power. H. P. Armon. *Can. Mach.*, vol. 31, no. 13, Mar. 27, 1924, pp. 19-21, 3 figs. Shop methods and tools in plant of Bond Eng. Works, Toronto, Can., for machining double tapered sleeves and inner and outer shells for compression couplings.

## CRANES

**Balance-Weight Determination.** Determination of Additional Weight—Ballast and Balance Weight—in Curb-Ring Cranes (Bestimmung des Zusatzgewichts—Ballast und Gegengewicht—bei Drehscheibenkränen). W. Hilge. *Fördertechnik u. Frachtverkehr*, vol. 17, no. 3, Feb. 3, 1924, pp. 29-31, 3 figs. Gives simple method for determining additional weight as the only possible minimum; by this means production and freight are rendered cheaper; current supply of slewing motor is reduced, and control of crane is made easier.

**Double.** Double Cranes in Port of Hamburg. Port & Terminal, vol. 4, no. 2, Mar. 1924, p. 20. Particulars of new crane, put out by Deutsche Maschinenfabrik A. G., Duisburg (Demag), for cargo handling; constructed along new lines, represents a combination in the building of two different types of cranes.

**Uses.** Industrial Cranes and Their Varied Uses. M. W. Potts. *Indus. Mgt. (N. Y.)*, vol. 67, no. 4, Apr. 1924, pp. 216-223, 12 figs. Discusses different ways in which cranes can be of service; classifications for cranes.

## CRANKCASES

**Aluminum, Molding.** Central European Practice. C. Irresberger. *Foundry*, vol. 52, no. 7, Apr. 1, 1924, pp. 258-262, 15 figs. Aluminum crankcases molded with chills and lugs to neutralize shrinkage effects; molding practice; castings cleaned by sand blast and tested for porosity by brushing with gasoline.

## CRANKSHAFTS

**Balancing.** Practical Balancing of a V-Type Engine Crankshaft. D. E. Anderson. *Soc. Automotive Engrs.—Jl.*, vol. 14, no. 4, Apr. 1924, pp. 409-414, 10 figs. Practical methods devised to accomplish results desired; describes how selection of parts to obtain equal weights is made; combination static and dynamic balancing machine that can be set for either operation is used for balancing crankshaft; method of testing completed work.

**Elastic Couplings, Influence of.** Influence of Harmonics of Phase Retardation on Arrangement of Cranks in a Multiple-Cylinder Explosion Engine (Influence des harmoniques des retards de phase sur la répartition des manivelles dans un moteur à explosion à cylindres multiples). A. Blondel. *Académie des Sciences—Comptes Rendus*, vol. 178, no. 4, Jan. 21, 1924, pp. 354-359. Investigation of influence of elastic couplings and damping; it is shown that use of elastic couplings necessitates closer examination of conditions of resonance and damping of multiple crankshafts.

## CUPOLAS

**Control Records.** Records Show Cupola Control. S. J. Pelton. *Foundry*, vol. 52, no. 7, Apr. 1, 1924, pp. 255-257, 6 figs. Constant personal check must be kept on materials and methods, otherwise records are liable to have little value; scales and weighing methods require particular attention.

**Slagging Operations.** Slagging Operations in Cupola Practice. H. H. Shepherd. *Metal Industry (Lond.)*, vol. 24, nos. 11 and 12, Mar. 14 and 21, 1924, pp. 259-261 and 283-284. Object of slagging; slagging reactions; amounts of flux to use; composition of good limestone for fluxing; sulphur absorption; cupola slags.

## CUTTING METALS

**City Gas, Use of.** Use of City Gas for Cutting Steel. J. H. Gumz. *West. Machy. Wld.*, vol. 15, no. 3, Mar. 1924, pp. 85-87, 9 figs. Results of tests made to determine cost of city gas cutting.

## CYLINDERS

**Castings.** The Cylinder Problem. O. Smalley. *Foundry Trade Jnl.*, vol. 29, nos. 392, 393 and 394, Feb. 21, 28 and Mar. 6, 1924, pp. 147-151, 173-177 and 195-197, 26 figs. Cause and elimination of the commoner defects encountered in manufacture of cylinder castings. Paper read before Inst. British Foundrymen and North East Coast Instn. Engrs. & Shipbldrs.

**Lubrication.** Cylinder Lubrication When Using Saturated and Superheated Steam. J. D. Morgan. *Power*, vol. 59, no. 16, Apr. 15, 1924, p. 607. Atomization of oil basic requirement in steam-cylinder lubrication; using low flash-point oils; lubrication of special engines.

# D

## DIESEL ENGINES

**Camellaird-Fullagar.** British Yard Builds Largest Marine Diesel Engine. *Mar. Eng.*, vol. 29, no. 4, Apr. 1924, pp. 238-240 and 242, 3 figs. Particulars of 6-cylinder Camellaird-Fullagar opposed-piston engine developing 3000 b.h.p. at 90 r.p.m., built by Palmers Shipbldg. & Iron Co.

**Double-Acting.** Double-Acting Diesel of Unique Design. *Motorship*, vol. 9, no. 4, Apr. 1924, pp. 261-263, 5 figs. How North British 200 s.h.p. unit differs from all other 2-cycle double-acting marine oil engines.

**Fairfield-Sulzer.** Fairfield-Sulzer Engines for the Union Steam Ship Company of New Zealand Ltd. *Shipbldg. & Shipp. Rec.*, vol. 23, no. 12, Mar. 20, 1924, p. 333. Particulars of engines to be installed in a new motor passenger liner, the Aorangi; four sets of Fairfield-Sulzer Diesel engines each having six cylinders 27 1/2 in. diameter by 39-in. stroke, working on 2-stroke cycle; 16,000 i.h.p. on four shafts.

**M. A. N.** How the World's Largest Diesel Was Built. *Fred. Englert. Motorship*, vol. 8, no. 12, Dec. 1923, pp. 848-849 and vol. 9, nos. 1, 2 and 3, Jan., Feb. and Mar. 1924, pp. 40-41, 119 and 185-187, 12 figs. Relates most serious problems which faced engineers of M. A. N.'s plant, Nürnberg, in bringing to practical state highest-powered Diesel engine ever constructed, developing over 17,000 s.h.p.

**The High-Power Diesel Engine of Nürnberg.** W. Laudahn. *Power*, vol. 59, nos. 16 and 17, Apr. 15 and 22, 1924, pp. 603-606 and 642-644, 8 figs. Discussion of difficulties met with in designing 12,000-hp. Diesel engine; account of explosion that wrecked engine. Translated from *Zeit. des Vereines Deutscher Ingenieure*, Dec. 8, 1923.

**Maintenance and Care.** The Maintenance and Care of Diesel Engines. O. Olson. *Mar. Eng. & Shipp. Age*, vol. 29, no. 3, Mar. 1924, pp. 169-170. Practical notes on operation of Diesel engines, compressors and motorship auxiliaries.

**Power Plants, Use in.** Diesel Engines as Economical Power Producers. J. Ander. *Power House*, vol. 17, no. 6, Mar. 20, 1924, pp. 30-31, 1 fig. Data on Diesel engine plants and operating cost of same under Canadian conditions. Serious competitor of hydro-electric power.

**Two-Stroke-Cycle Application.** Present-Day Diesel Engines—Application of the Two-Stroke-Cycle Principle. Nagal. *Power*, vol. 59, no. 14, Apr. 1, 1924, pp. 526-527, 3 figs. Extract of paper read before Verein Deutscher Ingenieure, June 20, 1923, at Berlin.

**Valves.** Valves of Diesel Engines. F. Johnstone-Taylor. *Gas & Oil Power*, vol. 19, no. 222, Mar. 6, 1924, pp. 97-98, 3 figs. Practical advice on their care and maintenance.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volumes

**Water-Works.** Oil Engines that Have Seen Long Water-Works Service J. H. Bender. Fire & Water Eng., vol. 75, no. 11, Mar. 12, 1924, pp. 495-496 and 513, 3 figs. Record of three units installed in Clayton, N. M. in 1911, 1912 and 1917 respectively, which have given good satisfaction, demonstrating reliability of this type of motive power.

#### DRAWINGS

**Tool-Drafting Records.** Tool Engineering, A. A. Dowd and F. W. Curtis. Am. Mach., vol. 60, no. 16, Apr. 17, 1924, pp. 591-593, 4 figs. Records necessary in tool-drafting room; time and progress records; supervision of drafting room.

#### DRILLING MACHINES

**Types.** Plate and Bar-working Tools. Machy. (Lond.), vol. 23, nos. 596 and 598, Feb. 28 and Mar. 13, 1924, pp. 713-718 and 777-784, 34 figs. Drilling machines and practice.

#### DYNAMOMETERS

**Torsion.** The Amsler Torsion Dynamometer with Stroboscopic Reading Device (Dynamomètre de torsion, système Amsler, avec dispositif de lecture stroboscopique). Génie Civil, vol. 84, no. 11, Mar. 15, 1924, pp. 260-261, 2 figs. Apparatus for measuring power absorbed by high-speed machines forced to overcome an almost constant resistance.

## E

#### EDUCATION, INDUSTRIAL

**Machinists.** Can a School Turn Out First-class Machinists? C. O. Herb. Machy. (N. Y.), vol. 30, no. 8, Apr. 1924, pp. 622-625, 4 figs. Methods followed in machine shop of Worcester Boys Trade School, Worcester, Mass., run on a commercial basis; describes shop work courses.

#### ELECTRIC FURNACES

**Acid.** More Electric Steel in South. Foundry, vol. 52, no. 8, Apr. 15, 1924, pp. 312-315, 8 figs. Also Iron Trade Rev., vol. 74, no. 14, Apr. 3, 1924, pp. 913-916, 8 figs. New Orleans company specializing in sugar-mill machinery installs acid electric furnace to make railroad castings; metallurgical control insures uniform quality of metal poured.

**Iron-Ore Reduction.** Electric Reduction Furnace Iron, R. C. Gosrow. Iron Trade Rev., vol. 74, no. 15, Apr. 10, 1924, pp. 982-983 and 991. States that pig iron made in electric reduction is of high quality and adapted to foundry and steelmaking use.

#### ELECTRIC LOCOMOTIVES

**Measurement Car for.** Measurement Car for the Investigation of Electric Locomotives (Der Messwagen zur Untersuchung elektrischer Lokomotiven), Kleinow. Glaser's Annalen, vol. 94, no. 5, Mar. 1, 1924, pp. 53-57, 10 figs. Describes car of the German State Railway fully equipped for investigation of electric locomotives; details of design, measuring instruments, and results.

**Single-Phase.** 2-C-1 Single-Phase Electric Locomotive with Individual Drive. Engineer, vol. 137, no. 3562, Apr. 4, 1924, p. 369-371, 6 figs. partly on p. 362. New locomotives built by Brown, Boveri & Co., in which each of driving axles have independent motors; gearing is fitted on one side of engine and driving wheels on opposite side are free.

**1-C-1 Electric Locomotives of the Swiss Federal Railway** (Les locomotives électriques type 1-C-1 des Chemins de fer fédéraux), E. Savary. Bul. Technique de la Suisse Romande, vol. 5, no. 3, Feb. 1924, pp. 25-29, 9 figs. partly on supp. plate. Principal features and advantages of single-phase locomotives with individual axle drive, built by Sécheron Works, Geneva.

#### ELECTRIC RAILWAYS

**Cars, Safety.** New Safety Cars for Ontario Hydro Electric Railways. Ry. Signaling, vol. 17, no. 4, Apr. 1924, pp. 184-185, 2 figs. Details of 400-class cars, which will be equipped for multiple-unit operation.

**Switzerland-Italy.** Domodossola to Locarno, via the Centovalli. Ry. Gaz., vol. 40, no. 12, Mar. 21, 1924, p. 415, 2 figs. New electric mountain railway of narrow gauge, 51 km. long.

#### ELECTRIC WELDING, ARC

**Precision.** The Electric Arc in Precision Welding, S. W. Mann. Forging-Stamping-Heat Treating, vol. 10, no. 2, Feb. 1924, pp. 68-71, 3 figs. Flexibility of electric arc welding makes it possible to repair a broken shaft or casting to same degree of strength and accuracy as before failure.

**Rail Joints.** Rail Welding in Connecticut. Elec. Ry. J., vol. 63, no. 14, Apr. 5, 1924, pp. 537-539, 2 figs. Improvements in carbon arc welded rail joints adopted by Connecticut Co.; tilted joint plate and base plate adapted to 23 different rail sections; precautions adopted to secure good welds.

#### ELECTRIC WELDING, RESISTANCE

**Seam Welders.** Various Types of Electric Seam Welders, J. R. Brueckner. Forging-Stamping-Heat Treating, vol. 10, no. 3, Mar. 1924, pp. 107-109. Discusses development of automatic spot welder, continuous seam welder, roll-step method of seam welding, and seam welding using interrupted current, and merits of each method.

#### EMPLOYEES, TRAINING OF

**Cooperative Education.** Training the Future Employee Through Cooperative Education, H. H. Bliss. J. of Electricity, vol. 52, no. 6, Mar. 15, 1924, pp. 205-206. Describes plan which is being widely

adopted in the West, in which firms cooperate with college in training future leaders of industry; includes alternate monthly periods of study and employment, coordinated so that work serves practically as laboratory part of a unified course of training.

#### EMPLOYMENT MANAGEMENT

**Promotion Policy.** Reducing Labor Turnover by Promotion, K. H. Condit. Am. Mach., vol. 60, no. 15, Apr. 10, 1924, pp. 539-541, 2 figs. Seventh article in Gilbreth series describing personnel policy; doing away with blind-alley jobs; helping employee to reach highest position he can hold.

**Selecting Foundry Molders.** Picking Competent Molders, R. J. Waldo. Foundry, vol. 52, no. 8, Apr. 15, 1924, pp. 307-309, 3 figs. Exacting methods for determining applicant's fitness to fulfill position recognized as desirable; trade test method of interviewing prospective employees successful in choosing men for foundry work.

#### ENGINEERS

**Relation to Finance.** The Engineer's Relation to Finance, L. W. Mayer. Min. & Metallurgy, vol. 5, no. 208, Apr. 1924, pp. 163-167. Why engineering profession does not rank higher; confidence in engineer held by banker; points out that there are more failures owing to poor financing than to poor engineering, and that financier underestimates degree of engineer's assistance.

#### EVAPORATION

**Heat of.** Heat of Vaporization, A Function of the Temperature, M. W. Green. Am. Chem. Soc.—Jl., vol. 46, no. 3, Mar. 1924, pp. 544-545. Calculation devised to show that if heat of vaporization is assumed to be function of temperature alone, the same function for all substances but differing in constants involved, conclusion is arrived at which indicates approximate limits of accuracy of such relation.

#### EVAPORATORS

**Continuous-Flow.** The Continuous Flow Evaporator, M. C. Stuart. Am. Soc. Nav. Engrs.—Jl., vol. 36, no. 1, Feb. 1924, pp. 55-65, 7 figs. Describes new evaporator, design of which embodies novel features directed toward improvement in purity, capacity, economy and operation.

## F

#### FABRICS

**Wear-Testing Machine.** A Machine for Investigating the Resistance of Fabrics to Abrasion ("Wear"), Rob. P. Ethridge. Testing, vol. 1, no. 2, Feb. 1924, pp. 156-159, 2 figs. Principle of design of cloth wear-testing machine.

#### FANS

**Drives.** The Argument for the Slow-Speed Direct-Connected D. C. Motor for Ventilating Fan Drive, J. L. McK. Yardley. Heat & Vent. Mag., vol. 21, no. 4, Apr. 1924, pp. 43-46, 10 figs. How motor ratings have increased; limit reached in reductions of speed of a.c. motors; transforming a.c. to d.c.

#### FIRE FIGHTING

**Fire-Escape Ladder.** A New Motor Turntable Fire Escape. Motor Transport (Lond.), vol. 38, no. 995, Mar. 24, 1924, pp. 353-354, 5 figs. Describes ladder, all movements of which are controlled by hydraulic power; mounted on a Merryweather standard 65-hp. chain-driven chassis and embodying latest design of Merryweather escape ladder and trussing.

#### FLIGHT

**Gliding.** Difference between the Piloting of Gliders and Motor Airplanes from the Standpoint of the Practical Glider Pilot (Unterschied zwischen der Führung von Segel- und Motorflugzeugen vom Standpunkt des praktischen Segelfliegers), H. Hackmack. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 1-2, Jan. 26, 1924, pp. 2-3. Offers practical suggestions for motorless flight.

**Gliding Flight** (Le vol à voile), H. Liurette. Vie Technique & Industrielle, vol. 6, no. 52, Jan. 1924, pp. 234-240, 20 figs. Mechanism of gliding flight; influence of weight on speed; laboratory experience; internal energy of a bird against internal energy of wind.

**Gliding Flight against the Wind** (Sur le vol à voile contre le vent), A. Rateau. Académie des Sciences—Comptes Rendus, vol. 178, no. 3, Jan. 14, 1924, pp. 280-285, 1 fig. Author demonstrates that Katzmayer effect can be deduced immediately from what is already known of wing characteristics in fixed regular current; formula obtained gives principal laws of Katzmayer effect.

#### FORGINGS

**Steel.** Recent Developments in Steel Forgings, J. L. Cox. Forging-Stamping-Heat Treating, vol. 10, nos. 1 and 2, Jan. and Feb. 1924, pp. 12-16 and 87-89, 23 figs. Review of developments in line of forging exceptionally large machine parts; forgings often employed to advantage in place of steel castings. Paper read before Am. Iron & Steel Inst., Oct. 1923.

#### FOUNDING

**Automobile.** Modern Automobile Foundry Practice, P. Pritchard. Foundry Trade J., vol. 29, nos. 392, 393, 394 and 395, Feb. 21, 28, Mar. 6 and 13, 1924, pp. 158-161, 169-172, 191-194 and 215-218, 33 figs. Also Automobile Engr., vol. 14, no. 187, Mar. 1924, pp. 84-91, 22 figs. Underlying principles; sand molds; molding machines; aluminum, its melting and molding,

and defects which have to be overcome in founding; aluminum die-casting; cast iron, its melting and molding; coremaking; cylinder casting; mild steel castings; non-ferrous foundry practice; etc. Paper read before Instn. Automobile Engrs.

#### FOUNDRIES

**Cost-Distribution System.** Distribute Costs on Each Job, E. C. Boehringer. Foundry, vol. 52, no. 6, Mar. 15, 1924, pp. 207-212, 11 figs. Nugent Steel Castings Co., Chicago. Manufacturers of electric-steel castings make detailed tabulation of expenses including minor materials to each job; how work is routed through shop.

**Metal Melting.** Fuels for. Melting by Natural-Draught Gas and Other Fuels, A. J. Smith. Brass Wld., vol. 20, no. 3, Mar. 1924, pp. 93-94. Results obtained in foundries with different fuels.

**Steel, Cost System for.** Distributing Costs on Each Job, E. H. Boehringer. Iron Trade Rev., vol. 74, no. 13, Mar. 27, 1924, pp. 853-857, 12 figs. Describes elaborate, yet not burdensome, cost system developed by Nugent Steel Castings Co., Chicago, Ill., whereby it keeps before it at all times a running and complete picture of all its cost factors; is controlling factor through plant from unloading of steel scrap to shipment of finished casting.

#### FOUNDRY EQUIPMENT

**Core and Sand Testing Equipment.** Molds, Cores and Molding Sands (Ueber Formen, Kerne und Formsande), L. Treuheit. Giesserei-Zeitung, vol. 20, no. 25, Dec. 1, 1923, pp. 483-492, 30 figs. Strength-testing apparatus for molds and cores; a new deaerating apparatus for molding sands; evaluation of molding sands.

**Flask Design.** Principles in Cast Iron Flask Design, H. Cohen. Iron Age, vol. 113, no. 16, Apr. 17, 1924, pp. 1137-1140, 7 figs. Applications to jarring machine work on gray iron; general rules as to bars; core weights and supports; internal strains.

#### FREIGHT HANDLING

**Containers, Demountable.** Container Units in Motor Truck Freight Service. Ry. Rev., vol. 74, no. 14, Apr. 5, 1924, pp. 656-658, 4 figs. How Detroit United Ry. has developed new equipment to establish auxiliary motor-truck service, consisting of demountable unit container equipment.

**L. C. L. by Motor Truck.** Delivering Less-Than-Carload Freight by Motor Truck, R. D. Sangster. Soc. Automotive Engrs.—Jl., vol. 14, no. 4, Apr. 1924, pp. 415-421. Outline of practical working of St. Louis system, demonstrating regard in which it is held by both shipper and carrier; adaptability of system to store-door delivery; advantages of off-track freight stations; Harlan plan for Manhattan Island.

#### FUELS

See COAL; OIL FUEL; PULVERIZED COAL.

#### FURNACES, GAS

**Specific Heat of Combustion Products.** Specific Heats of Products of Combustion from Gas Furnaces, L. E. Biemiller. Gas Age-Rec., vol. 53, no. 14, Apr. 5, 1924, pp. 423-425, 1 fig. Determination of specific-heat values; review of previous work on the subject, and calculations.

#### FURNACES, HEATING

**Continuous Pair.** Pair Heating, Wm. C. Buell, Jr. Blast Furnace & Steel Plant, vol. 12, nos. 2, 3 and 4, Feb. Mar. and Apr. 1924, pp. 122-123, 159-160 and 180-182, 3 figs. Resume of conditions surrounding present practice in heating sheet bars; describes heating furnace of new design and employing two-stage combustion; analysis of heating costs.

#### FURNACES, HEAT-TREATING

**Recuperative.** Heat-Treating Furnaces Using Recuperation, P. J. Nutting. Iron Age, vol. 113, no. 16, Apr. 17, 1924, pp. 1156-1157, 2 figs. Effect of pre-heating air, using coal, oil or other fuels; applications to annealing and carburizing.

#### FURNACES, HOT-AIR

**Gas-Fired.** Making Progress with the Hot Air Furnace. Gas Age-Rec., vol. 53, no. 15, Apr. 12, 1924, pp. 473-474, 5 figs. Particulars of furnace developed by Rochester Gas & Elec. Corp., entirely automatic, being equipped with a humidostat as well as a thermostat; heat loss to chimney is low, as gases pass off at 170 deg. Fahr. as against 300 to 500 deg. Fahr. in coal-fired furnaces.

## G

#### GAGES

**Checking System.** Systematic Gage-Checking as a Requisite of Precise Measurement, Jos. Lannen. Soc. Automotive Engrs.—Jl., vol. 14, no. 4, Apr. 1924, pp. 407-408. Details of methods employed in creating and maintaining gage-checking system, and statement in reference to equipment used and good results attained.

**Pressure.** Modern Recording Pressure Gauges. Eng. Progress, vol. 5, no. 2, Feb. 1924, pp. 26-27, 4 figs. Describes design of recording instruments which permit control of constancy of pressure by means of graph produced by apparatus during certain interval of time.

**Sine Bar.** A Sine-bar Angle Gage for Commutator Work, Wm. Crozier. Machy. (Lond.), vol. 23, no. 598, Mar. 13, 1924, pp. 767-768, 5 figs. Describes sine-bar angle gage designed by author for motor commutators.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

**Steels for.** Research Reveals Properties of Steels Used for Gages. Automotive Industries, vol. 50, no. 14, Apr. 3, 1924, pp. 759-760. Investigations carried on at Bur. of Standards throw light on wear characteristics of different steels, hardened and unhardened; relative changes in size on hardening in oil and water; factors which affect time changes in gages.

#### GALVANIZING

**Process.** Galvanizing Process (Das "Neuerzinken"). H. Bablik. Stahl u. Eisen, vol. 44, no. 9, Feb. 28, 1924, pp. 223-225, 1 fig. Describes process which originated in Czechoslovakia and is now extensively employed in Austria; iron is dipped in liquid zinc, and resulting coatings consist of several layers of zinc of different composition; advantages of process; cost figures.

#### GAS ENGINES

**Performance.** Gas-engine Performance. F. Johnstone-Taylor. Mech. Wld., vol. 75, no. 1941, Mar. 14, 1924, pp. 161-162, 1 fig. Importance of mixture strength, and method of estimation.

#### GAS PRODUCERS

**Practice.** Gas Producer Practice. W. Dyrssen. Blast Furnace & Steel Plant, vol. 12, no. 3, Mar. 1924, pp. 161-165. Temperature of gas; blast temperature and steam consumption; use of oxygen in gas producers; influence of rate of gasification; instruments required for controlling and supervising operation of producers; preheating of blast; other cooling mediums than steam in producers.

#### GASES

**Explosive Gas-Air Mixtures.** Investigations of Combustible Gas- and Steam-Air Mixtures (Untersuchungen an explosiblen Gas- und Dampf-Luft-Gemischen). E. Berl and H. Fischer. Zeit. für Elektrochemie, vol. 30, no. 1, Jan. 1924, pp. 29-36, 3 figs. Determination according to new method of explosion limits of mixtures of air with carbon monoxide, hydrogen, methane, acetylene, ethylene, alcohol, acetone, ether, benzol and gasoline at atmospheric pressure and room temperature; influence of temperature on explosive range at 100, 200 and 300 deg. cent.; influence of subpressure on system carbon monoxide-air. Bibliography.

#### GEAR CUTTING

**Hobbing Machines.** A New Gear Hobbing Machine. Automobile Engr., vol. 14, no. 187, Mar. 1924, p. 75, 1 fig. Describes new Brown & Sharpe spur-gear hobber.

**Quality Testing.** Quality Testing in the Manufacture of Gears (Güteprüfung bei der Zahnradherstellung). Frommer. Werkstattstechnik, vol. 18, no. 6, Mar. 15, 1924, pp. 176-178, 6 figs. Arrangements for investigation of helicoidal cutter of cutting machine and finished wheel; profile-testing machines; testing of pitch and trueness; investigation of condition of cutting machine.

#### GEARS

**Calculation.** The Calculation of Gears for Machine-Tool Construction (Zahnradberechnung für den Werkzeugmaschinenbau). A. Eberwein. Maschinenbau, vol. 3, no. 11, Mar. 13, 1924, pp. 359-361, 4 figs. Formulas are derived for calculation of machine-tool gears, making use of modulus method.

**Involute.** Degree of Irregularity of Involute Spur Gears (Ungleichförmigkeitsgrad von Evolventenstirnrädern). C. Miklósy. Werkstattstechnik, vol. 18, no. 6, Mar. 15, 1924, pp. 173-175, 3 figs. Author traces by calculation the irregular course of involute gears and describes method of determining series of cutters for a given degree of irregularity.

**Non-Metallic.** Laboratory Tests of Non-Metallic Gears. H. R. Moyer. Am. Mach., vol. 60, no. 14, Apr. 3, 1924, pp. 505-507, 4 figs. Work done to determine strength and endurance; evolution of testing equipment; tests for vibration and effect of oil; reproducing service conditions.

**Spur.** Standardized Roller for Checking Spur Gears. W. H. Folds. Machy. (Lond.), vol. 23, no. 598, Mar. 13, 1924, pp. 765-767, 3 figs. Writer proposed to standardize, to some extent, roller-check method by use of tables of factors, which makes it possible to use any size roller that will form contact on tooth faces or flanks, and from given diameter of roller, overall measurement over roller as it is located in teeth of gear can be calculated.

**Testing.** Gear Testing and Special Production (Zahnradprüfung und Sonderherstellung). A. Steinle. Werkstattstechnik, vol. 18, no. 6, Mar. 15, 1924, pp. 169-173, 22 figs. Optical testing methods and instruments.

**Tooth-Bearing Control.** Tooth Bearing Control for Spiral Bevel Gears. Chas. H. Logue. Am. Mach., vol. 60, no. 15, Apr. 10, 1924, pp. 549-553, 9 figs. Importance of position of bearing along teeth; measurement of backlash by "pinion inclination"; "pinion intersection" design and operation of suitable testing machine.

**Worm.** A New Enveloping Worm Gear. Machy. (Lond.), vol. 23, no. 599, Mar. 20, 1924, pp. 819-820, 4 figs. Describes form of worm gear with very high load-carrying capacity, which is extension of principle of straight-line generation to include its application to production of Hindley-type worm to which term "enveloping" gear has been applied.

**Worm Gears and Windlasses.** H. S. Howard. Am. Soc. Nav. Engrs.—Jl., vol. 36, no. 1, Feb. 1924, pp. 18-29. Conclusions and decisions as to future heavy-duty worm gears which may be built; worm gear which was investigated was in windlass of battleship Tennessee.

#### GRINDING

**Automobile Parts.** How Nash Motor Parts Are

Ground. E. C. Boehringer. Abrasive Industry, vol. 5, no. 4, Apr. 1924, pp. 90-92 and 97, 7 figs. Grinding operations and equipment used at plants of Nash Motors Co., Milwaukee and Kenosha, Wis.

#### GRINDING

**Motor-Truck Parts.** Precision Grinding Operations Finish White Motor Trucks. F. B. Jacobs. Abrasive Industry, vol. 5, nos. 2, 3 and 4, Feb., Mar. and Apr. 1924, pp. 29-33, 60-64 and 98-101, 29 figs. Description of grinding methods followed at plant of White Motor Co., Cleveland, Ohio.

## H

#### HARDNESS

**Testing Machines.** Hardness Testing, with Special Regard to Dynamic Hardness Testing Machines (Ueber Härteprüfung, mit besonderer Berücksichtigung des Fallhärteprüfers). M. v. Schwarz. Maschinenbau, vol. 3, no. 10, Feb. 28, 1924, pp. 316-319, 5 figs. Describes new type of hardness testing machine developed by author; results of tests showing its useful applications.

**Work-Hardening of Metals and the Herbert Tester.** Engineer, vol. 137, no. 3558, Mar. 7, 1924, pp. 248-251, 5 figs. Discusses use of pendulum tester (described in Apr. 13, 1923, issue of same journal) for investigation of scale hardness figures; gives list of work-hardening figures of various materials, as determined by E. G. Herbert, inventor of instrument. See also editorial on pp. 257-258.

#### HEAT PUMPS

**Applications.** Utilization of the Heat of Low Temperature (Ueber die Nutzbarmachung von Wärme niedriger Temperatur). Ferdinand. Gesundheits-Ingenieur, vol. 47, no. 11, Mar. 15, 1924, pp. 81-82, 9 figs. Describes applications of heat pumps which work on principle of refrigerating machines.

#### HEAT TRANSMISSION

**Water Flowing Inside Pipes.** Heat Transfer for Water Flowing Inside Pipes. W. H. McAdams and T. H. Frost. Refrig. Eng., vol. 10, no. 9, Mar. 1924, pp. 323-332 and (discussion) 332-334, 15 figs. Progress recently made in developing an equation which may be used by designer to predict numerical value of film coefficient of heat transfer between a clean pipe and water which is flowing through it in turbulent motion.

#### HEATING AND VENTILATING

**School Buildings.** Heating and Ventilating an Up-to-date School Building. T. E. Mason. Plumbers' Trade J., vol. 76, no. 6, Mar. 15, 1924, pp. 499, 502 and 504, 2 figs. Describes heating and ventilating system of high-school building now being erected in Saranac Lake, N. Y.; ventilating is of central fan system; vapor heating.

#### HEATING, ELECTRIC

**Combination Cooking and Heating Oven.** Recommendation for Utilization of Electric Energy for Cooking and Heating Purposes (Vorschlag zur Verwertung elektrischer Energie für Koch- und Heizzwecke). E. Boder. Schweiz. Elektrotechnischer Verein—Bul., vol. 15, no. 2, Feb. 1924, pp. 67-70, 4 figs. Investigates possibility of utilizing electric energy for calorific purposes in households and suggests scheme for simultaneous heating of kitchen and adjoining room, by means of electric cooking and heat-storage oven.

#### HEATING, HOUSE

**Economic Installations.** The Economic Design of House-Heating Installations (Die wirtschaftliche Gestaltung der Raumheizanlagen). P. Beck. Archiv für Warmwirtschaft, vol. 5, no. 3, Mar. 1924, pp. 41-45. Comparison of stove and central heating; possibilities for improvement of central heating plants; making use of radiation and pipe losses; reduction of chimney losses; use of low-grade fuel.

#### HEATING, STEAM

**Central-Station.** Central Station Heating Proves Successful. H. A. Woodworth. Power Plant Eng., vol. 28, no. 7, Apr. 1, 1924, pp. 377-380, 3 figs. Discusses factors contributing to successful systems of central-station heating.

**Unit Heaters.** The Trend in the Unit Heater Field. A. H. Greene. Heat & Vent. Mag., vol. 21, no. 3, Mar. 1924, pp. 55-57, 4 figs. Special reference to use of copper and brass radiators as a means of reducing size and weight and increasing efficiency.

#### HYDRAULIC ACCUMULATORS

**Switzerland.** Examples of Hydraulic Accumulators and Pumps in Switzerland, Italy and France (Exemples d'installations hydrauliques d'accumulation et de pompage, en Suisse, en Italie et en France). Génie Civil, vol. 84, no. 9, Mar. 1, 1924, pp. 208-210, 5 figs. Describes accumulator plants working principally with Sulzer centrifugal pumps, placed in operation during past few years.

#### HYDRAULIC DRIVE

**Schneider.** The Schneider Gear for the Drive of Machine Tools and Hoists (Das Schneifer-Kapselgetriebe für den Antrieb von Werkzeugmaschinen und Hebezeugen). O. Keller. Schweizerische Bauzeitung, vol. 83, no. 9, Mar. 1, 1924, pp. 100-101, 8 figs. Describes new hydraulic drive patented by H. Schneider, with which any fine adjustment of speed according to material and feed can be made without interfering with operation; advantages of gear, which is a hydraulic change and reversing gear, consisting of two valveless pumps.

#### HYDROELECTRIC DEVELOPMENTS

**Australia.** Hume Reservoir for Hydro-Electric Development. Indus. Australian & Min. Standard, vol. 71, no. 1836, Feb. 14, 1924, pp. 242-244. Reports of investigations of possibility of utilizing Hume Reservoir (Australia) for hydroelectric development. Conclusion reached was that Hume Reservoir, with capacity as at present proposed, viz., 1,100,000 acre-ft. would have a potential value for development of hydroelectric power and that increasing of capacity of reservoir would add to that potential value.

**Austria.** Statistical, Economic and Legislative Data on Hydroelectric Development in Austria (Statistisches, Wirtschaftliches und Gesetzliches über den Ausbau der österreichischen Wasserkraft), K. Nachr. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 10, Mar. 8, 1924, pp. 240-242. Fuel and energy consumption in Austria; water power as substitute; developments in recent years; most important enterprises; competition of steam power plants; legislative support for obtaining necessary investment capital.

**Canada.** Musquash Hydro-Electric Development. F. B. Casey. Can. Engr., vol. 46, no. 15, Apr. 8, 1924, pp. 405-409, 7 figs. Development in New Brunswick on Musquash River; three Morgan Smith turbines and C. G. E. generators develop 11,000 hp. for transmission to St. John and surrounding district and Moncton.

**Economics of.** The Economics of Hydro-Electric Development. D. W. Mead. Am. Soc. Civ. Engrs.—Proc., vol. 50, no. 4, Apr. 1924, pp. 417-452, 9 figs. Discusses following factors: Acquisition of suitable legal rights; command of satisfactory power market; suitable physical and hydrological conditions; proper design of works involved; economical construction and financing; rapid and economical development of business; management, operation and maintenance; accurate estimates; factors of economic expediency in consideration of proposed hydroelectric developments; capital costs; annual expenses; calculation of net revenue.

**Western United States.** Survey Shows 1924 Will Be Record Year for Hydro-electric Development. Jl. Electricity, vol. 52, no. 3, Feb. 1, 1924, pp. 96-99, 5 figs., 1 map. Survey of hydroelectric projects under way during 1923 or definitely scheduled for 1924.

#### HYDROELECTRIC PLANTS

**Standard Tests for.** Standard Tests for Hydraulic Power Plants. Engineer, vol. 137, no. 3562, Apr. 4, 1924, pp. 354-356, 3 figs. Discussion of report of Joint Committee appointed by Instns. of Mech. and Civ. Engrs. to draw up set of recommended rules for testing of hydraulic power plants.

#### ICE PLANTS

**Design.** The Essentials of the Modern Ice Plant. C. T. Baker. Ice & Refrigeration, vol. 66, no. 3, Mar. 1924, pp. 243-245. Type of plant, prime mover, compressors, freezing tank, air agitation system, condensers and piping. Paper read before North Carolina Ice Exchange.

**Raw-Water.** Raw Water Ice Plant of Miller Ice Co., Chicago Heights, Ill., V. P. Miller. Ice & Refrigeration, vol. 66, no. 3, Mar. 1924, pp. 239-241, 4 figs. Oil-engine-driven 50-ton ice-making-plant which has been remodeled and improved several times; description of mechanical equipment; vertical compressors belted to oil engines.

#### INDICATORS

**Manograph, for High-Speed Engines.** Indicator-Manograph (Indikator-Manograph Otto Schulte). Motor u. Auto, vol. 21, no. 1, Jan. 10, 1924, pp. 5-7, 8 figs. Describes optical indicator manufactured by Osa Apparate Gesellschaft, Frankfurt, Germany, which can be used for speeds up to 8000 r.p.m.; diagrams are stated to be not only qualitatively but quantitatively correct, so that actual pressure conditions in cylinder can be determined.

#### INDUSTRIAL MANAGEMENT

**Engineering and Operating Departments, Relation of.** The Relation of the Engineering Department to the Operating Department. F. J. Crolius. Engrs.' Soc. West. Pa.—Proc., vol. 40, no. 2, Mar. 1924, pp. 45-52 and (discussion) 53-55. Relates incidents and results accomplished through coordinated engineering investigation; discusses combustion, centrifugal force; etc.

**Estimating.** Estimating. Engineer, vol. 137, no. 3558, Mar. 7, 1924, pp. 244-246, 5 figs. Deals with requirements of factory employing about 5000 hands, and manufacturing more than one type of product; personnel of department; preparation of estimate; coordination of effort.

**Material Purchasing and Control.** One Master Form Basis of Material Buying and Control System. W. L. Carver. Automotive Industries, vol. 50, no. 15, Apr. 10, 1924, pp. 806-811, 6 figs. Scheme of material purchasing and control at plant of Chandler Motor Car Co. eliminates bookkeeping from purchasing, stock and production departments.

**Pricing Policy.** Pricing Policy in Relation to Financial Control. Donaldson Brown. Mgt. & Administration, vol. 7, nos. 2, 3 and 4, Feb., Mar. and Apr., 1924, pp. 195-198, 283-286 and 417-422. Outlines method of price analysis which, though resting upon theoretical basis, is wholly practical; theory of pricing of Gen. Motors Corp.

**Production Control.** Maintaining a Profit with Reduced Prices. E. A. Munschauer. Mgt. & Ad-

# Manufactured by Advertisers **CLASSIFIED LIST OF MECHANICAL EQUIPMENT** Alphabetical List on page 156

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

ministration, vol. 7, no. 4, Apr. 1924, pp. 401-404, 4 figs. How capacity of plant for manufacturing refrigerators was increased 50 per cent and unit costs lowered.

**Production Planning.** New Methods of Production Planning That Make Heavy Stocks Unnecessary. Factory, vol. 32, no. 4, Apr. 1924, pp. 480-482 and 528, 1 fig. Methods employed in large machine-tool manufacturing plant, in which standardization is stressed; how production budget aids planning.

**Purchasing and Inventories.** The Relationship of Purchasing to Inventories. H. N. Stronck. Factory, vol. 32, no. 4, 1924, pp. 501-503, 606 and 608-609. Notes based upon observations made during examination of manufacturing enterprises of large variety of industries, and in all parts of country.

**Stores Control.** Step by Step Details for Obtaining Equipment and Supplies for Maintenance. J. E. Housley. Indus. Engr., vol. 82, no. 4, Apr. 1924, pp. 109-113, 6 figs. Routine followed in an industrial plant for procuring supplies, with methods of storing and accounting for material.

## INDUSTRIAL RELATIONS

**Lumber Industry.** Industrial Relations in the West Coast Lumber Industry. C. R. Howd. U. S. Bur. Labor Statistics, no. 349, Dec. 1923, 120 pp., 2 charts. Examination of lumber industry, particularly financial conditions and kind of work men do; technology of industry and demands it makes on employees; hours, rates of wages, and working and living conditions; history of organized or articulate protests of employees and reactions of employers.

## INSULATION, HEAT

**Tests.** Insulation. G. A. Young and E. F. Burton. Refrig. Engr., vol. 10, no. 9, Mar. 1924, pp. 345-348. Properties of low-temperature insulating materials; types of insulation; unit of heat flow; facilities for insulation tests at Purdue University; Master Car Bldrs.' Assn. model electric calorimeter; Bur. of Standards model electric calorimeter.

## INSURANCE

**Group.** Group Life Insurance on Twenty-seven Railroads. Ry. Age, vol. 76, no. 18, Apr. 5, 1924, pp. 881-883. List of roads on which insurance is in force; with notes on differences in details.

**Workmen's Compensation and.** Workmen's Compensation, Health and Accident Insurance in the German State Railway since the Year 1920 (Die Arbeiterpensionskassen, die Krankenkassen und die Unfallversicherung bei der Deutschen Reichsbahn seit dem Jahre 1920). O. Kubatschek. Archiv. für Eisenbahnwesen, no. 1, Jan.-Feb. 1924, pp. 44-63. Conditions and results of health, accident and invalidity insurance since 1920.

## INTERNAL-COMBUSTION ENGINES

**Factory Power Plants.** The Control of Power Production. Chas. L. Hubbard. Factory, vol. 32, no. 4, Apr. 1924, pp. 482-486, 17 figs. Internal-combustion engines as source of factory power.

**Mewes.** The Mewes Engine, Old and New Types (Der Mewes-Motor in alter und neuer Bauart). R. Mewes. Zeit. für Sauerstoff- u. Stickstoff-Industrie, vol. 14, no. 12, Dec. 1922, pp. 141-144, and vol. 15, nos. 1, 2, 3, 5, 7, 8, 9, 10 and 11, Jan.-Feb., Mar., May, July, Aug., Sept., Oct. and Nov. 1923, pp. 2-3, 10-11, 18-19, 33-37, 49-54, 61-64, 65-68 and 69-72, and vol. 16, no. 2, Feb. 1924, pp. 12-14, 8 figs. Construction, operation and efficiency of 1901 type, and new developments added; indicator diagrams; objections raised against Mewes engine; Mewes gas-air-pressure engine, using exhaust gases of explosion and internal-combustion engines mixed with compressed air; advantages of Mewes engine; theory.

**Technical Aspects.** Some Technical Aspects of the Internal-Combustion Turbine. Power Engr., vol. 19, no. 216, Mar. 1924, pp. 107-109, 1 fig. Survey of present knowledge and practice.

**Theory of.** Contribution to the Theory of Internal-Combustion Engines (Contribution à la théorie des moteurs à combustion interne). M. Bruckhaus. Technique Moderne, vol. 16, no. 4, Feb. 15, 1924, pp. 105-112, 7 figs. Rudiments and formulas of theoretical chemistry; combustion in engines and variation of pressure; combustion and variation of temperature; combined action of these three factors; study of fuels employed.

[See also AIRPLANE ENGINES; AUTOMOBILE ENGINES; DIESEL ENGINES; GAS ENGINES; OIL ENGINES.]

## INVENTION

**Stimulation of Employees.** How to Stimulate Invention by Employees. H. A. Toulmin, Jr. Factory, vol. 32, no. 4, Apr. 1924, pp. 490-492, 580 and 582, 6 figs. Nine methods from experience of five companies.

## IRON AND STEEL

**Chemical Specifications, Interpretation of.** Interpretation of Chemical Specifications for Iron and Steel in Relation to Analytical Accuracy. C. H. Ridsdale. Iron & Coal Trades Rev., vol. 108, no. 2923, Mar. 7, 1924, pp. 382-383. Abstract of paper read at joint meeting of Cleveland Instn. Engrs., Newcastle Soc. Chem. Industry, and Inst. of Chemistry.

## IRON CASTINGS

**Permanent-Mold.** Permanent Mold Casting Methods Cut Production Expense. D. H. Meloche. Automotive Industries, vol. 50, no. 13, Mar. 27, 1924, pp. 711-714, 11 figs. Chief problem in developing successful method was to regulate properly cooling rate; results achieved have resulted in better quality and less cost. (Abstract.) Paper read before Soc. Automotive Engrs.

**Welding.** The Influence of Mass Upon Methods of Preheating and Welding Large Iron Castings. Acetylene J., vol. 25, no. 9, Mar. 1924, pp. 441-443, 4

figs. Typical example of difficulties encountered in repairing massive castings, and correct method of carrying out repair. From Acetylene & Welding J., Lond.

## J

### JIGS

**Bevel Gear-Testing.** Double Helical Bevel Gear-Testing Jig. Machy. (Lond.), vol. 23, no. 596, Feb. 28, 1924, p. 711, 3 figs. Special jig for testing both accuracy and truth of apex in double helical bevel wheels, as used in automobile back-axle drives.

## L

### LATHES

**Chuckling Operations.** The Machining of Small Components. Machy. (Lond.), vol. 23, no. 599, Mar. 20, 1924, pp. 793-803, 27 figs. Chuckling operations on small automatic and capstan machines.

**Gear-Box Design.** Production Design of a Lathe Feed Gear-box. A. Clegg. Machy. (Lond.), vol. 23, no. 597, Mar. 6, 1924, pp. 735-737, 3 figs. Gives example of expensive design of 3-speed lathe feed-gear box and shows how this can be substituted by cheaper and better design of similar gear box.

### LOCOMOTIVES

**Boosters.** The Locomotive Booster. M. H. Roberts. Ry. & Locomotive Engr., vol. 37, no. 4, Apr. 1924, pp. 111-115, 6 figs. Effect of locomotive booster on operation and its efficiency as engine.

**China, Types Used in.** Locomotive Practice on the Chinese Government Railways. Ry. Engr., vol. 45, no. 529, Feb. 1924, pp. 66-69, 9 figs. Data on locomotives used on the different railways; a multiplicity of types of international origin are in use, but efforts toward standardization are being pursued.

**Compound.** Compound Locomotives. Times Trade & Eng. Supp., vol. 14, no. 297, Mar. 15, 1924, p. 23. Discusses their reintroduction on British railways, giving data on different types.

**Condensing.** Paris-Orleans Condensing Locomotive. H. Leflot. Ry. Mech. Engr., vol. 98, no. 4, Apr. 1924, pp. 211-212, 3 figs. Means adopted on suburban tank locomotive for condensing exhaust steam while passing through long tunnel.

**Connecting-Rod Failures.** Locomotive Connecting Rod Failures. Ry. Engr., vol. 44, no. 527, Dec. 1923, pp. 457-460, 3 figs. Report to Ministry of Transport on accident at Betley Road, near Crewe, Lond. Midland & Scottish Ry.

**Decapod, Russian.** Russian "Decapod" Locomotives. A. Lipetz. Ry. Engr., vol. 45, no. 530, Mar. 1924, pp. 104-108, 12 figs. Describes frames and running gear, cab, running-board, jacket, draw-gear, brakes, tools, sandbox and sanders, radial buffer connection, tender, etc. (Continuation from Aug. 1923 issue, p. 313.)

**Design and Construction.** Modern Locomotive Engine Design and Construction. Ry. Engr., vol. 45, no. 529, Feb. 1924, pp. 50-53 and 65, 1 fig. Coned helical and volute springs; stresses in locomotive wheels; wheel-boss stresses; stresses in wheel tires.

**Freight.** 1 E Large Freight Locomotives of the Austrian Federal Railway (1 E-Grossgüterzuglokomotiven der österreichischen Bundesbahnen). J. Rihosek. Zeit. des Vereines österreichischer Ingenieure, vol. 68, no. 10, Mar. 8, 1924, pp. 225-232, 26 figs. Results of preliminary tests of coal-saving equipment; new designs of 1 E locomotives, series 81; details of Dabeg spray preheater; exhaust-gas preheater; Davies and Metcalfe exhaust-steam injector; Lentz valve gear; etc.

**Mallet.** Simple Mallets for the Chesapeake & Ohio. Ry. Age, vol. 76, no. 19, Apr. 12, 1924, pp. 927-929, 4 figs. 2-8-8-2 type designed to meet restricted clearances; rated tractive force 103,500 lb. See also description in Ry. Rev., vol. 74, no. 14, Apr. 5, 1924, pp. 631-640, 13 figs.

**Mikado.** New Mikado Type Locomotives for the Wabash R. Ry. Ry. Rev., vol. 74, no. 13, Mar. 29, 1924, pp. 593-599, 6 figs. New 2-8-2-type freight engines somewhat larger than other locomotives of same type in use on this road.

**0-6-0 Type.** Shipping Complete Locomotives to India. Ry. Engr., vol. 45, no. 530, Mar. 1924, pp. 95-96 and 108, 6 figs. Principal data on 0-6-0 type British built locomotives delivered to East Indian Ry. at Calcutta.

**Steam-Turbine.** Developments of the Ljungström Locomotive. Ry. Age, vol. 76, no. 17, Mar. 29, 1924, pp. 849-850, 2 figs. Its performance and later developments in design.

**Ljungström Steam Locomotive (Ljungströms Locomotiv).** I. F. Johansen. Ingeniören, vol. 33, no. 6, Feb. 9, 1924, pp. 61-68, 16 figs. Description of Swedish locomotive; great economy obtained by this design shown by test data; fuel consumption reduced about 50 per cent as compared to locomotives of usual design.

**Superheater.** 1 E-(2-10-0) Two-Cylinder Superheated Goods Train Locomotive for the Polish State Railways. Eng. Progress, vol. 5, no. 2, Feb. 1924, pp. 29-34, 14 figs. Locomotives built partly by Berlin Machine Co. and partly by Belgian works; requirements and characteristics; results of trial trips. See also description in Ry. Gaz., vol. 40, no. 12, Mar. 21, 1924, pp. 416 and 422, 3 figs.

**Three-Cylinder.** L. V. Tests of Three-Cylinder Locomotive. Ry. Mech. Engr., vol. 98, no. 4, Apr. 1924, pp. 203-206, 9 figs. Fast movement of heavy trains produced with low fuel consumption and high boiler efficiency; results of tests run on Lehigh Valley mountain-type locomotive no. 5000, for freight service. See also Ry. & Locomotive Engr., vol. 37, no. 4, Apr. 1924, pp. 103-105, 13 figs.

**Types.** Modern Locomotive Types (Zusammenstellung neuerer Lokomotivbauarten). C. Müller. Praktischer Maschinen-Konstrukteur, vol. 57, no. 7, Feb. 25, 1924, pp. 69-76, 18 figs. Deals with adhesion, rack, and combined adhesion and rack locomotives; passenger and freight locomotives with and without tenders.

### LUBRICANTS

**Handling and Storage.** Good Practice in Handling and Storing Lubricants. Lubrication, vol. 10, no. 1, Jan. 1924, pp. 1-12, 13 figs. Discusses factors involved in storage of lubricants, including construction of oil house or oil room, storage tanks and their accessory equipment for handling products and shipping containers, extent to which semi-solid lubricants are to be used, etc.

### LUBRICATING OILS

**Automobile-Engine.** Lubricating Oils for Automobile Engines (Die Schmieröle für Automobilmotoren). H. Franz. Motorwagen, vol. 27, no. 7, Mar. 10, 1924, pp. 105-108, 5 figs. Study of process of lubrication in automobile engines and properties of lubricating oils in connection therewith.

### LUBRICATION

**Bearings.** Achieving Safety in Lubrication. R. W. A. Brewer. Iron Age, vol. 113, no. 12, Mar. 20, 1924, pp. 857-859, 6 figs. Fundamental principles which underlie art of correct lubrication; results of tests; fatty acids prevent seizure of heavily loaded bearings; normal working friction more important than abnormal conditions.

**Journal Bearings.** The Mechanism of Lubrication. D. P. Barnard, H. M. Myers and H. O. Forrest. Indus. & Eng. Chem., vol. 16, no. 4, Apr. 1924, pp. 347-350, 8 figs. Effect of oiliness on behavior of journal bearings.

**Locomotive Flanges.** A Pneumatic Flange Oiler. Ry. Age, vol. 76, no. 17, Mar. 29, 1924, pp. 841-842, 2 figs. Describes Hooper flange oiler for lubricating locomotive and wheel flanges.

**Multiple-Feed High-Pressure.** Experiences with Multiple Feed, High Pressure Lubrication. L. R. Humpton. Iron & Steel Engr., vol. 1, no. 3, Mar. 1924, pp. 127-129, 3 figs. Describes installation of lubricators in steel works and successful results.

## M

### MACHINE DESIGN

**Kinematic Study of Mechanisms.** The Systematic Use of Bright Colors in the Study of Drives and Mechanisms (Die systematische Anwendung bunter Farben in der Getriebelehre). Hundhausen. Maschinenbau, vol. 3, no. 11, Mar. 13, 1924, pp. 355-356, 13 figs. on supp. plate. Discusses method employed successfully for many years by author, of using bright colors in order to distinguish different parts of a mechanism from one another or the separate groups from an assembled set; includes kinematic instrument sheet, showing use of colors.

### MACHINE TOOLS

**German.** The Machine-Tool Exhibition of the Society of German Machine-Tool Builders at the Leipzig Technical Fair 1924 (Die Werkzeugmaschinen-Ausstellung des Vereines Deutscher Werkzeugmaschinenfabriken auf der Leipziger Technischen Messe 1924). O. Rambuschek. Maschinenbau, vol. 3, no. 10, Feb. 28, 1924, pp. 269-299, 116 figs. Describes tools and machine tools for metal and wood working. See also article by H. Pfennig, entitled New Machine Tools (Neue Werkzeugmaschinen), pp. 300-301, 4 figs., describing three new machines exhibited at show, namely, a turret lathe, grinding machine and automatic milling machine.

**Special.** "Ten Cookie Cutters per Minute." K. H. Crumrine. Am. Mach., vol. 60, no. 15, Apr. 10, 1924, pp. 535-537, 5 figs. How obstacles in development of special machines for making cookie cutter were overcome; cutting irregular pieces from thin aluminum tubing; mechanism based on ordinary pipe-cutter finally successful.

### MACHINING

**Shouldered Work.** Accuracy in Machining Shouldered Work. A. A. Dowd. Machy. (N. Y.), vol. 30, no. 8, Apr. 1924, pp. 590-591, 3 figs. Method of obtaining accurate shoulder distances with turret lathe. Accurate facing on a drill press.

### MANGANESE STEEL

**Casting.** Casting Manganese Steel. H. E. Diller. Foundry, vol. 52, nos. 7 and 8, Apr. 1 and 15, 1924, pp. 245-249 and 298-302, 14 figs. Apr. 1: Describes open-hearth converter and electric-furnace processes; methods of adding manganese to steel; metal softened by heating in oven and quenching. Apr. 15: Heat treatment in electric furnaces; quality of metal determined by bending test piece; details of molding and handling track work.

### MARINE BOILERS

**Tests.** Tests on a Cylindrical Marine Boiler with and without Preheated Air. W. H. Owen. Mar. Engr.,

# Manufactured by **CLASSIFIED LIST OF MECHANICAL EQUIPMENT** Alphabetical List on page 156

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

vol. 20, no. 4, Apr. 1924, pp. 244-248, 8 figs. Account of tests undertaken to ascertain what economical results were to be expected from a marine boiler of cylindrical type when air for combustion was preheated, by new form of heater to a degree much higher than had been possible with type of apparatus hitherto used, and to compare this efficiency with that obtained with natural draft. Abstract of paper read before Instn. Engrs. & Shipbuilders in Scotland.

#### MARINE STEAM TURBINES

**De Laval.** Geared Turbine Drive. Pacific Mar. Rev., vol. 21, no. 4, Apr. 1924, pp. 216-217 and 242, 4 figs. Particulars of De Laval compound steam turbine with double-reduction gear, which is to be installed in Southern Pacific single-screw passenger steamer.

#### MATERIALS

**Testing.** Strength and Material Testing (Festigkeits und Materialprüfung), P. Ludwik. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 10, Mar. 8, 1924, pp. 212-214, 6 figs. Difference in strength and notch action in static, dynamic and variable stress. Report from Experimental Engineering Inst. of Vienna Technical High School.

#### MATERIALS HANDLING

**Equipment.** Cutting Corners in Material Handling, A. G. J. Rapp. Blast Furnace & Steel Plant, vol. 12, no. 4, Apr. 1924, pp. 12-16, 14 figs. Horizontal conveyors, vertical hoists, tractors, cranes and savings effected by their use.

#### METAL DRAWING

**Shells.** Drawing Double-walled Steel Shells, R. B. Hickey. Machy. (N. Y.), vol. 30, no. 8, Apr. 1924, pp. 592-594, 4 figs. Describes dies employed in production of steel shells used in connection with an auxiliary mechanism of an a.c. motor and generally known as "spring barrel tubes," and press operations required in blanking, drawing, redrawing and forming shells.

#### METALS

**Elastic and Fatigue Limits.** Elastic and Fatigue Limits in Metals, B. P. Haigh. Birmingham Met. Soc.—Jl., vol. 42, no. 9, Feb. 1924, pp. 412-422 and (discussion) 423-424, 8 figs. partly on supp. plate. Proving and research tests; tensile test as a basis of design; safe stress as a fraction of ultimate tension strength; measurement of fatigue limit; different elastic limits for different kinds of stress.

**Impact Resistance.** Elastic Impact Resistance of Metals and Alloys (Schlagelastigkeit von Metallen und Legierungen), Geo. Weidner. Zeit. für Metallkunde, vol. 16, no. 1, Jan. 1924, pp. 6-11, 13 figs. In author's opinion elastic behavior of materials under dynamic stress is of greatest importance in dimensioning of machine parts and other constructions; describes new method of determining impact elasticity limit of metals and determines according to this method range of permissible permanent stress for aluminum, electrolytic copper, brass, iron and hardened aluminum alloys; influence of notches is taken into consideration.

**Resistance to Wear.** A Universal and Practical Machine for Determining the Resistance of Metals to Wear under the Various Kinds of Friction Encountered in Practice, F. P. Hitchcock. Testing, vol. 1, no. 2, Feb. 1924, pp. 147-155, 5 figs. Describes machine which is also suitable for investigation of efficiency of anti-friction metals and of lubricants.

**Temperature, Effects of.** Summary of the Results obtained from Experiments made during the Years 1918 to 1923 of the Effects of Temperature on the Properties of Metals, A. Mallock. Roy. Soc.—Proc., vol. 105, no. A730, Feb. 1, 1924, pp. 129-134, 6 figs. Study of effects which variations of temperature produce on elasticity and other constants of various metals.

**Tension Testing.** Tension Testing of Thin Plate Metals, N. S. Otey. Iron Age, vol. 113, no. 14, Apr. 3, 1924, pp. 1008-1009, 5 figs. New test grips claimed to insure accurate results on duralumin and alloy-steel sheets.

**Testing.** Some Aspects of the Mechanical Testing of Materials, R. T. Rolfe. Birmingham Met. Soc.—Jl., vol. 42, no. 9, Feb. 1924, pp. 385-405 and (discussion) 405-411, 7 figs. partly on supp. plate. Results of investigation carried out on eyebolts; considerations of load test in its relation to question of brittleness in mild steel; slag inclusions in forgings and their relation to hardening cracks and failures occurring in service; work-hardening of forgings in service.

#### MICROSCOPES

**Design.** Microscopes. Eng. Progress, vol. 5, no. 2, Feb. 1924, pp. 27-29, 3 figs. Physical principles of design; manufacturing difficulties; importance of German industry; special microscopes.

#### MOLDING MACHINES

**Hydraulic vs. Jarring.** Hydraulic vs. Jarring Molding Machine (Hydraulische oder Rüttelformmaschine?) V. Zsák. Giesserei-Zeitung, vol. 21, no. 1, Jan. 1, 1924, pp. 1-5, 8 figs. Nature of sand packing with molding press and jarring machine; it is shown that for up to 24-in. boxes only hydraulic molding machines can be used; for boxes from 24 to 40 in. both systems are equally good; for boxes over 40 in. only jarring molding machine can be used.

**Selection and Operation.** Why Molding Machines? C. W. Miller. Metal Industry (N. Y.), vol. 22, no. 4, Apr. 1924, pp. 146-147. Conditions under which it is advisable to use machines in brass foundry, and when it is poor policy to use them; types best suited to different classes of work; methods of handling and operating to get best results; difficulties which may be encountered and how to overcome them; quality of machine-made castings.

**Types.** Molding Machines and Molding Practice, R. R. Clarke. Metal Industry (N. Y.), vol. 22, no. 3, Mar. 1924, pp. 100-103, 2 figs. Principles of machine

molding and how to distinguish between different types for different classes of work.

#### MOLDING METHODS

**Cylinder Stuffing Box.** Molding a L. P. Cylinder Stuffing Box, B. Shaw and J. Edgar. Foundry Trade Jl., vol. 29, no. 395, Mar. 13, 1924, pp. 211-212, 7 figs. Describes successive operations.

**Jolt-Ramming.** Jolt-Ramming Molding Practice, A. L. Key. Foundry Trade Jl., vol. 29, no. 397, Mar. 27, 1924, pp. 249-251, 8 figs. Describes author's practice. Principles, advantages, types of machines and installations, layout and tackle.

#### MOLDS

**Cast-Steel.** Comparison of Cast Steel and Iron Ingot Molds, Fr. Schivetz. Forging—Stamping—Heat Treating, vol. 10, no. 3, Mar. 1924, pp. 123-125. Account of author's experiments with steel ingot molds, from which he concludes that great distrust toward steel molds is not wholly warranted; with properly chosen pouring method and careful observance of all physical properties, favorable economic results can be obtained. Translated from Stahl u. Eisen, Dec. 28, 1922. See reference to original article in Eng. Index 1922, p. 431.

**Long-Life.** Making Long Life Molds, O. Smalley. Foundry, vol. 52, no. 8, Apr. 15, 1924, pp. 294-297. Details of refractory mixtures which give satisfactory service; record of series of tests under shop conditions; plaster, paper pulp, ganister, carborundum and monazite among materials used.

#### MONEL METAL

**Welding.** Welding Monel Metal and Nickel. Welding Engr., vol. 9, no. 3, Mar. 1924, pp. 25 and 28-29, 8 figs. Correct procedure for welding by oxy-acetylene, metallic-arc, carbon-arc and resistance methods.

#### MOTOR BUSES

**Hydraulic Transmission.** Hydraulic Transmission for Omnibuses, Engineer, vol. 137, no. 3559, Mar. 14, 1924, p. 292, 1 fig. New system of hydraulic transmission gear which is development of mechanism, devised by same inventor for locomotive work, but modified to suit exigencies of chassis on which it has been fitted.

**Removable Top.** New Bus with Removable Top is Installed by Fifth Ave. Coach Co. Automotive Industries, vol. 50, no. 11, Mar. 13, 1924, pp. 614-615, 4 figs. Novel covering protects passengers from rain and snow but can be rolled up in fair weather; front and rear are inclosed in glass panels; capacity increased by lengthening upper deck.

**32-Volt Systems for.** Higher Voltage Systems Suggested for Heavy-Duty Motor Buses, A. M. Dudley and W. E. Menzies. Bus Transportation, vol. 3, no. 4, Apr. 1924, pp. 169-171. Arguments advanced in favor of making 32 volts standard for electrical systems on buses capable of carrying 50 to 60 passengers.

#### MOTOR-TRUCK TRANSPORTATION

**Germany.** Truck Transportation Growing Rapidly in Germany, A. Sommer. Automotive Industries, vol. 50, no. 11, Mar. 13, 1924, pp. 627-628. Automotive development hindered by high fuel costs, poor roads, and social unrest; Diesel engines likely to replace present power plants; cooperation of railroads.

#### MOTOR TRUCKS

**Guy Subsidy.** The Latest Subsidy Chassis Model. Motor Transport (Lond.), vol. 38, no. 997, Apr. 7, 1924, pp. 419-421, 9 figs. Particulars of new 30-cwt. Guy designed to meet War Office requirements; 25.6-hp. 4-cylinder engine.

**Light Delivery.** Special Design Features Are Incorporated in Federal Light Delivery Truck. Automotive Industries, vol. 50, no. 15, Apr. 10, 1924, pp. 816-818, 5 figs. Transmission is three-speed-and-reverse sliding pinion type; all four gears on secondary shaft are made in single unit mounted on stationary shaft on flexible roller bearings, equipped with Willys-Knight engine.

**Producer-Gas-Driven.** The Problem of Producer-Gas-Driven Motor Trucks (Aperçu sur l'état actuel de la question des camions à gazogène), M. Chauvierre. Technique Automobile & Aérienne, vol. 15, no. 124, 1924, pp. 8-16, 10 figs. Describes E. T. I. A. and Renault producers; results of tests employing wood and charcoal as fuel; conclusions.

**Renault.** The 17.9 hp. Renaults. Motor Transport (Lond.), vol. 38, no. 997, Apr. 7, 1924, pp. 425-427, 8 figs. Particulars of two freight-carrying chassis for 30-cwt. and 35-cwt. loads respectively and a 20-passenger coach model fitted with 4-wheel brakes.

**Trailers.** Motor-Truck Trailers (Lastwagenanhänger), C. Kolley. Motorwagen, vol. 6, Feb. 29, 1924, pp. 92-95, 5 figs. Describes new type of two-wheel trailer built by Dürkopp Works, Berlin, for their 1½-ton high-speed truck.

#### OIL ENGINES

**Airless-Injection.** Standardizing Airless-Injection Engines. Motorship, vol. 9, no. 4, Apr. 1924, pp. 270-271, 2 figs. Standardization by Vickers, Ltd., of their 600-b.hp. mercantile 4-stroke oil engine.

**Bethlehem.** Cubore's New Bethlehem Engine Demonstrated. Motorship, vol. 9, no. 3, Mar. 1924, pp. 195-197, 4 figs. Single-screw vessel of 3500 i.h.p. is put into service by Ore Steamship Corp. See also description of new Bethlehem oil engine, pp. 198-202, 16 figs.

**The Bethlehem Steel Company's New Oil Engine Shipbldg. & Shipg. Rec.,** vol. 23, no. 10, Mar. 6, 1924, pp. 275-282, 16 figs. Detailed description of vertical 2-cycle single-acting oil engine, claimed to be first oil engine of all-American design; constructed in units of four, six, or eight cylinders, running at a speed of from 161 r.p.m. for land power and twin-screw marine purpose down to 90 r.p.m. for single-screw marine use. Description of engine as installed on motorship Cubore. See also Mar. Eng. & Shipg. Age, vol. 29, no. 3, Mar. 1924, pp. 161-167, 15 figs.

**Developments.** Recent Developments in Oil-Engine Practice, J. T. Godfrey and K. W. Merrylees. Roy. Engrs. Jl., vol. 38, no. 1, Mar. 1924, pp. 28-32, 2 figs. Developments in Diesel and semi-Diesel, or heavy-oil engine.

**Marine.** Some Aspects of the Large Marine Oil Engine, C. J. Hawkes. North-East Coast Instn. Engrs. & Shipbldrs., advance paper, no. 2725S, for meeting Apr. 4, 1924, 15 pp., 3 figs. Deals with questions related to cycle temperatures.

**The Utilisation of Waste Heat in Marine Oil Engines.** Mar. Engr. & Naval Architect, vol. 47, no. 558, Mar. 1924, pp. 111-114, 6 figs. Theoretical possibilities.

**Palmer.** The New Palmer Oil Engine. Shipbuilder, vol. 30, no. 164, Apr. 1923, pp. 285-286, 1 fig. Particulars of engine intended for British Tanker Co.'s oil-carrying ship British Aviator; 6-cylinder opposed-piston type working on two-stroke cycle and having a diagonal rod coupling system between top and bottom pistons of adjacent cylinders, giving a double-acting action in reference to each individual crank-pin; 3000 b.h.p. at 90 r.p.m.

#### OIL FUEL

**Equipment, Rules for.** New Fuel-Oil Rules for New York City. Heat & Vent. Mag., vol. 21, no. 3, Mar. 1924, pp. 67-71. Amendments adopted by Board of Standards and Appeals, dealing with construction and installations of oil-burning equipment and storage and use of fuel oil.

#### OPEN-HEARTH FURNACES

**Moll End.** The Moll End for Open-Hearth Furnaces (Der Moll-Kopf für Siemens-Martin-Ofen), H. Moll. Stahl u. Eisen, vol. 44, no. 8, Feb. 21, 1924, pp. 193-196 and (discussion) 197-202, 2 figs. Describes furnace designed by author; advantages of Moll furnace end; practical results.

#### OXY-ACETYLENE WELDING

**Heavy Plate.** Fabricating Heavy Plate by Oxy-Acetylene Welding. Boiler Maker, vol. 24, no. 3, Mar. 1924, pp. 63-67, 19 figs. Construction of two 1000-barrel oil-storage tanks, 125-ft. rotary kiln, and 50,000-cu. ft. gas holder.

## P

#### PAINTS

**Colloidal Reaction, Effect of.** Phenomena in Paints and Varnishes Induced by Colloidal Reactions, H. A. Gardner. Paint Mfrs.' Assn. of U. S.—Sci. Section; no. 200, Mar. 1924, pp. 279-293. Wetting and grinding phenomena; texture of pigments; absorption phenomena; plasticity and yield value; electrical charge on pigments; viscosity and surface-tension effects, etc.

**Protective Properties.** The Protective Properties of Paint, W. T. Pearce. Chem. & Met. Eng., vol. 30, no. 12, Mar. 24, 1924, pp. 463-467, 10 figs. Scientific investigations at North Dakota Agricultural College; formulation of test paints; factors affecting durability.

#### PAPER MANUFACTURE

**Chromo Paper.** Special Moistening of Chromo Paper, E. Arnould. Paper Trade Jl., vol. 78, no. 14, Apr. 3, 1924, pp. 79-80. Notes on manufacture of chromo paper; moistening of paper as it is being reeled. Translated from Revue Universelle de la Papeterie et de l'Imprimerie, Dec. 14-16, 1923.

**Driers, Vacuum.** The Vacuum Paper Machine Dryer, O. Minton. Paper Mill, vol. 48, no. 15, Apr. 12, 1924, pp. 90, 92, 94, 96, 98, 100, 102, 104, 132, 134, 136, 138 and 140. Historical review; mechanical considerations; operation; theoretical considerations; mill data. This method of drying paper is revolutionary improvement in art of paper making, second only to advent of Fourdrinier paper machine.

**Minerals and Chemicals Used.** The Non-Metallic Minerals and Chemicals Used in the Pulp and Paper Industry, L. H. Cole. Can. Min. Jl., vol. 45, nos. 7, 10 and 11, Feb. 15, Mar. 7 and 14, 1924, pp. 158-160, 236-239 and 258-261, 2 figs. Indicates where the different minerals and chemicals are being obtained, process of their manufacture, and possibilities of their being procured in commercial quantities in Canada.

**Sizing.** The Asa Process, E. Westarp. Paper Trade Jl., vol. 78, no. 14, Apr. 3, 1924, p. 77. Consists in the use of a chemical agent which, on addition to glue, transforms it into a gel which can be ground and added to furnish in beater; is cheaper and simpler than other sizing processes and eliminates use of surface sizing but gives same results.

**The Sizing of Paper.** L. P. Zhareboff. Paper Trade Jl., vol. 78, no. 13, Mar. 27, 1924, pp. 45-53, 6 figs. Review of latest books on papermaking; results of study on rosin.

**Wood Pulp, Measurement of.** Weight of Wood and Quantity of Pulp, R. Sieber. Paper, vol. 33, no. 21, Mar. 13, 1924, pp. 7-10, 5 figs. Deals with measuring pulpwood by weight instead of volume. Amount of moisture in wood influences yield of pulp, capacity of digester being affected. Results of investigations

**Stampings, Sheet Metal**  
Rockwood Sprinkler Co.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume.

Translated from Svensk Pappers-Tidning, 15 and 17, 1923.

## PIPE

**Bending.** Pipe Bending, Johnstone-Taylor. Boiler Maker, vol. 24, no. 3, Mar. 1924, p. 81, 1 fig. Brief review of Bonn system developed in England and scope of its application.

## PISTON RINGS

**Calculation and Production.** A New Method of Calculation and Production of Spring Rings (Ein neues Verfahren zur Berechnung und Anfertigung selbstspannender Kolbenringe), O. Pollert. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 11, Mar. 15, 1924, pp. 253-254, 2 figs. Discusses some well-known methods of making piston rings and describes new method developed in Sweden by R. Bennet, and gives results of tests.

## PLATES

**Deformations and Stresses.** Deformations and Stresses of Continuous Plates (Die Formänderungen und die Spannungen von durchlaufenden Platten), A. Nádai. Bauingenieur, vol. 5, no. 5, Mar. 15, 1924, pp. 102-107, 5 figs. Calculation of deformation and stress in slabs which have individual loads at regularly arranged points.

**Perforated, Stresses in.** On Stresses in a Plate with a Circular Hole, S. Timoshenko. Franklin Inst.—Jl., vol. 197, no. 4, Apr. 1924, pp. 505-516, 6 figs. Method of approximating influence of beads, used to reinforce holes, on local stresses.

## PRESSES

**Classification.** Classification of Power Presses, F. R. Daniels. Machy. (N. Y.), vol. 30, no. 8, Apr. 1924, pp. 617-618, 7 figs. Advocates classification by style of frame, because use to which a press may be put and method of moving gate may be varied; describes machines built by Waterbury Farrel Foundry & Machine Co., Waterbury, Conn., the names given them being those applied by this company.

**Ejectors for.** Ejectors for Punches and Dies, H. M. Goff. Machy. (N. Y.), vol. 30, no. 8, Apr. 1924, pp. 608-609, 3 figs. Describes different devices employed for ejecting parts from punches and dies of power presses.

**Inclinable.** Design of Inclinable Power Presses, P. A. Friedell. Machy. (N. Y.), vol. 30, no. 8, Apr. 1924, pp. 626-628, 1 fig. Calculations for designing gearing, driving shaft, back-shaft bearing, flywheel and pulleys.

## PRODUCER GAS

**Factory Power and Heating.** Gas for Power and Heating. Power Engr., vol. 19, no. 216, Mar. 1924, pp. 99-105, 12 figs. Describes Raleigh's Cycle Co.'s power and heating plant; factory uses suction and producer gas for whole of its heat-treatment processes, and as fuel for its prime movers.

## PULLEYS

**Pressed Metal, Manufacture.** Redesigning a Pressed Metal Pulley, E. Panek. Forging—Stamping—Heat Treating, vol. 10, no. 3, Mar. 1924, pp. 129-130, 8 figs. Eight operations eliminated in manufacture of pulley by change of design and addition of one more part; strength and appearance materially improved.

## PULVERIZED COAL

**Boiler Firing.** Burning Low-Grade Fuels in Pulverized Form, E. K. Scott. Colliery Guardian, vol. 127, no. 3297, Mar. 7, 1924, pp. 607-608 (includes discussion). Particulars of some of the largest boilers in world designed for working with pulverized fuel firing on Lopolco system; particulars of power stations in France and Belgium which are being equipped with boilers to burn pulverized fuel; application to colliery boilers; colliery coal dust as pulverized fuel. Paper read before Coke Oven Mgrs.' Assn.

**Combustion.** Experimental Investigation of the Combustion of Pulverized Coal (Etude expérimentale de la combustion du charbon pulvérisé), E. Audibert. Revue de l'Industrie Minière, no. 73, Jan. 1, 1924, pp. 1-32, 16 figs. Points out that primary reason for large combustion chambers is abnormal temperature otherwise reached by brickwork; it is suggested that combustion chamber should be in two compartments, viz., an ignition chamber of very refractory bricks, impermeable to heat, and main combustion chamber with walls permeable to heat; heat passing through latter could be recovered by means of water jacket through which passes feedwater.

## PUMPING ENGINES

**Holland.** Modern Pumping Engines in Holland J. C. Dishoorn. Engineering, vol. 117, no. 3040, Apr. 4, 1924, pp. 446-448, 5 figs. Describes representative installations of modern practice and considerations involved in design. (Abstract.) Paper read before Instn. Engrs. & Shipbuilders in Scotland.

## PUMPS

**Speed of Absorption.** Contributions to the Theory of Pumps and Compressors (Beiträge zur Theorie von Pumpen und Kompressoren), E. Altenkirch. Zeit. für technische Physik, vol. 5, no. 2, 1924, pp. 44-52, 7 figs. Study of phenomenon of absorption of air from spaces in which liquids can penetrate leads to conclusion that velocity of absorption for low suction heads increases with increasing vacuum, with smaller clearance space more rapidly than with larger.

## PYROMETERS

**Optical.** The Optical Pyrometer as a Brightness Photometer, W. E. Forsythe. Franklin Inst.—Jl., vol. 197, no. 4, Apr. 1924, pp. 517-525, 4 figs. Points out that disappearing filament pyrometer, with red-green glass in eyepiece, has been found very satisfactory as photometer for measuring brightness of different

surfaces that were difficult to measure by ordinary means.

## PYROMETRY

**Fundamental Principles.** Non-Technical Discussion on Pyrometry, G. C. McCormick. Forging—Stamping—Heat Treating, vol. 10, nos. 1 and 2, Jan. and Feb., 1924, pp. 38-39 and 72-74. Fundamental principles reduced to terms within understanding of layman; frequent checking of couples and instruments essential.

**Steel Works.** General Phases of Pyrometry and Temperature Control in the Steel Industry, O. Brewer. Iron & Steel Engr., vol. 1, no. 3, Mar. 1924, pp. 116-123 and (discussion) 123-127, 8 figs. Deals with instruments for indicating, recording and controlling temperatures, and their application to blast furnace, open hearth, soaking pits, rolling mill, etc.

# R

## RADIATORS

**Traps.** Operating Characteristics of Radiator Traps. Heat & Vent. Mag., vol. 21, no. 4, Apr. 1924, pp. 57-60, 5 figs. What heating industry should expect of these devices in way of permanency. Symposium based upon recent tests conducted by Nat. Assn. Bldg. Owners and Mgrs.

## RAILS

**Failures.** High Rail Failure Record for 1917 Rollings. Iron Age, vol. 113, no. 12, Mar. 20, 1924, pp. 851-852. Data from records of rail failures made public by rail committee of Am. Ry. Eng. Assn. Electric welding in steel fabrication.

**Old, Rerolling into Rods.** Rerolling Old Railroad Rails Into Rods, A. Noell. Iron Age, vol. 113, no. 12, Mar. 20, 1924, pp. 866-869, 10 figs. Methods of operation in rolling with oblique pressure; reduction of sectional area in rolling; influence of steel strength. (Abstract.) Translated from Stahl u. Eisen.

## RAILWAY OPERATION

**Express-Train Resistance.** The Resistance of Express Trains, C. F. D. Marshall. Ry. Engr., vol. 45, no. 531, Apr. 1924, pp. 133-137, 3 figs. Natural wind; effect of direct wind; effect of wind gusts on frontal pressure; limiting speeds.

**Freight Rolling-Stock Distribution and Control.** Increasing the Mobility of Freight Rolling-Stock. Ry. Gaz., vol. 40, no. 11, Mar. 14, 1924, pp. 363-374, 19 figs. Lond. & North East Ry. now control distribution of whole of their freight rolling stock from a central control office at York, working through 24 district superintendents' offices and 120 sub-control stations. Explains means by which economy in wagon movement is effected and mobility of freight rolling stock increased.

**Freight-Train Delays, Cost of.** What Is Cost of Freight Train Delays? Ry. Age, vol. 76, no. 19, Apr. 12, 1924, pp. 925-926. Committee of signal section, Am. Ry. Assn., analyzes charges and fixes average at \$21.07 per hr.

**Loaded Car Movement, Delays.** Some Causes of Delay to Loaded Car Movement, R. A. Munsch. Ry. Rev., vol. 74, no. 15, Apr. 12, 1924, pp. 681-683. Analyzes delays for which shipper is primarily responsible and for which agent is responsible.

**Train Control.** Making Brake Tests for Train Control, C. B. Miles. Ry. Signaling, vol. 17, no. 3, Mar. 1924, pp. 98-100, 4 figs. Relation of air brake to signal engineering from standpoint of air-brake engineer. Methods of making tests.

**Train Control Air Devices Improved.** Ry. Signaling, vol. 17, no. 4, Apr. 1924, pp. 162-164, 3 figs. Indiana Equipment Corp. develops valves to give graduated reduction of brake pipe pressure.

**Train Control Test Engine on the U. P. Ry.** Signaling, vol. 17, no. 3, Mar. 1924, pp. 102-103, 5 figs. Describes equipment of locomotive fitted by Union Pacific with three types of control equipment to determine device best suited to its conditions; installation made so that locomotive could be operated over adjacent territory on which the three types of road apparatus were installed.

## RAILWAY REPAIR SHOPS

**Locomotive, Welding Standardization.** Welding Standardization in Locomotive Shops, J. S. Heaton. Ry. Mech. Engr., vol. 98, nos. 3 and 4, Mar. and Apr. 1924, pp. 176-178 and 231-234, 5 figs. Review of the various methods used on boilers, fireboxes, running gear, cylinders and reclamation work; proper care of equipment.

## RAILWAY SHOPS

**Machine Tools, Application of Modern.** How Modern Machine Tools Cut Costs. Elec. Ry. Jl., vol. 63, no. 12, Mar. 22, 1924, pp. 444-454, 29 figs. Practices of some shops in application of modern machine tools and methods to electric railway work. How multiple cutting lathes reduce cost of axle machining; improvements in wheel lathes and boring mills; special machines used in bearing work; etc.

**Piecework Production in.** Piecework Production as Applied to Electric Railways, E. C. Parham. Elec. Traction, vol. 20, no. 3, Mar. 1924, pp. 124-125. How piecework is checked and recorded to derive most beneficial results from this production method.

**Woodworking Machines.** Wood-Working Plant for Railway Carriage and Wagon Building. Ry. Engr., vol. 45, no. 529, Feb. 1924, pp. 61-64, 9 figs. Describes mortising, boring, tenoning and other machines.

## RAILWAY SIGNALING

**Automatic, for Grade Crossing.** Automatic Interlocker for a Crossing. Ry. Signaling, vol. 17, no. 4, Apr. 1924, pp. 165-168, 3 figs. Satisfactory for thin traffic; home and distant signals arranged on "normal danger" plan.

**Automatic Block.** A. C. Supply with Battery Reserve for Automatic Block Signaling, H. G. Morgan. Ry. Signaling, vol. 17, no. 4, Apr. 1924, pp. 158-160, 1 fig. Discusses use of commercial power for railway signaling with emergency reserve battery; application of floating system on terminals; transmission for systems requiring more power; systems using power for all functions; signals lighted electrically. Paper presented before Signal Section, Am. Ry. Assn.

**Report on A. C. Block Signaling.** Ry. Signaling, vol. 17, no. 3, Mar. 1924, pp. 126-128. Report of Am. Ry. Assn. committee on necessary modification of a. c. track circuits in detail or in principle to insure reliable protection of motor buses and motor cars, and availability of rectifiers for signal systems.

**Direct-Current.** Report of Committee on D. C. Signaling. Ry. Signaling, vol. 17, no. 3, Mar. 1924, pp. 132-135. Report of Am. Ry. Assn. committee. Instructions for testing resistance of switch circuit controller, shunting circuits and contacts; maximum resistance for switch circuit controllers, shunting circuits and contacts; specification for bonding track circuits.

**Light Signals.** D. C. and A. C. Power for Light Signals, L. S. Dunham. Ry. Signaling, vol. 17, no. 3, Mar. 1924, pp. 113-115. Reliable, economical operation to be derived by different combinations of primary battery and a. c. supply.

**115 Miles of Light Signals on Santa Fe, E. Winans.** Ry. Signaling, vol. 17, no. 4, Apr. 1924, pp. 155-157, 8 figs. Electrically lighted switch lamps and pumping-station motor are fed from transmission line. See also Ry. Age, vol. 76, no. 17, Mar. 29, 1924, pp. 843-844, 2 figs.

**Points Operation, Automatic.** Automatic Operation of Railway Points. Ry. Engr., vol. 44, no. 527, Dec. 1923, pp. 473-474, 1 fig. Describes automatic signaling arrangement on Mersey Ry., England, first installation in world where trains make their own point movements; this allows for two signal boxes to be closed.

**Single Lines.** Economies on Single Lines. Ry. Engr., vol. 45, no. 530, Mar. 1924, pp. 91-94, 6 figs. Single lines are more costly to signal and to man than double lines of equal or slightly higher traffic density, because of necessary stopping places which, generally, have a layout and signaling altogether out of proportion to ordinary traffic demands of locality. Describes how some of this cost may be reduced.

**Storage-Battery Maintenance and Operation.** Report of Committee on Instruction. Ry. Signaling, vol. 17, no. 3, Mar. 1924, pp. 130-131, 1 fig. Report of Am. Ry. Assn. committee giving instructions on installation, maintenance and operation of storage batteries of both lead and nickel alkaline types, and care and installation of insulated wire.

**Telegraph and Telephone Practice.** Telegraph and Telephone Practice, Chas. S. Rhoads. Ry. Signaling, vol. 17, no. 4, Apr. 1924, pp. 173-175, 12 figs. West. Elec. Co. developments of selectors, group type, intercalling and time sending.

## RAILWAY TIES

**Preservative Treatment.** Improving Method of Treating Ties with Zinc Chloride, J. D. MacLean. Ry. Eng. & Maintenance, vol. 20, no. 4, Apr. 1924, pp. 160-162, 4 figs., 3 tables. Experiments show way to improve treatment, reduce fuel consumption and increase plant output.

## RAILWAY TRACK

**Constituents, Manufacture of.** The Production of Iron and Steel for Railway Purposes, C. J. Allen. Ry. Engr., vol. 44, no. 527, Dec. 1923, pp. 453-456 and 465, 9 figs. Manufacture of fishplates, steel sleepers, corrugated sheets, slag bricks and concrete, and miscellaneous equipment, at Cleveland Steelworks of Bolckow, Vaughan & Co. Ltd.

**Crossings.** Report on Highway Crossing Protection. Ry. Signaling, vol. 17, no. 3, Mar. 1924, pp. 123-125, 2 figs. Report of Am. Ry. Assn. committee on requisites for automatic signals used for highway crossing protection, transmission values, reflectors, circuits, code on colors for traffic signals.

**Depression and Elevation, Combination.** C. & N. W. Ry. Depresses Busy Main Line at Milwaukee. Eng. News-Rec., vol. 92, no. 14, Apr. 3, 1924, pp. 570-574, 3 figs. Grade-crossing elimination improves operating conditions; new four-track line; one running track maintained during work; three types of monolithic and precast concrete walls.

**Rail Laying, by Machine.** Laying Rail with a Machine in India. Ry. Eng. & Maintenance, vol. 20, no. 4, Apr. 1924, pp. 157-159, 4 figs. Labor-saving equipment which may be applied to advantage even where wages are extremely low.

**Platelaying with the Anderson Rail Conveyor.** Ry. Engr., vol. 45, no. 529, Feb. 1924, pp. 58-60, 5 figs. Account of track-laying work carried out on Bengal-Nagpur Ry. in India with aid of a simple machine invented by A. T. D. Anderson; description of machine.

**Renewal.** Getting the Maximum Service from Rail, B. M. Cheney. Ry. Eng. & Maintenance, vol. 20, no. 4, Apr. 1924, pp. 145-148. Analysis of various factors that determine when rail must be replaced.

## RAILWAYS

**Future Traffic Forecast.** Forecasting Future Volume of Railway Traffic, L. E. Peabody. Ry. Age, vol. 76, no. 18, Apr. 5, 1924, pp. 899-900. Consideration of Blood's formula is said to lead to estimates that are too large; original article by J. B. Blood was printed in same journal (Feb. 9, 1923, p. 369).

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

**Reclamation Plant.** C. B. & Q. Builds Modern Reclamation Plant. Ry. Age, vol. 76, no. 19, Apr. 12, pp. 919-923, 9 figs. New facility at Eola, Ill., has large scrap dock with huge gantry cranes to facilitate sorting.

#### REDUCTION GEARS

**Shock-Absorbing.** Shock-Absorbing and Concentric Speed Transformer. Engineering, vol. 117, no. 3038, Mar. 21, 1924, p. 378, 7 figs. Describes system combining speed reduction obtainable with epicyclic gear, with use of shock-absorbing characteristics of helical springs.

#### REFRIGERATING MACHINES

**Types.** Modern Refrigerating Machines, R. G. Reid. Inst. Mar. Engrs., advance paper for meeting Jan. 8, 1924, 11 pp. Factors which have influenced adoption of high-speed compressor; description of some particular machines; summary of tests taken from such machines on test bed and in actual service.

#### REFRIGERATING PLANTS

**Automatic, Electricity in.** Electricity in Automatic Refrigeration, W. Deans. Refrig. Eng., vol. 10, no. 9, Mar. 1924, pp. 335-344 and 348-349, 4 figs. Character of load on motor; types, selection, control and protection of motors; description of automatic plant.

**Hold-Over Tanks.** Heat Transfer in Brine Hold-Over Tanks, Chas. H. Herter. Power, vol. 59, no. 15, Apr. 8, 1924, pp. 563-565. Discusses three types of hold-over tanks; how to calculate size of congealing tank.

#### REFRIGERATION

**Electric.** Electro-Mechanical Refrigeration, A. D. Melay. Nat. Elec. Light Assn. Bul., vol. 11, no. 3, Mar. 1924, pp. 155-158. Temperature observations of cellars and living rooms; summary of refrigerator temperature studies; vapour process; ice-cream cabinets; etc. Abstract of paper read at Great Lakes Division, Nat. Elec. Light Assn.

**Oil-Refining Industry.** Oil Refinery Refrigeration, C. H. Herter. Refrig. Wld., vol. 59, no. 3, Mar. 1924, pp. 13-16. Data on important applications of refrigeration in various industries treating oils, fats and greases.

#### REGULATORS

**Oil-Pressure.** The Working of a Generating Set Provided with an Oil-Pressure Regulator (Fonctionnement d'un groupe électrogène pourvu d'un régulateur à pression d'huile, sous la forme la plus générale), M. Barbillon. Revue de l'Industrie Minière, no. 75, Feb. 1, 1924, pp. 69-76, 2 figs. Discusses working of a tachymetric oil-pressure regulator; design and calculation.

#### RIVETED JOINTS

**Frictional Resistance of.** Determination of the Frictional Resistance of Rivet and Bolt Connections (Bestämning av glidmotståndet i nit- och bultförband), W. Weibull. Teknisk Tidskrift, vol. 54, nos. 3 and 7, Jan. 19 and Feb. 16, 1924, pp. 17-21 and 51-54 (Allmänna Avdelningen), 11 figs. Results of measurement of friction between steel plates; calculation of stresses in rivets. Diagrams and tables.

#### RIVETS

**Heat Treating Steel for.** Heat Treating Low-Carbon Bars for Rivets, C. B. Langstroth. Iron Age, vol. 113, no. 12, Mar. 20, 1924, pp. 849-850, 3 figs. Advantage derived from heat treating low-carbon steel as shown by some experience with rivets; cold working strains, as cause of broken heads, removed; properties of final product improved.

#### ROLLING MILLS

**Blooming Mill.** Builds New Blooming Mill in France. Iron Trade Rev., vol. 47, no. 16, Apr. 17, 1924, pp. 1046-1047, 3 figs. Details of new blooming mill erected in works of Société des Acieries de Longwy, built by Maschinenfabrik Sack, Düsseldorf, Germany; used for breaking down ingots into blooms either for 38-in. two-high reversing shape mill or for other smaller section mills, and in addition serves as slabbing mill for rolling slabs for plate mills.

**Gripping of Rolls.** The Gripping of Rolls at Variable Rolling Speed (Das Greifen von Walzen bei veränderlicher Walzgeschwindigkeit), W. Tabel and Er. Schneider. Stahl u. Eisen, vol. 44, no. 12, Mar. 20, 1924, pp. 305-309, 9 figs. Theory of gripping process; influence of quality of material; influence of rolling speed on coefficient of friction; critical speed for gripping; tests on smooth and rough rolls; most favorable rolling speed.

#### ROPE, HOISTING

**Wire.** Wire Hoisting Ropes for Lifts, G. H. Roberts. Mech. Wld., vol. 75, no. 1940, Mar. 7, 1924, pp. 143-146, 3 figs. Discusses features of primary importance for efficient and economical working of lift ropes; rope life, and conditions of a rope's deterioration.

S

#### SCREW MACHINES

**Five-Spindle.** National-Acme Five-spindle Automatic, Machy. (Lond.), vol. 23, no. 597, Mar. 6, 1924, pp. 752-754, 4 figs. Among new features is exclusive use of right-hand tools, telescoping main tool carrier, improved type of spindle carrier, indexing mechanism for spindle carrier, stock feed in either first or fifth spindle, or both, centralized lubrication, etc.

#### SEAPLANES

**Developments and Aims.** The World Status of Seaplanes (L'Orientation actuelle de l'Hydraviation mondiale), Boutin. Aéronautique, vol. 5, no. 55, Dec. 1924, pp. 517-525, 9 figs. Discusses tendencies and aims; evolution of shape and outline; increasing tonnage; metallic construction; improvement of hull and fuselage; future province of marine planes.

#### SHAFTS

**Fastening Drop-Hanger Bearings.** The Fastening of Drop-Hanger Bearings (Befestigung von Hängeagern), Praktischer Maschinen-Konstrukteur, vol. 57, no. 3-4, Jan. 22, 1924, pp. 14-16, 9 figs. Abstract from German Industrial Standards Committee (N. D. I.) report on methods of fastening drop-hanger bearings to concrete beams.

**Torsional Strength.** Torsional Strength of Keyway-cut Shafts, W. R. Needham. Machy. (Lond.), vol. 23, no. 596, Feb. 28, 1924, pp. 705-706, 2 figs. Discusses method of calculating polar moduli; includes table of torsional strength (polar values) of British standard sunk keyway shafts.

#### SHEET METAL

**Stamping.** Widening Applications of Metal Stamping, R. I. Miner. Forging—Stamping—Heat Treating, vol. 10, no. 2, Feb. 1924, pp. 75-78, 6 figs. Describes applications of sheet metal stamping, i.e., work of those industries in which sheet metal is forced to take a desired shape through the action of properly designed tools or dies, operated in a mechanical press.

#### SHELLS

**Tapered, Machining.** Difficulties in Making Tapered Shells, J. Williams. Am. Mach., vol. 60, no. 16, Apr. 17, 1924, pp. 583-585, 2 figs. Drawing shells with parallel sides; cause of buckling and wrinkling; flowage of molecules; variation in density of metal.

#### SOOT BLOWERS

**Tests.** Tests of Diamond Soot Blowers, H. H. Norton. Am. Soc. Nav. Engrs.—Jl., vol. 36, no. 1, Feb. 1924, pp. 42-54, 13 figs. Results of official tests conducted for purpose of determining efficacy of mechanical soot blowers in cleaning water-tube boiler fired with oil fuel, and to ascertain boiler and furnace efficiencies under certain conditions.

#### SPRINGS

**Automobile.** Making Springs for Motor Vehicles, F. H. Colvin. Am. Mach., vol. 60, no. 14, Apr. 3, 1924, pp. 509-511, 10 figs. Testing steel and finding best heat treatment for it; methods of forming eyes and bending curves; assembling and testing springs for deflection.

#### STANDARDIZATION

**Simplification and.** Simplification and Standardization, R. M. Hudson. Am. Soc. Steel Treating—Trans., vol. 5, no. 3, Mar. 1924, pp. 276-284. Reviews work of Division of Simplified Practice, Dept. of Commerce, together with many associations, societies and individual producers, in bringing about standardization of materials produced, as well as effecting reduction in number of types, grades, brands, finishes and sizes; author brings out that much progress has been made in this work.

#### STANDARDS

**European.** European Engineering Standards Issued in 1923. Am. Mach., vol. 60, no. 15, Apr. 10, 1924, p. 538. List of standards issued during 1923 by European Standardizing bodies, which have been received by Am. Eng. Standards Committee, copies of which can be furnished or which may be consulted at offices of Committee.

#### STEAM

**High-Pressure.** The High-Pressure Steam Convention of the Institute of German Engineers. Eng. Progress, vol. 5, no. 2, Feb. 1924, pp. 21-22. Brief account of meeting held in Berlin, Jan. 18-19, and of papers read.

What the Boiler Owner Should Know about High-Pressure Steam was soll der Kesselbesitzer über Hochdruckdampf wissen? Zeit. des Bayerischen Revisions-Vereines, vol. 28, no. 6, Mar. 31, 1924, pp. 41-44, 7 figs. Discusses properties of high-pressure steam up to 100 atmos., and points out that number of auxiliary arrangements are required for its use; difficulties of its generation, complicated design of plants and frequent lack of economic inducements are some of drawbacks counteracting advantages of high-pressure steam.

#### STEAM ENGINES

**Corliss.** Erecting a Corliss Engine, G. Edwards. Southern Engr., vol. 40, no. 6, and vol. 41, no. 1, Feb. and Mar. 1924, pp. 49-51 and 54-57, 12 figs. Feb.: Finishing erection and setting valves. Mar.: Final preparations and breaking in the engine.

**Power Plants.** Slow-Speed Steam Engines for Industrial Purposes, D. S. Capper. Indian & East. Engr., vol. 54, no. 1, Jan. 1924, pp. 34-36. Discusses chief factors which combine to determine best method of power supply, viz., first cost, working costs, suitability to particular work, liability to stoppage owing to breakdowns and strikes, and insurance risk.

**Power Plants, Efficient Use in.** Steam Engine Utility in Modern Power Plants, A. Murphy. Power House, vol. 17, no. 6, Mar. 20, 1924, pp. 21-24 and 46, 6 figs. Plain slide valve, automatic high speed, Corliss and uniflow types still used efficiently in Canadian field despite hydroelectric development; discussion of different types and how to secure efficiency.

**Steps, Standardization of.** A. I. & S. E. E. General Specifications for Construction and Installation of Automatic Engine Stops. Iron & Steel Engr., vol. 1, no. 3, Mar. 1924, pp. 135-136. Specifications adopted

as standard, Sept. 24, 1923, which shall apply to all automatic engine stops of whatever kind or method. See also article, by W. Greenwood, entitled Standardization of Engine Stops, pp. 136-139.

#### STEAM PIPE

**High-Pressure.** Piping Specifications, H. W. Brooks. Power, vol. 59, no. 13, Mar. 25, 1924, pp. 505-506. Gives specifications on high-pressure steam header for Batavia power house of Chicago, Aurora & Elgin Railroad Co., as an example of specifications prepared from purchaser's viewpoint.

#### STEAM POWER PLANTS

**Interconnection of Gas and.** Difficulties Encountered in the Operation of Interconnected Gas and Steam Stations (Quelques Difficultés rencontrées dans l'Exploitation des groupements de Centrales à gaz et à vapeur), F. Courtroy. Assn. des Ingénieurs Electriciens Sortis de l'Institut Electrotechnique Montefiore—Bul., vol. 2, series 7, Jan. 1924, pp. 4-14. Deals with technical, commercial and administrative difficulties.

**Measuring Instruments.** New Apparatus for Steam Power Plants, Measuring and Recording Instruments (Nouveaux Appareils pour Centrales à Vapeur, Instruments de Mesure et d'Enregistrement des Consommations de Vapeur). Industrie Electrique, vol. 33, no. 760, Feb. 25, 1924, pp. 65-72, 13 figs. Description of apparatus constructed and employed by Gen. Elec. Co. in United States and Compagnie Française Thomson-Houston in France.

**Prime Movers, Progress in.** Progress in Prime Movers, Wm. H. Patchell. Engineer, vol. 137, no. 3561, Mar. 28, 1924, pp. 332-334, 3 figs. Review of developments and progress in size of units and pressure; direction in which progress points at present, with mention of some limitations. (Abstract.) Address before Instn. Mech. Engrs.

**Testing, Continuous.** Continuous Power-Plant Testing, T. Maynz. Power, vol. 59, nos. 6, 9 and 12, Feb. 5, 26 and Mar. 18, 1924, pp. 205-208, 324-325 and 450-452, 10 figs. Feb. 5: How efficiency of plant can be found each day; examples of necessary log data together with simple process of making calculations. Feb. 20: Checking performance of turbine room. Mar. 18: Making power-plant heat balance.

**Thermal Efficiency.** Power Plant Simplification, H. D. Fisher. Combustion, vol. 10, no. 4, Apr. 1924, pp. 262-264. Deals with question of how far it is practicable or advisable for an industrial power plant to follow trend of central station to obtain greatest possible thermal efficiency.

#### STEAM TURBINES

**Design and Operation.** Modern Large Steam Turbines. Power, vol. 59, no. 14, Apr. 1, 1924, pp. 543-544, 5 figs. Abstract of lecture delivered by L. Helander before Providence Eng. Soc., Jan. 4, 1924, in which he described conditions governing design and operation of large steam turbines.

**Water Rates of Geared Turbines.** H. E. Brelsford. Mar. Eng. & Shipp. Age, vol. 29, no. 3, Mar. 1924, pp. 171-174, 4 figs. Design and operating factors of impulse, reaction and combined impulse reaction turbines tending to increase economy.

**Marine.** See MARINE STEAM TURBINES

**Nozzle Regulator.** An Automatic Nozzle Regulator for Steam Turbines. Eng. Progress, vol. 5, no. 3, Mar. 1924, pp. 54-55, 3 figs. Consists of number of double-heat drop valves, controlled by one common spindle; each single valve controls steam admission to nozzle, or group of nozzles, of first stage; made by Bergmann Elec. Works, Berlin.

**Operation.** Operating Instructions for Large Turbines. Power, vol. 59, no. 13, Mar. 25, 1924, pp. 490-491. Rules of procedure in starting up and getting turbine under way; taken from instructions of Westinghouse Elec. & Mfg. Co.

**Periodic Examination.** Periodic Examinations of Steam Turbines. Power, vol. 59, no. 15, Apr. 8, 1924, pp. 562-563. Instructions of Westinghouse Elec. & Mfg. Co. on details which should be critically observed in periodic examinations.

#### STEEL

**Abrasion, Resistance to.** Brinell's Researches on the Resistance of Iron, Steel and Some Other Materials to Wear, H. A. Holz. Testing, vol. 1, no. 2, Feb. 1924, pp. 104-146, 21 figs. Review of researches and test data, largely based upon translation of Brinell's original paper in Swedish.

**Alloy.** See ALLOY STEELS.

**Basic and Acid, Comparison.** Comparative Investigation of Basic and Acid Steels, Foundry Trade Jl., vol. 29, no. 394, Mar. 6, 1924, pp. 200-201. Also Iron & Coal Trades Rev., vol. 108, no. 2922, Feb. 29, 1924, p. 352. Abstract of paper by F. Schmitz published in recent issue of Stahl u. Eisen, giving details of tests made by author, using new method of comparing basic and acid steels.

**Composition.** Common Elements in Plain Carbon Steel, V. E. Hillman and F. L. Coonan. Forging—Stamping—Heat Treating, vol. 10, no. 2, Feb. 1924, pp. 66-68. A non-technical discussion of properties imparted to steel by common elements entering into its composition; carbon plays most important role.

**Elastic Limit.** Determination of the Elastic Limit of Steels (Détermination industrielle de la limite élastique des aciers), J. Durand. Génie Civil, vol. 84, no. 9, Mar. 1, 1924, pp. 205-208, 3 figs. Discusses three methods of determining elastic limit of steel for industrial uses; comparison of results.

**High-Sulphur.** Effect of Zirconium on Hot Rolling Properties of High-sulfur Steels and the Occurrence of Zirconium Sulfide, A. L. Field. Am. Inst. Min. & Met. Engrs.—Trans., no. 1306-S, Feb. 1924, 17 pp., 10 figs. Describes hot-rolling properties of

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

series of high-sulphur steels; shows how zirconium reacts with sulphur content of molten steel.

**Manganese.** See MANGANESE STEEL.

**Stainless.** Metallurgical Data on Stainless Steels, H. H. Abram. Chem. & Met. Eng., vol. 30, no. 11, Mar. 17, 1924, pp. 430-431. Results of careful investigation of properties: tells how properties most desired in any particular case may be obtained by means of heat treatment.

**Tool.** See TOOL STEEL.

**Welding Heat, Behavior at.** The Behavior of Low-Carbon Sheet Iron at Welding Heat (Das Verhalten von Flusseisenblechen in der Schweisshitze), H. Schottky. Krupp'sche Monatshefte, vol. 5, Jan. 1924, pp. 1-6, 11 figs. Through tests with series of silicon-free plates, it is shown that bending test at maximum temperatures—1350 to 1450 deg.—gives good idea of resistivity of low-carbon steel at welding heat.

**Work Hardening of.** Influence of Temperature on the Work-Hardening of Metals, E. G. Herbert. Engineer, vol. 137, no. 3562, Apr. 4, 1924, pp. 356-357, 6 figs. Tests for measuring work-hardening properties of mild steel at succession of temperatures such as might be expected to be generated by action of cutting tool.

## STEEL CASTINGS

**Manufacture.** Liquid Steel for Castings, T. E. Hull. Foundry Trade J., vol. 29, no. 396, Mar. 20, 1924, pp. 238-240. Deals with subject of liquid steel as required for sand molds in production of steel castings. Control of slag; slag inclusions; influence of dissolved or occluded gases; shrinkage; liquidity and fluidity of steel; chemical composition.

## STEEL, HEAT TREATMENT OF

**Carburization.** Heat-Treatment of Steel with Special Reference to Production, J. W. Urquhart. Machy. (Lond.), vol. 23, no. 596, Feb. 28, 1924, pp. 707-711, 4 figs. Carbon concentration and core condition; deep penetration; wasteful carburization; distortion factor; heating for quenching.

**Quenching.** Effect of Repeated Quenching on Hardness, A. Katto. Forging—Stamping—Heat Treating, vol. 10, no. 3, Mar. 1924, pp. 126-129, 6 figs. Points out that many steels that are not sufficiently hardened after first quenching frequently develop cracks if quenching is repeated, due to excessive hardening.

The Quenching Bath. Machy. (Lond.), vol. 23, no. 597, Mar. 6, 1924, pp. 741-742, 1 fig. Facts concerning rate of cooling; effect of specific heat of bath.

## STEEL WORKS

**Bethlehem, Pa.** Brief Description of the Bethlehem Steel Co.'s Plant. Min. & Metallurgy, vol. 5, no. 208, Apr. 1924, pp. 168-171, 4 figs. Divisions of plant; railroad facilities; power plants; blast-furnace department; open-hearth and bessemer departments; rolling mills, foundries and forge departments; machine shops, etc.; products of plant.

**Cost and Practice Chart.** The A. I. and S. E. E. Iron and Steel Cost and Practice Chart. Iron & Steel Eng., vol. 1, no. 3, Mar. 1924, suppl. loose folder, containing cost data on coke ovens, blast furnaces, open hearth, blooming mill and electric power, compiled by B. R. Shover.

**Electric Drive.** Inland Steel Electrically Operated, F. J. Crolius. Blast Furnace & Steel Plant, vol. 12, nos. 2 and 3, Feb. and Mar. 1924, pp. 90-93 and 142-147, 8 figs. Feb.: Describes by-product coke plant and replacement of steam-driven units by electrical equipment at Indian Harbor plant of Inland Steel Co. Mar.: Electrical equipment in various departments of the two plants.

**Sweden, Bofors.**—The Famous Swedish Steel Works. Forging—Stamping—Heat Treating, vol. 10, no. 3, Mar. 1924, pp. 119-121, 7 figs. Details of Bofors work, founded in 1646, for making fine steel and guns; includes two blast furnaces, steel works with 3 open-hearth furnaces, rolling mills, steel foundry, pig-iron and brass foundry, laboratory and testing department, pressing and forging departments, machine shops, etc.

## STOKERS

**Electric Drives for.** What Type of Stoker Drive Should Be Used? Power Plant Eng., vol. 28, no. 7, Apr. 1, 1924, pp. 374-377, 4 figs. Relative advantages of engine, turbine, a.c. and d.c. motor drives.

## STREET RAILWAYS

**Cars, German.** New German Cars Have Unique Features. Elec. Ry. J., vol. 63, no. 15, Apr. 12, 1924, pp. 574-575, 3 figs. Details of new cars added to rolling stock of Krefeld Street Ry. system, Germany; thin castings for truck side frames; special leaf springs; all bearings roller type; air for motors taken in at roof; doors on ball bearings. From Verkehrstechnik, Sept. 7, 1923.

**Track Maintenance and Reconstruction.** Keeping Track Machinery "on the Job." Elec. Ry. J., vol. 63, no. 12, Mar. 22, 1924, pp. 463-469, 11 figs. How track maintenance and reconstruction are expedited by use of large variety of machine equipment, by Milwaukee Elec. Ry. & Light Co.

## SUBWAYS

**Repair-Shop Methods.** Keeping Subway Trains on Schedule, F. H. Colvin. Am. Mach., vol. 66, nos. 14 and 16, Apr. 3 and 17, 1924, pp. 491-493 and 587-589, 16 figs. Methods of handling motive power in exacting service. Apr. 3: Wheels, tires and journal bearings. Apr. 17: How motor pinions are removed and armatures taken out of motors; method of testing pinions for cracks.

## SUPERHEATED STEAM

**Application.** Superheated Steam, H. F. Ely and L. Weil. Indus. Mgt. (N. Y.), vol. 67, no. 4, Apr. 1924, pp. 212-215, 6 figs. Modern practice in application of superheat.

## SUPERPOWER

**United States.** The Significance and Status of Super Power Development in the United States, E. B. Whitman. Mfrs. Rec., vol. 85, no. 13, Mar. 27, 1924, pp. 79-81, 1 fig. Resume of what it is hoped will be eventually accomplished for the entire country.

# T

## TAPS

**Standard Tolerances for.** Standardizing Tolerances for Taps—Discussion, Chas. C. Winter. Am. Mach., vol. 60, no. 16, Apr. 17, 1924, pp. 593-594. Discussion of article by W. Daley published in same journal, vol. 60, p. 217.

## TEMPERATURE CONTROL

**Automatic Regulators.** "Samson" Automatic Temperature Regulators. Power Engr., vol. 19, no. 216, Mar. 1924, pp. 105-106, 3 figs. Device for maintaining constant temperature of atmosphere or of liquids heated by air, hot water or steam.

## TERMINALS, LOCOMOTIVE

**Turntables.** Unusually Quick Installation of Longer Turntable, H. S. Clarke. Ry. Rev. vol. 74, no. 14, Apr. 5, 1924, pp. 644-649, 9 figs. Delaware & Hudson Co. replaces balanced turntable with longer twin span table in remarkable short time.

## TERMINALS, RAILWAY

**Freight.** Pennsylvania Completes New Freight Station. Ry. Age, vol. 76, no. 18, Apr. 5, 1924, pp. 875-878, 10 figs. Capacious two-level structure latest feature of Pennsylvania's entrance into Detroit; building has concrete roof and expansion joints; 25-ton gantry crane for team tracks.

**Freight Haulage in.** Successful Tractor and Trailor Haulage, J. F. Murphy. Port & Terminal, vol. 4, no. 1, Feb. 1924, pp. 16-19, 6 figs. Intra-city automotive hauling and intra-terminal haulage; off-track versus on-track railway depots; tractor and semi-trailer movement control.

**St. Paul, Minn.** St. Paul Union Depot Completes Third Section, G. W. Wilsey. Ry. Age, vol. 76, no. 17, Mar. 29, 1924, pp. 827-830, 6 figs. Extension of waiting room and six more tracks placed in service; details of small engine terminal, coaling station, engine house and machine shop.

## TESTING MACHINES

**Tensile.** Inauguration of 100-Ton Tensile Testing Machine at Birmingham. Gas J., vol. 165, no. 3173, Mar. 5, 1924, pp. 563-565, 2 figs. Machine is of vertical single-lever type, operated by four straining screws driven through suitable reduction gearing by 15-hp. 440-volt motor; installed at Research Laboratories of Birmingham Gas Dept.

## TEXTILE MILLS

**Oil-Engine Drive.** The Heavy Oil Engine for Factory Drive. Indus. Australian & Min. Standard, vol. 71, no. 1834, Jan. 31, 1924, pp. 167-168, 5 figs. Results obtained at Coney Lane textile mill, Keighley.

## TIRES, RUBBER

**Low-Pressure.** Low-Pressure Tyres. Autocar, vol. 52, no. 1484, Mar. 28, 1924, pp. 549-551, 1 fig. Review of present position; arguments for and against the new tires; changes necessary in converting from ordinary tires.

**Motor-Truck.** The Choice of Tyres for Coaches. Motor Transport (Lond.), vol. 38, no. 993, Mar. 10, 1924, pp. 291-292, 5 figs. Discussion on relative merits of pneumatic, semi-pneumatic and solid equipment from economic point of view.

## TOOL STEEL

**Hardness and Cutting Trials.** Hardness and Cutting Trials of a Tool Steel, Dempster Smith and Israel Hey. Engineer, vol. 137, no. 3562, Apr. 4, 1924, pp. 366-368, 8 figs. Hardness observations on tool steel; cutting tests in Herbert tool-steel testing machine; cutting trials with tools held in turret of ordinary lathe; variation in vertical force with speed of cutting; durability trials with hardened tools subjected to different subsequent heat treatments. Paper read before Manchester Assn. Engrs.

## TOOLS

**Design.** Tool Engineering, A. A. Dowd and F. W. Curtis. Am. Mach., vol. 60, no. 13, Mar. 27, 1924, pp. 463-465, 4 figs. Points of importance in making drawings and keeping records of them.

## TRACTORS

**Cross-Country.** Traction Across Rough and Roadless Country, L. A. Legros. Engineering, vol. 117, nos. 3035, 3036 and 3037, Feb. 29, Mar. 7 and 14, 1924, pp. 282-286, 316-319 and 347-350, 63 figs. General consideration of problem; examination of qualities that cross-country tractor possess, and general features of such tractors. Paper read before Brit. Section of Société des Ingenieurs Civils de France.

## TRANSPORTATION

**Street Car-Bus System.** How Saginaw has Co-ordinated Railway and Bus. Elec. Ry. J., vol. 63, no. 14, Apr. 5, 1924, pp. 531-534, 4 figs. Unified system of transportation result of people's referendum; 25 modern buses operate on three routes specified in 15-yr. franchise; control of system in hands of public; railway equipment rebuilt and painted.

## TURBO-GENERATORS

**Niagara Falls.** World's Largest Hydro Unit.

M. C. Olson and D. B. Plenge. Elec. Wld., vol. 83, no. 4, Jan. 26, 1924, pp. 174-177, 6 figs. Describes Niagara Falls Power Co.'s new turbo-generator, rated at 65,000 kva.; weight is 1,500,000 lb.; driven by a 70,000-hp. hydraulic turbine under an effective head of 213.5 ft.

# V

## VIBRATIONS

**Machinery.** Vibration and Noise, R. B. Grey. Electrician, vol. 92, no. 2392, Mar. 21, 1924, pp. 354-355, 4 figs. Their isolation as affecting erection of machinery; methods by which it has been successfully accomplished during last few years.

## VOCATIONAL TRAINING

**Vocational Guidance and Selection.** The Use of Vocational Tests in the Selection of a Vocation, C. S. Myers. Roy. Soc. Arts—Jl., vol. 72, no. 3722, Mar. 21, 1924, pp. 291-298 and (discussion) 298-302. Vocational selection is defined as the process of choosing, by systematic examination of worker's mental and physical condition, those workers best fitted for vacancies in any one occupation. Work being done on the subject; methods of vocational testing.

# W

## WASTE HEAT

**Industrial Furnaces, Recovery from.** Production and Recovery of Waste Heat from Industrial Furnaces (Entstehung und Gewinnung der Abhitze von Industrieöfen), P. Beck. Gesundheits-Ingenieur, vol. 47, no. 12, Mar. 22, 1924, pp. 90-95. Based on practical experiences important aspects of waste-heat installations are discussed; results of tests on high- and low-pressure waste-heat boilers; suggestions for further developments in design of such boilers.

**Utilization.** Waste-Heat Utilization Plant in Municipal Rudolf-Virchow Hospital in Berlin (Abdamfverwertungsanlage im städt. Rudolf-Virchow-Krankenhaus zu Berlin), Ploppa. Archiv für Wärme-wirtschaft, vol. 5, no. 3, Mar. 1924, pp. 49-51, 3 figs. Increase in economy and efficiency obtained by heating water-heating apparatus with waste steam.

## WELDING

**Electric.** See ELECTRIC WELDING, ARC; ELECTRIC WELDING, RESISTANCE.

**Iron Castings.** See IRON CASTINGS, WELDING.

**Oxy-Acetylene.** See OXY-ACETYLENE WELDING.

**Pipe Lines.** Pipe Line Welding, N. E. Wagner. Acetylene J., vol. 25, no. 6, Dec. 1923, pp. 276-280 and 284-285, 8 figs. Review of progress made in this field during 1923.

## WELDS

**Welded Joints, Efficiency of.** How Efficient Are Welded Joints? E. E. Michaels. Contract Rec. & Eng. Rev., vol. 38, no. 14, Apr. 2, 1924, pp. 327-329, 4 figs. Tests conducted by Chicago Bridge & Iron Works to determine efficiencies of various types of joints; results obtained provide excellent design data.

## WELFARE WORK

**National Cash Register Co. Plant.** Human Factors at Cash Register Plant. Iron Age, vol. 113, no. 12, Mar. 20, 1924, pp. 843-847, 10 figs. Evolution of welfare work of Nat. Cash Register Co. at Dayton, Ohio; division of profits with resultant low labor turnover; apprenticeship in cooperation with engineering schools.

## WIND MOTORS

**Electricity Supply by.** Modern Installations for the Generation of Electricity by Wind Power (Neuere Anlagen zur Erzeugung von Elektrizität durch Windkraft), L. Riefstahl. Praktischer Maschinen-Konstrukteur, vol. 57, no. 6, Feb. 15, 1924, pp. 49-51, 4 figs. Discusses useful field of wind-electric plants, and describes AEG (German Gen. Elec.) system and other plants carried according to this system; economic aspects.

## WOOD PRESERVATION

**Mine Timber.** Wood Preservation and Reforestation Advances Reviewed by American Mine Institute, Coal Age, vol. 25, no. 14, Apr. 3, 1924, pp. 491-492, 4 figs. Discusses three methods whereby present situation may be at least partially relieved, namely, (1) use of less timber in mining; (2) preservation through chemical treatment of timber used; and (3) employment of various substitutes for timber. Based on round-table discussion at Am. Inst. Min. & Met. Engrs.

**Pressure Process, Treatment by.** Specification for the Preservative Treatment of Timbers by Pressure Processes. Wood Preserving News, vol. 2, no. 3, Mar. 1924, pp. 40-43, 2 figs. Approved at 20th Annual Mtg. of Am. Wood-Preservers' Assn., 1924.

## WOODWORKING MACHINES

**Wood-Planing Machines.** High-Speed Wood-Planing Machine. Engineering, vol. 117, no. 3040, Apr. 4, 1924, pp. 445-446, 6 figs. partly on p. 436. Planing machine for production of flooring boards and other repetitive planing work, capable of completely planing timber up to 12 in. by 5 in. in section at rate of 300 ft. per min.

# THE ENGINEERING INDEX

(Registered United States, Great Britain and Canada)

**THE ENGINEERING INDEX** presents each month, in conveniently classified form, items descriptive of the articles appearing in the current issues of the world's engineering and scientific press of particular interest to mechanical engineers. At the end of the year the monthly installments are combined along with items dealing with civil, electrical, mining and other branches of engineering, and published in book form, this annual volume having regularly appeared since 1906. In the preparation of the Index by the engineering staff of The American Society of Mechanical Engineers some 1200 technical publications received by the Engineering Societies Library (New York) are regularly reviewed, thus bringing the great resources of that library to the entire engineering profession.

Photoprint copies (white printing on a black background) of any of the articles listed in the Index may be obtained at a price of 25 cents a page. When ordering photoprints identify the article by quoting from the Index item: (1) Title of article; (2) Name of periodical in which it appeared; (3) Volume, number, and date of publication of periodical; (4) Page numbers. A remittance of 25 cents a page should accompany the order. Orders should be sent to the Engineering Societies Library, 29 West 39th Street, New York.

(See also page 442 of this issue for supplementary items.)

## ABRASIVE WHEELS

**Rubber-Bond.** The Manufacture of Rubber-bond Grinding Wheels, E. Sheldon. Am. Mach., vol. 60, no. 21, May 22, 1924, pp. 777-780, 17 figs. Vulcanizing the wheels; static test to determine breaking strength; methods of dressing wheels; running test; wheels for various purposes.

## AIR COMPRESSORS

**Cylinder Lubrication.** Air Compressor Cylinder Lubrication. Lubrication, vol. 10, no. 3, Mar. 1924, pp. 25-36, 14 figs. Temperatures involved; basic construction features of several types of air compressors; compressor-oil requirements; methods of air-cylinder lubrication; air-compressor explosions.

**Portable Sets.** Portable Air Compressor Sets. Engineering, vol. 117, no. 3039, Mar. 28, 1924, pp. 398-400, 8 figs. Modifications introduced by Globe Pneumatic Eng. Co., Lond., including new type of lightweight set on much improved frame and carriage, specially designed to conform to regulations regarding trailer vehicles.

## AIR CONDITIONING

**Air Cleaners.** Determining the Efficiency of Air Cleaners, A. M. Goodloe. Am. Soc. Heat & Vent. Engrs.—Jl., vol. 30, no. 2, Feb. 1924, pp. 115-119, 5 figs. Describes apparatus and method for determining by weight efficiency of average commercial cleaner, devised primarily for purpose of making a forced efficiency test of air cleaners in a laboratory or shop.

## AIR PUMPS

**Water vs. Steam-Jet.** Water and Steam-Jet Air Pumps for Surface Condensers Especially on Board Ships (Wasser- und Dampfstrahl-Luftpumpen für Oberflächenkondensatoren insbesondere auf Schiffen). Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 12, Mar. 22, 1924, pp. 288-292. Contributions from representatives of steam-jet pumps with and without intermediate coolers, challenging statements on superiority of water-jet pump contained in articles by Blum and Richter in same journal (vol. 67, nos. 39-40 and 45, pp. 956 and 1042, 1923); replies from Blum and Richter are included.

## AIRCRAFT CONSTRUCTION MATERIALS

**Metallic.** Some Materials in Aircraft Construction. Roy. Aeronautical Soc.—Jl., vol. 28, no. 160, Apr. 1924, pp. 226-248 and (discussion) 248-259, 6 figs. First article, by J. D. North, discusses materials which should be used to give lightest structure. Second article, by L. Aitchison, deals with properties of metallic aircraft materials.

**Steel and Duralumin Tubing.** Torsional Strength of Nickel Steel and Duralumin Tubing as Affected by the Ratio of Diameter to Gauge Thickness, N. S. Otey. Nat. Advisory Committee for Aeronautics—Tech. Notes, no. 189, Apr. 1924, 8 pp., 15 figs. on supp. plates. Tests to determine extent of variations of torsional modulus of rupture with ratio of diameter to gauge thickness.

## AIRPLANE ENGINES

**Air-Cooled.** Radial Air-Cooled Aero Engines, A. H. R. Fedden. Roy. Aeronautical Soc.—Jl., vol. 28, no. 160, Apr. 1924, pp. 260-267. Outlines advantages and disadvantages of static air-cooled radial engine, and attempts to analyze problems peculiar to it.

**Evolution.** The Evolution of Aircraft Engines (L'évolution des moteurs d'aviation). Martinot-Lagarde. Technique Moderne, vol. 10, no. 7, Apr. 1,

1924, pp. 195-207, 19 figs. General characteristics; principal types—water-cooled and air-cooled engines; rôle of light metals; factors influencing efficiency of engines; compression; engines for high altitudes and high speeds; means of reducing power loss with altitude; setting and installation of engines; technical details of cylinder construction; new cycles for automobiles and aviation.

**French Developments.** The Great Efforts of French Industry towards Development of New Engines (Le grand effort de l'industrie française vers les moteurs nouveaux). Aérophile, vol. 32, nos. 3-4 and 5-6, Feb. 1-15 and Mar. 1-15, 1924, pp. 61-64 and 102-105, 10 figs. Review of progress made in design of airplane engines and examination of different types, including nearly all of well-known French makes.

**Radiators.** Modern Radiators for Aeronautical Engines. Aviation, vol. 16, no. 20, May 19, 1924, pp. 536-537, 4 figs. New Lamblin radiator consists of manifold fixed to front of wing spar or of strut of landing gear and it is divided into two parts by partition; advantages of 1924 over 1922 model.

## AIRPLANE PROPELLERS

**Design and Tests.** The Analysis of Free Flight Propeller Tests and Its Application to Design, M. M. Munk. Nat. Advisory Committee for Aeronautics—Report, no. 183, 1924, 12 pp., 20 figs. New and useful method suitable for design of propellers and for interpretation of tests with propellers.

## AIRPLANES

**Annular Type.** The "Annular" Type of Aeroplane. Flight, vol. 41, no. 15, Apr. 10, 1924, pp. 204-207, 11 figs. Describes some early experiments with a wing form in which lifting surfaces were circular in plan, with a circular piece cut out of center so as to leave a wing of annular shape.

**Beams, Deflection of.** Deflection of Beams with Special Reference to Shear Deformations, J. A. Newlin and G. W. Trayer. Nat. Advisory Committee for Aeronautics—Report, no. 180, 1924, 19 pp., 8 figs. Influence of form of wooden beam on its stiffness and strength.

**British Empire Exhibition.** Aeronautics. Engineering, vol. 117, no. 3043, Apr. 24, 1924, pp. 550-553, 8 figs., partly on supp. plates. Describes exhibits of Vickers and of Bristol Aeroplane Co. at Brit. Empire Exhibition.

**Flying Boats.** See FLYING BOATS.

**Metal.** Metal Airplane Construction (Ueber Metallflugzeugbau). Motorwagen, vol. 27, no. 11, Apr. 20, 1924, pp. 190-194. Comparisons between metal and wooden airplanes, showing advantages of former; properties of metals employed; heat treatment for annealing and for refining. Abstracted and translated into German from Russian journal, Westnik Woduschnogo Flota.

**Performance.** Comparing the Performance of Geometrically Similar Airplanes, M. M. Munk. Nat. Advisory Committee for Aeronautics—Tech. Notes, no. 190, Apr. 1924, 27 pp. Deals with model rules relating to aeronautical problems, and shows how characteristics of one airplane can be determined from those of another of different weight or size, and of similar type.

**Stability.** Utilization of Laboratory Charts for Study of the Stability and Centering of Airplanes (L'utilisation des Courbes de Laboratoire pour l'étude de la stabilité et du centrage des avions), J. Kerné.

**Aérophile.** vol. 32, nos. 3-4 and 5-6, Feb. 1-15 and Mar. 1-15, 1924, pp. 54-57 and 89-93, 12 figs. It is shown that with regard to stability, laboratory curves lead in very simple manner to desired result; it is essential, before using them, to change them with regard to center of gravity, which can be accomplished by aid of simple graphic method.

**Stout Air Pullman.** The Stout Air Pullman. Aviation, vol. 16, no. 20, May 19, 1924, pp. 533-534, 3 figs. America's first all-metal commercial plane, built in Detroit, is 7-passenger-and-pilot cabin transport designed for air-line work; engine is standard Liberty 400-hp. model, but fitted with new intake manifold which is latest development of Air Service; equipped with new type jump-gap Delco distributing system.

**Strength Tests.** Static Elastic and Breaking Tests of a Falco-Dornier Airplane with a 300-Hp. Hispano-Suiza Engine (Prova statica di elasticità e rottura dell'apparecchio "Falco Dornier" con motore "Hispano Suiza" 300 HP). Note Tecnica di Aeronautica, Jan. 1924, pp. 3-13, 12 figs. Describes tests made at Pisa in Dec., 1923, and gives results obtained.

**Troop Carriers.** The Armstrong-Whitworth "Awana" Troop-Carrier. Flight, vol. 41, no. 14, Apr. 3, 1924, pp. 187-190, 6 figs. Particulars of large biplane having two 450-hp. Napier Lion engines; span 105 ft. 6 in., length 68 ft., total loaded weight 18,450 lb.; cabin accommodates 25 troops with their kit.

**Wings.** Further Notes on the Design of Wing Spar Sections, E. P. Warner. Aviation, vol. 16, no. 14, Apr. 7, 1924, pp. 358-360, 2 figs. Supplementary to article by author in same journal, May 29, 1922, and to critical remarks by A. J. Sutton Pippard, July 17, 1922.

## AIRSHIPS

**Aerodynamic Forces on Hulls.** The Aerodynamic Forces on Airship Hulls, M. M. Munk. Nat. Advisory Committee for Aeronautics—Report, no. 184, 1924, 20 pp., 4 figs. New method for making computations in connection with study of rigid airships, used in investigation of Navy's ZR-1; attempt is made to develop results from very fundamental of mechanics, without reference to some of modern highly developed conceptions.

## ALLOYS

**Aluminum.** See ALUMINUM ALLOYS.

**Bearing Metals.** See BEARING METALS.

**Brass.** See BRASS.

**British Practice.** Useful New Alloys and Bronzes for Engineers, A. W. Jordan. Can. Foundryman, vol. 15, no. 3, Mar. 1924, pp. 13 and 15. British practice in engineering and foundry field.

**Light.** Light Alloys for Pistons and Connecting-Rods, L. Aitchison. Automobile Engr., vol. 14, no. 189, May 1924, pp. 148-155, 5 figs. Discusses advantages and disadvantages of light alloys for automobile-engine pistons and connecting rods.

**Recent Progress in Light Alloys** (Les alliages légers, leurs récents progrès), L. Guillet. Revue Universelle des Mines, vol. 67, no. 1, Apr. 1, 1924, pp. 7-36, 14 figs. Examination of alloys of aluminum and magnesium, their properties, influence of impurities, etc.

## ALUMINUM ALLOYS

**Aluminum-Copper.** Heat Treatment of Aluminum-Copper Alloys, A. Portevin and F. Le Chatelier. Am. Soc. Steel Treating—Trans., vol. 5, no. 5, May

# Classified List of Mechanical Equipment

## Manufactured by Firms Represented in MECHANICAL ENGINEERING

FOR ALPHABETICAL LIST OF ADVERTISERS, SEE PAGE 152

**Accumulators, Hydraulic**  
 \* Farrel Foundry & Machine Co.  
 Mackintosh-Hemphill Co.  
 \* Worthington Pump & Machinery Corp'n

**Aftercoolers, Air**  
 \* Ingersoll-Rand Co.

**Agitators**  
 Hill Clutch Machine & Foundry Co.

**Air Compressors, Receivers, etc.**  
 (See Compressors, Receivers, etc., Air)

**Air Conditioning Apparatus**  
 \* American Blower Co.  
 \* Carrier Engineering Corp'n  
 \* Clarage Fan Co.  
 \* Sturtevant, B. F. Co.

**Air-Jet Lifts**  
 \* Schutte & Koerting Co.

**Air Washers**  
 \* American Blower Co.  
 \* Carrier Engineering Corp'n  
 \* Clarage Fan Co.  
 \* Cooling Tower Co. (Inc.)  
 \* Sturtevant, B. F. Co.

**Alloys**  
 Driver-Harris Co.

**Alloys (Calite)**  
 Calorizing Co.

**Ammeters**  
 \* Bristol Co.  
 \* General Electric Co.  
 \* Westinghouse Electric & Mfg. Co.

**Anemometers**  
 \* Taylor Instrument Cos.  
 Weber, F. Co. (Inc.)

**Annealing**  
 \* American Metal Treatment Co.  
 Nuttall, R. D. Co.

**Arc Welding Equipment**  
 \* Westinghouse Elec. & Mfg. Co.

**Arches, Boiler Furnace**  
 \* McLeod & Henry Co.  
 \* Titusville Iron Works Co.

**Arches, Fire Door**  
 \* McLeod & Henry Co.

**Arches, Ignition (Flat Suspended)**  
 \* Combustion Engineering Corp'n  
 \* McLeod & Henry Co.

**Asbestos Products**  
 Carey, Philip Co.  
 Garlock Packing Co.  
 Johns-Manville (Inc.)

**Ash Lifts, Telescopic**  
 Palmer-Bee Co.

**Autoclaves**  
 Farrel Foundry & Machine Co.

**Babbitt Metal**  
 \* Medart Co.  
 \* Westinghouse Elec. & Mfg. Co.

**Ball Bearings, Gages, etc.**  
 (See Bearings, Gages, Ball)

**Balls, Brass and Bronze**  
 \* Atlas Ball Co.  
 \* Gwilliam Co.

**Balls, Steel**  
 \* Atlas Ball Co.  
 \* Gwilliam Co.  
 \* New Departure Mfg. Co.  
 \* S K F Industries (Inc.)

**Barometers**  
 \* American Schaeffer & Budenberg Corp'n  
 \* Taylor Instrument Cos.

**Barometers, Mercurial**  
 \* Tagliabue, C. J. Mfg. Co.

**Bearings, Ball**  
 \* Fafnir Bearing Co.  
 \* Gwilliam Co.  
 \* Marlin-Rockwell Corp'n  
 \* New Departure Mfg. Co.  
 \* Norma Co. of America  
 \* S K F Industries (Inc.)  
 \* Strom Ball Bearing Mfg. Co.

**Bearings, Collar Oiling**  
 Hill Clutch Machine & Foundry Co.

**Bearings, Radial Thrust**  
 \* New Departure Mfg. Co.

**Bearings, Roller**  
 \* Gwilliam Co.  
 \* Hyatt Roller Bearing Co.  
 \* Norma Co. of America  
 \* Royersford Fdry. & Mach. Co.  
 \* Timken Roller Bearing Co.

**Bearings, Self-Oiling**  
 \* Brown, A. & F. Co.  
 \* Doehler Die-Casting Co.  
 \* Falls Clutch & Machinery Co.  
 \* Hill Clutch Machine & Foundry Co.  
 \* Jones, W. A. Fdry. & Mach. Co.  
 \* Link-Belt Co.  
 \* Royersford Fdry. & Mach. Co.  
 \* Wood's, T. B. Sons Co.

**Bearings, Tapered**  
 \* Timken Roller Bearing Co.

**Bearings, Thrust**  
 \* Fafnir Bearing Co.  
 \* General Electric Co.  
 \* Gwilliam Co.  
 \* Hill Clutch Machine & Foundry Co.  
 \* Norma Co. of America  
 \* S K F Industries (Inc.)  
 \* Timken Roller Bearing Co.  
 \* Strom Ball Bearing Mfg. Co.

**Belt Dressing**  
 \* Dixon, Joseph Crucible Co.  
 Gandy Belting Co.

**Belt Lacing, Steel**  
 \* Bristol Co.

**Belt Tighteners**  
 \* Brown, A. & F. Co.  
 \* Hill Clutch Machine & Foundry Co.  
 \* Jones, W. A. Fdry. & Mach. Co.  
 \* Link-Belt Co.  
 \* Medart Co.  
 \* Smith, F. L. & Co.  
 \* Wood's, T. B. Sons Co.

**Belt Tighteners, Automatic**  
 Hill Clutch Machine & Foundry Co.

**Belting, Canvas (Stitched)**  
 Gandy Belting Co.  
 \* U. S. Rubber Company

**Belting, Conveyor**  
 Gandy Belting Co.  
 \* Goodrich, B. F. Rubber Co.  
 \* United States Rubber Co.

**Belting, Elevator**  
 Gandy Belting Co.  
 \* Goodrich, B. F. Rubber Co.  
 \* United States Rubber Co.

**Belting, Endless**  
 Gandy Belting Co.

**Belting, Fabric**  
 Gandy Belting Co.

**Belting, Leather**  
 American Sole & Belting Leather Tanners (Inc.)

**Belting, Rubber**  
 \* Goodrich, B. F. Rubber Co.  
 \* United States Rubber Co.

**Belting, Waterproof**  
 Gandy Belting Co.

**Bending & Straightening Machines**  
 \* Long & Allstatter Co.

**Bends, Pipe**  
 \* Frick Co. (Inc.)  
 \* Vogt, Henry Machine Co.

**Billets, Steel**  
 \* Timken Roller Bearing Co.

**Blocks, Tackle**  
 Clyde Iron Work Sales Co.  
 \* Roebling's, John A. Sons Co.

**Blowers, Centrifugal**  
 \* American Blower Co.  
 \* Clarage Fan Co.  
 \* Coppus Engineering Corp'n  
 \* De Laval Steam Turbine Co.  
 \* General Electric Co.  
 \* Ingersoll-Rand Co.  
 \* Kerr Turbine Co.  
 \* Sturtevant, B. F. Co.  
 \* Westinghouse Electric & Mfg. Co.

**Blowers, Fan**  
 \* American Blower Co.  
 \* Clarage Fan Co.  
 \* Coppus Engineering Corp'n  
 \* Green Fuel Economizer Co.  
 \* Sturtevant, B. F. Co.

**Blowers, Forge**  
 \* American Blower Co.  
 \* Sturtevant, B. F. Co.

**Blowers, Pressure**  
 \* American Blower Co.  
 \* Clarage Fan Co.  
 \* Lammett & Mann Co.  
 \* Sturtevant, B. F. Co.

**Blowers, Rotary**  
 Fletcher Works  
 Lammett & Mann Co.  
 \* Schutte & Koerting Co.  
 \* Sturtevant, B. F. Co.

**Blowers, Soot**  
 Diamond Power Specialty Corp'n  
 \* Sturtevant, B. F. Co.

**Blowers, Steam Jet**  
 \* Schutte & Koerting Co.

**Blowers, Turbine**  
 \* Coppus Engineering Corp'n  
 \* Sturtevant, B. F. Co.

**Blueing (Metal)**  
 \* American Metal Treatment Co.

**Boards, Drawing**  
 Dietzen, Eugene Co.  
 Keuffel & Esser Co.  
 New York Blue Print Paper Co.  
 ParVell Laboratories  
 U. S. Blue Co.  
 Weber, F. Co. (Inc.)

**Boiler Baffles**  
 \* King Refractories Co. (Inc.)  
 \* McLeod & Henry Co.

**Boiler Compounds**  
 \* Dixon, Joseph Crucible Co.  
 Unisol Mfg. Co.

**Boiler Coverings, Furnaces, Tube Cleaners, etc.**  
 (See Coverings, Furnaces, Tube Cleaners, etc., Boiler)

**Boiler Fronts**  
 \* O'Brien, John Boiler Works Co.  
 \* Titusville Iron Works Co.

**Boiler Settings, Steel Cased**  
 \* Casey-Hedges Co.  
 \* McLeod & Henry Co.  
 \* O'Brien, John Boiler Works Co.  
 \* Vogt, Henry Machine Co.  
 \* Walsh & Weidner Boiler Co.

**Boilers, Heating**  
 \* Casey-Hedges Co.  
 \* Erie City Iron Works  
 \* Keeler, E. Co.  
 \* Leffel, James & Co.  
 \* Lidgerwood Mfg. Co.  
 \* O'Brien, John Boiler Works Co.  
 \* Titusville Iron Works Co.  
 \* Union Iron Works  
 \* Walsh & Weidner Boiler Co.

**Boilers, Locomotive**  
 \* Casey-Hedges Co.  
 \* Keeler, E. Co.  
 \* Leffel, James & Co.  
 \* Titusville Iron Works Co.  
 \* Union Iron Works  
 \* Walsh & Weidner Boiler Co.

**Boilers, Marine (Scotch)**  
 Bethlehem Shipbldg. Corp'n (Ltd.)  
 \* Casey-Hedges Co.  
 \* Leffel, James & Co.  
 \* Titusville Iron Works Co.  
 \* Walsh & Weidner Boiler Co.

**Boilers, Marine (Water Tube)**  
 \* Babcock & Wilcox Co.  
 Bethlehem Shipbldg. Corp'n (Ltd.)  
 \* Casey-Hedges Co.  
 \* Connelly, D. Boiler Co.  
 \* O'Brien, John Boiler Works Co.  
 \* Springfield Boiler Co.  
 \* Titusville Iron Works Co.  
 \* Walsh & Weidner Boiler Co.  
 \* Ward, Charles Engineering Wks.

**Boilers, Portable**  
 \* Casey-Hedges Co.  
 \* Erie City Iron Works  
 \* Frick Co. (Inc.)  
 \* Keeler, E. Co.  
 \* Leffel, James & Co.  
 \* Lidgerwood Mfg. Co.  
 \* O'Brien, John Boiler Works Co.  
 \* Titusville Iron Works Co.  
 \* Union Iron Works  
 \* Walsh & Weidner Boiler Co.

**Boilers, Tubular (Horizontal Return)**  
 \* Bigelow Co.  
 \* Casey-Hedges Co.  
 \* Cole, R. D. Mfg. Co.  
 \* Connelly, D. Boiler Co.  
 \* Erie City Iron Works  
 \* Keeler, E. Co.  
 \* Leffel, James & Co.  
 \* Lidgerwood Mfg. Co.  
 \* Morrison Boiler Co.  
 \* O'Brien, John Boiler Works Co.  
 \* Titusville Iron Works Co.  
 \* Union Iron Works  
 \* Vogt, Henry Machine Co.  
 \* Walsh & Weidner Boiler Co.  
 \* Ward, Charles Engineering Wks.  
 \* Webster, Howard J.  
 \* Wickes Boiler Co.

**Boilers, Tubular (Vertical Fire)**  
 \* Bigelow Co.  
 \* Casey-Hedges Co.  
 \* Clyde Iron Works Sales Co.  
 \* Keeler, E. Co.  
 \* Leffel, James & Co.  
 \* Lidgerwood Mfg. Co.  
 \* Morrison Boiler Co.  
 \* O'Brien, John Boiler Works Co.  
 \* Titusville Iron Works Co.  
 \* Union Iron Works  
 \* Walsh & Weidner Boiler Co.

**Boilers, Water Tube (Horizontal)**  
 \* Babcock & Wilcox Co.  
 Bethlehem Shipbldg. Corp'n (Ltd.)  
 \* Casey-Hedges Co.  
 \* Cole, R. D. Mfg. Co.  
 \* Connelly, D. Boiler Co.  
 \* Edge Moor Iron Co.  
 \* Erie City Iron Works  
 \* Keeler, E. Co.  
 \* Ladd, George T. Co.  
 \* Morrison Boiler Co.  
 \* O'Brien, John Boiler Works Co.  
 \* Springfield Boiler Co.  
 \* Union Iron Works  
 \* Vogt, Henry Machine Co.  
 \* Walsh & Weidner Boiler Co.  
 \* Wickes Boiler Co.

**Boilers, Water Tube (Inclined)**  
 \* Babcock & Wilcox Co.  
 Bethlehem Shipbldg. Corp'n (Ltd.)  
 \* Bigelow Co.  
 \* Casey-Hedges Co.  
 \* Keeler, E. Co.  
 \* Ladd, George T. Co.  
 \* Morrison Boiler Co.  
 \* O'Brien, John Boiler Works Co.  
 \* Vogt, Henry Machine Co.  
 \* Walsh & Weidner Boiler Co.  
 \* Ward, Charles Engineering Wks.

**Boilers, Water Tube (Vertical)**  
 \* Babcock & Wilcox Co.  
 \* Bigelow Co.  
 \* Casey-Hedges Co.  
 \* Erie City Iron Works  
 \* Keeler, E. Co.  
 \* Ladd, George T. Co.  
 \* Morrison Boiler Co.  
 \* O'Brien, John Boiler Works Co.  
 \* Walsh & Weidner Boiler Co.  
 \* Wickes Boiler Co.

**Boring and Drilling Machines**  
 Universal Boring Machine Co.

**Boring, Drilling and Milling Machines**  
 (Horizontally Combined)

Universal Boring Machine Co.

**Boxes, Carbonizing**  
 Driver-Harris Co.

**Boxes, Case Hardening**  
 Driver-Harris Co.

**Boxes, Water Service**  
 Murdock Mfg. & Supply Co.

**Brake Blocks**  
 Johns-Manville (Inc.)

**Brakes, Air**  
 \* Allis-Chalmers Mfg. Co.  
 \* General Electric Co.

**Brass Goods**  
 \* Scovill Mfg. Co.

**Brass Mill Machinery**  
 Farrel Foundry & Machine Co.

**Breechings, Smoke**  
 Morrison Boiler Co.

\* Titusville Iron Works Co.  
 \* Vogt, Henry Machine Co.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment. 1923-24 Volume

1924, pp. 457-478, 14 figs. Study of properties of light aluminum alloys containing varying proportions of copper, manganese and magnesium; discusses characteristics of alloys containing copper, with and without magnesium; heat treatment and aging, and their effect upon physical properties; hypotheses explaining constitution of aluminum-copper-manganese-magnesium alloys.

**Aluminum-Silicon.** Aluminum-Silicon Alloys, J. B. Swan. *Automobile Engr.*, vol. 14, no. 188, Apr. 1924, pp. 102-105, 10 figs. Their properties and limitations; aluminum-silicon binary system; making up and casting alloy; reversion; aluminum-silicon as forging and cold-worked metal; effects of heat treatment.

**Castings, Hard Spots in.** Study Aluminum Hard Spots. A. J. Lyon. *Foundry*, vol. 52, no. 10, May 15, 1924, pp. 396-397. Methods employed to identify inclusions, and determine effect on mechanical properties, and metallographic structure of oxidizing aluminum cast alloys during melting.

See also ALLOYS, Light.

## AMMONIA

**Anhydrous.** Is Anhydrous Ammonia Combustible?, W. F. Schaphorst. *Nat. Engr.*, vol. 28, no. 5, May 1924, pp. 220-221. Opinions of authorities and experts, from which it appears that it is feebly combustible under certain conditions but normally incombustible and actually a retardant of combustion in many cases.

## AMMONIA COMPRESSORS

**Compound Compression.** Effect of Compound Compression of Ammonia, J. E. Starr. *Power Plant Eng.*, vol. 28, no. 8, Apr. 15, 1924, pp. 445-446, 1 fig. Cost of extra equipment, it is claimed, will in most cases offset thermodynamic gains which would result from compound compression.

## ASH HANDLING

**Power Plants.** The Disposal of Ashes in Power Plants, E. K. Scott. *Power Engr.*, vol. 19, nos. 215, 216 and 217, Feb., Mar. and Apr., 1924, pp. 55-56, 90-92 and 145-147, 16 figs. Survey of present practice. Feb.: Trucks and skips; bucket and tray conveyors; scraper and belt conveyor. Mar.: Sluicing ash conveyor.

## AUTOMOBILE ENGINES

**Corrosion.** Undue Wear of Engine Parts is Caused by Rust. *Automotive Industries*, vol. 50, no. 18, May 1, 1924, pp. 956-958, 2 figs. Three hypotheses analyzed in research work conducted in Gen. Motors Corp., namely, acid, oxide and electrolytic theory, all of which agree that presence of moisture is necessary.

**Fuel-Feed Apparatus.** Tests with Fuel Feed Apparatus (Einige Versuche mit Brennstoff-Förderapparat). R. Conrad. *Motorwagen*, vol. 27, no. 5, Feb. 20, 1924, pp. 65-75, 16 figs. Measurement results with underpressure apparatus and with a combined underpressure and overpressure suction apparatus.

**Lycorning.** 8-in-Line Engine is Latest Product of Lycorning. *Automotive Industries*, vol. 50, no. 20, May 15, 1924, pp. 1066-1067, 4 figs. Cylinders are cast in single block and are of L-head type; dimensions will be varied for particular cars, but on first models built bore is 3 1/4 in. and stroke 4 1/4 in.; pistons are of cast iron; inlet and exhaust manifolds are combined.

**Oil Rectifiers.** Rickenbacker Incorporates Skinner Rectifier in All New Models. *Automotive Industries*, vol. 50, no. 20, May 15, 1924, pp. 1086-1087, 2 figs. Oil drawn from around piston by inlet suction is subject to distillation process by hot exhaust gases, fuel driven off being returned to intake manifold.

**Radiator Cores.** New McCord Radiator Core Stamped from Ribbon Brass. *Automotive Industries*, vol. 50, no. 20, May 15, 1924, pp. 1084-1085, 4 figs. Entire structure with integral fins is built up by means of progressive multiple die which forms tubes that project from strips running continuously through press; tinned sections are stacked, forced together, and baked to sweat all joints.

## AUTOMOBILE FUELS

**Lignite as Source of.** Lignites and the Manufacture of Automobile Fuel (Les lignites et la fabrication des carburants). E. Marcotte. *Revue Industrielle*, vol. 54, no. 2178, May 1924, pp. 85-94, 5 figs. Notes on extraction of light products; classification of possible treatments; recovery of benzol; objections against distillation of lignite; hydrogenation; Bergius process and its industrial application; liquefaction direct from coal; Mélanid process; Fischer and Schrader processes.

## AUTOMOBILES

**Bodies, Finishing.** High Brake Pre-Enamelled Panels Used in Body Construction. *Automotive Mfr.*, vol. 66, no. 1, Apr. 1924, pp. 9-11, 4 figs. Details of new type of construction which permits easy application of hard permanent finish to metal panels applied over conventional wood frame.

**Ultra-Violet Rays Used to Test Body Fabrics and Finishes.** W. L. Carver. *Automotive Industries*, vol. 50, no. 19, May 8, 1924, pp. 1011-1014, 5 figs. Few hours of exposure under suitable conditions may be equal to many months of natural weathering; utilization of quartz-tube mercury-vapor lamp which emits ultra-violet rays, which may also be employed to dry varnish.

**Brakes.** Study of Gripper Brakes for Automobiles and Lifting Devices (L'étude des freins à machoires pour automobiles et appareils de levage). *Génie Civil*, vol. 84, no. 19, May 10, 1924, pp. 452-454, 4 figs. General considerations on functioning of brakes; elementary calculation; distribution of pressure; determination of bending.

**Brakes, Four-Wheel.** Four-Wheel Braking Systems, F. A. Stepany Acres. *Automobile Engr.*, vol. 14, no. 188, Apr. 1924, pp. 116-118, 4 figs. Arrangement of brakes; brake-power ratio; mechanical difficulties;

pedal leverage; central steering; compensation; mechanical difficulties; front springs; brake-rod layout.

**Chassis Lubrication.** Chassis Lubrication Is Simplified by Bowen System. *Automotive Industries*, vol. 50, no. 16, Apr. 17, 1924, pp. 876-878, 9 figs. Designed to deliver accurately measured quantities of oil to each bearing slowly for several hours after pump plunger is depressed; air domes over each header valve serve important purpose in metering and controlling flow; special tubing used.

**Clyno.** The 11 Hp. Clyno Light Car. *Automotive Engr.*, vol. 29, no. 17, Apr. 24, 1924, pp. 347-350, 10 figs. Comfortable body-work, ease of operation and economy in running; 66-mm. bore and 100-mm. stroke; capable of an output of 16 hp. on brake at 1500 r.p.m. and 25 hp. at 2950 r.p.m.

**Gear Boxes.** New Morris Production Methods. *Machy (Lond.)*, vol. 24, no. 602, Apr. 10, 1924, pp. 33-38, 11 figs. Machines and methods used by Morris Engines, Ltd., Coventry, in grinding spline shafts and gears for automobile gear boxes.

**German.** A New German Two-Seater (Ein neuer deutscher Kleinauto-Zweisitzer). H. Werner. *Motorwagen*, vol. 27, no. 8, Mar. 20, 1924, pp. 135-136, 1 fig. 1.9/6.5-hp. BZ small car with light-metal body.

**Light Cars.** The 9.8 Hp. Lea and Francis Chassis. *Automobile Engr.*, vol. 14, no. 188, Apr. 1924, pp. 94-101, 17 figs. Light car in which good performance has been secured by reducing dead weight.

**Rear Axles, Machining.** Maxwell Methods in Making Rear Axle Parts, F. H. Colvin. *Am. Mach.*, vol. 60, no. 118, May 1, 1924, pp. 661-663, 7 figs. Rear-axle housing and drive pinion; fixtures used in production; grinding two diameters at once; special mounting for truing diamonds.

**Renault.** The Second and Third Trips Across the Sahara Desert by Automobile (Les 2e et 3e traversées du Sahara en automobile). G. Delanghe. *Génie Civil*, vol. 84, no. 2172, Mar. 29, 1924, pp. 293-297, 13 figs. Renault automobiles with six double wheels; details of chassis; comparison of different systems of 6-wheel chassis.

**Rover.** The 14 Hp. Rover Chassis. *Automobile Engr.*, vol. 14, no. 189, May 1924, pp. 126-134, 14 figs. General arrangement and principal features of medium-weight car of orthodox design.

**Singer.** The Singer Six. *Auto-Motor J.*, vol. 29, no. 16, Apr. 17, 1924, pp. 327-331, 14 figs. 15-hp. 6-cylinder model of British firm; cylinders bored to 65 mm. diam., and crank throw of 100 mm.

**Streamline.** A Streamlining Development. *Autocar*, vol. 52, no. 1486, Apr. 11, 1924, pp. 662-664, 7 figs. Unconventional body designed by a Danish engineer, P. Forostovsky, Jr., and fitted to a 2-liter Bignan chassis; head resistance diminished; resulting in reduced power and gasoline consumption; but with no loss of comfort.

**Windsor.** The 10-15 Hp. Windsor Car. *Auto-Motor J.*, vol. 29, no. 15, Apr. 10, 1924, pp. 305-309, 11 figs. British-built car designed with a view to comfort and mechanical efficiency; 4-cylinder engine with 65-mm. bore and 102-mm. piston stroke.

## AVIATION

**Naval.** Naval Aviation Today, F. W. Wead. *U. S. Naval Inst. Proc.*, vol. 50, no. 254, Apr. 1924, pp. 561-574. Use of individual types of lighter-than-air machines, with certain observations as to material and general doctrine.

**Night-Flying Equipment.** Night-Flying Equipment and Operation, H. R. Harris and D. L. Bruner. *Mech. Eng.*, vol. 46, no. 5, May 1924, pp. 274-278, 9 figs. Non-mathematical discussion of portion of work carried on by Engineering Division of Air Service; much of equipment developed has been adapted by Air Mail Service. (Abridged.)

**Terminals.** The Future of the Air Terminal, D. Huntington. *Aviation*, vol. 16, no. 16, Apr. 21, 1924, pp. 423-425, 3 figs. Importance of air terminals; influence of carriers on terminal design; evolution of field-type terminal; location with respect to community; ideal location of airport; municipal-terminal idea; detail problems.

# B

## BEARING METALS

**Durex.** Durex, a Bearing Material Which Holds Oil Like a Sponge. *Automotive Industries*, vol. 50, no. 20, May 15, 1924, pp. 1072-1074, 14 figs. Copper-tin-graphite bronze which absorbs up to one-fourth its own volume by capillarity through myriads of tiny, evenly distributed pores, and maintains oily bushing surface; offers insurance against shortage or stoppage of lubrication.

## BEARINGS

**Anti-Friction.** Anti-Friction Bearings Lower Transportation Costs from Face to Railroad Car, F. H. Kneeland. *Coal Age*, vol. 25, no. 17, Apr. 24, 1924, pp. 603-606, 5 figs. Need only one-fourth as many applications of lubricant as plain bearings and have nearly twice as long life; lubrication cost reduced by two-thirds; save power and equipment.

**Babbitting Brasses.** Babbitting Brasses for Subway Trains, F. H. Colvin. *Am. Mach.*, vol. 60, no. 17, Apr. 24, 1924, pp. 629-630, 4 figs. Methods and equipment in babbitting room of New York 148th St. shop; simple mandrels used for holding brasses in position for babbitting; two men handle four tons of babbitt per month.

**Cylindrical.** The Design and Performance of Com-

plete Cylindrical Bearings from Mathematical Theory of Lubrication, C. B. Upton. *Sibley J. of Eng.*, vol. 38, nos. 3 and 4, Mar. and Apr. 1924, pp. 56-60 and 76 and 97-100, 6 figs. Presentation and discussion of Harrison's equations; and modifications brought about by finite length and its consequences in end leakage of lubricant and lengthwise variation of pressure in lubricating film.

**Experiments.** Some Bearing Investigations, E. G. Gilson. *Gen. Elec. Rev.*, vol. 27, no. 5, May 1924, pp. 318-327, 20 figs. Results of investigation made by Research Laboratory of Gen. Elec. Co. into phenomena of bearings.

**Railway-Motor, Lubrication of.** Packing Railway Motor Bearings for Oil Lubrication, C. Bethel. *Elec. Ry. J.*, vol. 63, no. 16, Apr. 19, 1924, pp. 605-609, 13 figs. Method of packing bearings; wood waste is most satisfactory, but care must be used to insure feeding proper quantity of oil; essentials are to keep shell tight and clearance small; proper design of oil grooves necessary.

## BEARINGS, BALL

**Life.** The Life of Ball Bearings (Die Lebensdauer von Kugellagern). A. Palmgren. *Zeit. des Vereines deutscher Ingenieure*, vol. 68, no. 14, Apr. 5, 1924, pp. 339-341. Shows that life of ball bearings subjected to axial or combined stresses depends partly on maximum developed ball pressure and partly on fatigue phenomena which have changed in comparison to conditions with purely radial load.

## BELT DRIVE

**Short-Center.** Short Belt Drives, V. Sahmel. *Paper Trade J.*, vol. 78, no. 19, May 8, 1924, pp. 61-64, 7 figs. Fundamental formula for belt drives; advantages of short-center drive; floating idlers, heaters, etc.

## BLAST FURNACES

**Charge, Behavior of.** The Behavior of the Charge in Blast Furnaces (Ueber das Verhalten der Beschickung im Hochofen). E. Diepschlag. *Stahl u. Eisen*, vol. 44, no. 16, Apr. 17, 1924, pp. 430-432. Heating and reactions; lowering and suspension of charges; wastes.

**Regenerators, Reversing.** Theoretical Considerations Respecting Certain Features in the Working and Efficiency of Reversing Regenerators, J. Seigle. *Iron & Steel Inst.*, advance paper, no. 14, for mtg. May 1924, 47 pp., 28 figs. Author seeks to show that certain relations which have been accepted in metallurgical investigations on influence of mass of refractory bricks of checkerwork, and on amount of calories which are exchanged per sq. m. of heated surface, have been somewhat too roughly approximate.

## BLOWERS

**Regulations.** Report of Committee on Blower Systems. *Nat. Fire Protection Assn.*, Advance Publication, 1924, 13 pp., 6 figs. Regulations for installation of blower and exhaust systems for heating and ventilating systems, systems for removal of flammable vapors, and stock and refuse-conveying systems, presented for final adoption.

## BOILER FEEDWATER

**System.** Boiler Feed System in Sugar Refinery, Claude C. Brown. *Power Plant Eng.*, vol. 28, no. 9, May 1, 1924, pp. 482-485, 4 figs. Fresh-water make-up, storage systems, filters, softeners, and feedwater testing.

## BOILER FIRING

**Gas.** Gas Firing—Flame Control, A. C. Ionides, Jr. *Gas J.*, vol. 166, no. 3179, Apr. 16, 1924, pp. 176-178 and (discussion) 178-179, 2 figs. Author claims that principles of gas firing mostly employed hitherto are fundamentally wrong; discloses grounds for such a conclusion and establishes an alternative method. See also *Gas Wld.*, vol. 80, no. 2073, Apr. 12, 1924, pp. 334-336 and (discussion) 336-337, 1 fig.

## BOILER FURNACES

**Air Preheating.** The Use of Preheated Air and Exhaust Gases for Boiler Furnaces (Ueber die Verwendung von vorgewärmter Luft und von Abgasen für Kesselfeuerungen). W. Deinlein. *Zeit. des Bayerischen Revisions-Vereins*, vol. 28, no. 5, Mar. 15, 1924, pp. 29-33. Numerical determination of furnace and waste-gas temperatures, fuel consumption, etc., when heating with crude lignite, Bavarian and Ruhr coal.

**Combustion Control.** Control of Combustion Processes in Furnaces (Excess Air and Efficiency) [Beurteilung und Kontrolle der Verbrennungsvorgänge bei Feuerungen (Luftüberschuss und Leistung)], A. Dosch. *Feuerungstechnik*, vol. 12, nos. 13 and 14, Apr. 1 and 15, 1924, pp. 107-109 and 116-117, 9 figs. Control device for excess air and stress; scale diagrams.

**Design.** Problems in Boiler Furnace Design, E. B. Ricketts. *Power Plant Eng.*, vol. 28, no. 9, May 1, 1924, pp. 473-476, 5 figs. Changes in stoker design, high ratings, high capacities, etc.; value of air heaters; materials for furnace-wall construction; effect of high combustion efficiency on superheat; mixing of boiler-furnace gases. Paper presented before Metropolitan Section of A.S.M.E.

**Induced-Draft Installations.** Calculation of Induced-Draft Installations (Berechnung einer Saugzug-Anlage), H. R. Karg. *Fördertechnik u. Frachtverkehr*, vol. 17, no. 6, Mar. 20, 1924, pp. 76-79. Calculation of induced-draft plant and auxiliary exhaustor; determination of excess air.

**Low Temperature-Tar Plant.** Boiler Furnace with Low-Temperature-Tar Recovery Plant (Dampf-Kesselfeuerung mit Urteergewinnungsanlage). *Wärme- u. Kälte-Technik*, vol. 26, no. 5, Mar. 1, 1924, pp. 33-35, 4 figs. Grate furnace with distillation shaft installed in front for production of low-temperature tar from combustion gases of boiler furnaces, according to process developed by B. Meyer; advantages of system.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment. 1923-24 Volume

**BOILER PLANTS**

**Flue-Dust Conveyors.** Pneumatic Flue Dust Conveyors. K. Wagner. Eng. Progress, vol. 5, no. 4, Apr. 1924, pp. 61-64, 7 figs. Suction plant designed by Seck Bros., Dresden, erected in boiler room; experience gained in service.

**BOILER PLATES**

**Strength of.** The Distribution of Strength Properties in a Sheet-Iron Plate (Die Verteilung der Festigkeitseigenschaften innerhalb einer Blechtafel). E. Koch. Zeit. des Bayerischen Revisions-Vereins, vol. 28, nos. 3-4, 5 and 6, Feb. 29, Mar. 15 and 31, 1924, pp. 13-19, 33-38, and 44-47, 17 figs. Results of experimental investigation begun two years ago and still in progress; account of tests carried out in ammonia works of Dr. Wyzomirsky in Merseburg. Contains appendix, giving supplementary test regulations for boiler plate.

**Testing.** The Testing of Boiler Plates, Chas. L. Huston. Power, vol. 59, no. 21, May 20, 1924, pp. 820-822, 3 figs. Proposed revival of Tetmajer formula for using unit stresses instead of factor of safety in determining allowable stresses on steel boiler plate in construction of steam boilers and other pressure vessels.

**BOILER ROOMS**

**Operation.** Boiler-Room Practice, J. Bruce. Elec. Rev., vol. 94, nos. 2414 and 2415, Feb. 29 and Mar. 7, 1924, pp. 324-325 and 365-367, 3 figs. Use of boiler-room instruments for efficient operation.

**BOILERMAKING**

**Babcock & Wilcox Plant, France.** The French Babcock and Wilcox Boiler Works. G. L. Carden. Boiler Maker, vol. 24, no. 4, Apr. 1924, pp. 95-98, 4 figs. Description of plant located at La Courneuve on northern outskirts of Paris.

**Standards.** Standards Adopted by the American Boiler Manufacturers' Association. Boiler Maker, vol. 24, no. 4, Apr. 1924, pp. 107-109 and 123-124. Report presented at meeting of Am. Boiler Mfrs.' Assn.

**BOILERS**

**Development.** An Outline of Boiler Development, H. Webster. Refrig. Eng., vol. 10, no. 10, Apr. 1924, pp. 367-369. Considers briefly multiplicity of fuels available for steam generation, great number of methods of burning such fuels which have been developed, and the various feedwater conditions that have been encountered, and outline of development of boiler.

**Feeding Arrangements.** Important Factors in Boiler Feeding, Chas. F. Wade. Power Eng., vol. 19, no. 217, Apr. 1924, pp. 136-137, 1 fig. Aspects of boiler-feeding arrangements which are often overlooked.

**Locomotive.** See LOCOMOTIVE BOILERS.

**Mercury.** See MERCURY-VAPOR PROCESS.

**Scale-Removal Apparatus.** Apparatus for the Prevention of Boiler Scale. Engineering, vol. 117, no. 3045, May 9, 1924, p. 623, 4 figs. Apparatus exhibited at Brit. Empire Exhibition consists of cast-iron cylinder within which perforated cylinder is placed which is filled with ordinary linseed and small amount of common soda.

**Settings.** Construction of Boiler Settings in Devon Station (Conn.). Power, vol. 59, no. 20, May 13, 1924, pp. 763-765, 6 figs. Furnace walls for 16,800-sq. ft. boilers constructed entirely of firebrick; arches built in walls to relieve loading on brick; expansion joints filled with asbestos fiber divide walls into vertical sections and allow for horizontal expansion; no heat-insulating bricks are used below lower tube line.

**3060 Hp. Boilers at Cleveland Rate 3060 Hp.** Power Plant Eng., vol. 28, no. 10, May 15, 1924, pp. 517-524, 8 figs. New boilers in Cleveland Elec. Illuminating Co. plant have 30,592-sq. ft. heating surface requiring 8 mi. of tubes; fired by pulverized coal; automatic-combustion control by steam pressure and flowmeters.

**Waste-Heat.** Waste Heat from Internal-Combustion Engines. Power Eng., vol. 19, no. 218, May 1924, pp. 176-177, 3 figs. Describes Clarkson boiler which is said to be well suited to small engines; its application to semi-Diesel engine.

**BORING MACHINES**

**Large Electrical Machinery.** Giant Boring Mill Built in Canada. Iron Age, vol. 113, no. 21, May 22, 1924, pp. 1508-1510, 7 figs. Machine of unusual size for use in manufacture of electrical generating equipment; massive design and convenient control.

**BRASS**

**Constitution.** The Constitution of Brass (Zur Konstitution des Messings), G. Masing. Zeit. für Metallkunde, vol. 16, no. 3, Mar. 1924, pp. 96-98, 9 figs. partly on supp. plate. Points out that  $\beta$ -brass is formed below 470 deg. cent. through diffusion and is therefore constant at lower temperatures; the Carpenter diagram of state, it is claimed, does not hold true.

**Lead and Tin, Influence of.** Lead and Tin in Brass (Blei und Zinn im Messing Ms 60), K. Hanser. Zeit. für Metallkunde, vol. 16, no. 3, Mar. 1924, pp. 91-95, 7 figs. Based on existing investigations and author's own tests, influence of lead and tin on strength, elongation, shrinkage, hardness, and hot and cold working of 60/40 brass is shown.

**C****CABLEWAYS**

**Types.** Cableways (Drahtseilbahnen), Fr. Werneke. Praktische Maschinen-Konstrukteur, vol. 57, no. 8, Mar. 1, 1924, pp. 79-81, 4 figs. Development of transportation on wire rope is discussed and a few successful

installations described, both for passenger and material haulage.

**CALORIMETERS**

**Measuring Small Heat Intensities.** Measurement of Small Heat Intensities: Use of Compensating Microcalorimeter (Mesure des intensités des petites sources de chaleur: emploi d'un microcalorimètre à compensation), A. Tian. Académie des Sciences—Comptes Rendus, vol. 178, no. 8, Feb. 18, 1924, pp. 705-707. Thermally insulated vessel immersed in bath at constant temperature serves as calorimeter; temperature differences between bath and vessel are measured using thermopile and galvanometer.

**CALORIMETRY**

**Saturated Fluids.** Calorimetry of Saturated Fluids, N. S. Osborne. Optical Soc. Am.—Jl., vol. 8, no. 4, Apr. 1924, pp. 519-540. Deals with theory of certain calorimetric processes for determination of important thermal properties of saturated fluids, and with interpretation of theory as bearing upon its experimental application.

**CARS**

**Bearings.** See BEARINGS, Anti-Friction.

**Cast-Steel Castings, Reclamation by Arc Welding.** Reclamation of Cast Steel Car Castings by Arc Welding, H. R. Pennington. Am. Welding Soc.—Jl., vol. 3, no. 4, Apr. 1924, pp. 28-35, 6 figs. Examples of potential savings in reclamation of such parts as coupler bodies, knuckles, truck sides and bolsters for railways, and practice for reclamation of such parts.

**Construction Methods.** Railway Carriage and Wagon Building. Machy. (Lond.), vol. 24, no. 601, Apr. 3, 1924, pp. 1-4, 5 figs. Practice of Cammell Laird & Co.; making buffer forgings—upsetting forging machines; buffer forging operations.

**CARS, FREIGHT**

**Box.** Single Sheathed Box Cars for the D. T. & I. Ry. Mech. Engr., vol. 98, no. 5, May 1924, pp. 279-281, 4 figs. U. S. Railroad Administration design modified to provide 1 ft. added height and 1 ft. wider door opening.

**Construction.** Production Methods in British Freight Car Building, D. R. Lamb. Ry. Rev., vol. 74, no. 16, Apr. 19, 1924, pp. 717-722, 10 figs. Consecutive operations in erection of 12-ton open freight cars at Derby, Eng., shops of Lond. Midland & Scottish Ry.

**CARS, PASSENGER**

**British Empire Exhibition.** British Empire Exhibition Railway Material. Engineering, vol. 117, no. 3045, May 9, 1924, pp. 595-601, 13 figs. Describes exhibits of Birmingham Railway Carriage & Wagon Co., consisting of five passenger, including two pullman cars, and electric locomotives built by Metropolitan-Vickers Elec. Co.

**CARS, REFRIGERATOR**

**Improved Design.** New Refrigerator Cars for the Rock Island. Ry. Mech. Engr., vol. 98, no. 5, May 1924, pp. 286-289, 7 figs. Improved side construction has reduced maintenance costs and improved refrigerating efficiency; new method of insulation; Acme ventilation system used.

**Insulation.** Economical Thickness of Insulation in Refrigerator Cars, A. J. Wood and P. X. Rice. Refrig. Eng., vol. 10, no. 10, Apr. 1924, pp. 357-362 (and discussion) 362-366, 10 figs. Explains a reasonably simple method for determining quickly and accurately most economical thickness of insulation, and discusses factors which enter into economical design of insulated walls.

**CARS, STEEL**

**Scrapping.** Electric Arc Process for Scrapping Steel Cars, A. M. Candy. Ry. Elec. Engr., vol. 15, no. 4, Apr. 1924, pp. 112-114, 5 figs. This method less expensive than others where large number of cars is to be handled. Operating data.

**CASE-HARDENING**

**Liquid Baths.** A Few Notes on the Shimer Case Hardening Process, B. F. Shepherd. Am. Soc. Steel Treating—Trans., vol. 5, no. 5, May 1924, pp. 485-489 (and discussion) 489-490, 9 figs. Notes on liquid case carburizing of certain steels; curves and photomicrographs showing depths of penetration and structures obtained on S.A.E. 6120 and S.A.E. 1112 steels.

**CAST IRON**

**Graphitization.** Notes Properties of Cast Iron, E. Touceda. Foundry, vol. 52, no. 9, May 1, 1924, pp. 345-347, 1 fig. Manner and conditions under which graphitization takes place in cast iron has profound influence upon chemical and physical properties of metal; describes special metal made by Ross-Meehan Foundries, Chattanooga, Tenn., called "mechanite metal." See also Iron Trade Rev., vol. 74, no. 19, May 8, 1924, pp. 1244-1246, 1 fig.

**High-Temperature Growth.** High-Temperature Growth of Special Cast Irons, J. H. Andrew and H. Hyman. Iron & Steel Inst.—advance paper, no. 2, for mtg. May 1924, 10 pp., 11 figs. Investigation to ascertain whether presence of silicon is necessary factor for growth; what exactly happens to graphite at end of 50 hours; and whether growth can be mitigated or retarded by presence of certain special elements, especially carbide-forming elements, such as chromium and vanadium in small quantities.

**Manufacture.** The Influence of Composition and Rate of Cooling upon the Microstructure and Physical Properties of Cast Iron, H. H. Beeny. Foundry Trade Jl., vol. 29, nos. 401 and 402, Apr. 24 and May 1, 1924, pp. 333-340 (and discussion) 365-366, 24 figs. Deals with constitution and physical properties of iron-carbon alloys as a whole, commencing with pure iron, passing through steels, and ending finally with white

cast iron; microstructure of each broad type illustrated. Iron-carbide system, and influence of silicon and other elements, and rates of cooling upon this system.

**Pearlitic.** Pearlitic Cast Iron (Perlitguss), K. Emmel. Stahl u. Eisen, vol. 44, no. 13, Mar. 27, 1924, pp. 330-333, 11 figs. Analysis of tests, structure of piston-ring castings; discussion based on article by O. Bauer in same journal (vol. 43, 1923, no. 17, p. 553).

**Physical Changes.** Physical Changes in Cast Iron due to (i) American Practice; (ii) Secondary Temperatures. Metal Industry (Lond.), vol. 24, no. 10, Mar. 7, 1924, pp. 227-228, 5 figs. Discusses influence of casting into chill pig molds and water spraying, as in American blast-furnace practice, and influence of secondary or foundry temperatures, that is, remelting iron and subsequent casting.

**Test Bars, Transverse.** Transverse Test-Bars and Engineering Formulae, G. S. Bell and C. H. Adamson. Iron & Steel Inst.—advance paper, no. 4, for mtg. May 1924, 15 pp., 11 figs. Test results show that generally accepted engineering formulas for conversion of transverse test on one sized bar to that on another sized bar do not hold when applied to cast-iron test bars of different sizes; results of tensile and hardness tests.

**CASTINGS**

**Automobile, Cleaning.** Cleaning Automobile Castings, B. K. Price. Foundry, vol. 52, no. 9, May 1, 1924, pp. 355-357, 7 figs. Methods employed at Brunswick, N. J., plant of Int. Motors Co.; after tumbling and sand blasting, castings are sent to grinding department; plant makes aluminum crankcases.

**Light.** Some Problems in Light Castings, J. C. Dorsie. Foundry Trade Jl., vol. 29, no. 399, Apr. 10, 1924, pp. 299-300, 4 figs. Designing covers for roadway manholes; warping of gutters; behavior of metal in molds.

**CENTRAL STATIONS**

**Boiler-Feedwater Circuits.** Boiler Feed-Water Circuits in Power Stations, J. G. Weir. Ingenieur, vol. 39, no. 18, May 3, 1924, pp. 332-338 (and discussion) 338-339, 18 figs. Importance of use of regenerative principles is emphasized and a number of possible circuits are described, illustrated and analyzed. (In English.)

**Brooklyn Edison, Hudson Ave.** Hudson Avenue Station. Elec. World, vol. 83, no. 18, May 3, 1924, pp. 867-876, 13 figs. Unusual features incorporated in design of new 400,000-kw. power house of Brooklyn Edison Co.; vertical-phase isolation used; details of coal-handling facilities, heat-balance arrangements, boilers and stokers, fans and feed pumps, turbines (which are largest in world), signaling system, etc.

**Hudson Ave. Plant in Operation.** Power Plant Eng., vol. 28, no. 10, May 15, 1924, pp. 549-553, 12 figs. Superpower station embodies refinement in heat balance, electric equipment and mechanical control; first section comprises two 50,000-kw. turbines and 8 boilers each with 19,650 sq. ft. heating surface; condensers with 70,000 sq. ft. cooling surface. See also description in Power, vol. 59, no. 20, May 13, 1924, pp. 750-758, 14 figs.

**Calcutta, India.** The Calcutta Electricity Supply Undertaking, W. Twinch. Elec. Rev., vol. 94, no. 2422, Apr. 25, 1924, pp. 659-663, 10 figs. Description of Cossipore electricity generating; present output is 57,500 kw., and pressure of generation is 6000 volts.

**Combustion Control, Centralized.** Centralized Combustion Control in Lowellville, Jos. F. Shadgen. Power, vol. 59, no. 18, Apr. 29, 1924, pp. 676-679, 2 figs. One of first complete remote-machine-regulated combustion systems in large power plants; fuel efficiency main object; pneumatic dispatch system of master controller and individual regulators; novel central-control house with unique instrument board.

**Construction Methods.** Construction Procedure for a Steam Power Station. Eng. News-Rec., vol. 92, no. 18, May 1, 1924, pp. 754-757, 7 figs. Connecticut Light & Power completes 75,000-kva. unit at Devon; concreting continued through winter; many parts fabricated in field shops.

**Delaware Station, Philadelphia.** Operating Features at Delaware. Power Plant Eng., vol. 28, no. 10, May 15, 1924, pp. 537-542, 8 figs. Among interesting features of large central station in Philadelphia are test boilers, emergency valve control and dual-drive circulating pumps.

**Developments.** Development and Progress of Central Station Engineering, B. Sankey. S. African Inst. Elec. Engrs.—Trans., vol. 15, Pt. 2, Feb. 1924, pp. 326-334 (and discussion) 334-338, 3 figs. Latest developments in steam-power generation, including high temperatures, high pressures, and air heating, binary fluid turbines, Mulungushi hydroelectric scheme, etc.

**Diesel-Engined.** Converting a Loser into Profit-Making Plant. Power, vol. 59, no. 20, May 13, 1924, pp. 772-775, 6 figs. Central station at Caruthersville, Mo., supplying both electricity and ice, cut its generating cost from over 6 to less than 1 per cent per kw-hr. by replacing an obsolete steam plant with Diesel engines; waste-heat recovery is employed in nearby house-heating service.

**Paper Mills, Kalamazoo.** New Power Plant of the Bryant Paper Co. Power, vol. 59, no. 19, May 6, 1924, pp. 710-715, 6 figs. Central plant of 8000-kw. ultimate capacity, designed to supply power, steam and hot water to four divisions of large paper mill in Kalamazoo, Mich., replaces combination of individual boiler plants and scattered engine units; special features are balancing of power and heating steam, special coal and ash handling, automatic control and complete metering facilities.

**Reheating in.** Reheating in Central Stations, W. J. Wohlenberg. Mech. Engr., vol. 46, no. 5, May 1924, pp. 259-262, 11 figs. Influence of amounts of energy added in reheating, number of reheating stages,

and points in expansion at which reheating should begin; comparison of reheating, regenerative, and combination cycles combining both reheating and bleeding stages; shows that, because of influence on internal machine efficiency thereby, reheating properly applied may lead to higher efficiencies than bleeding; also that combination cycles give promise of realization in practice of appreciably higher efficiencies than would be case for other cycles investigated. Abridged.

**Units in Parallel, Efficiency of.** Maximum Operating Efficiency of Power Units in Parallel, A. P. Strom. Nat. Engr., vol. 28, no. 5, May 1924, pp. 210-212, 2 figs. Water rates of individual units plotted on a combined chart showing total water rate for any combination of units for various loads; most efficient combination of units can at once be determined by reference to chart. Serves equally well for distribution of load in hydroelectric plants.

**Williamsport, Md. A 14,000-Kw. Station at Williamsport (Md.).** Quickly Designed and Built. Power, vol. 59, no. 10, Mar. 4, 1924, pp. 354-360, 10 figs. Ultimate capacity is 160,000 kw.; economizers and stage bleeders are used; 325 lb. steam pressure; design and erection completed one year after site was purchased, with 3,990,500 kw-hr. generated; other features of Potomac Edison Co.'s station; tabular list of mechanical equipment.

#### CHAIN DRIVE

**Efficiency.** The Efficiency of Chains as a Power Transmitting Agent, H. Seymour. Elec. Rev., vol. 94, no. 2418, Mar. 28, 1924, pp. 484-486, 5 figs. Advantages of chain drive; suggestions for efficiency operation.

#### CHAINS

**Malleable-Iron.** Malleable Iron Chain, J. W. Gardom. Foundry Trade J., vol. 29, no. 398, Apr. 3, 1924, pp. 269-272, 8 figs. Description of manufacturing methods, including molding and annealing, and metallurgical considerations. See also discussion in no. 399, Apr. 3, 1924, pp. 301-304.

#### CHIMNEYS

**Calculation.** The Calculation of Chimneys (Le Calcul des Cheminées), A. Grebel. Chaleur & Industries, vol. 5, no. 45, Jan. 1924, pp. 13-22, 8 figs. Method developed by author, extracted from work entitled, Gas & Coke, by Gerbel and Bouron.

#### CLUTCHES

**Electrically Operated.** Electrically-Operated Clutches, M. H. Sabine. Machy. (Lond.), vol. 24, no. 602, Apr. 10, 1924, pp. 44-45, 7 figs. Improved design of solenoid clutches for use where control of power unit from distant position is required.

**Friction.** Considerations in Friction Clutch Design, A. Clegg. Machy. (N. Y.), vol. 30, no. 9, May 1924, p. 669-670. Factors involved in design; allowable bearing pressures; calculating horsepower; types of friction clutches; single-plate, coil, and double-plate clutches.

#### COAL

**Anthracite, Ash Content of.** Ash in Anthracite, O. P. Hood. U. S. Bur. Mines, Reports of Investigations, No. 2571, Feb. 1924, 2 pp. Results of tests made by Bur. of Mines on 127 samples of 1000 lb. each, representing nearly 30,000 tons of anthracite in dealers' yards in 17 cities in State of Massachusetts.

**Classification.** Contribution to the Classification of Coal with Special Reference to Its Coking Qualities (Bidrag till klassifikationen av stenkol med särskild hänsyn tagen till deras kokningsförmåga), S. Qvarfort. Teknisk Tidskrift, vol. 54, no. 15, Apr. 12, 1924, pp. 25-30. (Kemi), 15 figs. Method for testing coking qualities of a coal sample is described and, on basis of test, coal is classified as belonging to one of the nine different classes, defined by author. Advantageous use of such tests for gas works.

**Oxidation.** Silver-sulphochromic Oxidation of Coal (Oxydation argento-sulfochromique de la houille), L. J. Simon. Académie des Sciences—Comptes Rendus, vol. 178, no. 9, Feb. 25, 1924, pp. 775-777. When coal is heated with mixture of silver bichromate and concentrated sulphuric acid at 100 deg., 4 to 5 per cent of carbon present remains unoxidized; formation of gaseous oxidation products is more rapid at 50 than at 60 deg., at which temperature 28 per cent of coal remains unchanged; it is concluded that coal contains two constituents intimately mixed; one is oxidized at low temperatures, other, like coke, requires temperature of 100 per cent.

**Pulverized.** See PULVERIZED COAL.

**Volatile Matter and Ash Content.** The Volatile Matter and Ash Contents of Samples of Coal from the Same Seam, T. J. Drakeley and J. R. I. Hepburn. Chem. & Industry, vol. 43, no. 18, May 2, 1924, pp. 1347-1377. Gives equation for calculating, on average samples of dry coal containing no iron pyrites, volatile-matter content of coal on ash-free basis; percentage of volatile matter yielded by dry shale appears to vary considerably; variations may be due to different methods employed in initial drying of shale; modified equations for calculating volatile-matter content of coal on ash-free bases, for crude-coal samples containing iron pyrites, etc.

#### COAL HANDLING

**Boiler Plants.** Coal Handling in Small Boiler Plants. Power Engr., vol. 19, no. 218, May 1924, pp. 171-172, 4 figs. Notes concerning plant with but one or two boilers.

**Ropeway System.** Ropeway for Coaling a London Hotel, G. P. Zimmer. Indus. Mgt. (Lond.), vol. 11, no. 9, May 1, 1924, pp. 243-245 and 249, 6 figs. Description of ropeway which brings coal to store or stoke hole of Hotel Cecil; is of standard bi-cable type; total length from center feeding to center delivery terminal 230 ft.; two rail ropes  $\frac{3}{4}$  in. in diam.; 3-hp. motor

operates  $\frac{1}{4}$ -in.-diam. hauling rope at speed of 25 ft. per min. at feeding terminal.

#### COAL STORAGE

**Economy.** Economic Phases of Coal Storage, F. G. Tryon and W. P. McKenney. Universal Engr., vol. 39, no. 4, Apr. 1924, pp. 19-25, 2 figs. Extent to which practice of storage has already been adopted; inducements to store offered by periodic fluctuations in price and supply of coal.

#### COKE HANDLING

**Hoists for.** Automatic Coke Hoist, D. Cleave Cross. Gas Wld., vol. 80, no. 2071, Mar. 29, 1924, pp. 292-293, 2 figs. Describes a somewhat novel coke hoist erected at Lea Bridge gas works for use with water-gas plant. Paper read before Lond. & Southern District Jr. Gas Assn.

#### COMPRESSED AIR

**Improved Practice, Possibilities of.** Possibilities of Improvement in Compressed-Air Practice (Verbesserungsmöglichkeiten im Druckluftbetrieb), A. Hinz. Glückauf, vol. 60, nos. 15 and 16, Apr. 12 and 19, 1924, pp. 279-284 and 304-308, 2 figs. After brief discussion of costs of compressed-air operation, author investigates whether economy can be increased through improvements of compressor and motors; no advantages are obtained from higher air pressure, as work with lower pressures is more economical; great advantages result from utilization of air expansion which is only possible with minimum water content of compressed air, due to danger of freezing.

**Measurement.** A New Compressed-Air Measuring Method (Ein neues Druckluft-Messverfahren), E. Stach. Glückauf, vol. 60, no. 14, Apr. 5, 1924, pp. 260-262, 3 figs. New method for and equipment determining compressed-air consumption in relation to suction volume in a pipe line or a machine; pressure fluctuations are without influence on measurement results.

#### CONDENSERS, STEAM

**Air Cooling, Effect on.** How External Air Cooling Increases the Effectiveness of Condenser-Tube Surface, P. Bancel. Power, vol. 59, no. 20, May 13, 1924, pp. 769-771, 4 figs. Points out that two distinct processes ordinarily occur inside of surface condensers, namely, steam condensing, which goes on at high rate of heat transfer, and evaporizing air-steam mixture, which is carried out at very low rate of heat transfer; when air coolers are provided outside of condenser to handle latter process, condenser tubes may operate at much higher efficiency.

**Barometric, Vacuum-Pump Capacity.** Calculating the Amount of Air Liberated in Barometric Condensers, C. M. Reed. Power, vol. 59, no. 10, Mar. 4, 1924, pp. 370-372, 4 figs. Air enters with cooling water, steam and by leakage, which may be easily calculated from charts.

**Ejector-Air.** Ejector-Air Condenser (L'Ejecteur-Air Condenseur), Génie Civil, vol. 84, no. 10, Mar. 8, 1924, pp. 234-235, 6 figs. Describes apparatus and principle upon which it is based; output depends solely upon speed of steam transmission in apparatus, and is expressed in function of ratio of weight of steam to cross-section of ejector inlet.

**Surface.** Tendencies in Surface Condenser Practice. Power Plant Eng., vol. 28, no. 10, May 15, 1924, pp. 530-533, 4 figs. Points out that elimination of dead tube space, multiple air-suction openings and variable water supply are important factors in condenser design and application.

**Surface, Heat Transmission in.** Transmission of Heat in Surface Condensers According to Nusselt's Theory (La trasmissione del calore nei condensatori a superficie secondo la teoria del Nusselt), M. Medici. Industria, vol. 38, nos. 2, 4 and 6, Jan. 31, Feb. 29 and Mar. 31, 1924, pp. 40-43, 100-103 and 163-165, 4 figs. Extended mathematical treatment of subject.

**Test Code.** Test Code for Condensing Apparatus. Mech. Eng., vol. 46, no. 5, May 1924, pp. 291-296. Preliminary draft of additional code in series of nineteen being formulated by A.S.M.E. Committee on Power Test Codes.

**Types.** The Control of Power Production, Chas. L. Hubbard. Factory, vol. 32, no. 3, Mar. 1924, pp. 312-316 and 366, 19 figs. Condensers and their equipment.

#### CONNECTING RODS

**Locomotive, Repair.** Repairing Locomotive Main and Side Rods, Chas. F. Henry. Am. Mach., vol. 60, no. 20, May 15, 1924, pp. 731-732, 10 figs. Detailed information concerning methods in use on Santa Fé system for reclaiming broken and worn connecting rods to fit them for further service.

#### CONVEYORS

**Cotton-Mill.** Conveyors Require Good Management, Robt. T. Kent. Mgt. & Administration, vol. 7, no. 5, May 1924, pp. 539-543. Mechanical handling in cotton mill improved production, increased wages, lowered costs, and lessened labor troubles; methods employed at Jackson Mills at Nashua, N. H.

**Medium-Sized Shops.** Increasing Production by Power Conveyors, Chas. O. Herb. Machy. (N. Y.), vol. 30, no. 9, May 1924, pp. 706-709, 5 figs. Conveyor installations that have proved their economy in plant manufacturing small parts; jannanning conveyors; conveyors for cleaning work before nickel-plating, and rinsing and drying afterward; assembly conveyors.

**Shaking.** Shaking Conveyors and the Marcus Acceleration Process (Die Schüttelrutschenförderung und das Beschleunigungsverfahren von Marcus), O. Ohnesorge. Fördertechnik u. Frachtverkehr, vol. 17, no. 6, Mar. 20, 1924, pp. 71-76, 8 figs. Mechanical basic conditions of oscillating troughs in general and the Marcus trough in particular; shaking-chute conveyance in inclined path purely as gravity conveyance; drive of shaking conveyors.

[See also ASH HANDLING.]

#### COST ACCOUNTING

**Capital Control.** Capital Requirements and Control, J. H. Bliss. Mgt. & Administration, vol. 7, no. 5, May 1924, pp. 529-532. Surplus and its constructive application.

**Point Method.** Getting at Costs by the "Point Method," R. E. Roesler. Factory, vol. 32, no. 5, May 1924, pp. 662-663, 2 figs. Describes point cost method and its applications.

#### CRANES

**Electric Current for, Choice of.** Choice of Current for Hoists with Special Regard to Harbor Cranes (Wahl der Stromart für Hebezeuge unter besonderer Berücksichtigung der Hafenkrane), H. Gettert. Elektrotechnische Zeit., vol. 45, no. 16, Apr. 17, 1924, pp. 353-359, 17 figs. Author seeks to ascertain which kind of current is most economical with regard to energy consumption.

**Electric Equipment.** Modern Single-Phase Crane Equipment of Brown, Boveri & Cie (Moderne Einphasen-Kran-Ausrüstungen der Brown, Boveri & Cie., A.-G.), H. Gettert. Fördertechnik u. Frachtverkehr, vol. 17, no. 5, Mar. 3, 1924, pp. 59-65, 28 figs. Advantages of Deri motors for drive of hoists; design and operation of motors; selection of control apparatus and arrangement of control for different types of cranes; notes on the control of Deri motors with controller and resistance.

**Harbor.** Improvements in the Construction of German Loading and Unloading Equipment (Neuerungen im Bau von deutscher Umschlaganlagen), Buhle. Bautechnik, vol. 2, no. 12, Mar. 18, 1924, pp. 125-142, 61 figs. Deals with mechanical equipment for ship loading and unloading, giving numerous examples of modern harbor cranes, and auxiliary equipment.

#### CUPOLAS

**Tilting Device.** Tilting Device Has Advantages on Small Cupola. Can. Foundryman, vol. 15, no. 3, Mar. 1924, p. 16, 1 fig. Shell hung on trunions for convenience in preparing instead of workman getting inside.

## D

#### DIES

**Drawing, Design of.** Designing Drawing Dies, E. Heller. Machy. (N. Y.), vol. 30, no. 9, May 1924, pp. 687-691, 7 figs. Problems encountered in determining size of blank necessary to produce shell of given dimensions and number of drawing operations required to complete work.

#### DIESEL ENGINES

**Beardmore-Tosi, Machining.** Building Marine Diesel Engines. Machy. (Lond.), vols. 23 and 24, nos. 600 and 601, Mar. 27 and Apr. 3, 1924, pp. 825-828 and 17-21, 25 figs. Machining operations on Beardmore-Tosi Engine.

**Bethlehem.** Types of Modern Power-Plant Oil Engines. Oil Engine Power, vol. 2, no. 3, Mar. 1924, pp. 152-156 and 161, 8 figs. Critique of design features of Bethlehem 2900-b.hp. 2-cycle unit, and complete details relating to design and method of operation of its axial scavenging valve.

**Experiments.** Further Experimental Work on Diesel Engines, R. Beeman. Shipbldg. & Shipp. Rec., vol. 23, no. 16, Apr. 17, 1924, pp. 459-461. Describes some further experimental work, dealing with Diesels for warships, dimensions and weight, aluminum alloy pistons, development of high mean pressures, determination of suitable profile for fuel cam actuating sprayer, shaping of combustion chamber, rate of heat flow and its attendant stresses, lubricating oil consumption, and alternative fuels. Abstract of paper read before Instn. Naval Architects.

**Four-Cycle, Supercharging of.** Will Supercharging Revolutionize Four-Cycle Diesel Operation? Oil Engine Power, vol. 2, no. 3, Mar. 1924, pp. 148-152, 8 figs. Supercharging development work in Germany and America in connection with four-cycle Diesel engines.

**Lubrication.** Lubricating Diesel Engines and Auxiliary Machinery. Mar. Eng., vol. 29, no. 5, May 1924, pp. 298-300. General rules for selecting lubricants and methods of applying them to promote economy.

The Lubrication of Diesel Engines (Ueber Dieselmaschinen-Schmierfragen), W. Ernst. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 18, May 3, 1924, pp. 451-454, 14 figs. Points out that in view of the different parts to be lubricated, use of different oils for various applications is desirable, but it is sometimes necessary to use a unit lubricating oil which has to be adapted to the various applications including that of cooling pistons; gives examples of difficulties encountered in lubrication of Diesel engines with a unit oil.

**Marine.** Latest Developments in Diesel-Engine Ship Propulsion (Neueste Bestrebungen beim Schiffsantrieb durch Dieselmotoren), E. Goos. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 18, May 3, 1924, pp. 435-441, 18 figs. Discusses present tendencies in development of marine Diesel engines; examples and practical results; measures for increasing efficiency and improving operating safety and economy; drive of auxiliary machinery; heating and motor oils.

**Michel.** The Michel Engine (Der Michel-Motor). Motur u. Auto, vol. 21, no. 5, May 10, 1924, pp. 40-41, 4 figs. Two-stroke-cycle Diesel engine with new arrangement for transmission of piston force; small engines requiring little space; good balancing of masses.

**Nordberg.** Types of Modern Power-Plant Oil Engines. Oil Engine Power, vol. 11, no. 4, Apr. 1924,

# Manufactured by **CLASSIFIED LIST OF MECHANICAL EQUIPMENT** Alphabetical List on page 152

**Engines, Steam, Corliss**  
 \* Allis-Chalmers Mfg. Co.  
 \* Franklin Machine Co.  
 \* Frick Co. (Inc.)  
 \* Harrisburg Fdry. & Mach. Wks.  
 \* Mackintosh-Hemphill Co.  
 \* Nordberg Mfg. Co.  
 \* Vilter Mfg. Co.

**Engines, Steam, High Speed**  
 \* American Blower Co.  
 \* Clarage Fan Co.  
 \* Engberg's Electric & Mech. Wks.  
 \* Erie City Iron Works  
 \* Harrisburg Fdry. & Mach. Wks.  
 \* Nordberg Mfg. Co.  
 \* Ridgway Dynamo & Engine Co.  
 \* Skinner Engine Co.

**Engines, Steam, Poppet Valve**  
 \* Erie City Iron Works  
 \* Nordberg Mfg. Co.  
 \* Ridgway Dynamo & Engine Co.  
 \* Vilter Mfg. Co.

**Engines, Steam, Throttling**  
 \* American Blower Co.  
 \* Clarage Fan Co.  
 \* Engberg's Electric & Mech. Wks.  
 \* Ridgway Dynamo & Engine Co.

**Engines, Steam, Una-Flow**  
 \* Frick Co. (Inc.)  
 \* Harrisburg Fdry. & Mach. Wks.  
 \* Nordberg Mfg. Co.  
 \* Ridgway Dynamo & Engine Co.  
 \* Skinner Engine Co.

**Engines, Steam, Variable Speed**  
 \* American Blower Co.  
 \* Harrisburg Fdry. & Mach. Wks.  
 \* Nordberg Mfg. Co.  
 \* Ridgway Dynamo & Engine Co.

**Engines, Steam, Vertical (Fully Enclosed, Self-Oiling)**  
 \* American Blower Co.  
 \* Clarage Fan Co.  
 \* Engberg's Electric & Mech. Wks.  
 \* Troy Engine & Machine Co.

**Engines, Steering**  
 \* Bethlehem Shipbldg. Corp'n (Ltd.)  
 \* Lidgerwood Mfg. Co.

**Evaporators**  
 \* Bethlehem Shipbldg. Corp'n (Ltd.)  
 \* Croil-Reynolds Engrg. Co. (Inc.)  
 \* Farrell Foundry & Machine Co.  
 \* Vogt, Henry Machine Co.  
 \* Wheeler Condenser & Engrg. Co.

**Excavating Machinery**  
 \* Clyde Iron Works Sales Co.  
 \* Lidgerwood Mfg. Co.  
 \* Link-Belt Co.

**Exhaust Heads**  
 \* Hoppes Mfg. Co.

**Exhaust Systems**  
 \* Allington & Curtis Mfg. Co.  
 \* American Blower Co.  
 \* Clarage Fan Co.  
 \* Sturtevant, B. F. Co.

**Exhausters, Gas**  
 \* American Blower Co.  
 \* Clarage Fan Co.  
 \* Fletcher Works  
 \* General Electric Co.  
 \* Green Fuel Economizer Co.  
 \* Schutte & Koerting Co.

 \* Jones, W. A. Fdry. & Mach. Co.

pp. 203-209, 12 figs. Describes Nordberg model having a cylinder output of 550 h.p. at 120 r.p.m.; many 4-cylinder units of 2200 hp. are in service. Operating and installation costs data.

#### DYNAMOMETERS

**Belt.** Some Power Studies Through Use of the Ohio Recording Belt Dynamometer, C. W. McCuen. *Agricultural Eng.*, vol. 5, no. 3, Mar. 1924, pp. 51-55, 13 figs. Describes dynamometer that will record power requirements and performance of belt-driven machines; prime mover, in a cradle, swings to make possible recording of a torque due to resistance in a belt. Studies in threshing and baling straw. Tests on effect of sharpness of knives.

## E

#### ELECTRIC FURNACES

**Acid.** The Manufacture of Acid Electric Steel for Commercial Castings, L. J. Barton. *Am. Soc. Steel Treating—Trans.*, vol. 5, no. 4, Apr. 1924, pp. 369-398, 8 figs. Discusses manufacture of acid as made in electric furnace, for use in production of commercial castings; selection, segregation and use of scrap metal; details of charging melting furnace; melting-down conditions involved, and various types of slags obtained in both good and bad practices; production of special steels and various alloy steels.

**Control Gear.** An Electric Furnace Regulating Gear, H. J. Seymour. *Power Engr.*, vol. 19, no. 218, May 1924, pp. 174-175, 2 figs. Describes one type of automatic apparatus for regulation of 2-phase electric furnaces.

**Developments.** Electric Furnace Developments, F. Hodson. *Foundry Trade J.*, vol. 29, no. 398, Apr. 3, 1924, pp. 273-274. Growth of electric melting furnace industry. Söderberg electrode. See also *Iron & Coal Trades Rev.*, vol. 108, no. 2928, Apr. 11, 1924, p. 596.

**Electrodes.** The Use of Söderberg Continuous Electrodes in Electric Steel Furnaces (Die Verwendung der Söderbergschen Dauerelektrode an Elektrostaehlen), W. Eilender and L. Lyche. *Stahl u. Eisen*, vol. 44, no. 14, Apr. 3, 1924, pp. 364-368. Experimental equipment with continuous electrode on one phase of 6-ton Héroult furnace; main equipment on 3-phase operation of same furnace; working results; reducing cost of electric-steel practice; thermal efficiency of 6-ton Héroult furnace.

**Increasing Capacity for Large Casting.** Nine Tons in a 3-Ton Furnace, L. J. Barton. *Foundry*, vol. 62, no. 10, May 15, 1924, pp. 401-403, 9 figs. Capacity of electric furnace increased to melt sufficient iron to pour large gear wheel; operating door banked up about 10 in. with cement made of white sand and sodium silicate; operation at plant of Dibert, Bancroft & Ross Co., New Orleans.

#### ELECTRIC LOCOMOTIVES

**Diesel-Electric.** See LOCOMOTIVES, Diesel-Electric.

**Mexican Railway.** Passenger and Freight Locomotives for Mexican Railway Company, Ltd., G. H. Walker. *Gen. Elec. Rev.*, vol. 27, no. 4, Apr. 1924, pp. 272-277, 9 figs. Mechanical and electrical details of 150-ton 3000-volt d.c. locomotive; tractive effort, 34,000 lb.; speed at 1 hr. rating, 19 m.p.h.; how locomotives have been arranged to meet service requirements of this particular electrification.

**0-4-4-0 Type.** Electric Goods Locomotive, Victorian Government Railways. *Ry. Gaz.*, vol. 40, no. 17, Apr. 25, 1924, pp. 596-597, 3 figs. Particulars of two locomotives to be used for service in Melbourne metropolitan railway yards and for hauling goods trains within Melbourne suburban electrified railway area; wheel arrangement 0-4-4-0; voltage and system 1500 d.c., individual single-gear drive, maximum tractive effort 26,000 lb.

**Oil-Engine-Driven.** New Type Electric Locomotive, Aera, vol. 12, no. 10, May 1924, pp. 1729-1732, 4 figs. Describes locomotive using oil for its fuel, built jointly by Gen. Elec. Co. and Ingersoll-Rand Co., and especially designed for switching service; fuel-oil engine operates d. c. generator supplying current to motors without intervening accelerating resistance; fuel cost exceedingly low, and new engine is smokeless.

**Oil-Electric Locomotive with Injection Type Engine.** *Ry. Age*, vol. 76, no. 23, May 10, 1924, p. 1159, 2 figs. Electric locomotive driven by fuel-oil engine built jointly by Gen. Elec. Co. and Ingersoll-Rand Co. See also *Ry. Rev.*, vol. 74, no. 19, May 10, 1924, pp. 846-847, 3 figs.

**Pit and Quarry Haulage.** Locomotives for Haulage at Pits and Quarries, H. H. Johnston. *Pit and Quarry*, vol. 8, no. 7, Apr. 1924, pp. 97-100, 4 figs. Notes on different types of electric locomotives, and electric equipment for haulage systems.

**Turbo-Electric.** See LOCOMOTIVES, Turbo-Electric.

#### ELECTRIC WELDING

**Machines and Processes.** Recent Developments of Electric Welding Machines (Die neuere Entwicklung der elektrischen Schweißmaschinen), A. Neuburger. *Elektrotechnik u. Maschinenbau*, vol. 42, nos. 14 and 25, Apr. 6 and 13, 1924, pp. 214-219 and 230-235, 20 figs. Description of modern processes and machines, with special reference to resistance welding.

#### ELECTRIC WELDING, ARC

**Cast Iron.** Arc Welding Cast Iron. *Welding Engr.*, vol. 9, no. 4, Apr. 1924, pp. 22-23, 3 figs. How to use monel-metal electrode.

**Copper.** Summary of Information on Arc Welding of Copper, Brass and Bronze in the Literature Up to March 1923. *Am. Welding Soc.—Jl.*, vol. 3, no. 3, Mar. 1924, pp. 9-15. Digest of literature made by sub-committee of Electric Arc Welding Committee of Am. Bur. Welding.

**Gate-Valve Reclamation.** An Interesting Arc Welding Operation. *West. Machy. Wld.*, vol. 15, no. 4, Apr. 1924, pp. 125-126, 2 figs. Methods used by ReQua-Wear Co. of San Francisco, in reclamation of a 48-in. gate valve for a Nevada power company.

**Manganese Steel.** Correct Welding Procedure Retains Qualities of Manganese Steel, H. H. George. *Elec. Ry. Jl.*, vol. 63, no. 16, Apr. 19, 1924, pp. 611-613. By use of arc welding in the field, life of manganese steel special work can be increased one to five years. Type of welding rod, technique employed and speed of cooling affect physical characteristics of welded material.

#### ELEVATORS

**Passenger.** Electric Passenger Lifts, H. Marryat. *Instn. Elec. Engrs.—Jl.*, vol. 62, no. 328, Apr. 1924, pp. 325-341 and (discussion) 341-349, 12 figs. Plea for British investigation and design in order to produce elevator more especially suitable to conditions in England than is possible by following American practice too closely; outlines methods employed by author in calculating elevator capacity required in building; comparison between drum and sheave driving; refers to new system of control, called auto-pilot; safety devices.

## F

#### FACTORIES

**Inspection.** Some Problems of Factory Inspection. *Int. Labour Rev.*, vol. 9, no. 3, Mar. 1924, pp. 372-386. Brief account of main lines of development of factory inspection, both in theory and practice, taking as basis reports prepared by Int. Labor Office.

#### FANS

**Exhaust.** Things to Know About Fan Application, H. W. Pfeffer. *Sheet Metal Worker*, vol. 15, no. 8, May 9, 1924, pp. 283-285 and 309, 3 figs. Important truths essential to a complete understanding of how to lay out a successful exhaust system; capacities to figure on; air velocities needed; pipe sizes; general suggestions.

**Mine.** The Change of Air Supply in Mine Fans, A. Latsinsky. *Russian Min. Jl.*, vol. 100, no. 1, Jan. 1924, pp. 31-34. (In Russian.)

#### FLIGHT

**Elements of Calculation.** General Method and Chart for Calculating Elements of Airplane Flight (Méthode générale et abaque pour calculer les éléments du vol d'un avion), G. Delanghe. *Génie Civil*, vol. 84, no. 2169, Mar. 8, 1924, pp. 222-226, 8 figs. Describes new method developed by author.

#### FLOW IN PIPES

**Water and Air Simultaneously.** Simultaneous Flow of Water and Air in Pipes, L. S. O'Bannon. *Am. Soc. Heat & Vent. Engrs.—Jl.*, vol. 30, no. 3, Mar. 1924, pp. 225-234, 14 figs. Describes experiments made to find capacity of pipes for carrying water and air simultaneously, within conditions of steady flow; results and methods of running experiments described under four following heads: Flow of water, flow of air, parallel flow of water and air, and counter flow of water and air.

#### FLOW OF FLUIDS

**Dynamical Similarity, Principle of.** The Principle of Dynamical Similarity, with Special Reference to Model Experiments, A. H. Gibson. *Engineering*, vol. 117, nos. 3037, 3038, 3039 and 3040, Mar. 14, 21, 28 and 42, 1924, pp. 325-327, 357-359, 391-393 and 422-423, 6 figs. Discusses application of principles to flow of fluid through pipes, resistance of wholly submerged and partially submerged bodies; model experiments on resistance of ships; resistance of smooth wires and cylinders; estuary model experiments; surge tanks; sea-going qualities of vessels in rough sea; suction of interaction between passing vessels; critical speed and torsional vibration of shafts.

#### FLOW OF GASES

**Measurement.** Measuring Flow of Gases, Chas. P. Turner and B. W. Winship. *Chem. & Met. Eng.*, vol. 30, no. 16, Apr. 21, 1924, pp. 633-635, 4 figs. Results of application of mixture method, suggested by salt-solution method for measuring flow of water, show that it is of value in related problems of fluid flow.

#### FLOW OF STEAM

**Pipes.** Critical Velocity of Steam and Condensate Mixtures in Horizontal, Vertical, and Inclined Pipes, F. C. Houghton and R. L. Lincoln. *Am. Soc. Heat & Vent. Engrs.—Jl.*, vol. 30, no. 2, Feb. 1924, pp. 153-168, 19 figs. Details of experiments made to obtain a thorough understanding and complete knowledge of factors entering into, and effects taking place when steam is sent through a pipe in which there is a counter-flow of condensate. Effect of length and size of pipe and type of entrance, upon critical velocity.

#### FLYING BOATS

**Short.** The Short All-Metal Light Flying Boat. *Flight*, vol. 16, no. 16, Apr. 17, 1924, pp. 220-223, 4 figs. Built entirely of metal, with exception of wing covering, and material mainly used in construction is duralumin; two 696 cc. Blackburne engines; length 24 ft. 8 1/2 in., span 36 ft.

#### FLYWHEELS

**Manufacture.** Maxwell Methods in Flywheel Work, F. H. Colvin. *Am. Mach.*, vol. 60, no. 20, May 15, 1924, pp. 729-730, 5 figs. Machine equipment, together with some of tooling fixtures and handling devices; drilling and tapping in multi-spindle machines; balancing machine.

#### FORGING

**Steam vs. Air Hammers.** Steam vs. Air in Forging-Hammer Practice (Dampf oder Luft für den Hammerbetrieb), F. Beleke. *Maschinenbau*, vol. 3, no. 12, Mar. 27, 1924, pp. 389-394, 18 figs. Comparison of economy of steam, pneumatic and air hammers; points out applications for which each type is most adaptable.

#### FORGINGS

**Heavy.** The Production of Heavy Forgings. *Mech. Eng.*, vol. 46, no. 5, May 1924, pp. 241-247 and 307-315 figs. Survey of status of industry in America at present time, together with data helpful to engineer ordering forgings.

#### FOUNDRIES

**Brass.** The Operation of a Brass Foundry under Scientific Control, F. W. Rowe. *Foundry Trade J.*, vol. 29, no. 399, Apr. 10, 1924, pp. 291-294 and (discussion) 294-296, 5 figs. Layout of brass foundries, provision of suitable stores, recording stocks, charge sheets, inspection of castings of new design, melting and casting procedure, casting temperature, etc.

**Costs.** Why Foundry Costs Vary on Rough Castings, A. Luenberg. *Can. Foundryman*, vol. 15, no. 3, Mar. 1924, pp. 14-15, 3 figs. Uniform cost-finding method for foundries; individual cost of castings based on actual time prevents confusion in locating leaks.

**Ford Motor Co., Detroit.** Jobbing Foundry of Ford Motor Co., F. L. Prentiss. *Iron Age*, vol. 113, no. 21, May 22, 1924, pp. 1485-1489, 8 figs. Iron, steel and non-ferrous departments; blast furnace, cupola and electrically melted metals used; new steel plant.

**Malleable-Iron.** Iron Supply Governs Location. *Foundry*, vol. 52, no. 10, May 15, 1924, pp. 389-395, 11 methods. Methods and equipment of Cadillac Malleable Iron Co., Cadillac, Mich., which chose site near source of charcoal-iron production; interplant transportation features, ladles, etc.

**Modern Practice.** Recent Evolution in Foundry Practice (Evolution récente de la fonderie), E. Ronceray. *Revue de Métallurgie*, vol. 21, nos. 1, 2 and 3, Jan., Feb. and Mar., 1924, pp. 4-11, 112-120 and 183-194, 16 figs. Jan.: General progress; semi-steel; fuels; American malleable; light metals; melting apparatus; heating furnaces. Feb.: Molding and casting; dry-sand and chill casting; molding machines. Mar.: Core and patterning; general layout of foundries.

#### FRICTION GEARING

**Slip.** Experiments on the Friction of Solid Bodies (Versuche über die Reibung fester Körper). *Zeit. für angewandte Mathematik u. Mechanik*, vol. 4, no. 1, Feb. 1924, pp. 1-32. Investigation of slip of driving disk in excess of distance corresponding to its actual revolution; deals with changes in surfaces and their influence on friction values, and progress of slip at different speeds, with normal and peripheral forces; deformations of disks as cause of slip; gives coefficients of friction for various combinations of metals, wood and leather.

#### FUELS

**Colloidal.** Experimental Preparation of Colloidal Fuel, A. V. Sapoznikow and M. N. Kalinin. *Petrochem & Oil-Shale Industry*, vol. 5, no. 11-12, Nov.-Dec. 1923, pp. 652-654. (In Russian.)

**Combustion, Maximum Temperatures and Pressures in.** An Investigation of the Maximum Temperatures and Pressures Attainable in the Combustion of Gaseous and Liquid Fuels, G. A. Goodenough and G. T. Felbeck. *Univ. of Ill. Bul.*, no. 139, Mar. 1924, 158 pp., 27 figs. Résumé of important laws of gas mixtures; general theory of chemical equilibrium, and derivation of equilibrium equations for various reactions; develops energy equation, and shows method of solving system of equations for maximum temperature; comparisons and applications of theory.

**Furnace Residue.** Investigation of Furnace Residue of Anthracite (Zur Kenntnis und zur Untersuchung der Feuerungsrückstände von Steinkohlen), E. Donath. *Berg- u. Hüttenmännisches Jahrbuch*, vol. 71, no. 4, 1923, pp. 24-27. Describes modification of method for preparation of residue according to which ferrous oxide and sulphur compounds and in fact main part of mineral substances are dissolved away.

**Lignite and Bituminous Mixtures.** Burning Mixtures of Lignite and Bituminous, A. Canfield. *Power Plant Eng.*, vol. 28, no. 9, May 1, 1924, pp. 476-477, 4 figs. Experiments carried out at power plant of State Mill & Elevator, Grand Forks, N. Dak., during past six months to determine most economical ratio of lignite to be burned with Eastern bituminous.

**Lignite Char.** Tests of Lignite Char as Reduction Fuel in the Smelting of Zinc Ores, B. M. O'Harra. *U. S. Bur. Mines, Reports of Investigations*, No. 2575, Feb. 1924, 7 pp. Analysis and characteristics of and experiments made with "char," the fuel produced by a simple carbonizing oven devised by Bur. of Mines which is essentially a vertical shaft with means for supplying raw lignite at top and discharging carbonized lignite at lower end. *From Zinc Inst. Bul.*, Jan. 1924.

**Pulpwood Bark.** Utilization of Pulpwood Bark for Fuel, J. D. Rue and E. P. Gleason. *Paper Trade J.*, vol. 78, no. 16, Apr. 17, 1924, pp. 40-50, 10 figs. Final report of Sub-Committee on Utilization of Bark, Committee on Waste of Technical Assn. Pulp & Paper Industry, dealing with possible methods of utilization, present practice in barking, bark presses, and furnaces for burning bark.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment. 1923-24 Volume

**Solid, Chemical Constitution.** Modern Theories on the Chemical Constitution of Solid Fuels (Les théories modernes sur la constitution chimique des combustibles solides), E. Audibert and A. Raineau. *Chimie & Industrie*, vol. 11, nos. 2 and 3, Feb. and Mar. 1924, pp. 229-247 and 434-448, 1 fig. Review of works on this subject during recent years: Constituents of higher plants; carbon hydrates; natural state, properties and constitution of lignines; humic acids; conversion from plant to humic acid and from humic acid to humic substances; investigations tend to confirm existing lack of knowledge on subject of chemical constitution of solid fuels. See also *Revue de l'industrie Minière*, no. 78, Mar. 15, 1924, pp. 127-171, 1 fig.

[See also COAL; LIGNITE; OIL FUEL; PULVERIZED COAL.]

#### FURNACES, HEAT-TREATING

**Continuous.** Continuous Furnaces Prove Advantageous in Heat Treating Automobile Parts, E. C. Cook. *Fuels & Furnaces*, vol. 2, no. 4, Apr. 1924, pp. 341-346, 8 figs. Notes on furnaces used for annealing, hardening, quenching and tempering at plant of Chevrolet Motor Ohio Co., at Toledo, Ohio.

#### FURNACES, INDUSTRIAL

**Electricity, Use of.** Furnaces and Heat Sources, E. F. Collins. *Fuels & Furnaces*, vol. 2, no. 5, May 1924, pp. 479-483. Reasons for wider and more general adoption of electric heat in past few years. Some fundamental considerations which determine when electric heat should be used.

**Recuperation, Advantages of.** Recuperation—Its Advantages, E. R. Posnack. *Combustion*, vol. 10, no. 5, May 1924, pp. 362-363. Advantages of recuperation in industrial furnaces.

## G

#### GAGES

**Hydrostatic.** How to Compensate for Temperature Effects on Hydrostatic Gages, J. P. Nikonow. *Automotive Industries*, vol. 50, no. 18, May 1, 1924, pp. 964-966, 3 figs. Fluctuations in atmospheric temperature change volume of entrapped air and thus vary readings; practical method of balancing this factor is worked out.

#### GAS ENGINES

**Foundations.** Foundations for Gas Engines, Power Engr., vol. 19, no. 217, Apr. 1924, pp. 125-127, 8 figs. Design and construction of foundations suitable for internal-combustion engines, and particularly gas plants.

**Ignition Equipment.** Ignition Equipment for a 7,500-Hp. Gas Engine. *Engineering*, vol. 117, no. 3039, Mar. 28, 1924, pp. 394-395, 4 figs. Set of equipment supplied by Lodge Bros. & Co. for gas engine; details of contact maker, igniter, timing unit and sparking plug.

#### GAS PRODUCERS

**Bituminous Coal as Fuel.** Central District Bituminous Coals as Water-Gas Generator Fuel, W. E. Odell and W. A. Dunkley. *U. S. Bur. Mines*, Bul. 203, 1924, 92 pp., 11 figs. Results of investigation made which consisted of study of practice already developed and difficulties encountered, development of operating methods that would obviate these difficulties, testing various coals of Central District to determine which might be considered for this purpose, and study of technical conditions involved in manufacture of water gas from bituminous coals.

**Regulation.** Tests on Regulation of Gas Producers and Open-Hearth Furnaces (Versuche zur Einregulierung von Gaserzeuger und Siemens-Martin-Ofen), Geo. Bulle. *Stahl u. Eisen*, vol. 44, no. 15, Apr. 10, 1924, pp. 397-403, 6 figs. Summary of measurements carried out on 7 producer plants and 3 open-hearth works; determination of influence of varying steam consumption, load and treatment on producers; tests on open-hearth furnaces to ascertain correct quantity of air and best mixing conditions of coke-oven and producer gas; description of necessary measuring equipment.

#### GAS TURBINES

**Developments.** The Gas Turbine, F. Döflin. *Instn. Mech. Engrs.—Proc.*, vol. 2, no. 6, 1923, pp. 1121-1135, 2 figs. Account of most noteworthy attempts to produce efficient and reliable gas turbine; summary of results obtained and indication of possible future developments. (Abridged.)

**Holzwarth.** The Holzwarth Gas Turbine. *Power Engr.*, vol. 19, no. 217, Apr. 1924, pp. 140-142, 6 figs. Chronicle of progress actually made with this design.

**Stauber.** New Methods of Energy Generation—Stauber Gas Turbine, Löffler. *Mech. Engr.*, vol. 46, no. 5, May 1924, pp. 284-285, 1 fig. Discusses various new paths sought and partly opened up in domain of power generation, and describes construction of Stauber turbine being experimentally operated by German Gen. Elec. Co. in Berlin. Translated from *Zeit. des Vereines Deutscher Ingenieure*, vol. 68, no. 8, Feb. 23, 1924, pp. 161-169.

#### GASES

**Combustion at High Pressure.** Gaseous Combustion at High Pressures, Wm. A. Bone, D. M. Newitt and D. T. A. Townend. *Roy. Soc.—Proc.*, vol. 105, no. A732, Apr. 1, 1924, pp. 406-433, 6 figs. Influence of varying initial pressures upon rate of pressure development and activation of nitrogen in carbon monoxide-air explosions.

#### GEAR CUTTING

**Hobbing Machines.** Gould & Eberhardt No. 72-H

Automatic Gear Hobbing Machine. *Am. Mach.*, vol. 60, May 1, 1924, pp. 669-670, 2 figs. Adapted for cutting of gears up to 27 in. in diam.

#### GEARS

**Bevel.** Spiral Bevel Gears. *Machy. (Lond.)*, vol. 24, no. 605, May 1, 1924, pp. 138-141, 6 figs. Deals with type produced on Gleason principle in which, owing to spiral effect tooth thickness cannot be measured on outer circumference as can be done in case of straight-tooth bevel gears, but should be measured across normal section of tooth.

**Differential.** Methods of Machine Tool Design, A. L. De Leeuw. *Am. Mach.*, vol. 60, no. 17, Apr. 24, 1924, pp. 621-624, 5 figs. Differential gearing finds its principal machine-tool application in feed mechanism; differential indexing mechanisms.

**Profiles.** On the Profiles of Gear, S. Hashimoto. *Tokyo. Japan, Dept. of Railways Bul.*, vol. 12, no. 2, Feb. 10, 1924, pp. 1-20, 12 figs. (In Japanese.)

**Spiral Bevel.** The Application of Spiral Bevel Gears, F. E. McMullen. *Am. Mach.*, vol. 60, no. 20, May 15, 1924, pp. 721-722. Paper presented before Am. Gear Mfrs. Assn.

#### GRINDING MACHINES

**Disk.** The Use of Fixtures in Disk-Grinding, H. Campbell. *Am. Mach.*, vol. 60, no. 21, May 22, 1924, pp. 759-761, 9 figs. Grinding production determined largely by types of fixture used; recently developed work holders; grinding piston rings automatically; better work and higher production with less labor.

**High-Traverse.** New Landis Grinder Has Stationary Head. *Automotive Industries*, vol. 50, no. 19, May 8, 1924, p. 1017, 2 figs. Designed to meet demand for oversize precision grinding with long-lived speed production; number of pieces ground per dressing of wheel said to offset higher initial cost.

**Internal.** Productive Internal Grinding, Brit. Machine Tool Eng., vol. 3, no. 26, Mar.-Apr. 1924, pp. 30-32, 5 figs. Describes internal-grinding machine made by Churchill Machine Tool Co., adapted to suit special piece of work; main features and operation.

## H

#### HARDNESS

**Ball Hardness Testing.** The Accurate Determination of the Hardness of Metals. *Engineering*, vol. 117, no. 3043, Apr. 25, 1924, pp. 518-519, 5 figs. Investigation of Brinell test with object in view of designing method of testing which yields Brinell hardness numerals of thoroughly reliable order, free from irregularities to which Brinell test is exposed when carried out in ordinary way.

**Indentation.** In the Indentation Hardness of Metals, K. Honda and K. Takahasi. *Iron & Steel Inst.—advance paper*, no. 10, for mtg. May 1924, 11 pp., 6 figs. Points out that Brinell hardness, when impression is measured during application of load, is quite correct, and much less than that by usual method of measurement; new definition of hardness is given.

**Magnetic Tests.** A Correlation between the Mechanical Hardness and the Magneto-restrictive Effects of Ferromagnetic Substances, S. R. Williams. *Am. Soc. Steel Treating—Trans.*, vol. 5, no. 4, Apr. 1924, pp. 362-368, 3 figs. Method of determining physical properties of metals through magnetic means; relative merits of X-ray and magnetic means of determining flaws in metals; Joule effect; discusses experiments wherein endeavor was made to relate magnetostriction and hardness of ferromagnetic substances.

**Steel Balls, Magnetic Test.** Hardness of Steel Balls by Magnetic Tests, S. R. Williams. *Am. Soc. Steel Treating—Trans.*, vol. 5, no. 5, May 1924, pp. 479-484, 4 figs. Rapid method of determining magnetically hardness of steel balls; with this method it is possible to conduct 100-per cent inspection on balls for hardness, with considerable rapidity; illustrations showing schematic arrangement of author's apparatus, and set-up and graphs of certain tests made upon balls having different degrees of hardness.

#### HEAT TRANSMISSION

**Boilers.** The Transmission of Heat in Boilers, W. N. Booth. *Gas Wld.*, vol. 80, no. 2071, Mar. 29, 1924, pp. 288-290, 6 figs. Conditions which affect flow of gas adjacent to a solid surface; conduction and convection; transmission of heat through boiler plates. Paper read before Lond. & Southern District Jr. Gas Assn. See also *Gas J.*, vol. 166, no. 3177, Apr. 2, 1924, pp. 36-38, 6 figs.

**Buildings.** An Improved Method of Determining the Heat Transfer Through Wall, Floor, and Roof Sections, R. F. Norris, H. H. Germond and C. M. Tuttle. *Am. Soc. Heat. & Vent. Engrs.—Jl.*, vol. 30, no. 2, Feb. 1924, pp. 109-114, 1 fig. Describes method developed in Burgess laboratories and apparatus used.

**Problems.** Heat Transfer Symposium. *Indus. & Eng. Chem.*, vol. 16, no. 5, May 1924. Contains following articles: Heat Transmission from Bare and Insulated Pipes, R. H. Heilman, pp. 451-458, 10 figs.; Heat Transmission in an Inclined Rapid Circulation Type Vacuum Evaporator, D. J. Van Marie, pp. 458-459, 2 figs.; Forced Convection of Heat in Gases and Liquids, Chester W. Rice, pp. 460-467, 4 figs.; Optimum Operating Conditions for Pipe Heating and Cooling Equipment, W. K. Lewis, J. T. Ward and E. Voss, pp. 467-468; Heat Transfer in Enamel-Lined Apparatus, E. P. Poste, pp. 469-470; Characteristics of Air-Blast Heaters, F. R. Ellis and J. D. White, pp. 471-473, 8 figs.; Studies in Evaporator Design—Effect of Surface Conditions, L. A. Pridgeon and W. L. Badger, pp. 474-478, 3 figs.; Evaporator Scale Formation, W. L.

McCabe and C. S. Robinson, pp. 478-479, 3 figs.; The Film Concept of Heat Transmission Applied to a Commercial Water Heater, D. K. Dean, pp. 479-483, 3 figs.; Loss of Heat from Furnace Walls, Rob. Calvert and L. Caldwell, pp. 483-490, 11 figs.; A Heat Transmission Meter, P. Nicholls, pp. 490-493, 3 figs.

**Heat Transfer Symposium.** *Chem. & Met. Eng.*, vol. 30, no. 17, Apr. 28, 1924, pp. 661-665. Review of series of practical technical papers summarizing present knowledge of process. Abstracts of papers read before Am. Chem. Soc.

#### HEATING AND VENTILATING

**Air Leakage in Buildings.** Air Leakage Through the Openings in Buildings, F. C. Houghten. *Am. Soc. Heat. & Vent. Engrs.—Jl.*, vol. 30, no. 2, Feb. 1924, pp. 121-134, 11 figs. Method employed in investigation of double-hung windows, 2 ft. 8 in. by 5 ft. 2 in. by 1 1/2 in., in a 13-in. brick wall, plastered on inside with cement plaster; results are given for leakage, through such a window without weatherstripping and with two types of weather stripping, around frame, and through brick wall itself.

#### HEATING, STEAM

**Central-Station.** Distribution and Regulation of Heat in Central Heating Plants (Distribution et Réglage de la Chaleur dans les installations de chauffage central par l'eau et la vapeur), A. Nesi and L. Nisolle. *Chaleur & Industrie*, vol. 4, no. 44, Dec. 1923, pp. 945-951 and vol. 5, no. 45, Jan. 1924, pp. 27-32, 6 figs. Discusses means and possibilities of improving economic efficiency of central heating stations.

#### HYDRAULIC MACHINERY

**Glycerine, Use in.** Study on the Use of Glycerine in Hydraulic Machinery (Etude sur l'emploi de la glycérine dans les appareils hydrauliques), F. Mercier. *Revue Industrielle*, vol. 64, no. 2177, Apr. 1924, pp. 52-57, 4 figs. Study of properties of glycerine and its action on metals, based on experience of 30 years extending over more than 1200 apparatus; author concludes that hydraulic or hydropneumatic apparatus of any kind, making use of glycerine, should be constructed so that in no case glycerine can come in contact with surfaces of different metallic nature.

#### HYDRAULIC TURBINES

**Bearings and Vibration Conditions.** Experience with Bearings and Vibration Conditions of Large Hydroelectric Units, J. Harisberger. *Am. Inst. Elec. Engrs.—Jl.*, vol. 43, no. 5, May 1924, pp. 428-429, 1 fig. Troubles experienced with hydraulic turbines installed at Snoqualmie Falls and White River power stations, and remedies applied.

**Efficiency Tests.** Hydraulic Turbine Efficiency, F. Johnstone-Taylor. *Power Plant Eng.*, vol. 28, no. 8, Apr. 15, 1924, pp. 436-437, 3 figs. Describes method of conducting efficiency tests and gives test results.

**Kaplan.** Test Results with Storek-Kaplan Turbines (Versuchsergebnisse von Storek-Kaplanturbinen), H. Mikyska. *Zeit. des Vereines deutscher Ingenieure*, vol. 68, no. 17, Apr. 26, 1924, pp. 416-418, 12 figs. Describes test apparatus and shows with aid of brake curves that Kaplan turbine follows Prof. Camerer's law for increasing size of turbines in certain cases; results of successful tests for elimination of cavitations.

**Large Installations.** Two Modern Turbine Installations (Zwei moderne Turbinenanlagen), R. Hofmann. *Zeit. des Vereines deutscher Ingenieure*, vol. 68, no. 16, Apr. 19, 1924, pp. 397-400, 12 figs. 14,300-hp. Pelton turbines of the Amsteg hydroelectric plant of the Swiss Federal Ry., and large Francis high-speed turbines of Mauzac hydroelectric plant, France; details of governors, safety arrangements, etc.

**Lawaczek.** The Lawaczek Turbine and Turbine Problems Connected Therewith (Om Lawaczek-turbinen och därmed sammanhängande turbinproblem), E. Svala. *Teknisk Tidskrift*, vol. 54, no. 16, Apr. 19, 1924, pp. 39-47 (Mekanik), 21 figs. A high-speed hydraulic turbine of a new and simple design and high efficiency.

**Machining Cast-Steel Casings.** Machining Massive Parts of the World's Largest Prime Movers, E. J. Armstrong. *Mech. Engr.*, vol. 46, no. 5, May 1924, pp. 263-267, 9 figs. Methods used for machining large cast-steel casings for 70,000-hp. hydraulic turbines installed at Niagara Falls.

**Spiral.** Large Spiral Turbines for Omine Hydroelectric Plant in Japan (Gross Spiralturbinen für das Kraftwerk Omine in Japan), v. Troeltsch. *Zeit. des Vereines deutscher Ingenieure*, vol. 68, no. 15, Apr. 12, 1924, pp. 377-378, 3 figs. Describes spiral turbines with vertical shaft built by J. M. Voith, Heidenheim, Germany.

#### HYDROELECTRIC DEVELOPMENTS

**Centralization of.** The Tendency Toward Centralization of Power Development, W. L. Abbott. *Mun. & County Eng.*, vol. 66, no. 4, Apr. 1924, pp. 165-171, 2 figs. What various states are doing; consolidation of stations; rail transmission of power cheaper than wire transmission; how railway coal freight schedules are made up; etc. Paper read at annual mtg. of Ill. Soc. Engrs.

**Davis Bridge Project.** Davis Bridge Development of the New England Power Company. *Power*, vol. 59, no. 20, May 13, 1924, pp. 776-779, 8 figs. Project on Deerfield River involves earth dam 200 ft. high, storage reservoir of 50,000,000 cu. ft. capacity, 13,000-ft. tunnel and three 20,000-hp. units for head varying from 300 to 390 ft.

**Ile Maligne, Canada.** Ile Maligne Hydro-Electric Development, J. P. Chapleau. *Can. Engr.*, vol. 46, no. 19, May 6, 1924, pp. 487-489, 5 figs. Large power development being undertaken by Quebec Development Co., on Saguenay River at Ile Maligne station; 12 turbine units will be installed having a total capacity of 540,000 hp.; details of turbine construction.

- \* Smooth-On Mfg. Co.

**Newfoundland.** Newfoundland Water Power. Times Trade & Eng. Supp., vol. 14, no. 303, Apr. 26, 1924, p. 167, 3 figs. Progress being made in large scheme for production of hydroelectric power and manufacture of paper, known as Humberarm proposition, in west of Newfoundland; details of dam, pipe line and power house, and paper mill.

**Sweden.** Swedish Water Power and the Farmer. Elec. World, vol. 83, no. 20, May 17, 1924, pp. 992-998, 14 figs. 40 per cent of tilled land now within reach of electric transmission lines; standardized distribution system employed, which is partly financed by farmers' local cooperative societies.

**Switzerland.** Hydroelectric Development and Railway Electrification in Switzerland (Reiseindrücke über Wasserkraftnutzung und Bahn elektrifizierung in der Schweiz). P. Dittes. Elektrotechnik u. Maschinenbau, vol. 42, no. 12, Mar. 23, 1924, pp. 177-189, 21 figs. Describes more important hydroelectric plants and developments in railway electrification, including transmission lines, locomotives, etc.

#### HYDROELECTRIC PLANTS

**Danube River, Germany.** The First Hydroelectric Plant on the Danube River (Das erste Donaukraftwerk), W. Wieser. Zeit. des Oesterr. Ingenieur- u. Architekten-Vereins, vol. 76, no. 11-12, Mar. 21, 1924, pp. 91-94, 6 figs. The Rhine-Main-Danube as waterway for hydroelectric development; canalization of Danube by means of dam at Kachlet near Passau; description of plant, locks, weir, and power house; status of construction work.

**Load Control.** Load Control in Automatic Hydro-Electric Generating Stations, R. C. Denny. Power, vol. 59, no. 19, May 6, 1924, pp. 716-717, 3 figs. Float-control method of making load changes; load control where water storage is available.

**Sand-Removal Plants.** The Deterioration of Turbines and Automatic Sand-Removal Plants (Neues über Turbinen-Abnützung und automatische Entsandungs-Anlagen), H. Dufour. Schweizerische Bauzeitung, vol. 83, nos. 15 and 17, Apr. 12 and 26, 1924, pp. 169-171 and 196-200, 16 figs. Cites examples to show that turbines, even in low-pressure works, suffer great deterioration from river detritus; and describes recent developments in automatic sand-removal plants.

## I

#### ICE MANUFACTURE

**Cracked- and Checked-Ice Problems.** Solving "Cracked and Checked" Ice Problems, E. Ormsby. Power House, vol. 17, no. 7, Apr. 5, 1924, pp. 28-29 and 41, 3 figs. Outline of some remedies for difficulties confronting power plant engineers as a result of strains produced in freezing. Paper read before Nat. Assn. Practical Refrig. Engrs. annual convention. See also Southern Engr., vol. 41, no. 2, Apr. 1924, pp. 50-52.

#### ICE PLANTS

**Huntingdon, Pa.** Modern Ice Making and Icing Station at Huntingdon, Pa. Ice & Refrigeration, vol. 66, no. 4, Apr. 1924, pp. 283-290, 15 figs. Describes ice-making plant and car-icing station of Bolye Ice Co. recently completed; built for supplying ice for Fruit Growers' Express and Pennsylvania R. R. Co.

**Oil-Engine-Driven.** Ice Plants and the Question of Oil Engine Power, C. T. Baker. Oil Engine Power, vol. 11, no. 4, Apr. 1924, pp. 212 and 217-219, 2 figs. Deals with subject of oil-engine drive for ice plants, discussing cost of installation, maintenance and repair costs, fuel and lubricating costs, method of drive, etc. Extracts from paper read before Ga. Ice Assn.

#### INDUSTRIAL MANAGEMENT

**Average Costs, Fallacy of.** A Fallacy of Management—That Average Costs Are of Any Value, B. M. Maynard and J. Heywood. Factory, vol. 32, no. 3, Mar. 1924, pp. 330-331 and 366, 1 fig. Discussion based on varied experience with industrial engineering in many plants.

**Development.** A Decade's Development in Management, H. P. Kendall. Taylor Soc.—Bul., vol. 9, no. 2, Apr. 1924, pp. 55-56. Trends and results of scientific management; developments in manufacturing problems; industrial relations; scientific management and selling.

**Executive Function.** Management as an Executive Function, J. H. Williams. Taylor Soc.—Bul., vol. 9, no. 2, Apr. 1924, pp. 66-71. Emphasizes modern biology and psychology as essential to development of science of management.

**Expense Control.** A Method of Expense Control That Paid, M. R. Lott. Indus. Mgt. (N. Y.), vol. 67, no. 5, May 1924, pp. 284-286, 2 figs. Keeping down cost of improvements; describes method which has proved of great benefit in controlling cost of work of expense nature, where large sums are involved.

**Increase of Production.** (Menschenwirtschaft.) Increase of Production. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 17, Apr. 26, 1924, pp. 405-413, 30 figs. Discusses increase of production by increasing present efficiency of workmen, by harmonizing their operation with the machinery they employ, and by providing them with intelligent direction and supervising.

**Machine-Building Industries.** Management Problems in Machine Building Industries, E. F. Du Brul. Am. Mach., vol. 60, no. 20, May 15, 1924, pp. 717-721, 2 figs. Effect of business cycle on management policies; handicaps under which builder of production equipment must work; profits of fat years must cover losses suffered in lean ones.

**Metal-Working Trades.** The Mechanical Engineering of Management in the Metal-Working Trades,

Robt. T. Kent. Mech. Eng., vol. 46, no. 5, May 1924, pp. 272-273 and 307. Good mechanical engineering is shown to be essential to good management in metal-working trades; engineering preliminaries to time study; engineering in plant; methods and equipment.

**Principles.** The Principles Underlying Good Management, H. Diemer. Indus. Mgt. (N. Y.), vol. 67, no. 5, May 1924, pp. 280-283. Investigation and standardization; comprehensive planning; preparation; inspection and records; wage incentives; control; mutual confidence and coöperation.

**Production Control.** A Workable Production Control Plan for the Small Plant, A. A. Dobson. Factory, vol. 32, no. 5, May 1924, pp. 652-654, 5 figs. Stock file of tickets are printed in addressing machine using metal plates; tickets required in system are stores issue, time ticket, job ticket, move ticket, and work tag.

**Production Planning.** A Flexible Method of Production Planning for the Job Shop, E. W. Palmer. Factory, vol. 32, no. 3, Mar. 1924, pp. 321-324, 392 and 394, 5 figs. Method devised by author's own organization.

**Sales.** Tendencies in Sales Management, S. Cowan. Taylor Soc.—Bul., vol. 9, no. 2, Apr. 1924, pp. 72-85. Consideration of influence of scientific-management attitude of mind on selling and advertising; scientific analysis of marketing problems; scientific planning of sales activities; executive responsibility.

**Simplification.** A Bibliography of Articles on Simplification. Factory, vol. 32, no. 3, Mar. 1924, pp. 318-320. Classified list of periodical articles, government reports and special reports.

**Tool-Division System.** Tool Division Organization and Management, E. C. Cooley. Machy. (N. Y.), vol. 30, no. 9, May 1924, p. 700. Deals with essential points to be considered in developing tool-division system; system successfully employed in number of shops engaged in interchangeable manufacture; making and upkeep of tools; controlling head.

#### INDUSTRIAL ORGANIZATION

**Automobile Manufacturing Plant.** Organizing a Great Industrial, C. S. Scott. Mgt. & Administration, vol. 7, no. 5, May 1924, pp. 523-527, 1 fig. Organization methods of General Motors corporation.

**Employers' Associations.** Some Tendencies of Employers' Organizations in 1923. Int. Labour Rev., vol. 9, no. 2, Feb. 1924, pp. 208-226. Outstanding tendencies of employers' associations during 12-month period ending in autumn of 1923.

**Vertical Trusts.** The Vertical Trust, D. T. Farnham. Indus. Mgt. (N. Y.), vol. 67, no. 5, May 1924, pp. 257-263, 4 figs. Newer form of industrial combination and what it portends; its advantages and limitations and place in present industrial order.

#### INTERCHANGEABLE MANUFACTURE

**Munitions.** Interchangeable Manufacture and Munitions, E. Buckingham. Army Ordnance, vol. 4, no. 24, May-June, 1924 pp. 361-366, 1 fig. Traces briefly progress of a commodity through all stages of its manufacture, from its inception as a mechanical project to final testing that determines its successful completion.

#### INTERNAL-COMBUSTION ENGINES

**Air Consumption and Power.** Air Consumption and Power of Petrol Engines, H. Moss. Engineering, vol. 117, no. 3042, Apr. 18, 1924, pp. 507-509, 5 figs. Relationship of air consumption of brake horsepower in internal-combustion engines; road and flight tests. (Abstract.) Paper read before Instn. Mech. Engrs.

**Balancing of Masses.** Balancing of Masses in Single-Crank, Single- and Double-Cylinder Internal-Combustion Engines (Massenausgleich bei einkurbeligen, ein- und zweizylinderigen Verbrennungsmotoren), H. Schrön. Motorwagen, vol. 27, nos. 8 and 10, Mar. 20 and Apr. 10, 1924, pp. 127-134 and 166-174, 35 figs. Numerical and graphical presentation of paths of center of gravity, free forces and moments exerted by masses with one cylinder and two cylinders in fork and end-to-end arrangement, when no counterweight is present and when rotating masses are balanced; determination of additional weight for further improvement of weight; numerical examples.

**Efficiency Standards.** Efficiency Standards for Internal Combustion Engines. Engineer, vol. 137, no. 3563, Apr. 11, 1924, p. 394. Discussion by Committee on Tabulating Results of Heat Engine and Boiler Trials on standards of comparison for thermal efficiency of internal-combustion engines. See also Shipbldg. & Shpg. Rec., vol. 23, no. 15, Apr. 10, 1924, pp. 426-427.

**Exhaust-Valve Temperatures.** Exhaust-Valve and Cylinder-Head Temperatures in High-Speed Petrol Engines, A. H. Gibson and H. W. Baker. Instn. Mech. Engrs.—Proc., vol. 2, no. 6, 1923, pp. 1045-1092 and (discussion) 1093-1119, 31 figs. Investigation shows that, in well-designed overhead-valve engine, either of air- or water-cooled type, under normal conditions of operation, temperature of exhaust valve may be between 600 and 750 deg. cent.; best shape of valve head appears to be one having flat bottom and tulip-shaped top, but as this is impracticable owing to weight, next best is one having tulip-shaped head common in airplane-engine practice; conditions tending to give hot valve also tend to give hot cylinder head.

**Flywheel Design, Chart for.** Finding the Flywheel Weight Required by an Internal-Combustion Engine, P. H. Schweitzer. Power, vol. 59, no. 18, Apr. 29, 1924, p. 673, 1 fig. Presents chart for flywheel design including full instructions as to steps to be followed when using chart.

**High-Speed Four-Cycle.** On Increasing the Size of the Gas Passages in High-Speed Four-Cycle Engines (Dell'ingrandimento delle luci di passaggio dei gas nei motori veloci a quattro tempi), P. Tedeschi. In-

dustria, vol. 38, no. 5, Mar. 15, 1924, pp. 133-136, 4 figs. Cylinder and valve arrangement and proportions by means of which area of gas passages is always 50 per cent, power output markedly increased, and efficiency improved.

**Thermal Efficiency of.** Standards of Comparison in Connection with the Thermal Efficiency of Internal Combustion Engines, G. J. Wells. Gas J., vol. 166, no. 3179, Apr. 16, 1924, pp. 172-175, 4 figs. Traces investigation of subject from commencement of work of original committee appointed by Instn. Civil Engrs. in 1903, to which reference is made to compute ideal efficiency. Standard recommended involves use of air as ideal fluid, together with hypothesis that its specific heat was constant over range of pressures and temperatures involved. See also Gas Wld., vol. 80, no. 2073, Apr. 12, 1924, pp. 338-339.

[See also AIRPLANE ENGINES; AUTOMOBILE ENGINES; DIESEL ENGINES; GAS ENGINES; MOTOR BUSES; OIL ENGINES.]

#### IRON

**Cold Work, Effect of.** The Effect of Cold-Work upon the Density of Crystals of  $\alpha$ -Iron, H. O'Neill. Iron & Steel Inst.—advance paper, no. 13, for mtg. May 1924, 12 pp., 4 figs. Tests on Armco iron and on single crystal; results.

**Deterioration from Rolling Friction.** Testing the Deterioration of Iron and Steel from Rolling Friction without Application of Lubricants (Ueber die Prüfung der Abnutzung von Eisen und Stahl bei rollender Reibung ohne Schmiermittel), H. Meyer and F. Nehl. Stahl u. Eisen, vol. 44, no. 17, Apr. 24, 1924, pp. 457-464, 25 figs. Different kinds of deterioration and their testing; wear through rolling friction and its practical importance; method of testing; process of deterioration; testing deterioration of different kinds of hard iron; change in structure through process of deterioration; influence of increased pressure and structure-changing heat treatment; zone of segregation and direction of grain.

**Wrought, Nick-Bend Test for.** The Nick-Bend Test for Wrought Iron, H. S. Rawdon and S. Epstein. U. S. Bur. Standards, Technologic Papers, No. 252, Feb. 29, 1924, pp. 115-155, 23 figs. Details of and results obtained from investigation which consisted of fracturing, under different conditions, of nicked bars of a number of grades of wrought iron, and study of character of fracture.

#### IRON ALLOYS

**Preparation and Properties.** Preparation and Properties of Pure Iron Alloys, J. F. T. Berliner. U. S. Bur. Standards, Scientific Papers, No. 484, Mar. 5, 1924, pp. 347-356, 4 figs. Determination of critical ranges of pure iron-carbon alloys by thermoelectric method.

#### IRON, PIG

**Characteristics and Uses.** Pig-Iron: Its Characteristics and Uses, H. Field. Foundry Trade J., vol. 29, no. 402, May 1, 1924, pp. 353-358, 1 fig. Elementary paper having the object to help foundry worker understand why there are "brands" of iron, why one brand is preferred to another, why pig-iron should be carried the length and breadth of the country, and why various castings in foundry are cast from different mixtures.

**Pig Casting Machine.** La Follette Improvements. Iron Age, vol. 113, no. 19, May 8, 1924, p. 1353. Single-strand pig-iron casting machine installed at blast furnace; improvements to other departments.

**Pig Casting Machine Replaces Sand Bed.** Iron Trade Rev., vol. 74, no. 21, May 22, 1924, pp. 1368-1369, 2 figs. LaFollette Coal & Iron Co., LaFollette, Tenn., has discontinued use of sand beds and placed in operation single-strand pig machine.

**Oxygen in.** Oxygen in Pig Iron (Nägra tankar om syre i tackjärn), J. A. Leffer. Jernkontorets Annaler, vol. 108, no. 3, 1924, pp. 149-177, 4 figs. Superiority of charcoal as a deoxidizer is claimed to be one of the main reasons for superiority of charcoal iron over coke iron. Analyses of Swedish charcoal iron as compared to German and English coke iron show also the very low contents of sulphur and phosphorus of charcoal iron as compared to the much higher contents of these elements in coke iron.

## J

#### JOINTS

**Soft-Soldered.** Some Properties of Soft Soldered Joints, T. B. Crow. Chem. & Industry, vol. 43, nos. 12 and 13, Mar. 21 and 28, 1924, pp. 65T-68T and 69T-70T, 15 figs. Points out that tensile strength of joints increases with diminution of thickness of solder film in joint; tensile strength of all joints was less than yield point of copper, but strongest joint had tensile strength of  $2\frac{1}{2}$  times that of solder; action of zinc chloride is to prevent oxidation by preventing access of oxygen; it has no electrochemical action.

## L

#### LATHES

**Elliptic-Turning Attachment.** Lathe Attachment for Elliptic Turning, I. F. Yeoman. Machy. (N. Y.), vol. 30, no. 9, May 1924, pp. 677-678, 5 figs. Describes attachment primarily employed for elliptical-turning operations on punches and dies used in making

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

oval or elliptical frames for retaining glass windows in automobile tops.

**Screw-Cutting.** Production of a 4-inch Screw-cutting Lathe. Machy. (Lond.), vol. 24, no. 601, Apr. 3, 1924, pp. 11-14, 9 figs. Practice of Britannia Lathe & Oil Engine Co., Colchester.

**Turret.** Chucking Work on Turret Lathes (Wirtschaftliche Ausführung von Futterarbeiten auf Revolverdrehbänken). A. Figge. Maschinenbau, vol. 3, no. 12, Mar. 27, 1924, pp. 396-397, 5 figs. Advantages of multiple-hole turret lathe with horizontal revolving head in regard to simplicity and convenient adjustment of tools.

## LIGNITE

**Carbonization.** Lignite Carbonization. W. W. Odell. U. S. Bur. Mines, Reports of Investigations, No. 2569, Feb. 1924, 6 pp. Figures showing what proportion of fuel requirements of Northwest is industrial or domestic fuel, and what proportion of lignite consumed is used for domestic purposes; notes on carbonization products; briquetting raw lignite.

**Low-Temperature Carbonization.** Particularly of Lignites (La carbonisation à basse température, en particulier celle des lignites). C. Berthelot. Société d'Encouragement pour l'Industrie Nationale—Bul., vol. 123, no. 1, Jan. 1924, pp. 44-66, 9 figs. Definition and realization of low-temperature carbonization, and its practical importance in metallurgical-coke industry; low-temperature carbonization of lignite.

**Distillation.** Furnaces for. Historical Development of the Rolle Furnace Up to the Present Time (Die geschichtliche Entwicklung des Rolle-Ofens bis zur Neuzeit). A. Thau. Braunkohle, vol. 23, no. 2, Apr. 12, 1924, pp. 17-32, 30 figs. on supp. plates. Development of these furnaces, which serve the purpose of distilling lignite, extends over three-quarters of a century. Rolle's designs, of which a large number are illustrated and described, have not been materially improved upon by later designers.

## LOCOMOTIVE BOILERS

**Fireboxes.** Making Four-piece Mallet Fireboxes. J. A. Doanberger. Boiler Maker, vol. 24, no. 4, Apr. 1924, pp. 101-104, 9 figs. Methods used in construction of fireboxes for 2-6-6-2 heavy Mallet locomotives for freight service on Norfolk & Western Lines.

**Manufacture.** Building Locomotive Boilers. Eng. Production, vol. 7, no. 139, Apr. 1924, pp. 105-110, 16 figs. Procedure at works of Great Western Ry. Co. at Swindon, Eng.

**Paying Weight.** The Paying Weight in Locomotive Boilers. C. A. Seely. Ry. Age, vol. 76, no. 24, May 17, 1924, pp. 1216-1218, 1 fig. Firebox heating surface about twice as effective as tubes and flues per lb. of material.

**Repair Shop.** A Modern Locomotive Boiler Reconditioning Shop, Alsace-Lorraine Railway. J. T. Burton-Alexander. Engineer, vol. 137, no. 3564, Apr. 18, 1924, pp. 404-407, 13 figs. partly on p. 414. Details of boiler shop erected since war at Strasburg; installation for repair of tubes.

## LOCOMOTIVES

**Bombay, Baroda & Central India Ry.** New Express and Freight Locomotives, Bombay, Baroda & Central India Railway. Ry. Engr., vol. 45, no. 532, May 1924, pp. 170 and 178. Particulars of 4-6-2-type express passenger and 2-8-2-type freight locomotives; tractive force at 90 per cent of boiler pressure, 28,825 lb.

**Diesel-Electric.** Diesel-Electric Locomotive for Tunis Railway (Locomotive Diesel Electrique en Service en Tunisie). R. Debize. Revue Générale des Chemins de Fer & des Tramways, vol. 43, no. 3, Mar. 1924, pp. 172-180, 8 figs. Details of locomotive supplied by Diesel-Elektriska Vagn-Aktiebolaget, Sweden; consists of rigid frame mounted on two trucks, each equipped with two axles; a heavy-oil Diesel engine is mounted on frame which is direct coupled to generator.

**Dimensions Comparison.** The Comparison of Locomotive Dimensions. E. C. Poultney. Ry. Engr., vol. 45, no. 528, Jan. 1924, pp. 19-21 and 35. Discusses factors which it is necessary to consider when a general opinion is to be formed as to comparative capacity of any given locomotive. Locomotive power definitions.

**Electric.** See ELECTRIC LOCOMOTIVES.

**Garratt Articulated.** Garratt Articulated Locomotives. Times Trade & Eng. Supp., vol. 14, no. 304, May 3, 1924, p. 191, 1 fig. Fundamental principle governing design is provision of engine combining great flexibility with comparatively high power, and affording possibility of large boiler dimensions; first of its kind to be used in England, recently delivered by Beyer, Peacock & Co.

**German.** Modern Locomotives of the German State Railway (Neuere Lokomotiven der Deutschen Reichsbahn). F. Meineke. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 12, Mar. 22, 1924, pp. 273-276, 7 figs. Describes four new types; features that these locomotives have in common are large grates, bar frames and free axles; critical discussion and method of calculating superheater and frame.

**Internal-Combustion.** Mountain Trains with Internal-Combustion Locomotives (Bergbahnen mit Motorbetrieb). W. Müller. Motorwagen, vol. 27, no. 11, Apr. 20, 1924, pp. 186-190, 6 figs. Describes system recommended by author for rack railway in the Bavarian Alps, consisting of trains with internal-combustion locomotives in place of steam or electric locomotives.

**Long Runs.** Long Locomotive Runs. F. E. Russell Pacific Ry. Club—Proc., vol. 7, no. 12, Mar. 1924, pp. 9, 11, 13, 15 and 17-27, and (discussion) 27-39. Traces briefly development of steam locomotive in past 100 years. Shows that there is ample opportunity for improvement by obtaining greater mileage out of locomotives by increasing length of locomotive runs; gives list of 34 railways that have increased locomotive runs. Modern appliances and improvements in design and

material that contribute to making long locomotive runs economical.

**Lubrication.** Locomotive Valve and Cylinder Lubrication. W. J. Schlacks. Ry. & Locomotive Eng., vol. 37, no. 5, May 1924, pp. 148-150, 1 fig. Schlacks force-feed lubricator; valve and cylinder lubrication of superheater locomotives.

**0-8-0 Heavy Switch.** New 0-8-0 Heavy Switch Engines for Wabash Ry. Ry. Rev., vol. 74, no. 19, May 10, 1924, pp. 833-838, 8 figs. Modern switch engines for use in yard and transfer service at large terminals.

**Repairing.** A Record in Completing Class III Repairs. Ry. Rev., vol. 74, no. 16, Apr. 19, 1924, pp. 713-715, 12 figs. Time record for making class III locomotive repairs was established on Kansas City Southern Ry., Mar. 17, 1924, when locomotive No. 556 was put through shops at Pittsburg, Kan., in 7 hr. and 55 min. Describes manner in which work was planned, preparations made beforehand, and schedule on which it was executed.

**French Shipyard Repairs American Locomotives.** G. L. Carden. Ry. Age, vol. 76, no. 22, May 3, 1924, pp. 1106-1107, 4 figs. Engines formerly used by U. S. A. are being equipped with copper fireboxes at Penhoët shipyards at St. Nazaire and Nantes.

**Switching.** A New Internal-Combustion Shunting Locomotive. Ry. Gaz., vol. 40, no. 16, Apr. 18, 1924, pp. 572-574, 6 figs. Particulars of the Vermont, gasoline-driven locomotive or tractor, designed to meet requirements of railway companies and industrial concerns; design based on simplicity of detail and economical operation.

**Tests.** Locomotive Tests on the Great Western Railway. Ry. Gaz., vol. 40, no. 18, May 2, 1924, pp. 637-642, 9 figs. Trials recently carried out between Swindon and Plymouth and vice versa with new 4-cylinder 4-6-0-type express locomotive, no. 4074, "Caldicot Castle," to obtain detailed information as to performance of locomotives of "Castle" class.

**Tire Practice.** Locomotive Tire Practice on the Santa Fé. F. H. Colvin. Am. Mach., vol. 60, no. 19, May 8, 1924, pp. 697-698, 6 figs. Wheel gages and calipers, and how they are used; mating of tires by carbon content as well as size; standard shims; shrinkage allowance.

**Turbo-Electric.** The Ramsay Turbo-Electric Condensing Locomotive. Ry. Engr., vol. 45, no. 528, Jan. 1924, pp. 5-10 and 24, 11 figs. partly on supp. plates. Discusses developing and transmitting power, design of condenser, driving motors, speed regulation, and gives results of tests made on Lond. Midland & Scottish Ry. subsequent to modification of certain details, showing possibilities of this class of locomotive for working main-line passenger traffic.

## LUBRICANTS

**Specifications and Testing Methods.** United States Government Specification for Lubricants and Liquid Fuels and Methods for Testing. U. S. Bur. Mines, Technical Paper 323A, 1924, 89 pp., 21 figs. Specification officially adopted by Federal Specifications Board Feb. 3, 1922, for use of departments and independent establishments of government in purchase of materials covered by it.

**Rolling Stock.** Lubricating Materials Used by the Russian Railroads. A. V. Sapozhnikov. Petroleum & Oil-Shale Industry, vol. 5, no. 7-8, July-Aug. 1923, pp. 75-80. (In Russian.) See also article by A. K. Saytzeff, entitled Railway Car Oils and Lubricating Mixtures, Their Properties, Mechanical Tests, Valuation and Selection, pp. 81-92, 4 figs., with abstract in English, pp. 92-94.

## LUBRICATION

**Methods.** Methods for Applying Lubricants. Power Plant Eng., vol. 28, no. 10, May 15, 1924, pp. 560-562, 8 figs. Drop-feed method of lubrication; gravity circulation of oil; methods of purifying oil; methods of using purifiers.

# M

## MACHINE SHOPS

**Drafting-Room Management.** A Practical Drafting-room System. I. B. Black. Machy. (N. Y.), vol. 30, nos. 8 and 9, Apr. and May 1924, pp. 605-607 and 671-673, 9 figs. Description of methods successfully applied in management of a drafting room.

## MACHINE TOOLS

**Attachments for.** Attachments for Standard Machines. A. A. Dowd. Machy. (N. Y.), vol. 30, no. 9, May 1924, pp. 711-712, 4 figs. Important points in design; types of flexible designs.

**Early Forms and Progress.** The Master Tools of Industry. D. S. Kimball. Am. Mach., vol. 60, nos. 19 and 20, May 1 and 15, 1924, pp. 679-683 and 723-727, 27 figs. Early attempt of man to supplement his bodily efforts; principle of transfer of skill; modern machines and transfer of thought. Henry Maudsley and his enduring contribution to lathe design; beginnings of interchangeable manufacture; semi-automatic machine; Spencer and full automatic machine.

**Tables.** Work-holding Surfaces of Machine Tools. Machy. (Lond.), vol. 24, no. 605, May 1, 1924, pp. 132-137, 20 figs. Table design for different types of machines.

## MACHINERY

**Manufacture, Size Control in.** Workmanship—The New Direct System of Size Control. P. J. Darlington. Sibley J. of Eng., vol. 38, no. 4, Apr. 1924, pp. 92-96. Describes new microgage system of production

measurement, or size control, in which precision made available by Bur. Standards, and represented in cylindrical standard, is directly transferred to part being produced by means of a new automatic measuring comparator called "microgage."

## MANGANESE STEEL

**Silico.** The Hardening of Silico-Manganese Steel. E. W. Colbeck and D. Hanson. Iron & Steel Inst.—advance paper, no. 5, for mtg. May 1924, 18 pp., 26 figs. Experiments show that temperatures required for complete hardening of steels used are very much higher than corresponding hardening temperatures for straight carbon steels having same carbon content.

## MATERIALS HANDLING

**Cake Bakery.** Conveying under Difficulties in a Cake Bakery. G. F. Zimmer. Indus. Mgt. (Lond.), vol. 11, no. 7, Apr. 3, 1924, pp. 189-192, 4 figs. Satisfactory solution of difficult problem of installing conveying plant at cake bakery of Kearley & Tonge, Ltd., which was laid out in a way which rendered adoption of handling plant most difficult.

**Cost-Saving Methods.** Materials Handling Methods That Have Added to Industrial Profits. Geo. E. Hagemann. Mgt. & Administration, vol. 7, no. 5, May 1924, pp. 557-562, 1 fig. Experience data from 55 plants using larger equipment.

**Equipment.** Improvements in Transportation Engineering (Allgemeine Fortschritte auf dem Gebiete der Transporttechnik). C. Michenfelder. Praktische Maschinen-Konstrukteur, vol. 57, no. 8, Mar. 1, 1924, pp. 77-79, 6 figs. Describes latest designs of electric industrial trucks, electric cranes and conveyors.

**Measuring the Savings of Mechanical Handling.** W. T. Spivey. Mgt. & Administration, vol. 7, no. 5, May 1924, pp. 551-556, 8 figs. Factors in selection of equipment for an installation.

**Labor-Saving Equipment.** Quality Production from the Application of Automatic Handling Equipment. C. J. Alfred. Mgt. & Administration, vol. 7, no. 5, May 1924, pp. 563-566, 7 figs. Labor-saving methods of Am. Sugar Refining Co.

**Plant Painting Department.** Handling Material in Painting Department. E. T. Bennington. Iron Age, vol. 113, no. 20, May 15, 1924, pp. 1413-1416, 6 figs. Overhead tramways with special carriers take filing cabinets through three dips, a drip and drying oven; automatic equipment featured.

**Routing.** Controlling the Flow of Package Products by Materials Handling Equipment. J. Mendleson. Mgt. & Administration, vol. 7, no. 5, May 1924, pp. 545-550, 8 figs. Labor-saving devices and routing methods employed by B. T. Babbitt Co. in manufacture of chlorinated lime, caustic soda, lye, etc.

## MERCURY-VAPOR PROCESS

**Emmet.** The Emmet Mercury-Vapor Process. W. L. R. Emmet. Mech. Eng., vol. 46, no. 5, May 1924, pp. 235-240 and 305, 13 figs. Early experiments; thermodynamic possibilities of process; Hartford installation; boiler problems; mercury turbines; packings and leakage; economies attainable; mercury supply.

## METAL CUTTING

**Hydrogen-Gas.** Cutting Metal with Hydrogen Gas. W. H. L. Porth. Am. Welding Soc.—Jl., vol. 3, no. 3, Mar. 1924, pp. 15-18. Conditions important in connection with determining use of a fuel gas for cutting of metals. Equipment used for cutting with hydrogen as fuel gas, and details of operation.

## METALS

**Brinell-Tensile Relationship.** Experiments on the Brinell-Tensile Relationship. A. L. Norbury and T. Samuel. Iron & Steel Inst.—advance paper, no. 12, for mtg. May 1924, 11 pp., 4 figs. Tensile, Brinell, and scleroscope tests on materials used; plotting of results according to Meyer's formula; comparison of Brinell and tensile results.

**Cleaning.** Metal Cleansing with Alkaline Cleaning Solutions. E. M. Baker and R. Schneidewind. Am. Electrochem. Soc.—advance paper, no. 15, for meeting Apr. 24-26, 1924, pp. 203-229, 11 figs. Typical analyses of cleaners used for various purposes, and factors entering into mixing of cleaners.

**Melting, Fluxes and Slags in.** Fluxes and Slags in Metal Melting and Working. Foundry Trade J., vol. 29, nos. 402 and 403, May 1 and 8, 1924, pp. 359-363 and 388-390. Abstracts of papers read at a general discussion on this subject which was held Apr. 28, 1924, at Instn. Mech. Engrs., under joint auspices of Faraday Soc., Inst. Metals, Inst. British Foundrymen, and British Non-Ferrous Research Assn., viz.: Oxidizing Fluxes in Melting of Non-Ferrous Metals, A. Portevin; Use of Fluxes in Brass Melting, R. Genders and M. A. Haughton; Note on Slags from Lead, Copper, and Other Blast Furnaces, G. Rigg; Slags Produced in Melting Silver Alloys, J. Phelps; Sulphurizing and Desulphurizing of Metals by Basic Slags and Fluxes, B. Bogitch; Slag Inclusions in Relation to Fatigue, B. P. Haigh; Fluxing Problems in Welding Mild Steel with Metallic Arc, H. Ogden; Physical Chemistry of Slags and Fluxes in Non-Ferrous Metal Industries, C. H. Desch; Fluxes and Slags in Oxy-Acetylene Welding, C. C. Smith.

**Strain Detection.** The Detection of Strain in Metals. J. D. Jevons. Metal Industry (Lond.), vol. 24, no. 10, Mar. 7, 1924, p. 225. Survey of work done by various investigators on this subject, together with comments on practical utility of the different methods suggested.

## MOLDING MACHINES

**Types.** New Molding Machines (Les nouvelles machines à mouler). Ponderie Moderne, vol. 18, Apr. 1924, pp. 100-103, 7 figs. Describes two new machines patented by Glaenzer & Perreud, for production of foundry cores.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

**MOLDING METHODS.**

**Green-Sand, Molding.** Hints on Green-Sand Moulding, C. H. Brown. Foundry Trade J., vol. 29, no. 399, Apr. 10, 1924, pp. 297-298 (includes discussion). Ramming of mold, venting of molds, effects of bad gating, burning on castings, etc.

**Pipe, Special Shapes.** Molding Special Pipe Shapes, P. Dwyer. Foundry, vol. 52, no. 10, May 15, 1924, pp. 373-378, 10 figs. Equipment developed for production of large valves and special shapes which usually are ordered in single units or in limited numbers; practice of Pittsburgh Valve, Foundry & Constr. Co.

**Spiral Drums.** Molding Spiral Drum From Pattern Swept in Loam, J. Taylor. Can. Foundryman, vol. 25, no. 4, Apr. 1924, pp. 12-14, 7 figs. Pattern swept on arbor in similar manner to sweeping cam core; molded same as wooden pattern; core also swept in.

**MOTOR BUSES**

**Engines.** Continental Announces Special Engine for Express Bus Service. Automotive Industries, vol. 50, no. 20, May 15, 1924, pp. 1075-1076, 2 figs. 6-cylinder engine has piston displacement of 331 cu. in. and develops maximum of over 70 hp. at 2300 4 p.m.; built for rapid, inter-city passenger work with long, non-stop runs.

**MOTOR TRUCKS**

**Electric.** Control Tests of Storage-Battery Vehicles (Essais contrôlés de véhicules électriques à accumulateurs). Revue Générale de l'Electricité, vol. 15, nos. 8 and 9, Feb. 23 and Mar. 1, 1924, pp. 306-325 and 356-389, 62 figs. Results of trials conducted by Union des Syndicats de l'Electricité Sept. 28-Oct. 14, 1923, and details of participating trucks and automobiles. Report of Committee of Organization.

**N****NAILS**

**Manufacture.** Manufacturing Nails by Automatic Machinery, H. P. Armson. Can. Machy., vol. 31, no. 17, Apr. 24, 1924, pp. 19-21, 3 figs. Practice at Graham Nail Works, Toronto, Can. Raw material first "pickled" to remove scale, then coated with lime to assist lubrication and reduce wear on dies in drawing operation.

**NICKEL ALLOYS**

**Permalloy.** Permalloy, A New Magnetic Material of Very High Permeability, H. D. Arnold and G. W. Elmen. Elec. Communication, vol. 2, no. 4, Apr. 1924, pp. 226-231, 7 figs. Describes a magnetic alloy which is a composition of about 78.5 per cent nickel and 21.5 per cent iron and at magnetizing fields in neighborhood of 0.04 gauss and with proper treatment has a permeability running as high as 90,000.

**O****OIL ENGINES**

**Brotherhood-Still.** The Brotherhood-Still Heavy Oil Engine. Power Engr., vol. 19, no. 217, Apr. 1924, pp. 128-130, 5 figs. Model of Still engine suited to stationary conditions.

**Double-Acting.** A Sliding Cylinder Two-cycle Double-acting Marine Oil Engine. Engineer, vol. 137, nos. 3565 and 3566, Apr. 25 and May 2, 1924, pp. 451-452, 4 figs. and 483-485, 6 figs. Design and performance of 2000-b.h.p. engine built at North Brit. Diesel Engine Works, Glasgow.

**Heavy-Oil.** Report on Heavy-Oil Engine Working Costs (1922-23). Diesel Engine Users Assn., Report submitted to Mtg. of Feb. 15, 1924, 20 pp., 2 figs. Deals only with cost of running and maintaining engines and their auxiliaries.

**Heavy-Oil, Lubrication of.** The Lubrication of Heavy-Oil Engines, C. S. Darling. Mech. Wld., vol. 75, no. 1944, Apr. 4, 1924, pp. 209-210. Deals with lubrication of pistons, cylinders, air compressors, etc., including discussion on oils.

**Nickel Applied to Parts.** Nickel and Its Alloys Applied to Oil Engine Parts. Motorship, vol. 9, no. 5, May 1924, pp. 361-363, 8 figs. Cast iron is improved by addition of from 3 to 5 per cent of nickel and monel metal reduces maintenance on valves.

**Scott-Still.** The Scott-Still Marine Engine. Diesel Engine Users Assn.—advance paper no. 38, for mtg. Mar. 14, 1924, 3 pp., 2 figs. Report on 1250-h.p. engine at Scott's Shipbldg. & Engrg. Co., Greenock, for M. S. Dolius.

**Solid-Injection.** The Solid-Injection Oil Engine, H. F. Shepherd. Mech. Eng., vol. 46, no. 5, May 1924, pp. 251-257 and (discussion) 257-258 and 278, 30 figs. Presents most pertinent facts on development of engine from former hot-surface unit and points out influence of combustion-chamber design, spray angle and velocity, atomization, detonation, and other problems confronting oil-engine designer.

**OIL FUEL**

**Burners.** Combustion Devices for Liquid Fuel, W. Trinks. Fuels & Furnaces, vol. 2, nos. 1, 2, 3 and 4, Jan. Feb., Mar. and Apr. 1924, pp. 21-24, 135-138, 255-258 and 349-352, 22 figs. Jan.: Burners of vaporization and atomization type or combination of both. Feb.: How atomization is accomplished. Mar.: High furnace atomization; low-pressure atomization. Apr.: Means for proper mixing of atomized liquid fuel and air.

**Delivery and Storage.** The Delivery and Storage of Fuel Oil, G. Porter. Gas & Oil Power, vol. 19, no. 223, Apr. 3, 1924, pp. 115-116. Advantages and disadvantages of modern methods.

**Heavy, Measurement of.** The Measurement of Heavy Fuel Oils, G. Porter. Gas & Oil Power, vol. 19, no. 224, May 1, 1924, pp. 137-139, 2 figs. Allowances for variation in temperature. Measuring devices.

**Properties.** Heating and Motor Oils (Zur Kenntnis der Heiz- und Treiböle), A. Aufhäuser. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 17, Apr. 26, 1924, pp. 419-422, 1 fig. Points out that properties of oils are functions of degree of distillation, and combustion itself is also a fractionated process; method in use for determination of flash point is of no value for Diesel-engine practice.

**Transformation from Solid Fuel.** Transformation of Solid into Liquid Fuel, G. L. Stadnikov. Petroleum & Oil-Shale Industry, vol. 5, no. 11-12, Nov.-Dec. 1923, pp. 655-660. (In Russian.)

**OIL PUMPS**

**Screw.** The Screw Oil Pump, R. H. Pearsall. Automobile Engr., vol. 14, no. 189, May 1924, pp. 145-147, 10 figs. General principle and analysis of pump action; experiments which corroborate analytical results.

**OPEN-HEARTH FURNACES**

**Moll End.** New Open-Hearth Furnace End, H. Moll. Iron Age, vol. 113, no. 19, May 1, 1924, pp. 1277-1278, 1 fig. Practical results from use of new design by author in Germany; advantages of a mixing flue for gases. Translated from Stahl u. Eisen.

**Waste-Heat Recovery.** Recovery of Waste Heat in Open-Hearth Practice, W. Dyrsen. Iron & Steel Inst.—Advance paper, no. 6, for mtg. May 1924, 48 pp., 16 figs. Complete detailed heat balance of fuel for modern American 80-ton producer-gas open-hearth furnace; results of study of heat balance; heat balance for coke-oven gas-fired open-hearth furnace is given for comparison with producer gas as fuel; steam output for various charges; comparison between blast-furnace and open-hearth practice; economic value of recovery of waste heat in steam in open-hearth practice.

**Wis. Steel Works, South Bend, Ind.** Wisconsin Steel Works Adds Open-Hearth, G. L. Lacher. Iron Age, vol. 113, no. 20, May 15, 1924, pp. 1421-1425, 7 figs. Separate oil and tar systems, laminated buckstays, motor-operated doors, valves and stack dampers and minimum of water cooling are features of new plant at South Chicago, Ill., comprising five 100-ton furnaces.

**ORDNANCE**

**Production Problems, U. S. War Dept.** Some Production Problems in the War Department's Preparedness Program, H. W. Churchill. Mech. Eng., vol. 46, no. 5, May 1924, pp. 268-270 and (discussion) 270-271. Cooperation of engineering, industrial and commercial bodies with War Department; reserve-officer personnel problem; problem of securing facilities for manufacturing war material; problems typical of those confronting plant production engineers; features of type of contract now being developed; raw materials, gages, machine tools. (Abridged.)

**OXY-ACETYLENE CUTTING**

**Advantages and Applications.** Oxy-acetylene Process of Cutting Metals. Machy. (Lond.), vol. 24, no. 604, Apr. 24, 1924, pp. 123-125, 3 figs. Advantages of method and modern applications.

**OXY-ACETYLENE WELDING**

**Aluminum.** Gas Welding Aluminum, S. W. Miller. Am. Welding Soc.—Jl., vol. 3, no. 3, Mar. 1924, pp. 44-50, 2 figs. Flux used, welding without flux, procedure in welding, character of flame, pre-heating, manipulation of welding rod and torch, etc.

**Locomotive Fireboxes.** Welding on Copper Fireboxes of Locomotives, J. F. Springer. Ry. Mech. Engr., vol. 98, no. 5, May 1924, pp. 293-294. Successful results obtained in Europe with oxy-acetylene torch and special filler rods.

**Oil and Gas Industry.** Theory and Practice in Use of Oxygen, L. Balliet. Oil & Gas Jl., vol. 23, no. 22, May 1, 1924, pp. 34 and 106. Results of extensive research in use of oxygen blowpipe, or acetylene torch, in oil and gas industry. Used for cutting slotted screens, welding pipe line, welding broken parts of machinery, filling in broken gear teeth, cutting off bolt heads, pipe and metal bending, etc.

**P****PAINTS**

**Metal-Protective.** Paints for Metals, H. A. Gardner. Paint Mfrs.' Assn. of U. S. Nat. Varush Mfrs. Assn.—Circular, no. 202, Apr. 1924, pp. 302-327, 10 figs. Review of tests with suggestions regarding design and use of metal protectives.

**White Lead.** Manufacture of White Lead (Fabrication de la Céruse), N. Chercheffsky. Chimie & Industrie, vol. 11, no. 1, Jan. 1924, pp. 45-48. Observations on the Dutch process; average yield of white lead is about 50 per cent of gross weight of lead taken under abnormal conditions it may be as low as 27 to 28 per cent, but under favorable conditions it may attain 67 to 68 per cent.

**PATTERNS**

**Metal Gear.** Metal Gear Patterns, J. F. Hines. Machy. (N. Y.), vol. 30, no. 9, May 1924, pp. 692-693, 4 figs. Metal patterns of type shown are especially satisfactory for casting spur and bevel gears; details of construction; making patterns.

**PISTONS**

**Automatic Machine.** Automatic Piston Machine. Iron Age, vol. 113, no. 20, May 15, 1924, pp. 1432-1433, 7 figs. New 6-spindle, 10-in. Contin-U-Matic machine, with which automobile pistons are machined at rate of three per min. with three simultaneous operations.

**PLANERS**

**Equipment for.** Tooling Reciprocating Machine Tools. Eng. Production, vol. 7, no. 139, Apr. 1924, pp. 94-97, 10 figs. Tools and special equipment for planers.

**PLATES**

**Flattening Machine.** Hydraulic Plate Flattening Machine. Machy. (Lond.), vol. 23, no. 600, Mar. 27, 1924, pp. 838-839, 4 figs. Type which operates on principle of gripping plate at each end and pulling it taut until irregularities and buckles disappear.

**PNEUMATIC TOOLS**

**Waste Elimination.** Cutting Out Waste in the Factory Air System, F. Johnston-Taylor. Indus. Mgt. (Lond.), vol. 11, no. 9, May 1, 1924, pp. 239-240 and 242, 4 figs. Explains how wastage and leakage may be detected in connection with pneumatic installations in factory, and how by use of compressed-air meter, economies may be effected.

**PULVERIZED COAL**

**Boiler and Metallurgical Furnaces.** Powdered Coal Firing for Water-Tube Boilers and Metallurgical Furnaces, H. W. Hollands. Instn. Mech. Engrs.—Proc., vol. 2, no. 6, 1923, pp. 143-151, 6 figs. Describes unit system, which consists of one pulverizer per boiler or furnace, and points out its advantages; coal dryings; savings in use of pulverized coal. (Abridged.)

**Boiler Firing.** Pulverized-Coal Firing (Ueber Kohlenstaub-Feuerung). Zeit. für die Gesamte Giesereipraxis, vol. 45, no. 13-14, Apr. 5, 1924, pp. 77-79, 3 figs. Description of "Kofino" coal mill, manufactured by Krupp-Gruson Works.

**Calculations.** Calculations Respecting Pulverized Fuel, E. Kilburn Scott. Power Engr., vol. 19, no. 217, Apr. 1924, pp. 148 and 157. Also Combustion, vol. 10, no. 5, May 1924, pp. 360-361. Elementary considerations regarding use of pulverized fuel, arranged as calculations.

**Preparation and Utilization.** Powdered Coal: Its Preparation and Utilization, R. Jackson. Engineering, vol. 117, nos. 3038 and 3039, Mar. 21 and 28, 1924, pp. 381-383 and 415-418, 22 figs. (Abstract.) Paper read before Instn. Mech. Engrs.

**Tests.** Experiences with Coal Dust and Combustion of Pulverized Coal (Les expériences sur les poussières de houille et la combustion du charbon pulvérisé), J. Arnoul de Grey. Chaleur & Industrie, vol. 5, no. 45, Jan. 1924, pp. 23-26, 2 figs. Calls attention to some of more important results obtained by Taffanel and Audibert from tests carried out at Liévin and Montlucon, and discusses their application to different problems of combustion of pulverized coal, dealing with problem of burners, combustion chambers, and possibility of utilizing certain combustibles in pulverized state.

**Unit System.** Unit System for Pulverized Coal, S. C. Martin. Power Plant Eng., vol. 28, no. 9, May 1, 1924, pp. 471-472, 1 fig. Advantages of unit system in remodeled plants; results of tests.

**PUMPS**

**Drainage.** Some Large Dutch Drainage Pumps, J. C. Dijkshoorn. Engineer, vol. 137, no. 3567, May 9, 1924, pp. 506-507, 3 figs. Particulars concerning pumps which were put to work over 3 years ago near village of Zoutkamp on Lauwer Zee. (Abstract.) Paper read before Instn. Engrs. & Shipbldrs. in Scotland.

**Rotary.** A New Rotary Pump (Neuerung im Bau von Rotationspumpen), E. Winter. Zeit. des Oesterr. Ingenieur- u. Architekten-Vereines, vol. 76, no. 9-10, Mar. 7, 1924, pp. 80-81, 7 figs. Describes "Feuerheerd" pump, named after its inventor. Shaft drives inner rotor, which carries three radial projections or arms, which fit into four corresponding pockets of outer rotor. Pump provides a uniform flow, is simple and reliable and has found considerable use in England and British Colonies.

**PUMPS, CENTRIFUGAL**

**Characteristic Curves.** Use of Centrifugal Pump Curves. Power Plant Eng., vol. 28, no. 9, May 1, 1924, pp. 497-499, 2 figs. Usual forms of characteristic curves for centrifugal pumps based on constant speed.

**Specifications.** Notes on Centrifugal Pump Specifications, J. D. Morgan. Power Plant Eng., vol. 28, no. 10, May 15, 1924, pp. 555-559, 7 figs. Service requirements are principal data needed by designer; service records show dependability of centrifugal pumps.

**PUNCHING MACHINES**

**Patents.** Punching and Perforating Machines and Hand Tools for Cutting, Punching, Perforating, and Tearing Paper, Leather, Fabrics, and the Like. Abridgments of Specification, Period 1916-20, Class 31 (ii), 1924, 29 pp. (illustrated). Patents for inventions.

**PYROMETERS**

**Disappearing-Filament.** A Direct-Reading Pyrometer of the Disappearing-Filament Type, F. H. Schofield and D. C. Gall. Jl. Sci. Instruments, vol. 1, no. 7, Apr. 1924, pp. 193-198, 5 figs. Modified form of disappearing-filament pyrometer in which pyrometer lamp forms one arm of a Wheatstone bridge.

**Radiation.** The "Pyro" Radiation Pyrometer. Engineering, vol. 117, no. 3042, Apr. 18, 1924, pp. 493-494, 6 figs. It is easily portable, weighing only 25 oz., and is completely self-contained, requiring no batteries or other accessory apparatus.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

## R

## RAILLESS TRACTION

**Advantages.** The Case for Railless Traction. *Tramway & Ry. Wld.*, vol. 55, no. 14, Mar. 20, 1924, pp. 132-134. Shows by means of actual and hypothetical figures, that for practically the whole field of municipal transport railless electric traction cannot only satisfy all traffic requirements, but can effect considerable saving in capital expenditure and operating costs.

## RAILS

**Corrugation.** Investigation of Corrugation of Rails with Aid of Torsigraph (Untersuchung der Riffelbildung an Schienen mit Hilfe des Torsigraphen). J. Geiger. *Zeit. des Vereines deutscher Ingenieure*, vol. 68, no. 12, Mar. 22, 1924, pp. 283-284, 7 figs. Measurement on rolling cars show plainly that corrugation is due to frictional oscillations, resulting from irregular speeds of both wheels of same axis when traveling over curves.

**Fracture.** Broken Rails. *Ry. & Locomotive Eng.*, vol. 37, no. 5, May 1924, pp. 150-152, 4 figs. Extracts from reports on broken rails that caused derailments and loss of life, published by Bur. Safety.

## RAILWAY ELECTRIFICATION

**Developments.** Railway Electrification in Foreign Countries. Stanley P. Smith. *Instn. Elec. Engrs.*—Jl., vol. 62, no. 328, Apr. 1924, pp. 317-322 (discussion) 322-324. Deals with various countries, not including Great Britain.

**Pa. R. R. Pa.** Electrification of the Ft. Washington Branch. P. R. R. *Ry. Rev.*, vol. 74, no. 19, May 10, 1924, pp. 843-845, 5 figs. Previous electrical installation in Philadelphia suburban district extended over 6.2 mi. of single track.

## RAILWAY MOTOR CARS

**Electromechanically vs. Mechanically Operated.** Experimental Operation of Rail Cars Driven by Internal-Combustion Engines by Means of Purely Mechanical Transmission (Het proefbedrijf met benzine-Maatschappij). H. J. P. Brunner. *Ingenieur*, vol. 39, no. 17, Apr. 26, 1924, pp. 312-317, 4 figs. Comparative tests made by Limburg Railway Co. between electromechanically and purely mechanically operated rail cars indicate superiority of electromechanical system.

## RAILWAY OPERATION

**Paulista Ry., Brazil.** Electric Operation of Paulista Railway in Brazil. G. Bellows. *Ry. Elec. Engr.*, vol. 15, no. 4, Apr. 1924, pp. 107-109, 6 figs. Electrification of section between Jundiahy and Campinas where wood and imported coal is used for fuel shows large savings. Service requirements, locomotive performance, and costs.

**Stopping and Starting Trains.** Estimated Cost of Stopping and Starting Trains. O. O. Carr. *Ry. Rev.*, vol. 74, no. 18, May 3, 1924, pp. 807-808. Tables giving estimated additional costs to stop and start trains.

**Train Control.** An Unusual Idea in Automatic Train Control. *Ry. Rev.*, vol. 74, no. 16, Apr. 19, 1924, pp. 723-731, 14 figs. Describes train-control system of Indiana Equipment Corp., designed and developed by C. F. Shadle, which is of the ramp or direct-contact type. Essential parts of device consist of a wayside ramp, a contact shoe having a roller contact, a neutral control relay, an electropneumatic valve, automatic air-brake valve, and a speed controller.

**Automatic Cut-Off Control Tested in Service.** *Ry. Age*, vol. 76, no. 21, Apr. 26, 1924, pp. 1033-1037, 9 figs. Describes control device and tells what its performance on two railroads has demonstrated.

**Hearing on Automatic Train Control Order.** *Ry. Age*, vol. 76, no. 23, May 10, 1924, pp. 1145-1148. Statement by W. J. Harahan outlining position of railroads and proposing three regional tests on 100 mi. of line in each region; testimony of W. S. Stone that engineers are strongly opposed to automatic control.

**Service Tests of Automatic Cut-Off Control.** *Ry. Mech. Engr.*, vol. 98, no. 5, May 1924, pp. 267-272, 12 figs. Describes control device; what its performance on two railroads has demonstrated.

## RAILWAY REPAIR SHOPS

**Denver & Rio Grande Western.** Denver & Rio Grande Western Rebuilds Shops. *Ry. Age*, vol. 76, no. 24, May 17, 1924, pp. 1193-1200, 11 figs. Completes extensive program of modernization of facilities for repair of cars and locomotives; details of new facilities at Denver, Colo., and at Salt Lake City.

**Locomotive.** The New Shops of the Compagnie Paris-Lyon-Méditerranée, at Nevers (Les nouveaux ateliers de machines de la Compagnie Paris-Lyon-Méditerranée, à Nevers). M. Pouillon. *Revue Générale des Chemins de Fer & des Tramways*, vol. 43, no. 3, Mar. 1924, pp. 159-171, 5 figs. Details of shops designed and equipped to repair 50 locomotives and 30 tenders per month.

**Organization.** B. R. & P. Has Well Organized Production Shop (Du Bois, Pa.). *Ry. Mech. Engr.*, vol. 98, no. 5, May 1924, pp. 295-299, 6 figs. Limited program of repairs facilitates efficient operations; routing of locomotives and parts; department organization and machine-tool operation; shop organization.

**Steel Cars.** Pennsylvania Builds Modern Steel Car Shops. *Ry. Age*, vol. 76, no. 22, May 3, 1924, pp. 1085-1088, 9 figs. Duplicate designs erected at Pitsa and Enola to handle heavy repairs on Eastern and Central regions; capacity of each shop is 33 cars a day; each car-repair unit consists of rivet-cutting shed housing 8 cars at a time, repair shop with 36 tear-down and 18 set-up positions, combined storeroom, office and welfare building.

## RAILWAY SHOPS

**Grinding Machines for.** Machine Tools for Railway Workshops. *Ry. Gaz.*, vol. 40, no. 15, Apr. 11, 1924, pp. 544-546, 6 figs. Describes some electrically driven grinding machines.

## RAILWAY SIGNALING

**A. C. Supply with Battery Reserve.** The Application of Alternating Current Supply with Battery Reserve to Signal Systems. H. G. Morgan. *Am. Ry. Assn., Signal Section Proc.*, Mar. 1924, pp. 698-705. Results obtained with various applications.

**Benefits of.** How Signaling Has Helped Several Roads. *Ry. Age*, vol. 76, no. 20, Apr. 19, 1924, pp. 971-974. Prize papers received in contest arranged by Railway Age and Railway Signaling, as follows: Congestion Relieved by Signaling on the B. & M., J. D. Bourne; Increasing Track Capacity by Signaling, Gel. S. Pfisterer; Cost Saving Accomplished by Signals on the B. & O., J. C. Hoffman.

## RAILWAY TIES

**Concrete.** Concrete Ties for Light-Traffic Track in France. Adam. *Eng. News-Rec.*, vol. 92, no. 18, May 1, 1924, p. 761, 1 fig. Reduction of maintenance forces and cost follows replacement of wood ties by concrete ties and pairs of blocks.

## RAILWAY YARDS

**Electric Power Signaling.** All-Electric Power Signaling Installation and Electric Apparatus, Feltham Yard, Southern Railway. W. J. Thorowgood. *Ry. Engr.*, vol. 45, nos. 531 and 532, Apr. and May 1924, pp. 126-132 and 140, and 157-163, 19 figs. Speedy operation of points and automatic track-circuit protection are features of shunting yard; track-circuit tests; electrical point detection; push-button signal frames; electric clocks; telephone communication.

## RAPID TRANSIT

**Suburban, New York City.** Suburban Transit Plan Suggested for New York City. *Eng. News-Rec.*, vol. 92, no. 19, May 8, 1924, pp. 818-820, 1 fig. Independent subway system to connect with trunk-line railways outside of Manhattan Island; new streets proposed.

## REFRACATORIES

**Electric-Brass-Furnace.** The Electric Brass Furnace Refractory Situation. H. W. Gillett and E. L. Mack. *Am. Ceramic Soc.—Jl.*, vol. 7, no. 4, Apr. 1924, pp. 288-299, 5 figs. Describes the three prominent types of electric brass furnaces, and outlines conditions which they impose on refractories. Limitations which properties of refractories place on applicability of the various furnaces, and lines along which development and improvement are most likely to take place. (Pub. by permission U. S. Bur. Mines.)

## REFRIGERANTS

**Ethyl Chloride.** Thermal Properties of Ethyl Chloride. Ice & Refrigeration, vol. 66, no. 4, Apr. 1924, pp. 347-348. Summary of report of results obtained by C. F. Jenkin and D. N. Shortnose of Univ. of Oxford, Eng. General physical and chemical properties; tables of saturated and superheated vapor.

## REFRIGERATION

**Brine Hold-Over Tanks, Heat Transfer in.** Heat Transfer in Brine Hold-Over Tanks. C. H. Herter. *Refrig. Eng.*, vol. 10, no. 10, Apr. 1924, pp. 370-371 and 375. Describes three types of hold-over tanks; makes heat-transfer calculations.

**Non-Condensable Gases.** Non-Condensable Gases. B. E. Hill. *Refrig. Eng.*, vol. 10, no. 10, Apr. 1924, pp. 372-375, 1 fig. Their causes and effects upon economical and efficient operation of an ice-making or refrigerating system.

## ROLLING MILLS

**Continuous.** Continuous Rolling-Mills: Their Growth and Development. Jos. P. Bedson. *Iron & Steel Inst.—advance paper*, no. 3, for mtg. May 1924, 18 pp., 6 figs. partly on supp. plates. Art as it was practiced 140 years ago; history of development; modern examples of continuous system. See (abstract) in *Engineering*, vol. 117, no. 3045, May 9, 1924, pp. 620-622, 7 figs.; also *Iron Age*, vol. 113, no. 21, May 22, 1924, pp. 1493-1495.

**Defective Material, Detection of.** Statistical Basis for Industrial Control. K. Daevs. *Iron Age*, vol. 113, no. 20, May 15, 1924, pp. 1441-1443, 3 figs. A "large numbers" method applied in Germany to metallurgy of iron; theory of collective subjects in relation to control of production; detection and control of defective material in rolling mill is claimed possible if certain statistical formulas or data are made use of. Translated from Stahl u. Eisen.

**Sheet Mills.** Build Sheet Mill at Golden Gate. *Iron Trade Rev.*, vol. 74, no. 21, May 22, 1924, pp. 1373-1375, 5 figs. Subsidiary of Metal & Thermit Corp. completes new six-mill sheet plant at South San Francisco; oil fuel used in furnaces.

**Sheet Mill Represents Latest Practice.** E. H. Werner. *Forging—Stamping—Heat Treating*, vol. 10, no. 4, Apr. 1924, pp. 153-158, 10 figs. New mill of Nat. Enameling & Stamping Co. at Granite City, Ill.; mill equipment and furnaces.

## S

## SCREW THREADS

**Comparators.** The Wilson Projection Comparator for Screw Threads. *Engineering*, vol. 117, no. 3045, May 9, 1924, pp. 606-608, 5 figs. Devised for gaging screw threads and other similar solids of revolution.

**Cutting Tools.** Position of Thread-cutting Tool and its Effect on Thread Form. Machy. (Lond.), vol. 24, no. 602, Apr. 10, 1924, pp. 54-55, 2 figs. Position of tool for external thread cutting; distortion produced in cutting internal threads; distortion of thread grooves having angular sides.

**Measurement.** Measuring Threads Accurately with Micrometers. *Can. Machy.*, vol. 31, no. 18, May 1, 1924, pp. 31-32 and 51, 6 figs. Hints on accurate use of micrometers.

## SEPARATORS

**Ash-Reclaiming.** Recovering Fuel from Ashes. S. H. Bunnell. *Iron Age*, vol. 113, no. 19, May 8, 1924, p. 1368, 2 figs. Operation of Kolomus coke separator, developed by Benno Schilde Machy, Co., Germany, and marketed by Ash Reclaiming Machy, Co., New York, in America.

## SHAFTS

**Whirling.** Internal Friction Theory of Shaft Whirling. A. L. Kimball, Jr. *Gen. Elec. Rev.*, vol. 27, no. 4, Apr. 1924, pp. 244-251, 11 figs. Shows Kimball's theory of internal friction in shafts as cause of whirling; shows that internal friction due to bending may cause a shaft to whirl when rotating at any speed about first critical speed.

## SMOKE

**Analysis.** The Analysis of Smoke (Ueber die Analyse von Rauch). H. Salmang. *Zeit. für angewandte Chemie*, vol. 37, no. 8, Feb. 21, 1924, pp. 97-98, 1 fig. Method of determining solid and liquid components in smoke and fog.

## SPRINGS

**Automobile.** Supplementary Air Spring Designed by Great Pianist. *Automotive Industries*, vol. 50, no. 18, May 1, 1924, p. 958, 1 fig. Supplementary springs of pneumatic type manufactured by Stevens Mfg. Co., Lowell, Mass., and invented by Josef Hofmann, 10,000 of which are said to be in use in Europe.

**Leaf.** Suspension. *Automobile Engr.*, vol. 14, no. 189, May 1924, pp. 135-140, 30 figs. Recent improvements in laminated springs.

## STEAM ACCUMULATORS

**Ruths.** Steam Turbine and Steam Accumulator at the Tuborg Works (Tuborgs Fabrikkers nye Damp-turbine og Dampakkumulatoranlæg). T. E. Thomsen. *Ingeniören*, vol. 33, no. 12, Mar. 22, 1924, pp. 134-143, 9 figs. Describes installation of accumulator of Ruths type, and new turbines; claimed to be a highly economical method of increasing capacity of power station.

**Thermotechnical and Practical Advantages of the Ruths Accumulator (Wärme- und betriebswirtschaftliche Vorteile des Ruths-Speichers).** C. Bientze. *Glaser's Annalen*, vol. 94, no. 7, Apr. 1, 1924, pp. 75-80 and (discussion) 80-84, 7 figs. Points out its important influence on production, through saving in time, by shortening of working process, saving in fuel by reduction of cooling-off losses, better control of whole operation, and improvement of quality of products.

## STEAM ENGINES

**Uniflow.** The Uniflow or Central Exhaust Engine. E. Dickinson. *Inst. Mar. Engrs.—Trans.*, Mar. 1924, pp. 627-642, 11 figs. Principle and important features of engine; consideration of parts.

## STEAM PIPES

**High-Pressure.** Piping for High Pressure and Temperature. R. A. Fiske. *Power Plant Eng.*, vol. 28, no. 8, Apr. 15, 1924, pp. 424-427, 5 figs. Shows effect of temperature upon tensile strength of 15 to 36-point carbon steel and on wrought-iron pipe; friction losses in superheated lines; pressure drop in fittings; heat transmission through pipe walls; joints for high-pressure steam lines.

## STEAM POWER PLANTS

**Industrial Plants.** Prime Movers for Industrial Plants. J. F. Ferguson. *Power*, vol. 59, no. 20, May 13, 1924, pp. 766-768, 1 fig. Comparison of various types of engines and turbines for use in industrial plants, with summary on economies and relative advantages.

**Physical Laws, Practical Bearing of.** The Bases of Efficiency in Power Production. C. F. Dewynter. *Power Engr.*, vol. 19, no. 218, May 1924, pp. 166-168. Shows practical bearing of physical laws, especially in regard to steam power.

**Working Costs.** Working Costs in Small Power Plants. T. E. Love. *Instn. Engrs. (India)—Jl.*, vol. 4, Apr. 1924, pp. 160-168, 3 charts on supp. plates. Deals with capital charges which include depreciation and interest on capital expenditure, and running charges which include cost of fuel, lubricating oil, water supply, labor and stores and repairs.

## STEAM TURBINES

**Checking Condition.** Maintaining Impulse-Turbine Efficiency by Checking the Condition Curve. Rob. R. Walden. *Power*, vol. 59, no. 21, May 20, 1924, pp. 823-825, 2 figs. Various stage pressures at normal load indicate if turbine is in efficient state or normal damage or undue wear will alter these from normal.

**Exhaust and Live Steam, Cost of.** Finding the Cost of Exhaust as Compared to Live Steam. C. E. Colburn. *Power*, vol. 59, no. 20, May 13, 1924, pp. 759-760, 1 fig. Why exhaust steam should be cheaper than live steam; typical examples.

**High-Pressure.** High-pressure Turbines. *Engineer*, vol. 137, no. 3566, May 2, 1924, pp. 489-490, 5 figs. Special turbines developed by Brown, Boveri & Co.

**High Pressure, Superheat, and Vacuum.** The Effect of High Pressure, Superheat and Vacuum on the Efficiency of Large Turbines. C. Sylvester. *Elec. Times*, vol. 65, no. 1692, Mar. 20, 1924, pp. 327-328.

# Manufactured by Advertisers **CLASSIFIED LIST OF MECHANICAL EQUIPMENT** Alphabetical List on page 152

- Vacuum Dryers, Pans, Pumps, Traps, etc.**

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

3 figs. Effects above-mentioned are illustrated by diagrams.

**Improvements.** Improvements in Steam-Turbine Construction (Neuerungen im Dampfturbinenbau), R. Palm. Glückauf, vol. 60, no. 9, Mar. 1, 1924, pp. 152-156, 3 figs. Comparison of different turbine types and discussion of new possible applications; details of recent improvements in turbine and auxiliary machines, and most important improvements in condenser plants.

**Metropolitan-Vickers.** Recent Developments in Large Turbine Practice. World Power, vol. 1, no. 4, Apr. 1924, pp. 243-248, 6 figs. Improvements in design and construction introduced by Metropolitan-Vickers Elec. Co., tending to reduce steam consumption to minimum.

**Wheels, Bucket Wear in.** Bucket Wear in Modern Steam Turbine Wheels, R. M. Norstrom. Nat. Engr., vol. 28, no. 5, May 1924, pp. 214-215, 6 figs. Factors in design and construction of modern steam turbines affecting wear and efficiency of buckets. Relative advantages of pressure-stage versus velocity-stage turbines in this respect.

## STEEL

**Elastic Limit.** High Elastic Limit of Mild Steel and Its General Applications, G. W. Barr, F. G. Martin and A. T. Wall. Engineering, vol. 117, no. 3042, Apr. 18, 1924, pp. 510-511, 4 figs. Describes new mild steel which possess very high elastic limit, and discusses some of its possibilities. Paper read before Instn. Nav. Architects. See also Engineer, vol. 137, no. 3565, Apr. 25, 1924, pp. 443-444, 4 figs.

**Forging Temperature.** On the Forging Temperature of Steels, Kōtarō Honda. Iron & Steel Inst.—advance paper, no. 9, for mtg. May 1924, 5 pp., 4 figs. Investigation shows that in case of carbon steels, elongation-temperature curve has generally maxima and minima, and hence in process of forging low-carbon steels it is better to take every precaution against fall of temperature to 900 deg., where elongation is at minimum; in case of carbon steels, as elongation at ordinary temperature is greater than that at 200 to 300 deg. process of slowly stretching or bending a sample at room temperature rather than at 200 to 300 deg. is safeguard against fracturing.

**Grain Growth.** An Occurrence of Grain Growth in Steel, A. A. Blue. Iron Age, vol. 113, no. 18, May 1, 1924, pp. 1271-1273, 8 figs. Further results of carbonizing, hardening and drawing back; comparison with double quenching and drawing; band formations.

**Hardened, Fundamental Defects.** Some Fundamental Defects of Hardened Steels, L. Aitchison. Am. Soc. Steel Treating—Trans., vol. 5, no. 5, May 1924, pp. 491-503, 3 figs. Deals with certain properties of fully hardened steels that can only be regarded as being of nature of defects; discusses two such defects, namely, abnormally low value of limit of proportionality (elastic limit), and instability of volume which characterizes hardened steels; gives values of limit of proportionality in different hardened steels, and shows that there is very large difference between actual stress which produces some permanent deformation in steel, and stress which is generally called yield point.

**Intercrystalline Fracture.** Intercrystalline Fracture in Steel, R. S. Williams and V. O. Homerberg. Am. Soc. Steel Treating—Trans., vol. 5, no. 4, Apr. 1924, pp. 399-412, 30 figs. Discusses abnormal type of failure in mild steel characterized by intercrystalline cracking and produced by action of cathodic hydrogen or caustic soda solutions; effect of hydrogen on steel under tension and action of alkaline solutions on inclusions of known chemical composition artificially introduced.

**Manganese Steel.** See MANGANESE STEEL.

**Metallurgical Defects, Detection of.** Detecting Metallurgical Defects in Steel, F. C. Thompson. Metal Industry (Lond.), vol. 24, nos. 10 and 11, Mar. 7 and 14, 1924, pp. 229-230 and 261-262, 4 figs. Methods of examination, and causes of troubles occurring.

**Perforation, Effect of.** Influence of the Method of punching Holes in Steel Bars (Note sur l'influence du mode de perçage des trous dans les barres en acier), A. de Marneffe. Revue Universelle des Mines, vol. 67, no. 1, Apr. 1, 1924, pp. 42-48, 7 figs. Results of tests carried out by author on samples with holes punched according to different methods, to determine effect of perforation on resistance of metal.

**Stainless.** Ferrous Alloys Resistant to Corrosion, B. D. Saklatwalla. Iron Age, vol. 113, no. 17, Apr. 24, 1924, pp. 1209-1213, 6 figs. Stainless iron for engineering uses; effect of adding other metals, particularly copper; direct process; future of stainless metallurgy. Paper read before Am. section of Soc. Chem. Industry.

**Strip, Cleaning.** Continuous Cleaning of Strip Steel. Iron Age, vol. 113, no. 19, May 8, 1924, pp. 1358-1359, 2 figs. 16-block unit of Trumbull Steel Co., Warren, O., has capacity of 50 tons per day.

## STEEL CASTINGS

**Cleaning-Cost Records.** Keeps Record of Cleaning Costs, B. K. Price. Iron Trade Rev., vol. 74, no. 18, May 1, 1924, pp. 1165-1166 and 1169, 4 figs. Steel foundry pays grinder hands according to amount of metal removed; castings weighed before being delivered to grinder and again after being ground; production and wages stimulated.

**Hawse Pipes, Leviathan.** Cast Large Steel Hawse Pipe. Foundry, vol. 52, no. 10, May 15, 1924, pp. 381-384, 7 figs. To replace Leviathan's defective cast-iron hawse pipes; steel castings required to resist heavy stress.

**Manufacture.** Liquid Steel for Light Castings, J. A. Holden. Foundry Trade J., vol. 29, no. 402, May 1, 1924, pp. 367-368. Shows that "Stock" plant, in addition to turning out mild steel of good quality, can be adapted for making many types of special steels. Probable cause of porosity in electric process of manufacture.

## STEEL, HEAT TREATMENT OF

**Problems.** Heat-treatment of Steel with Special Reference to Production, J. W. Urquhart. Machy. (Lond.), vol. 23, no. 600, Mar. 27, 1924, pp. 832-835, 6 figs. Machining difficulties with mild steels; difficulties resulting from high and deep carbon casings; typical case in carburizing steels; when double quench is necessary; micrographs; French and American high-temperature initial quenching; distinction between second quenching and hardening; destructive effect of excessive temperature; structure of carbon steel gears.

## STOKERS

**Efficiency, Computation of.** Computing Guaranteed Stoker Efficiency, H. F. Gauss. Power, vol. 59, no. 21, May 20, 1924, pp. 813-815, 1 fig. Computing stoker efficiency for given fuel, with discussion of various factors entering into problem; typical examples and convenient charts to facilitate work.

**Types.** Stokers an Essential of Power Plant Economy. Power House, vol. 17, no. 8, Apr. 20, 1924, pp. 24-31, 8 figs. Reasons, from manufacturers of principal types in use in Canada, for reduction in fuel costs and increase in efficiency of "mechanical firemen" effect.

## STREET RAILWAYS

**Cars.** Rear Exit Expedites Passenger Movement. Elec. Ry. J., vol. 63, no. 18, May 3, 1924, pp. 693-695, 5 figs. Describes one-man double-truck lightweight cars recently placed in service in Fort Wayne by Indiana Service Corp.; rear exit and inclosed steps.

## STRESSES

**Internal.** Internal Stresses Rendered Visible (Les tensions intérieures rendus visibles), A. Mesnager. Technique Moderne, vol. 16, no. 6, Mar. 15, 1924, pp. 161-171, 52 figs. Discusses method based on theory of polarization which permits accurate measurements of internal stresses of a solid; applications of method.

## SUPERHEATERS

**Radiant-Heat.** Operation of Radiant Heat Superheaters. Power Plant Eng., vol. 28, no. 10, May 15, 1924, pp. 528-529, 1 fig. Steam temperature varies slightly with percentage of CO<sub>2</sub>; advantages of two-stage superheating.

# T

## TERMINALS, LOCOMOTIVE

**Richmond, Va.** Electrical Equipment at New Engine Terminal. Ry. Elec. Engr., vol. 15, no. 5, May 1924, pp. 135-140, 8 figs. Describes terminal of Richmond, Fredericksburg & Potomac Railroad, at Richmond, Va.

**Water Supply.** Water Supply of the New Genoa-Terralba Enginhouse (Impianti idrici nel nuovo deposito locomotive e locomotori di Genova-Terralba), E. D'Andrea. Rivista Tecnica delle Ferrovie Italiane, vol. 25, no. 3, Mar. 15, 1924, pp. 73-85, 12 figs. partly on supp. plates. Particulars of plant consisting of 7 driven wells, electrically driven centrifugal pumps, and twin monolithic concrete water tanks each of capacity of 50,000 gal., and erected over a common pump house.

## TESTING MACHINES

**Metal Strip.** Notes on the Testing of Metal Strip, L. Aitchison and L. W. Johnson. Iron & Steel Inst.—advance paper, no. 1, for mtg. May 1924, 15 pp., 13 figs. Bend-testing machine; proof stress testing; simple proof stress extensometer. See (abstract) in Iron Trade Rev., vol. 74, no. 21, May 22, 1924, pp. 1361-1364, 5 figs.

## TEXTILE MACHINERY

**Looms.** Textile Machinery. Engineering, vol. 117, no. 3043, Apr. 24, 1924, pp. 549-550, 4 figs. Describes exhibits of Rob. Hall & Sons at Brit. Empire Exhibition, including automatic loom, belt loom for production of cotton, camel hair or hemp driving belts, loom for making horse-hair cloth, and cloth-folding and measuring machine.

## TINNING

**Thickening of Hot Molten Tin.** Origin and Prevention of the Formation of Undesirable Thickening of Hot Molten Tin (Entstehung und Verhütung schädlicher Verdickungen bezw. Legierungen flüssiger Zinnbäder), B. Haas. Zeit. für die Gesamte Giesereipraxis, vol. 45, no. 15, Apr. 12, 1924, pp. 33-34. Molten tin combines with iron, forming an alloy that thickens tin bath, impairs process of tinning, and wastes metal. It is recommended to tin vessels containing tin bath and to pickle and preheat articles to be tinned.

## TRANSPORTATION

**Factory.** Shop Transportation Economics, S. M. Lowry. Mgt. & Administration, vol. 7, no. 5, May 1924, pp. 533-538, 6 figs. Westinghouse Elec. & Mfg. Co.'s methods and results.

**Railway.** The Place of Railway Transportation in the American Industrial Structure. Inst. Transport—Jl., vol. 5, no. 5, Mar. 1924, pp. 230-237. Report of Research Council of Nat. Transportation Inst. setting forth place of railway transportation in economic structure of America.

## TUBES

**Solid-Wall, Manufacture of.** Making Solid Wall Tubes of Strip Steel. Iron Age, vol. 113, no. 19, May 1, 1924, pp. 1293-1294, 2 figs. New methods of manufacturing brass, copper and steel tubing by continuous process developed by Bundy Tubing Co., Detroit; material wide enough to give double thickness of wall; tinned before rolling; walls soldered together by heat.

# U

## UNEMPLOYMENT

**Seasonal.** The Problem of Seasonal Unemployment in the Building Industry, Wm. S. Parker. Int. Labour Rev., vol. 9, no. 3, Mar. 1924, pp. 361-371. Indicates economic and civic waste involved in leaving building labor idle for several months in year and considers chief causes of seasonal unemployment.

# V

## VISCOSIMETERS

**Mercurial.** A Mercurial Viscosimeter Compensated for Density, F. M. Lidstone. Chem. & Industry, vol. 43, no. 14, Apr. 4, 1924, pp. 877-887, 1 fig. Describes apparatus which is modified form of viscosimeter described in previous issues of same journal.

# W

## WATER HAMMER

**Moderating Effects of.** Water Hammer (Il colpo d'ariete), G. B. Ugolini. Annali dei Lavori Pubblici, vol. 62, nos. 1 and 2, Jan. and Feb. 1924, pp. 7-57 and 101-130, 51 figs. partly on supp. plates. Extended study describing methods for lessening its harmful effects in pipe lines and means for utilizing it in form of sonic waves for power transmission.

## WATER POWER

**Steam and, Relative Costs of.** Relative Cost of Water and Steam Power. Power, vol. 59, no. 21, May 20, 1924, pp. 827-828. Construction costs and fixed charges for water plant are as a rule twice as great as for steam plant and overbalance smaller operating expense; steam plant has greater reserve capacity and is in position to render better and safer service.

**Sweden.** Swedish Water-Power Resources and Their Utilization (Schwedens Wasserkräfte und deren Ausnutzung), F. V. Hansen. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 14, Apr. 5, 1924, pp. 321-327, 13 figs. Water-power resources are estimated at 10,000,000 hp. for six months of year; present status of utilization and estimated power requirements; technical details of more important hydroelectric plants.

## WELDING

**Chemical Aspects.** Some Chemical Aspects of Welding, J. R. Booer. Inst. Mar. Engrs.—Trans., Mar. 1924, pp. 642-659, 2 figs. It is shown that crux of chemical aspect is removal and prevention of foreign inclusions in welds, which are chief cause of failures.

**Electric.** See ELECTRIC WELDING; ELECTRIC WELDING, ARC.

**Fluxes and Slags in.** Fluxes and Slags in Welding, W. Sraagen. Am. Welding Soc.—Jl., vol. 3, no. 4, Apr. 1924, pp. 36-47. Digest of opinions of experts in America on action of these fluxes in electric arc, gas and resistance welding. Paper to be presented before joint session of Faraday Soc. and Inst. Metals.

**Oxy-Acetylene.** See OXY-ACETYLENE WELDING.

**Welding Metal, High-Carbon.** High Carbon Welding Metal, C. A. McCune. Am. Welding Soc.—Jl., vol. 3, no. 3, Mar. 1924, pp. 22-33, 16 figs. Results of experiments made in connection with high-carbon welding materials.

## WELDS

**Flexibility vs. Rigidity.** Design of Welds—Flexibility Versus Rigidity. Am. Welding Soc.—Jl., vol. 3, no. 4, Apr. 1924, pp. 15-27, 3 figs. Contains five short papers giving views of experts in each of the welding fields as to whether a weld in a structure should be designed more rigid or flexible than parts which it joins: Carbon Arc Welding, J. C. Lincoln; Gas Welding, S. W. Miller; Metal Arc Welding, C. J. Holslag; Resistance Welding, H. A. Woofter; and Thermit Welding, J. H. Deppeler.

## WOOD

**Soft, Microscopic Structure.** Microscopic Structure of Softwood. Eng. News-Rec., vol. 92, no. 20, May 15, 1924, p. 861, 1 fig. Presents drawing of cell structure of minute block of softwood.

## WOOD PRESERVATION

**Paint as Preservative.** Does Paint Preserve Wood? H. D. Tiemann. Sci. Am., vol. 130, no. 5, May 1924, pp. 314-315, 6 figs. Points out that paint is not proof against gradual absorption of moisture and will not prevent swelling or shrinkage, but it retards rate of absorption or loss of moisture through surface, thus giving time for partial equalization of moisture and reduction of moisture gradient within piece.

## WOODWORKING PLANTS

**Lumber Conservation.** Ford Upsets Precedents in Interest of Lumber Conservation. Automotive Industries, vol. 50, no. 16, Apr. 17, 1924, pp. 866-867, 4 figs. System employed at saw mills and woodworking plants of Ford Motor Co.; body parts are cut from unaged green slabs and are kiln-dried afterward; crooked logs, swell at butt and even branches 4 in. or more in diam., formerly discarded, are now utilized effectively.

# THE ENGINEERING INDEX

(Registered United States, Great Britain and Canada)

**THE ENGINEERING INDEX** presents each month, in conveniently classified form, items descriptive of the articles appearing in the current issues of the world's engineering and scientific press of particular interest to mechanical engineers. At the end of the year the monthly installments are combined along with items dealing with civil, electrical, mining and other branches of engineering, and published in book form, this annual volume having regularly appeared since 1906. In the preparation of the Index by the engineering staff of The American Society of Mechanical Engineers some 1200 technical publications received by the Engineering Societies Library (New York) are regularly reviewed, thus bringing the great resources of that library to the entire engineering profession.

Photoprint copies (white printing on a black background) of any of the articles listed in the Index may be obtained at a price of 25 cents a page. When ordering photoprints identify the article by quoting from the Index item: (1) Title of article; (2) Name of periodical in which it appeared; (3) Volume, number, and date of publication of periodical; (4) Page numbers. A remittance of 25 cents a page should accompany the order. Orders should be sent to the Engineering Societies Library, 29 West 39th Street, New York.

(See also page 510 of this issue for supplementary items.)

## AERONAUTICAL INSTRUMENTS

**Wind Measurement.** Objective Wind Measurement in Aircraft (Ueber objektive Windmessung im Luftfahrzeuge), H. Boykow. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 5-6, Mar. 26, 1924, pp. 40-42, 4 figs. Describes instrument, constructed by Goetz Works for airship overseas flight to America and for the Amundsen transpolar flight, which measures simultaneously lift angle and speed above ground.

## AIR COMPRESSORS

**Portable.** Portable Compressors, F. A. McLean. Can. Min. J., vol. 45, no. 21, May 23, 1924, pp. 503-506, 5 figs. Notes on their use in mining and contracting.

## AIRCRAFT CONSTRUCTION MATERIALS

**Dopes and Fabric.** Dopes and Fabric, J. E. Ramsbottom. Roy. Aeronautical Soc.—Jl., vol. 28, no. 161, May 1924, pp. 273-305 and (discussion) 305-314, 16 figs. Deals with dopes and fabric as far as they relate to problem of production of structural covering for aircraft which will maintain its tautness under varying conditions of humidity and also retain its strength after prolonged weathering.

**Light Metals.** The Non-Ferrous Metals with Special Regard to Airplanes (Die Nicht-eisenmetalle unter besonderer Berücksichtigung der Luftfahrzeuge), E. H. Schulz. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 22, May 31, 1924, pp. 545-550, 5 figs. Importance of light metals and alloys for construction of aircraft; properties and treatment; pure aluminum; duralumin; other alloys; cast aluminum alloys; silumin; magnesium alloys; electron metal; future prospects.

## AIRCRAFT ENGINES

**Bristol Cherub.** The New Bristol Cherub. Aeroplane, vol. 26, no. 23, June 4, 1924, pp. 474 and 476, 3 figs. Is of two-cylinder opposed type and has total cylinder capacity of just under 1100 cc.; bore 3.35 in., stroke 3.80 in., piston displacement 66.8 cu. in., normal output 22 h.p. at 2500 r.p.m., maximum output 34 h.p. at 4000 r.p.m.

**British Types.** British Aero Engines. Flight, vol. 16, no. 22, May 29, 1924, pp. 331-339, 24 figs. Gives particulars such as power, weight, consumption, etc., of all modern British aero engines. Brief particulars of two small engines which have been proved suitable for light airplanes, and of one engine which is as yet experimental.

**Fuel Pump.** The Bellows (Sylphon) Fuel Pump for Liberty "12" and Wright "H" Engines, H. C. Osborne. Air Service Information Circular, vol. 5, no. 458, Mar. 15, 1924, 6 pp., 6 figs. Description of pump; overhaul; installation; precautions.

**German Development.** The Development of Airplane Engines Since the War (Die Entwicklung des Flugmotoren seit dem Kriege), H. Baer. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 22, May 31, 1924, pp. 539-544, 11 figs. Summary of types developed since war in Germany; construction parts, such as cylinders, pistons, bearings, lubrication, steering, ratio of compression, maximum cylinder dimensions, etc.; the light airplane engine.

**Sample Tests.** Sample Tests of Aircraft Engines (Musterprüfungen von Flugmotoren), Rich. Roth. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 7-8, Apr. 26, 1924, pp. 57-61, 6 figs. Brief outline of test regulations for aircraft engines and examples showing how they are carried out.

**Stedman Two-Stroke.** A Novel Type of Two-

Stroke. Flight, vol. 16, no. 17, Apr. 24, 1924, pp. 238, 5 figs. Describes engine patented and invented by L. B. Stedman which, in its simplest form, consists of a V-twin, in which one cylinder draws its charge from crankcase, while other is supplied initially from crankcase, but via a chamber surrounding crankcase.

**Wright T-3.** The Wright T-3 Engine. Aeroplane, vol. 26, no. 22, May 28, 1924, pp. 455 and 458, 4 figs. Twelve-cylinder V-type with an angle of 60 deg. between cylinders. Bore 5 1/4 in., stroke 6 1/4 in., piston displacement 1947 cu. in., normal output 600, normal speed 1900.

## AIRCRAFT PROPELLERS

**Slipstream Theory.** The Slipstream Theory in Its Practical Application (Die Strahltheorie in ihrer praktischen Anwendung), Wm. Hoff. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 7-8, Apr. 26, 1924, pp. 51-53, 4 figs. Study of slipstream theory as basis for air-propeller dimensioning.

## AIRPLANES

**Aileron Displacement, Effect of.** On the Distribution of Lift Along the Span of an Airfoil with Displaced Ailerons, M. M. Munk. Nat. Advisory Committee for Aeronautics—Tech. Notes, no. 195, June 1924, 8 pp., 4 figs. Effect of aileron displacement on distribution of lift along span is computed for elliptic wing of aspect ratio 6 for three conditions.

**Aileron Efficiency.** Aileron Effectiveness, A. L. Morse. Air Service Information Circular, vol. 5, no. 454, Mar. 15, 1924, 8 pp., 19 figs. Wind-tunnel tests of U. S. A-35 (half-span) airfoil to determine aerodynamic efficiency of ailerons, hinge lines of which were skewed at various angles with transverse or y-axis.

**Beams, Form Factors.** Form Factors of Beams Subjected to Transverse Loading Only, J. A. Newlin and G. W. Trayer. Nat. Advisory Committee for Aeronautics—Report, no. 181, 1924, 19 pp., 8 figs. Tests to determine factors to apply to usual beam formula in order that properties of wood based on tests of rectangular sections might be used as basis of design for beams of any section, and to develop formulas for determining such factors.

**Civil.** British Civil Aircraft. Flight, vol. 16, no. 22, May 29, 1924, pp. 327-331, 3 figs. partly on pp. 324-325. Illustrates and describes commercial, racing, and school machines.

**Climbing.** The Climbing Ability of Airplanes (Die Steigleistungen von Flugzeugen), P. Brenner. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 7-8, Apr. 26, 1924, pp. 61-65, 3 figs. New formula for calculation of climbing time, with aid of which, with known ceiling and engine performance, theoretical climbing curve of airplane can be found.

**Corps Observation.** Notes on the Design of a Corps Observation Plane, H. F. Marshall. Aviation, vol. 16, no. 21, May 26, 1924, pp. 561-563, 2 figs. Exhaust silences is said to be desirable; cockpit arrangement; provision for overload; cruising range; landing speed; reporting on observation.

**Daimler L. 15.** The Daimler L. 15. Flight, vol. 16, no. 19, May 8, 1924, pp. 263-265, 6 figs. Description of a German two-seater light plane, with motor-cycle engine of 7-9 rated hp.; wing span, 41 ft. 4 in.

**Design, Technical Applications.** Aviation and Technology (Luftfahrt und Technik), E. Everling. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 20, May 17, 1924, pp. 491-492, 2 figs. Points out that aircraft construction may be considered as light construction, that is, it is characterized by weight economy in

design, material and power plant; applications of aircraft technology to other fields of engineering, especially to automobile construction, in which great advantages have resulted from light construction; Rumpier streamline automobile is cited as example; results for industry and academic instruction.

**Dietrich-Gobiet.** The Dietrich-Gobiet Sport Monoplane. Flight, vol. 16, no. 21, May 22, 1924, pp. 286-287, 3 figs. A German "Ford of the air." Length overall 17 ft. 8 1/2 in., span 26 ft. 3 in., height 6 ft. 5 in., weight empty 396 lb., useful load 352 lb.; 30-35-hp. 2-cylinder opposed air-cooled Haacke engine.

**Economy Tests.** Economy Test of the DH-4, W. F. Gerhardt and Rob. Anderson. Air Service Information Circular, vol. 5, no. 461, Apr. 1, 1924, 4 pp., 3 figs. Following development of satisfactory flow-meter installation for airplanes, application was made to determine economical operating conditions of DH-4; attempt to check results of previous economy tests, to ascertain effect of altitude adjustment, and to confirm theory of economical operation previously developed.

**Ehrlich V.** The Ehrlich V. Flight, vol. 16, no. 20, May 15, 1924, pp. 277, 1 fig. Notes on a new passenger airplane produced by Zentral Aviatik & Automobil Ges. M.B.H. of Vienna; span 32 ft. 10 in., length 22 ft., wing area 333.5 sq. ft.; 6-cylinder vertical "Hiero" engine rated at 180/200 b.h.p.

**Fiat.** The Fiat "C. R.," "R. S." and "B. R." Biplanes. Flight, vol. 16, no. 20, May 15, 1924, pp. 273-274, 4 figs. Brief particulars of three recent Italian military machines constructed by Fiat Co., of Turin. "C. R." and "R. S." fitted with 300-hp. Hispano-Suiza engine, and "B. R." with 700-hp. Fiat A-14 engine.

**Flap-Gear.** The De Havilland Automatic Flap Gear. Aeroplane, vol. 26, no. 18, Apr. 30, 1924, p. 368, 5 figs. Differs from other types in that there is no additional operating gear involved and flaps are entirely automatic in their action. Flaps are exactly like normal ailerons, except that they extend over whole span of wings. Effect on machine when this gear was fitted to a D. H. 50 airplane.

**Gliders.** Gliders: Their History and Uses, W. H. Sayers. Roy. Aeronautical Soc.—Jl., vol. 28, no. 161, May 1924, pp. 315-322. Review of development and discussion of possibilities.

**Handley Page W8.F.** The Handley Page W8.F. Aeroplane, vol. 26, no. 18, Apr. 30, 1924, pp. 370, 372 and 374, 8 figs. Fitted with one Rolls-Royce Eagle IX engine of 360 hp. in nose of fuselage, and two Siddeley Puma engines each of 240 hp. on wings; span 75 ft., length 60 ft. 1 in., height 17 ft., wing area 1456 sq. ft., loaded weight 12,000 lb., max. speed 102 m.p.h. See also Flight, vol. 16, no. 18, May 1, 1924, pp. 248-253, 17 figs.

**Light.** Light Airplane Construction (Leichtbau), A. Baumann. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 22, May 31, 1924, pp. 551-555. Deals with materials, design stress and arrangement conducive to light-weight construction; advantages and disadvantages of light construction and useful field. See also following article, pp. 555-556, 3 figs., entitled The Selection of Materials for Light Construction (Die Frage des Baustoffes im Leichtbau), P. Meyer.

**Metal.** Development and Design of Dornier Metal and All-Metal Airplanes (Entwicklung und Konstruktion der Metall- und Ganzmetallflugzeuge von Dornier), H. Werner. Motorwagen, vol. 27, no. 14, May 20, 1924, pp. 246-248, 8 figs. Comparison with development of Junkers planes.

**Military.** British Military Aircraft. Flight, vol.

# Classified List of Mechanical Equipment

## Manufactured by Firms Represented in MECHANICAL ENGINEERING

FOR ALPHABETICAL LIST OF ADVERTISERS, SEE PAGE 150

**Accumulators, Hydraulic**  
Farrel Foundry & Machine Co.  
Mackintosh-Hemphill Co.  
\* Worthington Pump & Machinery Corp'n

**Aftercoolers, Air**  
\* Ingersoll-Rand Co.

**Agitators**  
Hill Clutch Machine & Foundry Co.

**Air Compressors, Receivers, etc.**  
(See Compressors, Receivers, etc., Air)

**Air Conditioning Apparatus**  
\* American Blower Co.  
\* Carrier Engineering Corp'n  
\* Clamage Fan Co.  
\* Sturtevant, B. F. Co.

**Air-Jet Lifts**  
\* Schutte & Koerting Co.

**Air Washers**  
\* American Blower Co.  
\* Carrier Engineering Corp'n  
\* Clamage Fan Co.  
\* Cooling Tower Co. (Inc.)  
\* Sturtevant, B. F. Co.

**Alloys**  
Driver-Harris Co.

**Alloys (Calite)**  
Calorizing Co.

**Ammeters**  
\* Bristol Co.  
\* General Electric Co.  
\* Westinghouse Electric & Mfg. Co.

**Anemometers**  
\* Taylor Instrument Cos.  
Weber, F. Co. (Inc.)

**Annealing**  
\* American Metal Treatment Co.  
Nuttall, R. D. Co.

**Arc Welding Equipment**  
\* Westinghouse Elec. & Mfg. Co.

**Arches, Boiler Furnace**  
\* McLeod & Henry Co.  
\* Titusville Iron Works Co.

**Arches, Fire Door**  
\* McLeod & Henry Co.

**Arches, Ignition (Flat Suspended)**  
\* Combustion Engineering Corp'n  
\* McLeod & Henry Co.

**Asbestos Products**  
Carey, Philip Co.  
Garlock Packing Co.  
Johns-Manville (Inc.)

**Ash Lifts, Telescopic**  
Palmer-Bee Co.

**Autoclaves**  
Farrel Foundry & Machine Co.

**Babbitt Metal**  
\* Medart Co.  
\* Westinghouse Elec. & Mfg. Co.

**Ball Bearings, Gages, etc.**  
(See Bearings, Gages, Ball)

**Balls, Brass and Bronze**  
\* Atlas Ball Co.  
\* Gwilliam Co.

**Balls, Steel**  
\* Atlas Ball Co.  
\* Gwilliam Co.  
\* New Departure Mfg. Co.  
\* S K F Industries (Inc.)

**Barometers**  
\* American Schaeffer & Budenberg Corp'n  
\* Taylor Instrument Cos.

**Barometers, Mercurial**  
\* Tagliabue, C. J. Mfg. Co.

**Bearings, Ball**  
\* Fafnir Bearing Co.  
\* Gwilliam Co.  
\* Marlin-Rockwell Corp'n  
\* New Departure Mfg. Co.  
\* Norma Co. of America  
\* S K F Industries (Inc.)  
\* Strom Ball Bearing Mfg. Co.

**Bearings, Collar Oiling**  
Hill Clutch Machine & Foundry Co.

**Bearings, Radial Thrust**  
\* New Departure Mfg. Co.

**Bearings, Roller**  
\* Gwilliam Co.  
\* Hyatt Roller Bearing Co.  
\* Norma Co. of America  
\* Royersford Fdry. & Mach. Co.  
\* Timken Roller Bearing Co.

**Bearings, Self-Oiling**  
\* Brown, A. & F. Co.  
\* Doehler Die-Casting Co.  
\* Falls Clutch & Machinery Co.  
\* Hill Clutch Machine & Foundry Co.  
\* Jones, W. A. Fdry. & Mach. Co.  
\* Link-Belt Co.  
\* Royersford Fdry. & Mach. Co.  
\* Wood's, T. B. Sons Co.

**Bearings, Tapered**  
\* Timken Roller Bearing Co.

**Bearings, Thrust**  
\* Fafnir Bearing Co.  
\* General Electric Co.  
\* Gwilliam Co.  
\* Hill Clutch Machine & Foundry Co.  
\* Norma Co. of America  
\* S K F Industries (Inc.)  
\* Strom Ball Bearing Mfg. Co.  
\* Timken Roller Bearing Co.

**Belt Dressing**  
\* Dixon, Joseph Crucible Co.  
Gandy Belting Co.

**Belt Lacing, Steel**  
\* Bristol Co.

**Belt Tighteners**  
\* Brown, A. & F. Co.  
\* Hill Clutch Machine & Foundry Co.  
\* Jones, W. A. Fdry. & Mach. Co.  
\* Link-Belt Co.  
\* Medart Co.  
\* Smith, F. L. & Co.  
\* Wood's, T. B. Sons Co.

**Belt Tighteners, Automatic**  
Hill Clutch Machine & Foundry Co.

**Belting, Canvas (Stitched)**  
Gandy Belting Co.  
\* U. S. Rubber Company

**Belting, Conveyor**  
Gandy Belting Co.  
\* Goodrich, B. F. Rubber Co.  
\* United States Rubber Co.

**Belting, Elevator**  
Gandy Belting Co.  
\* Goodrich, B. F. Rubber Co.  
\* United States Rubber Co.

**Belting, Endless**  
Gandy Belting Co.

**Belting, Fabric**  
Gandy Belting Co.

**Belting, Rubber**  
\* Goodrich, B. F. Rubber Co.  
\* United States Rubber Co.

**Belting, Waterproof**  
Gandy Belting Co.

**Bending & Straightening Machines**  
\* Long & Allstatter Co.

**Bends, Pipe**  
\* Frick Co. (Inc.)  
\* Vogt, Henry Machine Co.

**Billets, Steel**  
\* Timken Roller Bearing Co.

**Blocks, Tackle**  
Clyde Iron Work Sales Co.  
\* Roebling's, John A. Sons Co.

**Blowers, Centrifugal**  
\* American Blower Co.  
\* Clamage Fan Co.  
\* Coppus Engineering Corp'n  
\* De Laval Steam Turbine Co.  
\* General Electric Co.  
\* Ingersoll-Rand Co.  
\* Kerr Turbine Co.  
\* Sturtevant, B. F. Co.  
\* Westinghouse Electric & Mfg. Co.

**Blowers, Fan**  
\* American Blower Co.  
\* Clamage Fan Co.  
\* Coppus Engineering Corp'n  
\* Green Fuel Economizer Co.  
\* Sturtevant, B. F. Co.

**Blowers, Forge**  
\* American Blower Co.  
\* Sturtevant, B. F. Co.

**Blowers, Pressure**  
\* American Blower Co.  
\* Clamage Fan Co.  
\* Lammett & Mann Co.  
\* Sturtevant, B. F. Co.

**Blowers, Rotary**  
\* Lammett & Mann Co.  
\* Schutte & Koerting Co.  
\* Sturtevant, B. F. Co.

**Blowers, Soot**  
\* Diamond Power Specialty Corp'n  
\* Sturtevant, B. F. Co.

**Blowers, Steam Jet**  
\* Schutte & Koerting Co.

**Blowers, Turbine**  
\* Coppus Engineering Corp'n  
\* Sturtevant, B. F. Co.

**Blueing (Metal)**  
\* American Metal Treatment Co.

**Boards, Drawing**  
\* Dietzen, Eugene Co.  
\* Electro Sun Co. (Inc.)  
\* Keuffel & Esser Co.  
\* New York Blue Print Paper Co.  
\* Parvell Laboratories  
\* U. S. Blue Co.  
\* Weber, F. Co. (Inc.)

**Boiler Baffles**  
\* King Refractories Co. (Inc.)  
\* McLeod & Henry Co.

**Boiler Compounds**  
\* Dixon, Joseph Crucible Co.  
Unisol Mfg. Co.

**Boiler Coverings, Furnaces, Tube Cleaners, etc.**  
(See Coverings, Furnaces, Tube Cleaners, etc., Boiler)

**Boiler Fronts**  
\* O'Brien, John Boiler Works Co.  
\* Titusville Iron Works Co.

**Boiler Settings, Steel Cased**  
\* Casey-Hedges Co.  
\* McLeod & Henry Co.  
\* O'Brien, John Boiler Works Co.  
\* Vogt, Henry Machine Co.  
\* Walsh & Weidner Boiler Co.

**Boilers, Heating**  
\* Casey-Hedges Co.  
\* Erie City Iron Works  
\* Keeler, E. Co.  
\* Leffel, James & Co.  
\* Lidgerwood Mfg. Co.  
\* O'Brien, John Boiler Works Co.  
\* Titusville Iron Works Co.  
\* Union Iron Works  
\* Walsh & Weidner Boiler Co.

**Boilers, Locomotive**  
\* Casey-Hedges Co.  
\* Keeler, E. Co.  
\* Leffel, James & Co.  
\* Titusville Iron Works Co.  
\* Union Iron Works  
\* Walsh & Weidner Boiler Co.

**Boilers, Marine (Scotch)**  
\* Bethlehem Shipbldg. Corp'n (Ltd.)  
\* Casey-Hedges Co.  
\* Leffel, James & Co.  
\* Titusville Iron Works Co.  
\* Walsh & Weidner Boiler Co.

**Boilers, Marine (Water Tube)**  
\* Babcock & Wilcox Co.  
\* Bethlehem Shipbldg. Corp'n (Ltd.)  
\* Casey-Hedges Co.  
\* Connelly, D. Boiler Co.  
\* O'Brien, John Boiler Works Co.  
\* Springfield Boiler Co.  
\* Titusville Iron Works Co.  
\* Walsh & Weidner Boiler Co.  
\* Ward, Charles Engineering Wks.

**Boilers, Portable**  
\* Casey-Hedges Co.  
\* Erie City Iron Works  
\* Frick Co. (Inc.)  
\* Keeler, E. Co.  
\* Leffel, James & Co.  
\* Lidgerwood Mfg. Co.  
\* O'Brien, John Boiler Works Co.  
\* Titusville Iron Works Co.  
\* Union Iron Works  
\* Walsh & Weidner Boiler Co.

**Boilers, Tubular (Horizontal Return)**  
\* Bigelow Co.  
\* Casey-Hedges Co.  
\* Cole, R. D. Mfg. Co.  
\* Connelly, D. Boiler Co.  
\* Erie City Iron Works  
\* Keeler, E. Co.  
\* Leffel, James & Co.

**Boilers, Tubular (Horizontal Return)**  
\* Lidgerwood Mfg. Co.  
\* Morrison Boiler Co.  
\* O'Brien, John Boiler Works Co.  
\* Titusville Iron Works Co.  
\* Union Iron Works  
\* Vogt, Henry Machine Co.  
\* Walsh & Weidner Boiler Co.  
\* Ward, Charles Engineering Wks.  
\* Webster, Howard J.  
\* Wickes Boiler Co.

**Boilers, Tubular (Vertical Fire)**  
\* Bigelow Co.  
\* Casey-Hedges Co.  
\* Clyde Iron Works Sales Co.  
\* Keeler, E. Co.  
\* Leffel, James & Co.  
\* Lidgerwood Mfg. Co.  
\* Morrison Boiler Co.  
\* O'Brien, John Boiler Works Co.  
\* Titusville Iron Works Co.  
\* Union Iron Works  
\* Walsh & Weidner Boiler Co.

**Boilers, Water Tube (Horizontal)**  
\* Babcock & Wilcox Co.  
\* Bethlehem Shipbldg. Corp'n (Ltd.)  
\* Casey-Hedges Co.  
\* Cole, R. D. Mfg. Co.  
\* Connelly, D. Boiler Co.  
\* Edge Moor Iron Co.  
\* Erie City Iron Works  
\* Keeler, E. Co.  
\* Ladd, George T. Co.  
\* Morrison Boiler Co.  
\* O'Brien, John Boiler Works Co.  
\* Springfield Boiler Co.  
\* Union Iron Works  
\* Vogt, Henry Machine Co.  
\* Walsh & Weidner Boiler Co.  
\* Wickes Boiler Co.

**Boilers, Water Tube (Inclined)**  
\* Babcock & Wilcox Co.  
\* Bethlehem Shipbldg. Corp'n (Ltd.)  
\* Bigelow Co.  
\* Casey-Hedges Co.  
\* Keeler, E. Co.  
\* Ladd, George T. Co.  
\* Morrison Boiler Co.  
\* O'Brien, John Boiler Works Co.  
\* Vogt, Henry Machine Co.  
\* Walsh & Weidner Boiler Co.  
\* Ward, Charles Engineering Wks.

**Boilers, Water Tube (Vertical)**  
\* Babcock & Wilcox Co.  
\* Bigelow Co.  
\* Casey-Hedges Co.  
\* Erie City Iron Works  
\* Keeler, E. Co.  
\* Ladd, George T. Co.  
\* Morrison Boiler Co.  
\* O'Brien, John Boiler Works Co.  
\* Walsh & Weidner Boiler Co.  
\* Wickes Boiler Co.

**Boring and Drilling Machines**  
Universal Boring Machine Co.

**Boring, Drilling and Milling Machines (Horizontally Combined)**  
Universal Boring Machine Co.

**Boxes, Carbonizing**  
Driver-Harris Co.

**Boxes, Case Hardening**  
Driver-Harris Co.

**Boxes, Water Service**  
Murlock Mfg. & Supply Co.

**Brake Blocks**  
Johns-Manville (Inc.)

**Brakes, Air**  
\* Allis-Chalmers Mfg. Co.  
\* General Electric Co.

**Brass Goods**  
\* Scovill Mfg. Co.

**Brass Mill Machinery**  
Farrel Foundry & Machine Co.

**Breechings, Smoke**  
\* Morrison Boiler Co.  
\* Titusville Iron Works Co.  
\* Vogt, Henry Machine Co.

**Brick, Fire**  
\* Bernitz Furnace Appliance Co.  
\* Celite Products Co.  
\* Drake Non-Clinkering Furnace Block Co.  
\* Keystone Refractories Co.  
\* King Refractories Co. (Inc.)  
\* McLeod & Henry Co.  
\* Mapthite Sales Corp'n

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

16, no. 22, May 29, 1924, pp. 306-327, 52 figs. Illustrates and describes land machines and seaplanes designed for warlike operations.

**Prague Show.** The Aero Show at Prague. Flight, vol. 16, no. 23, June 5, 1924, pp. 356-365, 19 figs. General descriptions and illustrations of machines at Third International Exhibition.

**Seaplanes.** See SEAPLANES.

**Wind-Tunnel Tests.** Wind Tunnel Test of the Original TA-4 with the Following Airfoils: USA-27C Large, USA-27C Small, Gottingen 387 and Gottingen 255, A. L. Morse. Air Service Information Circular, vol. 5, no. 455, Mar. 15, 1924, 27 pp., 31 figs. Test to determine aerodynamic characteristics.

Wind Tunnel Test of CO-2A Model Airplane, C. E. Archer. Air Service Information Circular, vol. 5, no. 453, Mar. 15, 1924, 17 pp., 12 figs. Results of test to obtain full data on lift, drag,  $L/D$ , and moment curve about center of gravity for angles from below zero lift to above maximum lift (with and without tail plane and with and without elevator).

## AIRSHIPS

**Schütte-Lanz Light Construction.** Light Construction of the Schütte-Lanz Airships (Leichtkonstruktion des Luftschiffbaus Schütte-Lanz), Gentzke. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 9, May 15, 1924, pp. 77-95, 73 figs. Application, improvement, treatment, strength, weight and qualities of construction materials; beams and joints of metal construction; beams and joints of wood construction.

**Speed of.** Speed of Airships with Minimum Fuel Consumption (Die Geschwindigkeit geringsten Brennstoffverbrauchs bei Luftschiffen), W. Bleistein. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 5-6, Mar. 26, 1924, pp. 42-44, 4 figs. Critical discussion of rule-of-thumb formulas developed by Munk and described in Nat. Advisory Committee Tech. Note, no. 89.

**Zeppelin, LZ, 126.** The Zeppelin L. Z. 126 (Le Zeppelin L. Z. 126), M. Foerster. Bul. Technique du Bur. Veritas, vol. 6, no. 2, Feb. 1924, pp. 24-27, 7 figs. Characteristics and general design; nacelles; engines; rudders; passenger and crew facilities; nautical instruments. Translated from Werft-Reederei-Hafen, Nov. 22, 1923.

Twenty-Five Years of Zeppelin Airship Construction (Funfundzwanzig Jahre Zeppelin-Luftschiffbau), L. Dürr. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 22, May 31, 1924, pp. 529-537, 31 figs. Details of airship LZ 126 built by Zeppelin Co. for the United States; deals with body of ship, machinery, propellers, gasoline storage, ballast, pilot's nacelle, electric lighting, landing gear, etc.

**V. Z.-24.** The French Zodiac Dirigible "Vedette." Flight, vol. 16, no. 22, May 29, 1924, p. 300, 3 figs. Particulars of V. Z. 24, airship of non-rigid type; capacity 141,280 cu. ft., overall length 190 ft. 6 in., overall diameter 38 ft. 9 in., weight empty 6670 lb., useful load 2944 lb., speed range 49.6-52.7 m.p.h.

## ALIGNMENT CHARTS

**Mathematical Principles.** The Mathematical Fundamentals of Nomography (Ueber die mathematischen Grundlagen der Nomographie), L. Bieberbach. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 20, May 17, 1924, pp. 495-498, 7 figs. Mathematical principles of alignment charts in simple and somewhat more complicated cases; suggestions for further developments.

**Reinforced Concrete.** Nomography in Reinforced Concrete Calculation (Nomographie in der Eisenbetonrechnung), Rob. Jacki. Beton u. Eisen, vol. 23, no. 7, Apr. 5, 1924, pp. 77-82, 17 figs. It is shown how different frequently occurring calculations can be greatly accelerated with aid of alignment charts which can be easily plotted by any engineer.

## ALLOY STEELS

**Development.** Alloy Steel Development Rapid, Rob. Hadfield. Iron Trade Rev., vol. 74, no. 25, June 19, 1924, pp. 1627-1628, 1 fig. Traces steps in progress in making of alloy steels; advance from 1882 to present time hastened by increase in volume of research work. (Abstract.) Paper read before Brit. Empire Min. & Met. Congress.

## ALLOYS

**Aluminum.** See ALUMINUM ALLOYS; DURALUMIN.

**Light.** See AIRCRAFT CONSTRUCTION MATERIALS, Light Metals.

**Nickel.** See NICKEL ALLOYS.

## ALUMINUM

**Castings.** The Production of Aluminum Castings (Die Herstellung von Aluminiumguss), von Zeidler. Metall u. Erz, vol. 21, no. 5, 1st Mar. issue, 1924, pp. 99-101. Describes recommendable working methods in aluminum foundries; melting arrangements; treatment of metal and production of molds.

**Melting, Use of Fluxes in.** The Use of Fluxes in the Melting of Aluminum and its Alloys, W. Rosenhain and S. L. Archbutt. Foundry Trade J., vol. 29, no. 405, May 22, 1924, pp. 427-428. Paper read at symposium arranged by Faraday Soc., Inst. Metals, Inst. British Foundrymen and Non-Ferrous Research Assn.

**Properties.** Investigations of the Properties of Aluminum (Recherches faites au Laboratoire central d'Electricité sur les propriétés de l'aluminium), M. Jouaust. Société Française des Electriciens—Bul., vol. 3, no. 30, Dec. 1923, pp. 663-669. Results of investigations carried out at Central Laboratory of Electricity on samples of French, American and English aluminum.

**Soldering.** Can Aluminum Be Soldered? (Ist Aluminium lötlbar), F. Roberti. Automobil-Rundschau, vol. 23, no. 2, Feb. 1924, pp. 17-18, 4 figs. De-

scribes aluminum soldering process, known as Conti process, which is result of many years' experimentation in special field of homogeneous aluminum joining; examples are cited showing advantages of process.

## ALUMINUM ALLOYS

**Aluminum-Copper.** The Heat Treatment of Light Alloys of Aluminum with Copper Base (Le traitement thermique des alliages légers d'aluminium à base de cuivre), A. Portevin and F. Le Chatelier. Revue de Métallurgie, vol. 21, no. 4, Apr. 1924, pp. 233-246, 14 figs. Gives characteristics of alloys containing magnesium and those containing no magnesium, and describes new process of heat-treating alloys without magnesium; influence of hardening temperature; mechanical properties of alloys, etc.; summary of advantages of alloy without magnesium. Bibliography.

**Duralumin.** See DURALUMIN.

**Metallography.** Metallography of Sand Cast Aluminum Alloys, A. J. Lyon and S. Daniels. Air Service Information Circular, vol. 5, no. 449, Mar. 1, 1924, 19 pp., 54 figs. Defines technique employed in metallography of aluminum and its alloys by Material Section, Engng. Div. Air Service; illustrates and describes common constituents and characteristic microstructure of cast-aluminum alloys used by Air Service.

**Production.** History of Light Aluminum Alloys and Actual Status of Their Production (Histoire des alliages légers d'aluminium et état actuel de leur fabrication), L. Guillet. Génie Civil, vol. 84, nos. 13, 14 and 15, Mar. 29, Apr. 5 and 12, 1924, pp. 298-303, 319-321 and 356-359, 9 figs. Traces history of development and describes latest improvements.

## AMMONIA

**By-Product.** By-Product and Synthetic Ammonia. Gas Engr., vol. 40, nos. 574 and 575, Feb. and Mar. 1924, pp. 24-25 and 48-49. Account and criticism of modern methods of by-product ammonia production. Discusses potential ammonia in coal, ammonia per ton carbonized, excessive addition of lime, heat-interchange devices, and ammonium bicarbonate and chloride and their possibilities as commercial fertilizers.

**Synthetic.** Catalyst Bombs for Synthetic Ammonia Production, E. K. Scott. Chem. Age (Lond.), vol. 10, no. 256, May 10, 1924, pp. 482-483, 3 figs. Describes Haber-Bosch, Claude, and Casale catalyst bombs; catalyst material.

Synthesis of Ammonia at High Pressures (Ueber die Ammoniaksynthese bei hohen Drucken), W. Moldenhauer. Chemiker-Zeitung, vol. 48, no. 46, Apr. 15, 1924, pp. 233-234, 1 fig. Yield of synthetic ammonia obtained by Claude at very high pressures are compared with theoretical yields deduced from Haber's ammonia equilibrium formula; discrepancies between actual yields obtained and theoretical yields of ammonia increase as temperature falls and as pressure rises; they are probably due to differences in compressibilities of ammonia and of more permanent gases, nitrogen and hydrogen.

**Temperature-Entropy Chart.** Temperature-Entropy Chart for Ammonia, W. M. Griffith. Ice & Refrigeration, vol. 66, no. 5, May 1924, pp. 462-465, 3 figs. Description of a new temperature-entropy chart based on Bur. of Standards ammonia tables. Construction of chart; diagram to illustrate use of chart; solution of practical problems by means of data from new diagram.

## AMMONIA CONDENSERS

**Superheat at.** Superheat at the Condenser, J. E. Starr. Ice & Refrigeration, vol. 66, no. 5, May 1924, pp. 461-462. Discussion of determination of amount of superheat in ammonia at condenser; effect of power requirements; a possible way of utilizing superheat by absorption system; means of reducing superheat.

## APPRENTICES, TRAINING OF

**Coöperative Plan.** Making the Skilled Mechanic of Tomorrow, F. A. Pope. Indus. Mgt. (N. Y.), vol. 67, no. 6, June 1924, pp. 363-367, 5 figs. Co-operative plan for apprentice training in metal trades, developed by Nat. Metal Trades Assn.

**Draftsmen and Patternmakers.** Training Draftsmen and Patternmakers. Machy. (N. Y.), vol. 30, no. 10, June 1924, pp. 787-789, 4 figs. Outline of courses given at Worcester Boys Trade School.

**France.** The Training of Apprentices (L'Apprentissage). Société des Ingenieurs Civils—Mémoires et Compte Rendu des Travaux, vol. 76, no. 10-12, Oct.-Dec. 1923, pp. 1172-1281. Account of what has been accomplished in 13th Ward of Paris, by Ch. Quillard; laws and organization of Syndicate of Mechanics, Boiler Makers and Foundrymen with regard to training of apprentices and vocational instruction, J. Quantin; training of apprentices from pedagogical viewpoint, M. Loffet; training of shop apprentices in its relation to rational organization of work, J. Androuin; rapid development of apprenticeship, M. Lacoine; the crisis in apprenticeship and its remedy, and technical instruction, J. Hiernaux; training of apprentices at steel works of Schneider, Jaquet & Cie, Strasbourg, and Cockerill Works, Belgium, E. Kern; theoretical vocational training and education during period of apprenticeship, M. Bostsarron; apprenticeship in the electrotechnical industry, Geo. Westerman; school for training of apprentices at works of Dion-Bouton M. Winder.

**Patternmakers and Molders.** Modern Apprenticeship Training of Patternmakers and Molders (Neuzeitliche Ausbildung der Modellstichler- und Formerlehrlinge), R. Harm. Gieserei-Zeitung, vol. 21, no. 7, April 1, 1924, pp. 135-140, 6 figs. Development of industrial training of apprentices, and of so-called DATSCH charts worked out by German Committee for Technical Education; DATSCH instruction courses and their practical application.

**Railways.** Training Apprentices, H. L. Shipman. Car Foremen's Assn.—Proc., vol. 18, no. 7, Apr. 1924, 15 pp. between pp. 12 and 52 (including discussion).

Basic elements that must be given consideration before an apprenticeship system is undertaken by a railroad. Suggestions regarding establishment of system and training of apprentices.

## AUTOMOBILE ENGINES

**Constant-Compression.** Economy of Fuel Attained by Means of Constant Compression Engine. Automotive Industries, vol. 50, no. 24, June 12, 1924, p. 1278, 1 fig. Gas mixture and air are drawn in successively so that they will remain on different levels of combustion chamber, and so that stratification replaces turbulence of charge in Burnett 4-cycle engine.

**Eight-in-Line.** Falls Eight-in-Line Has Crankcase and Cylinders Cast Integral. Automotive Industries, vol. 50, no. 22, May 29, 1924, pp. 1182-1183, 2 figs. Valve in head-type engine has five-bearing crankshaft lubricated by pressure, integral inlet manifold, and two additional cylinders have same bore and stroke as six of same make.

**Godet-Vareille.** A Diminutive "Six." Autocar, vol. 52, no. 1492, May 23, 1924, pp. 935-936, 6 figs. Six-cylinder 745 cc. Godet-Vareille engine; outstanding features are positive valve operating mechanism, a supercharger, distinctive type of cylinder construction, and use of roller and ball bearings.

**Two-Cycle.** Two-Cycle Engines (Dolf, Bekamo, Carelli), C. Hanfland. Motorwagen, vol. 27, no. 14, May 20, 1924, pp. 239-242, 13 figs. Describes three types of 2-cycle engines, namely, the Dolf, Bekamo and Carelli engines.

## AUTOMOBILE INDUSTRY

**S. A. E. Standards Report.** Standards Committee Division Reports. Soc. Automotive Engrs.—Jl., vol. 14, no. 6, June 1924, pp. 625-640, 15 figs. Gives following Division Reports: Parts and fittings; agricultural power equipment; ball and roller bearings; lighting; non-ferrous metals; screw threads; springs.

## AUTOMOBILE MANUFACTURING PLANTS

**Machine Tools for.** Large Fixtures and Tools for Building Twin City Tractors, H. Campbell. Am. Mach., vol. 60, no. 25, June 19, 1924, pp. 907-910, 13 figs. Details of operations on large automotive units at plant of Minneapolis Steel & Machy. Co., Minneapolis.

## AUTOMOBILES

**Albatros.** The 8 H.P. Albatros Car. Auto-Motor Jl., vol. 29, no. 19, May 8, 1924, pp. 393-395, 10 figs. British-built car. Four-cylindered monobloc engine built up as one unit with clutch case and gear box and an entirely enclosed propeller shaft in a tubular torque member transmits power to newly designed rear live axle.

**Amsterdam Show.** The Automobile Show in Amsterdam, Holland, February, 1924 ("De Teutoonstelling van Automobilen" in Amsterdam), W. Hirschfeld. Motorwagen, vol. 27, nos. 10, 11 and 12, Apr. 10, 20 and 30, 1924, pp. 161-166, 179-183 and 206-209, 37 figs. Details of most important exhibits of automobiles, motor trucks and auxiliary parts.

**Armstrong-Siddeley.** The 14 H. P. Armstrong-Siddeley. Auto-Motor Jl., vol. 29, no. 21, May 22, 1924, pp. 435-437, 11 figs. A roomy family touring car; four cylinders; speed, efficiency and economy.

**Beardmore.** The 12.30 H. P. Beardmore Car. Auto-Motor Jl., vol. 29, no. 18, May 1, 1924, pp. 367-370, 14 figs. Four-cylinder monobloc overhead valve engine, with clutch and gear integral, and a propeller shaft drive to a spiral bevel-driven silent live axle, with Hotchkiss type of torque taking semi-elliptic underslung springs.

**Bodies, Assembly of.** Packard Bodies Assembled in Metal Jigs to Minimize Hand Fitting. Automotive Industries, vol. 50, no. 24, June 12, 1924, pp. 1272-1273, 4 figs. Production methods similar to those used in chassis manufacture are employed in putting together wood frames and units from which they are constructed.

**Brakes.** Notes on Automobile Brakes, D. Roesch. Armour Engr., vol. 15, nos. 3 and 4, Mar. and Apr. 1924, pp. 91-94 and 112 and 135-139 and 151, 15 figs. Brake requirements, and performance obtainable with different systems; discusses representative types and gives data pertaining to brake design; highway capacity and influence of various conditions upon stopping distances, with a thought of legislative requirements.

**Brakes, Four-Wheel.** Advantages and Disadvantages of 4-Wheel Brakes (Licht- und Schattenschein der Vierradbremse), v. Löw. Automobil-Rundschau, vol. 23, no. 5, May 1924, pp. 51-53, 11 figs. Critical discussion of advantages and disadvantages.

**British Empire Exhibition.** Cars at the British Empire Exhibition. Autocar, vol. 52, no. 1489, May 2, 1924, pp. 785-792, 46 figs. Summarized specifications of models on view; 80 cars, ranging from 749 cc. to 7413 cc. cylinder capacity, represent 47 different manufacturers.

**Chassis Lubrication.** Chassis Lubrication. Soc. Automotive Engrs.—Jl., vol. 14, no. 6, June 1924, Contains following papers: Notes on Chassis Lubrication and Maintenance, A. F. Masury, pp. 641-646, 14 figs.; Magazine Oiling System of Chassis Lubrication, C. T. Myers, pp. 646-648, 5 figs.

**Construction, Cast Iron in.** Cast-Iron in Motor Car Construction, F. H. Hurren. Foundry Trade J., vol. 29, no. 405, May 22, 1924, pp. 423-426. Considers technical and metallurgical aspects of production of automobile parts, and extent to which science can assist.

**Design.** Racing's Effect on Design, W. F. Bradley. Autocar, vol. 52, no. 1491, May 16, 1924, pp. 865-866, 4 figs. Florio races (Sicily) indicate that famous continental constructors will offer production models with superchargers and dry sump lubrication as results of racing experience.

**Indianapolis Race.** Reliability is Outstanding Characteristic of Cars in This Year's Race, P. Dumas.

# Manufactured by **CLASSIFIED LIST OF MECHANICAL EQUIPMENT** Alphabetical List on page 150

**Brick, Insulating**

- \* Celite Products Co.
- \* Quigley Furnace Specialties Co.

**Bridges, Coal and Ore Handling**

- \* Brown Hoisting Machinery Co.
- \* Link-Belt Co.

**Bridgewalls (Furnace)**

- \* McLeod & Henry Co.

**Buckets, Elevator**

- \* Brown Hoisting Machinery Co.
- \* Chain Belt Co.
- \* Gifford-Wood Co.
- \* Hendrick Mfg. Co.
- \* Jones, W. A. Fdry. & Mach. Co.
- \* Link-Belt Co.
- \* Palmer-Bee Co.

**Buckets, Grab**

- \* Brown Hoisting Machinery Co.
- \* Clyde Iron Works Sales Co.
- \* Lidgerwood Mfg. Co.
- \* Link-Belt Co.

**Buckets, Self-Dumping**

- \* Brown Hoisting Machinery Co.
- \* Clyde Iron Works Sales Co.
- \* Link-Belt Co.

**Burners, Oil**

- \* Bethlehem Shipbldg. Corp'n (Ltd.)
- \* Combustion Engineering Corp'n
- \* Schutte & Koerting Co.

**Burners, Powdered Fuel**

- \* Combustion Engineering Corp'n
- \* Grindle Fuel Equipment Co.
- \* Quigley Furnace Specialties Co.

**Bushings, Bronze**

- \* Hill Clutch Mach. & Fdry. Co.
- \* Wood's, T. B. Sons Co.

**Cabinets and Tables, Blue Print**

- \* Dietzgen, Eugene Co.
- \* Economy Drawing Table & Mfg. Co.
- \* Keuffel & Esser Co.
- \* ParVell Laboratories
- \* U. S. Blue Co.
- \* Weber, F. Co. (Inc.)

**Cableways, Excavating**

- \* Lidgerwood Mfg. Co.

**Cableways, Hoisting and Conveying**

- \* Lidgerwood Mfg. Co.

**Calorimeters**

- \* American Schaeffer & Budenberg Corp'n
- \* Sarco Co. (Inc.)

**Calorizing**

- \* Calorizing Co.

**Cars, Charging**

- \* Easton Car & Construction Co.
- \* Whiting Corp'n

**Cars, Industrial Railway**

- \* Easton Car & Construction Co.
- \* Link-Belt Co.
- \* Whiting Corp'n

**Cars, Trolley (Industrial Railway)**

- \* Link-Belt Co.

**Casehardening**

- \* American Metal Treatment Co.
- \* Nuttall, R. D. Co.

**Casings, Steel (Boiler)**

- \* Casey-Hedges Co.
- \* Vogt, Henry Machine Co.
- \* Walsh & Weidner Boiler Co.

**Castings, Acid Resistant**

- \* U. S. Cast Iron Pipe & Fdry. Co.

**Castings, Aluminum**

- \* Buffalo Bronze Die Casting Corp'n

**Castings, Brass**

- \* Croll-Reynolds Engineering Co.
- \* Edward Valve & Mfg. Co.

**Castings, Bronze**

- \* Buffalo Bronze Die Casting Corp'n

**Castings, Die-Molded**

- \* Doehler Die-Casting Co.
- \* Veeder Mfg. Co.

**Castings, Heavy**

- \* Farrel Foundry & Machine Co.
- \* Hill Clutch Mach. & Fdry. Co.
- \* U. S. Cast Iron Pipe & Fdry. Co.

**Castings, Iron**

- \* Bethlehem Shipbldg. Corp'n (Ltd.)
- \* Brown, A. & F. Co.
- \* Builders Iron Foundry
- \* Burhorn, Edwin Co.
- \* Casey-Hedges Co.
- \* Central Foundry Co.
- \* Chain Belt Co.
- \* Cole, B. D. Mfg. Co.
- \* Croll-Reynolds Engineering Co.
- \* Falls Clutch & Machinery Co.
- \* Farrel Foundry & Machine Co.

**\* Franklin Machine Co.**

- \* Garlock Packing Co.
- \* Harrisburg Fdry. & Mach. Wks.
- \* Hill Clutch Machine & Fdry. Co.
- \* Jones, W. A. Fdry. & Mach. Co.
- \* Lidgerwood Mfg. Co.
- \* Link-Belt Co.
- \* Nordberg Mfg. Co.
- \* Pittsburgh Valve, Fdry. & Const. Co.
- \* Royersford Fdry. & Mach. Co.
- \* Treadwell Engineering Co.
- \* U. S. Cast Iron Pipe & Fdry. Co.
- \* Vogt, Henry Machine Co.

**Castings, Monel Metal**

- \* Driver-Harris Co. (In Canada)
- \* Edward Valve & Mfg. Co.

**Castings, Nichrome**

- \* Driver-Harris Co.

**Castings, Nickel Chromium**

- \* Driver-Harris Co.

**Castings, Semi-Steel**

- \* Builders Iron Foundry
- \* Chain Belt Co.
- \* Croll-Reynolds Engrg. Co. (Inc.)
- \* Farrell Foundry & Machine Co.
- \* Hill Clutch Machine & Fdry. Co.
- \* Link-Belt Co.
- \* Nordberg Mfg. Co.
- \* Vogt, Henry Machine Co.

**Castings, Steel**

- \* Falk Corporation
- \* Link-Belt Co.
- \* Mackintosh-Hemphill Co.
- \* Reading Steel Casting Co. (Inc.)
- \* (Reading Valve & Fittings Div.)
- \* Treadwell Engineering Co.

**Castings, White Metal**

- \* Doehler Die-Casting Co.

**Cement, Asbestos**

- \* Carey, Philip Co.

**Cement, Iron and Steel**

- \* Smooth-On Mfg. Co.

**Cement, Pipe Joint**

- \* Smooth-On Mfg. Co.

**Cement, Refractory**

- \* Celite Products Co.
- \* Johns-Manville (Inc.)
- \* King Refractories Co. (Inc.)
- \* Quigley Furnace Specialties Co.

**Cement, Water-Resistant**

- \* Smooth-On Mfg. Co.

**Cement Machinery**

- \* Allis-Chalmers Mfg. Co.
- \* Hill Clutch Mach. & Fdry. Co.
- \* Link-Belt Co.
- \* Smith, F. L. & Co.
- \* Worthington Pump & Machinery Corp'n

**Centrifugals, Chemical**

- \* Tolhurst Machine Works

**Centrifugals, Metal Drying**

- \* Tolhurst Machine Works

**Centrifugals, Sugar**

- \* Tolhurst Machine Works
- \* Worthington Pump & Mchry. Corp'n

**Chain Belts and Links**

- \* Chain Belt Co.
- \* Diamond Chain & Mfg. Co.
- \* Gifford-Wood Co.
- \* Jones, W. A. Fdry. & Mach. Co.
- \* Link-Belt Co.
- \* Union Chain & Mfg. Co.
- \* Whitney Mfg. Co.

**Chains, Block**

- \* Palmer-Bee Co.

**Chains, Power Transmission**

- \* Baldwin Chain & Mfg. Co.
- \* Chain Belt Co.
- \* Diamond Chain & Mfg. Co.
- \* Link-Belt Co.
- \* Morse Chain Co.
- \* Union Chain & Mfg. Co.
- \* Whitney Mfg. Co.

**Charging Machines**

- \* Whiting Corp'n

**Chimneys, Brick (Radial)**

- \* Morrison Boiler Co.

**Chucking Machines**

- \* Jones & Lamson Machine Co.
- \* Warner & Swasey Co.

**Chucks, Drill**

- \* S K F Industries (Inc.)
- \* Whitney Mfg. Co.

**Chucks, Tapping**

- \* Whitney Mfg. Co.

**Chutes**

- \* Chain Belt Co.
- \* Gifford-Wood Co.
- \* Hendrick Mfg. Co.
- \* Link-Belt Co.

**Circuit Breakers**

- \* General Electric Co.
- \* Westinghouse Elec. & Mfg. Co.

**Circulators, Feed Water**

- \* Schutte & Koerting Co.

**Circulators, Steam Heating**

- \* Schutte & Koerting Co.

**Cloth, Rubber**

- \* Garlock Packing Co.
- \* Goodrich, B. F. Rubber Co.

**Cloth, Tracing**

- \* Dietzgen, Eugene Co.
- \* Electro Sun Co. (Inc.)
- \* Keuffel & Esser Co.
- \* New York Blue Print Paper Co.
- \* ParVell Laboratories
- \* U. S. Blue Co.
- \* Weber, F. Co. (Inc.)

**Clutches, Friction**

- \* Allis-Chalmers Mfg. Co.
- \* Brown, A. & F. Co.
- \* Falls Clutch & Machinery Co.
- \* Farrell Foundry & Machine Co.
- \* Gifford-Wood Co.
- \* Hill Clutch Mach. & Fdry. Co.
- \* Johnson, Carlyle Machine Co.
- \* Jones, W. A. Fdry. & Mach. Co.
- \* Link-Belt Co.
- \* Medart Co.
- \* Philadelphia Gear Works
- \* Western Engineering & Mfg. Co.
- \* Wood's, T. B. Sons Co.

**Coal**

- \* Pennsylvania Coal & Coke Co.

**Coal and Ash Handling Machinery**

- \* Brown Hoisting Machinery Co.
- \* Chain Belt Co.
- \* Combustion Engineering Corp'n
- \* Gifford-Wood Co.
- \* Link-Belt Co.
- \* Palmer-Bee Co.

**Coal Bins**

- \* Brown Hoisting Machinery Co.
- \* Chain Belt Co.
- \* Link-Belt Co.

**Coal Breakers and Cleaners**

- \* Pennsylvania Crusher Co.

**Coal Mine Equipment and Supplies**

- \* General Electric Co.
- \* Ingersoll-Rand Co.

**Coal Preparing Equipment**

- \* Grindle Fuel Equipment Co.

**Coal Stations, Locomotive**

- \* Chain Belt Co.
- \* Gifford-Wood Co.
- \* Link-Belt Co.

**Cocks, Air and Gage**

- \* American Schaeffer & Budenberg Corp'n
- \* Ashton Valve Co.
- \* Crane Co.
- \* Jenkins Bros.
- \* Lunkenheimer Co.
- \* Reading Steel Casting Co. (Inc.)
- \* (Pratt & Cady Division)
- \* Vogt, Henry Machine Co.

**Cocks, Blow-off**

- \* Crane Co.
- \* Lunkenheimer Co.
- \* Pittsburgh Valve, Fdry. & Const. Co.
- \* Reading Steel Casting Co. (Inc.)
- \* (Pratt & Cady Division)

**Cocks, Three-Way and Four-Way**

- \* American Schaeffer & Budenberg Corp'n
- \* Crane Co.
- \* Crosby Steam Gage & Valve Co.
- \* Lunkenheimer Co.
- \* Pittsburgh Valve, Fdry. & Const. Co.
- \* Reading Steel Casting Co. (Inc.)
- \* (Pratt & Cady Division)

**Coils, Pipe**

- \* Superheater Co.
- \* Vilter Mfg. Co.
- \* Vogt, Henry Machine Co.

**Coke**

- \* Pennsylvania Coal & Coke Co.

**Cold Storage Plants**

- \* De La Vergne Machine Co.

**Collars, Shafting**

- \* Chain Belt Co.
- \* Hill Clutch Machine & Fdry. Co.
- \* Link-Belt Co.
- \* Medart Co.
- \* Royersford Fdry. & Mach. Co.
- \* Wood's, T. B. Sons Co.

**Coloring (Metal)**

- \* American Metal Treatment Co.

**Combustion (CO<sub>2</sub>) Recorders**

- \* Sarco Co. (Inc.)
- \* Tagliabue, C. J. Mfg. Co.
- \* Uehling Instrument Co.

**Compressors, Air**

- \* Allis-Chalmers Mfg. Co.
- \* General Electric Co.
- \* Goulds Mfg. Co.
- \* Ingersoll-Rand Co.
- \* Mackintosh-Hemphill Co.
- \* Nordberg Mfg. Co.
- \* Titusville Iron Works Co.
- \* Wayne Tank & Pump Co.
- \* Worthington Pump & Machinery Corp'n

**Compressors, Air, Centrifugal**

- \* De Laval Steam Turbine Co.

- \* General Electric Co.

**Compressors, Air, Compound**

- \* Ingersoll-Rand Co.
- \* Nordberg Mfg. Co.
- \* Worthington Pump & Machinery Corp'n

**Compressors, Ammonia**

- \* Erick Co. (Inc.)
- \* Ingersoll-Rand Co.
- \* Vilter Mfg. Co.
- \* Vogt, Henry Machine Co.
- \* Worthington Pump & Machinery Corp'n

**Compressors, Gas**

- \* De Laval Steam Turbine Co.
- \* General Electric Co.
- \* Ingersoll-Rand Co.
- \* Nordberg Mfg. Co.
- \* Worthington Pump & Machinery Corp'n

**Condensers, Ammonia**

- \* De La Vergne Machine Co.
- \* Erick Co. (Inc.)
- \* Ingersoll-Rand Co.
- \* Vilter Mfg. Co.
- \* Vogt, Henry Machine Co.

**Condensers, Barometric**

- \* Allis-Chalmers Mfg. Co.
- \* Buffalo Steam Pump Co.
- \* Ingersoll-Rand Co.
- \* U. S. Cast Iron Pipe & Fdry. Co.
- \* Wheeler, C. H. Mfg. Co.
- \* Wheeler Condenser & Engrg. Co.
- \* Worthington Pump & Machinery Corp'n

**Condensers, Jet**

- \* Allis-Chalmers Mfg. Co.
- \* Buffalo Steam Pump Co.
- \* Elliott Co.
- \* Ingersoll-Rand Co.
- \* Nordberg Mfg. Co.
- \* Westinghouse Electric & Mfg. Co.
- \* Wheeler, C. H. Mfg. Co.
- \* Wheeler Condenser & Engrg. Co.
- \* Worthington Pump & Machinery Corp'n

**Condensers, Surface**

- \* Allis-Chalmers Mfg. Co.
- \* Bethlehem Shipbldg. Corp'n (Ltd.)
- \* Elliott Co.
- \* Ingersoll-Rand Co.
- \* Nordberg Mfg. Co.
- \* Westinghouse Electric & Mfg. Co.
- \* Wheeler, C. H. Mfg. Co.
- \* Wheeler Condenser & Engrg. Co.
- \* Worthington Pump & Machinery Corp'n

**Conduits**

- \* Johns-Manville (Inc.)

**Controllers, Automatic, for Temperature or for Pressure**

- (See Regulators)

**Controllers, Electric**

- \* General Electric Co.
- \* Westinghouse Electric & Mfg. Co.

**Controllers, Filter Rate**

- \* Builders Iron Foundry

- \* Simplex Valve & Meter Co.

**Controllers, Liquid Level**

- \* General Electric Co.
- \* Simplex Valve & Meter Co.
- \* Tagliabue, C. J. Mfg. Co.

**Converters, Steel**

- \* Whiting Corporation

**Converters, Synchronous**

- \* Allis-Chalmers Mfg. Co.
- \* General Electric Co.
- \* Ridgway Dynamo & Engine Co.
- \* Westinghouse Electric & Mfg. Co.

**Conveying Machinery**

- \* Brown Hoisting Machinery Co.
- \* Chain Belt Co.
- \* Combustion Engineering Corp'n
- \* Gifford-Wood Co.
- \* Hill Clutch Machine & Fdry. Co.
- \* Jones, W. A. Fdry. & Mach. Co.
- \* Link-Belt Co.
- \* Palmer-Bee Co.

\* Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

Automotive Industries, vol. 50, no. 23, June 5, 1924, pp. 1213-1215, 6 figs. All but five of 22 entrants were running at finish of 1924 Indianapolis; average total time at pits is only 6.5 min. per car; Duesenberg super-charger proves worth.

**Light.** The German Light-Automobile Industry (Die deutsche Kleinauto-Industrie). Allgemeine Automobil-Zeitung, vol. 25, nos. 16 and 17, Apr. 19 and 26, 1924, pp. 17-8 and 24-28, 45 figs. Details of different German makes in alphabetical order; tabular data on German light automobiles up to 6 hp.

**Racing.** Mercedes with Supercharger Engine Wins Sicilian Classic, W. F. Bradley. Automotive Industries, vol. 50, no. 21, May 22, 1924, pp. 1116-1118, 8 figs. Results of 335-mi. race; air filters and dry sump lubricating systems employed on some cars entered; those who use servo mechanisms find them advantageous; details in brief of Diat, Peugeot, Mercedes, and Hispano-Suiza cars.

**Riley.** The Eleven-Forty Riley. Auto-Motor J., vol. 29, no. 22, May 29, 1924, pp. 455-457, 9 figs. Light car of English manufacture; mechanical accuracy and efficiency have been brought to a high pitch; great comfort and roominess; engine is of monobloc construction with detachable head.

**Rover.** The 14 H. P. Rover. Auto-Motor J., vol. 29, no. 20, May 15, 1924, pp. 413-416, 11 figs. Monobloc engine with detachable head and side-camshaft-operated side-by-side valves; cylinders of 75 mm. bore and stroke 130; 40 b.h.p. obtained.

The Rover "Nine." Auto-Motor J., vol. 29, no. 23, June 5, 1924, pp. 477-479, 10 figs. New model, with 4-cylindered over-head-valve water-cooled engine in 1100-cc. class; develops 20 hp. at 3000 r.p.m.

**Steering-G or Analysis.** Steering-Gear Analyses, F. F. Chandler. Soc. Automotive Engrs.—Jl., vol. 14, no. 6, June 1924, pp. 585-590 and 648, 8 figs. Describes set of automatic recording instruments being developed by author assisted by H. A. Huebotter, that will record not only physical effort needed to steer automobile, but simultaneously, forces and shocks imposed upon entire steering system, so that such records will constitute basis for steering-system design; study of helix characteristics; possibilities of producing variable-ratio helix that gives great mechanical advantage in extreme positions.

**Streamline.** The Future High-Speed Automobile (Der künftige Schnellkraftwagen), A. Persu. Allgemeine Automobil-Zeitung, vol. 25, no. 18, May 3, 1924, pp. 25-26, 2 figs. Author states future high-speed car will be streamline type, in which all four wheels are built within streamline form, the two rear driving wheels will be less distance apart than front wheels, passenger seats will be in front and power plant in rear.

**Sunbeam.** Three-Litre Super-Sports Sunbeam. Autocar, vol. 52, no. 1489, May 2, 1924, pp. 782-784, 7 figs. Standardization of a new edition of 6-cylinder 16-50-hp. car for high speed touring; improvements to 20-60-hp. model.

**Suspension.** A Promising Spring Suspension System. Motor Transport (Lond.), vol. 38, no. 1006, June 9, 1924, pp. 703-704, 2 figs. Details of Farnsworth design. Improved riding qualities obtained by eliminating unsprung weight and providing independent springing for each wheel.

**Two-Wheeled.** A Revolutionary Proposal, P. Schilovsky. Autocar, vol. 52, no. 1490, May 9, 1924, pp. 833-835, 3 figs. Advantages and possibilities of gyroscopic two-wheeled car, and its main principles of design and operation. Details of an experimental model.

## AVIATION

**Aerial Transportation.** Air Transport and Its Uses, G. H. Thomas. Inst. Transport—Jl., vol. 5, no. 6, Apr. 1924, pp. 245-256 (and discussion) 256-261, 3 figs. Shows that this form of transport is of vital interest to British trade and commerce.

# B

## BEAMS

**Elastic Line, Determination of.** Graphic Determination of the Elastic Line of an Elastically Supported, Statically Indeterminate Beam (Zeichnerische Ermittlung der elastischen Linie eines federnd gestützten, statisch unbestimmten Balkens), C. B. Biezeno. Zeit. für angewandte Mathematik u. Mechanik, vol. 4, no. 2, Apr. 1924, pp. 93-102, 4 figs. Simple iteration method for determining reaction of support of such beams.

## BEARINGS

**Automobile Axles.** The Friction Losses in Journal and Roller Bearings in Automobile Axles (Die Reibungsverluste der Gleitlager und der Rollenlager bei Automobilachsen), G. Becker. Motorwagen, vol. 27, no. 12, Apr. 30, 1924, pp. 201-206, 10 figs. Report of Experimental Station for Automotive Vehicles of Tech. High School, Berlin-Charlottenburg.

**Lubrication.** Some Types and Applications of Babbitt, Ball and Roller Hanger Bearings, F. E. Gooding. Indus. Engr., vol. 82, no. 5, May 1924, pp. 229-231 and 257, 9 figs. Methods of lubricating bearing surfaces and reducing friction losses.

**Oil Engines.** White Metal Bearings for Oil Engines, F. J. Taylor. Gas & Oil Power, vol. 19, no. 225, June 5, 1924, pp. 155-156, 2 figs. Causes and prevention of engine-shaft failure.

**Use and Maintenance.** Possible Improvements in Bearing Service, G. A. Van Brunt. Indus. Engr., vol. 82, no. 6, June 1924, pp. 264-270 and 304, 11 figs. Manufacturers of sleeve, ball and roller bearings give their viewpoint on things to be considered in connection with use and maintenance of bearings.

## BEARINGS, BALL

**Automobiles and Motorcycles.** Precision Ball Bearings (Erzeugnisse der Schweinfurter Präzisions-Kugellager-Werke Fichtel & Sachs A.-G.). Automobil-Rundschau, vol. 23, no. 5, May 1924, pp. 56-59, 11 figs. Types of precision ball bearings made by firm of Fichtel & Sachs Corp. for automobile and motorcycle construction.

**Machine Tools, Application to.** Application of Ball Bearings to Machine Tools, Machy. (N. Y.), vol. 30, no. 10, June 1924, pp. 776-781, 9 figs.; also Machy. (Lond.), vol. 24, no. 609, May 29, 1924, pp. 257-262, 9 figs. Method of applying ball bearings to lathes, grinding machines, drilling-machine spindles, and transmission shafts.

**Tests.** Tests on Bearings (Lagerversuche), G. Meyer-Jagenberg. Werkstatttechnik, vol. 18, nos. 7 and 8, Apr. 1 and 15, 1924, pp. 214-217, and 229-236, 23 figs. Apr. 1: Investigation of two kinds of ball bearings; influence of load, speed and lubrication on friction conditions; importance of felt packing of ball-bearing housings. Apr. 15: Investigations of same bearings as transmission bearings; comparison of test-bed and transmission results; comparison of journal and ball-bearing transmission.

## BEARINGS, ROLLER

**Tapered.** Production and Application of Tapered Roller Bearings, Machy. (Lond.), vol. 24, no. 604, 605 and 606, Apr. 24, May 1 and 8, 1924, pp. 108-111, 129-131 and 161-165, 21 figs. Timken bearing and its production by Brit. Timken Ltd., Birmingham, Eng.

## BELTING

**Installation and Care.** Installation and Care of Belting, C. O. Streeter. Paper, vol. 34, no. 3, May 8, 1924, pp. 90-91, 11 figs. Points in the purchasing of leather belting; approved types of belt drives; aligning and care of belts to avoid injury.

## BLAST-FURNACE GAS

**Cleaning.** The Cleaning of Blast Furnace Gas, G. M. Hohl. Iron Age, vol. 113, no. 22, May 29, 1924, pp. 1563-1564. Savings from clean gas; preliminary cleaning; heat saved by dry cleaned gas; flue dust as washer sludge. (Abstract.) Paper read before Am. Iron & Steel Inst.

**Composition.** Composition of Blast-Furnace Gas (Sur la composition des gaz de hauts fourneaux), J. Seigle. Académie des Sciences—Comptes Rendus, vol. 178, no. 17, Apr. 22, 1924, pp. 1426-1429, 2 figs. With aid of graphic presentation author discusses possible proportions of carbon dioxide and monoxide in gas at mouth of blast furnace, Gruner's ideal point, extreme values of volume of oxygen reduced per kg. of carbon, possible compositions of gas produced when dry air containing 20 per cent of oxygen, or air enriched in oxygen, or pure oxygen is used for blast, etc.

## BLAST FURNACES

**Design, Progress in.** Progress in Blast Furnaces (Considérations sur les progrès réalisés dans les hauts-fourneaux), R. Jordan. Revue de Métallurgie, vol. 21, nos. 3 and 4, Mar. and Apr. 1924, pp. 127-142 and 223-232, 20 figs. Critical examination of problems and solutions relating to progress in blast-furnace design during last 20 years. Mar.; Charging apparatus. Apr.; Determination of cross section; details of construction.

**Fuel Regulation.** Uniform Coking Coal is Needed, W. Mathesius. Iron Trade Rev., vol. 74, no. 22, May 29, 1924, pp. 1422-1424, 3 figs. Regulation of blast-furnace fuel in accordance with principles of iron-ore trade; author urges analysis as basis of accounting for furnace fuel. (Abstract.) Paper presented before Am. Iron & Steel Inst.

**Metallic Obstructions, Formation of.** Formation of Metallic Obstructions in Blast Furnaces (Sur la formation des lours dans les fours à cuve), B. Bogitch. Académie des Sciences—Comptes Rendus, vol. 178, no. 14, Mar. 31, 1924, pp. 1177-1179. Formation of obstructions in blast furnaces in which matte is produced by melting oxides or silicates with calcium sulphate is invariably preceded by separation of melt into two layers, upper of high sulphur content and highly fusible, lower of small sulphur content and of higher melting point; latter sinks and, on cooling, forms obstruction; construction of furnace to avoid obstructions.

## BOILER EXPLOSIONS

**Locomotive Boilers.** Low Water Causes Fatal Crown Sheet Explosion. Boiler Maker, vol. 24, no. 5, May 1924, pp. 136-138, 3 figs. Report of Bur. of Locomotive Inspection investigation of A. T. & S. F. Locomotive 1455 disaster which occurred on Feb. 13, 1924.

## BOILER FEEDWATER

**Treatment.** Boiler Feedwater (Kesselspeisewasser), Wimmelmann. Bergbau, vol. 37, nos. 8, 9 and 10, Apr. 17, May 1 and 15, 1924, pp. 141-144, 173-176 and 205-208, 8 figs. Describes in detail the various methods to prevent or remove boiler scale, also a number of devices used for this purpose.

## BOILER FURNACES

**Air Preheaters.** The Preheating of Combustion Air (Le Réchauffage de l'air de Combustion), Chaleur & Industrie, vol. 5, no. 46, Feb. 1924, pp. 66-70. Critical remarks, by E. Damour and M. Lafargue on article by M. Roszak, published in Nov. 1923 issue of same journal, and reply of Ch. Roszak.

The Preheating of Combustion Air (Le préchauffage de l'air de la combustion), Roszak. Société des Ingénieurs Civils—Mémoires et Compte Rendu des Travaux, vol. 76, no. 10-12, Oct.-Dec. 1923, pp. 1145-1170, 8 figs. Study of question as to whether preheating of air of combustion offers same advantage when applied to evaporators as to metallurgical furnaces; derivation of calorific equation and analytical relation

between preheating of air and increase of combustion temperature; advantages and disadvantages of process.

**Ground Firebrick for Repair.** Ground Firebrick for Furnace Repair, Jos. Harrington. Power, vol. 59, no. 25, June 17, 1924, pp. 976-978, 10 figs. Results from experience with special bond made principally from old firebrick for laying up new walls and of mortar for facing or patching; thick joints of this bond show saving of 35 per cent over thin cement joint construction.

**Lignite.** Improvements in the Construction of Lignite Furnaces (Neue Wege im Bau von Braunkohlen-Großfeuerungen), Pradel. Feuerungstechnik, vol. 12, no. 15, May 1, 1924, pp. 121-126, 7 figs. Extension grates and furnaces; drying on grate; drying in shaft in self-feed furnace with trough grate; step-grate half-gas furnaces; extension drying shafts; arrangements for low-temperature-tar production.

**Oil-Fired.** Efficiency in Oil Burning Installations, F. A. Rothwell. Power Plant Eng., vol. 28, nos. 10 and 12, May 15 and June 15, 1924, pp. 526-528 and 639-641, 3 figs. May 15: Furnace design and location of burners. June 15: Selection of burners; method of supplying fuel to burners; necessary auxiliary equipment; operation of fuel-oil-burning furnace.

**Operation.** The Economical Operation of Boiler Furnaces, R. June. Power House, vol. 17, no. 9, May 5, 1924, pp. 21-22, 5 figs. Stresses fact that development of flat suspended arch has been an important factor in reducing maintenance costs.

## BOILER PLANTS

**Iron and Steel Industry.** The Generation and Utilization of Steam in the Iron and Steel Industry, J. A. Hunter. Mech. Eng., vol. 46, no. 6, June 1924, pp. 325-328 and 342, 3 figs. Equipment employed in iron and steel industry for generating and using steam; quantities and cost of fuel, and cost of converting heat in fuel to steam; present-day tendencies toward design and size of equipment, and refinements in control; describes two of latest installations; probable savings which could be made if all of steam required in industry were made and consumed in most efficient apparatus now in use.

## BOILER ROOMS

**Efficiency in.** Boiler-Room Practice, J. Bruce. Elec. Rev., vol. 94, nos. 2424 and 2425, May 9 and 16, 1924, pp. 736-738 and 809-811, 3 figs. Furnace efficiency, excess air, and critical point of combustion.

## BOILERMAKING

**Locomotive.** Building the Longest Locomotive Boilers in the World. Boiler Maker, vol. 24, no. 5, May 1924, pp. 127-133, 13 figs. Details of construction of boilers recently built by Am. Locomotive Co. for an order of 25 simple 2-8-2 Mallet locomotives for Chesapeake & Ohio R. R.; overall length of boiler 56 ft. 11 1/4 in.; 205 lb. steam pressure.

## BOILERS

**Benson High-Pressure.** See STEAM GENERATORS, Benson High-Pressure.

**Circulation.** The Circulation Boiler (Der umlaufende Dampfkessel), Wintermeyer. Feuerungstechnik, vol. 12, nos. 15 and 16, May 1 and 15, 1924, pp. 127-128 and 137-138, 6 figs. High-pressure boilers; development of design of first Atmos boiler; present aims in design of circulation boilers.

**Combustion Control.** Combustion Control for Boilers, R. J. S. Pigott. Combustion, vol. 10, no. 6, June 1924, pp. 432-436. General discussion of subject; what combustion control should do, what it usually does, what it can do. Paper read before A.S.M.E.

**Combustion Problems Calculation.** The Relation of Ash Pit Loss to Flue Gas Analysis, R. Brown. Combustion, vol. 10, no. 6, June 1924, pp. 436-438, 2 figs. Two charts which furnish short-cuts in boiler calculations.

**Fireproof Structures, Influence of.** Influence of Fireproof Structures in Boilers (Die Wirkung von Einbauten in Flammrohrkesseln), Unger. Archiv für Warmwirtschaft, vol. 5, no. 4, Apr. 1924, pp. 61-69, 17 figs. Propeller-shaped structures of fireproof material are inserted in fire tubes and give flue gases a spiral-shaped movement that improves combustion as well as heat transmission. Economy of old and new plants is greatly improved by simple and inexpensive means.

**Locomotive.** See LOCOMOTIVE BOILERS.

**Priming of.** Priming of Boilers, A. A. Pollitt-Gas Engr., vol. 40, no. 576, Apr. 1924, pp. 74-76, 1 fig. Discusses problem of priming and necessity for maintaining low concentrations in feedwater.

**Scale Removal.** Boiler Tubes and Boiler Scale. Eng. & Boiler House Rev., vol. 37, no. 10, May 1924, pp. 370 and 372-373, 3 figs. Some of the most modern methods of scale removal.

**Tests.** Evaporation Tests (Les essais de vaporisation), V. Kammerer. Société Industrielle de Mulhouse—Bul., vol. 90, no. 1, Jan. 1924, pp. 27-56. Classification of tests into scientific, performance, industrial and comparative tests; duration and conducting of tests; determination of efficiency and heating value; distribution of losses; heat balance; presentation of results. Author points out difficulties in formulating concise rules for conducting evaporation tests and presenting results.

**Water-Tube.** See BOILERS, WATER-TUBE.

## BOILERS, WATER-TUBE

**Water Circulation.** Studies of Water Circulation in Vertical-Tube Boilers (Studien über Wasserrumlauf in Steilrohrkesseln), Schirmer. Wärme, vol. 47, no. 8, Feb. 22, 1924, pp. 73-76, 12 figs. Observations made on two model boilers from heating until first production of steam, with uniform and varying steam generation; conclusions from results obtained.

**BOMBING**

**Aerial.** Aerial Bombing, A. H. Hobley and H. B. Inglis. *Mech. Eng.*, vol. 46, no. 6, June 1924, pp. 309-316, 8 figs. Early practice and conditions; bombing moving targets; theory of bomb trajectory; principles of various sights; ground-speed determination; sources of error and methods of overcoming them.

**BUSES**

**Trolley.** The Trolley-Bus Line between Modane and Lanslebourg (France) (La ligne d'électrobus de Modane à Lanslebourg), A. Chardin. *Industrie des Tramways*, vol. 18, no. 206, Feb. 1924, pp. 41-46, 4 figs. Brief description of installations, including two substations, trolley lines, passenger buses and trucks; results of tests and economic advantages of system.

**BUSHINGS**

**Cast-Iron.** Close Work on a Cast Iron Bushing, D. T. Hamilton. *Am. Mach.*, vol. 60, no. 25, June 19, 1924, pp. 915-917, 5 figs. Accurate guide bushing for gear-shaper spindle; tolerance of 0.0002 in. in bore; unsuccessful methods; grinding operations.

**C****CALCULATING MACHINES**

**Cost Accounting.** The Mechanical Compilation of Costs. *Eng. Production*, vol. 7, no. 140, May 1924, pp. 139-141, 5 figs. Describes machines in connection with Powers system, and their performance; system where one clerical entry is required to produce a master from which all subsequent work may be done by mechanical means.

**CAR COUPLERS**

**Automatic.** Von Scharfenberg Automatic Railroad Coupling (Die selbsttätige Eisenbahnkupplung von Scharfenberg), P. Paap. *Praktische Maschinen-Konstruktion*, vol. 57, no. 10, Mar. 25, 1924, pp. 128-131, 7 figs. Description of this coupling, and its great advantages over earlier designs; is always in proper position for automatic connection; air brake hose is also automatically connected; ring springs act as draft gears.

**CAR WHEELS**

**Manufacture.** The Manufacture of Railway Tires. *Engineer*, vol. 137, no. 3570, May 30, 1924, p. 602-603. Account of work done in Sheffield, England, 50 years ago.

**Metal Roofs, Reclamation of.** Central of Georgia Reclaims Metal Car Roofs, W. H. Harrison. *Ry. Mech. Engr.*, vol. 98, no. 6, June 1924, p. 329-332, 11 figs. 60 per cent of all sheets removed are restored to service at cost of \$10 per car.

**Painting, Mechanical.** The Possibilities of Mechanical Painting, J. W. Gibbons. *Ry. Mech. Engr.*, vol. 98, no. 6, June 1924, pp. 360-362, 5 figs. Handicaps which have been overcome; protection of equipment increased against corrosion or decay.

**Shops.** Improvements in the Johnstown Car Shops, Geo. A. Richardson. *Ry. Rev.*, vol. 74, no. 23, June 7, 1924, pp. 1040-1045, 10 figs. Improvements and additions made by Bethlehem Steel Co. to what were formerly known as Cambria car shops.

**CARS, FREIGHT**

**Foundation Brake Gear.** Freight Car Foundation Brake Design, W. G. Stenason. *Ry. Rev.*, vol. 74, no. 21, May 24, 1924, pp. 923-924, 5 figs. Describes form of foundation brake gear, with slack compensating attachment, that has given very satisfactory service. (Abstract.) Paper presented before Air Brake Assn.

**Rebuilding Contest.** Box Cars Rebuilt in Record Time, D. & H. Co. *Ry. Rev.*, vol. 74, no. 21, May 24, 1924, pp. 913-921, 12 figs. 3 At freight-car rebuilding contest conducted at Oneonta, N. Y., entire superstructure of 60,000-lb. capacity, steel underframe, double-sheathed box car was rebuilt in record time of 52 man-hours.

**CARS, PASSENGER**

**Oriental Limited.** New Equipment for Oriental Limited Trains. *Ry. Age*, vol. 76, no. 26, May 31, 1924, pp. 1303-1305, 8 figs. Great Northern cars of improved design to be placed in service between Chicago, Seattle and Portland; equipment of each train will consist of dynamo baggage car, smoking car, first-class coach, Pullman tourist car, dining car, pullman sleepers and observation car.

**Steel.** The Passenger Car Up-to-Date, C. E. Barba. *New Eng. Railroad Club*, Apr. 8, 1924, pp. 70-81 and (discussion) 81-103. Discussion of construction of steel passenger cars. Ideals to be considered in up-to-date equipment. Tentative specification for painting.

**CASE-HARDENING**

**Prevention by Copper Plating.** Prevention of Case-Hardening by Copper Plating, J. C. McCullough and O. M. Reiff. *Indus. & Eng. Chem.*, vol. 16, no. 6, June 1924, pp. 611-613, 4 figs. Selective case-hardening by carbon-pack method may be secured by protecting desired parts with copper plating; method can always be relied upon when copper plating is perfect.

**CAST IRON**

**Chemical Composition, Influence of.** Influence of Chemical Composition on Cast Iron. *Metal Industry (Lond.)*, vol. 24, nos. 14, 15, 16, 17, 18 and 19, Apr. 4, 11, 18, 25, May 2 and 9, 1924, pp. 331-333, 353-356, 379-380, 403-405, 431-432 and 455-457, 3 figs. Influence of silicon, sulphur, phosphorus, and manganese; carbon forms and changes under the various conditions of chemical composition and temperature influences.

ous conditions of chemical composition and temperature influences.

**Cooling Effects in.** Some Cooling Effects in Cast Iron and Their Correction, R. T. Rolfe. *Metal Industry (Lond.)*, vol. 24, nos. 21, 22 and 23, May 23, 30 and June 6, 1924, pp. 501-502, 525-526 and 551-552, 2 figs. General causes giving rise to internal stresses in castings and methods of relieving them. Particulars of a series of tests carried out into annealing temperatures. Typical cases in which annealing is resorted to.

**Graphitic Softening.** The Graphitic Softening of Cast Iron, J. W. Shipley and I. R. McHaffie. *Indus. & Eng. Chem.*, vol. 16, no. 6, June 1924, pp. 573-575, 6 figs. Graphitic softening is produced by retention within residual structure of cementite-phosphide eutectic and graphite of some of products of corrosion; wrought iron, steel, and some cast irons corrode out of face and hole, owing to absence of supporting non-corrosive framework.

**Non-Magnetic.** Non-Magnetic Cast Iron, S. E. Dawson. *Foundry Trade J.*, vol. 29, no. 406, May 29, 1924, pp. 439-444, 10 figs. Effect and distribution of constituents; phosphide eutectic; position of eutectic experiments; disposition of silicide of iron.

**Pearlitic.** Pearlitic Cast Iron, K. Emmel. *Mech. Eng.*, vol. 46, no. 6, June 1924, pp. 352-353. Methods of production; photomicrographs and structure of piston rings cast in pearlitic metal. Translated and abstracted from *Stahl u. Eisen*, vol. 44, no. 13, Mar. 27, 1924.

**Pearlitic Cast Iron.** *Metal Industry (Lond.)*, vol. 24, no. 20, May 16, 1924, pp. 477-478. Comments on recent work, including process of Diefenthaler and Sipp, iron-carbon conditions, mechanism of change on slow-cooling, etc.

The Manufacture of Pearlitic Cast Iron for High-Temperature Engines, A. Marks. *Foundry Trade J.*, vol. 29, no. 404, May 15, 1924, pp. 406-408, 3 figs. Author's attempts to produce pearlitic cast iron in cupola with a view to obtaining strongest material possible for manufacture of castings for parts subjected to high temperature, such as internal-combustion-engine cylinder covers and pistons.

**CENTRAL STATIONS**

**Abandoned, Idle-Equipment Utilization.** Utilization of Abandoned Steam Power Plants, H. A. Woodworth. *Nat. Engr.*, vol. 28, no. 6, June 1924, pp. 262-264, 3 figs. Constructive suggestion for making use of idle equipment at present located in the many abandoned power plants throughout the country.

**Private Plant, vs. Central-Station Power Versus the Private Plant,** H. C. Thuerk. *Elec. World*, vol. 83, no. 22, May 31, 1924, pp. 1140-1141. Disadvantages of isolated plant which are sometimes overlooked in comparing relative merits of two sources of power.

**Service Improvement.** Improving Central Station Service by the Application of Current-limiting Reactors to Distribution Feeders, D. K. Blake. *Gen. Elec. Rev.*, vol. 27, no. 6, June 1924, pp. 361-368, 17 figs. Decided advantages that are obtainable by installation of current-limiting reactors in distribution feeders.

**Unit Costs.** Power Plant Unit Costs and Their Engineering Significance, L. Helander. *Elec. J.*, vol. 21, no. 6, June 1924, pp. 285-290, 4 figs. Presents unit costs intended to be a guide to engineer undertaking a preliminary survey of desirability of expanding capacity of an existing power station, of building a new station, or of entering into an agreement with an existing power plant for purchase of power, and particularly to assist engineers who are not continuously engaged in power-plant erection but find it necessary to make occasional surveys of power-generating costs.

**CHARTS**

**Construction and Functions.** The Construction of the Principal Types of Charts Employed in Industry (Note sur la construction des principaux types d'abaques employés dans l'industrie), P. Cayère. *Arts & Métiers*, vol. 77, no. 41, Feb. 1924, pp. 45-62, 24 figs. Discusses different types of charts and explains their various functions.

**Instructional Purposes.** The Diagram and Its Use for Instructional Purposes in Continuation Schools (Das Diagramm und seine Verwendung als Anschauungsmittel im Unterricht der Fortbildungsschule), L. Werner. *Werkstattstechnik*, vol. 18, nos. 7 and 8, Apr. 1 and 15, 1924, pp. 209-214 and 237-244, 27 figs. Most important kinds and forms of diagrams, with special regard to enlightening public with regard to industrial facts and conditions; importance of diagram as subjective and objective medium of instruction.

**Production Reports.** Charts for Report Purposes, H. N. Stronck. *Mgt. & Administration*, vol. 7, no. 6, June 1924, pp. 705-709, 6 figs. Treatment of large production charts; reproductions of charts; photostat reproduction of special material; lettering of charts; chart showing percentage fluctuations; arrangement of charts in report.

**CLUTCHES**

**Drums, Deformation of.** Investigations of Deformation in Clutch Drums (Formänderungs-Untersuchungen an Kupplungsstrommeln), G. Penef. *Maschinenbau*, vol. 3, no. 15, May 8, 1924, pp. 517-520, 10 figs. Deformation tests on four different types of gear clutch drums of benzol rail car; gives figures and diagrams which are of value in design and calculation of clutch drums.

**Ring.** Expanding and Contracting Ring Clutches, A. Clegg. *Machy. (N. Y.)*, vol. 30, no. 10, June 1924, pp. 793-796, 6 figs. Expanding ring clutch with unusual adjustment; design operated by toggle levers; Johnson expanding ring clutch; contracting type of ring clutch.

**COAL**

**Carbonization.** Practical Coal Carbonization, F.

W. Sperr, Jr. *Mech. Eng.*, vol. 46, no. 6, June 1924, pp. 329-333, 4 figs. Discusses high-temperature and low-temperature carbonization with special reference to American conditions.

**Cleaning and Sizing.** How to Clean and Size Coal so That a Favorable Market Can be Maintained. *Coal Age*, vol. 25, no. 21, May 22, 1924, pp. 761-764, 10 figs. By air cleaning, ash is reduced between 33 to 50 per cent; coal gets to market unfrozen; what coal should be sized in tippie and what in rescreen. Discussion at meeting on coal preparation at Am. Min. Congress. See also article by G. F. Osler entitled, How Should Coal be Screened and into How Many Sizes, pp. 762-764.

**COAL HANDLING**

**Piers.** Modern Practice of Handling Coal in Bulk at Coal Piers, J. W. Speer. *Elec. J.*, vol. 21, no. 6, June 1924, pp. 260-265, 11 figs. Turning-type dumper installation, direct-loading stationary lifting-type dumper, direct-loading stationary revolving-type dumper, mechanical coal trimmers, etc.

**COKE**

**Blast-Furnace.** Production of High-grade Blast-furnace Coke, H. M. Chance. *Am. Inst. Min. & Met. Engrs.—Trans.*, no. 1351-C, June 1924, 8 pp., 2 figs. Outline of differential separation which makes available vast stores of low-ash coal locked up in coal beds from which it has been impossible to ship anything better than fair grades of steam coal; can be made by any liquid or solution having specific gravity greater than that of coal which is to be floated and less than that of coal that is to be separated by sinking in liquid.

**Properties.** The Quality of Coke, Determination of its Properties and the Development of Good Grades (Koksbeschaffenheit, Bestimmung der Eigenschaften und Erzielung guter Sorten), E. Diepschlag. *Stahl u. Eisen*, vol. 44, no. 18, May 1, 1924, pp. 496-498. Combustibility and strength of coke; coking process; author recommends coking under pressure.

**CONDENSERS, STEAM**

**Barometric, Testing.** Testing Steam Turbine and Barometric Condenser, F. S. Youtsey. *Power*, vol. 59, no. 25, June 17, 1924, pp. 979-980, 2 figs. Method employed in testing condenser serving mixed-pressure steam turbo-generator.

**Pumps, Cooling-Water.** Economical Operation of Condenser Pumps, Chas. E. Colborn. *Power Plant Engr.*, vol. 28, no. 12, June 15, 1924, pp. 643-645, 4 figs. Study of conditions governing use of one or two circulating pumps with changes in cooling-water temperatures.

**CONDUITS**

**Penstock Manifolds.** Penstock Manifolds Designed to Simplify Stresses, H. L. Doolittle and C. W. Lerner. *Eng. News-Rec.*, vol. 92, no. 24, June 12, 1924, pp. 1006-1008, 7 figs. Describes unusual penstock manifolds of radically different types installed at two of new power plants, one at Big Creek, no. 3 plant of S. Cal. Edison Co., and other in Vermont at Davis Bridge plant of N. E. Power Co.; both manifolds designed to eliminate as many indeterminate stresses as possible.

**CONVEYORS**

**Forgings and Scrap Handling.** Conveyors to Handle Forgings and Scrap. *Iron Age*, vol. 113, no. 24, June 12, 1924, pp. 1711-1712, 3 figs. Application of conveyor equipment for handling flashings and small automobile forgings from cold trimming presses at forge plant of Chevrolet Motor Co., Detroit.

**CORROSION**

**Electrolytic.** Electrolytic Corrosion in a Water-Gas Holder, F. H. Rhodes and E. B. Johnson. *Indus. & Eng. Chem.*, vol. 16, no. 6, June 1924, p. 575. Describes special case of electrolytic corrosion and gives results of investigation.

**Study of.** A Paradox in Corrosion, U. R. Evans. *Chem. & Met. Eng.*, vol. 30, no. 24, June 16, 1924, pp. 949-953, 3 figs. Mechanism by which currents are produced explains why corrosion depending on oxygen is sometimes greatest where oxygen is excluded.

**COST ACCOUNTING**

**Capital Control.** Capital Requirements and Control, J. H. Bliss. *Mgt. & Administration*, vol. 7, no. 6, June 1924, pp. 653-658. Discusses protection of working capital.

**Depreciation Schedules.** New Forms of Depreciation Schedules, G. W. Greenwood. *Mgt. & Administration*, vol. 7, no. 6, June 1924, pp. 689-692, 3 figs. Outlines method called sinking-fund method, which is believed to be new and to have advantages in many cases; comparison of sinking-fund method with straight-line method.

**COTTON MILLS**

**Mechanical Engineering and Management.** The Relation of Mechanical Engineering to Management in the Textile Industry, E. H. McKitterick. *Mech. Eng.*, vol. 46, no. 6, June 1924, pp. 343-344 and 359. Reduction of cost of manufacture by means of improvements in power, lighting, and heating systems, and in handling of goods between processes.

**CRANES**

**Quay.** The Design of Quay Cranes, F. M. Du Plat Taylor. *Engineer*, vol. 137, no. 3570, May 30, 1924, p. 598, 2 figs. Suggests arrangement and design of cranes to meet requirements of modern large sea-going vessels.

**Self-Propelling.** A French Automobile Crane. *Engineer*, vol. 137, no. 3570, May 30, 1924, pp. 604-605, 2 figs. Type of self-propelled crane extensively used in France for railway siding and port work, as well as for town and city transport and cleaning services.

- \* American Schaeffer & Budenberg Corp'n
- \* Ashton Valve Co.
- \* Bristol Co.
- \* Crane Co.
- \* Jenkins Bros.
- \* Lunkenheimer Co.
- \* Reading Steel Casting Co. (Inc.) (Pratt & Cady Division)
- \* Simplex Valve & Meter Co.

**Gages, Water Level**

- \* American Schaeffer & Budenberg Corp'n
- \* Bristol Co.
- \* Lunkenheimer Co.
- \* Simplex Valve & Meter Co.

**Gas Plant Machinery**

- \* Cole, R. D. Mfg. Co.
- \* Steere Engineering Co.

**Gaskets**

- \* Garlock Packing Co.
- \* Jenkins Bros.
- \* Johns-Manville (Inc.)
- \* Sarco Co. (Inc.)

**Gaskets, Iron, Corrugated**

- \* Smooth-On Mfg. Co.

**Gaskets, Rubber**

- \* Garlock Packing Co.
- \* Goodrich, B. F. Rubber Co.
- \* United States Rubber Co.

**Gates, Blast**

- \* American Blower Co.
- \* Steere Engineering Co.

**Gates, Cut-off**

- \* Easton Car & Construction Co.
- \* Link-Belt Co.

**Gates, Sluice**

- \* Chapman Valve Mfg. Co.
- \* Pittsburgh Valve, Fdry. & Const. Co.

**Gear Blanks**

- \* Cann & Saul Steel Co.

**Gear Cutting Machines**

- \* Jones, W. A. Fdry. & Mach. Co.

**Gear Hobbing Machines**

- \* Jones, W. A. Fdry. & Mach. Co.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

## D

## DIES

**Forging.** Taking the Guesswork Out of Dies, C. C. Rhead. Forging—Stamping—Heat Treating, vol. 10, no. 3, May 1924, pp. 188-193, 3 figs. Records covering die performance essential to efficient production; discusses system for recording performance of dies used in production of pressed-metal parts.

**Progressive.** Progressive Dies for Piercing, Bending, and Blanking, W. Richards. Machy. (Lond.), vol. 24, no. 606, May 8, 1924, pp. 174-175, 5 figs. Comments on progressive die for production of bracket, described in same journal (vol. 23, p. 543), and shows that simpler tool and simpler method of producing piece, in one operation, are both available.

**Sewing-Machine Parts.** Dies for Producing a Complicated Sewing-machine Part, C. E. Stevens. Machy. (N. Y.), vol. 30, no. 10, June 1924, pp. 783-786, 6 figs. Piercing and blanking die; die for second and for final forming operation.

## DIESEL ENGINES

**Double-Acting.** Double-Acting Marine Diesel Engines. Engineering, vol. 117, no. 3048, May 30, 1924, pp. 707-708, 7 figs. on supp. plates. Details of 1000-hp. experimental 4-cycle North-Eastern-Werkspoor engine. See also Engineer, vol. 137, nos. 3570 and 3571, May 30 and June 6, 1924, pp. 604 and 626-627, 5 figs. partly on p. 630.

**Manufacture.** One of America's Prominent Diesel Plants. Motorship, vol. 9, no. 6, June 1924, pp. 434-436 and 441, 6 figs. Describes Cleveland, Ohio, plant of Winton Engine Works. Quantity production, handling and routing highly developed.

**Non-Reversible.** Reversible and Non-Reversible Marine Diesel Engines (Umsteuerbare und nicht umsteuerbare Schiffsdieselmotoren), M. W. Gerhards. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 22, May 31, 1924, pp. 579-580. Critical discussion of advantages of non reversible engines with reversible intermediate gears over directly reversible engines.

**Sun-Doxford.** Sun-Doxford Engines of the Henry Ford II. Mar. Eng., vol. 29, no. 6, June 1924, pp. 334-337, 5 figs. First application of large Diesel engines on a Great Lakes bulk freighter. Details of engines; opposed-piston type, having four cylinders 23 1/2 in. in diameter, each piston having stroke of 45 1/2 in.; approximate shaft horsepower 3000 at 85 r.p.m.

**Tosil.** The Tosil Diesel Engine, G. C. Ziliotto. Mar. Eng., vol. 29, no. 6, June 1924, pp. 357-360, 6 figs. Discusses features of Tosil engines principally combined inlet and exhaust valves, injection valve, and method of cooling cylinder.

**Warships.** Further Experimental Work on Diesel Engines, R. Beeman. Engineering, vol. 117, nos. 3043, 3044 and 3045, Apr. 24, May 2 and 9, 1924, pp. 559, 589-591 and 624-625, 22 figs. Discusses possibilities of application of Diesel engines for propelling machinery of surface war vessels. (Abstract.) Paper read before Instn. Nav. Architects. See also Engineer, vol. 137, nos. 3566, 3567, 3568 and 3569, May 2, 9, 16 and 23, 1924, pp. 487-488, 517-518, 547-548 and 578-579, 22 figs.

## DRILLING MACHINES

**Angular Settings for.** Angular Settings for Drilling and Boring. Mech. Wld., vol. 75, nos. 1943, 1945 and 1948, Mar. 28, Apr. 11 and May 2, 1924, pp. 190-192, 222 and 270-271, 16 figs. Describes various methods of angular setting.

**Radial.** A New Portable Universal Radial Drilling Machine. Eng. Production, vol. 7, no. 140, May 1924, pp. 144-145, 4 figs. Describes drilling and tapping machine of Wm. Asquith, Ltd., Halifax.

## DURALUMIN

**Properties and Uses.** Duralumin (Duralumin), R. Beck. Zeit. für Metallkunde, vol. 16, no. 4, Apr. 1924, pp. 122-127, 2 figs. Its properties and uses; refining process.

## DUST

**Removal of.** Dust Removal and Gas Purification by Means of Electricity (Entstaubung und Gasreinigung durch Elektrizität), E. Zopf. Montanistische Rundschau, vol. 16, no. 6, Mar. 16, 1924, pp. 135-138, 3 figs. Description of Cottrell-Möller electric process, according to which gases are conducted through a high-tension electric field, carrying pulsative direct current of about 50,000 volts. Metal dust, vapor and smoke-containing gases are completely purified by this process. Hundreds of successful installations in Germany.

## DYEING

**Turkey Red.** Comparison of Methods for Dyeing Turkey Red (Contribution à l'étude du rouge Alizarine teint), Chas. Sunder. Société Industrielle de Mulhouse—Bul., vol. 90, no. 1, Jan. 1924, pp. 72-79. Review of methods in which fabric is mordanted, before dyeing, with oil and alumina or with alumina and then oil, or is mordanted after dyeing (padding) with Alizarin.

## DYNAMOMETERS

**Direct-Reading Power Indicator.** A Direct-Reading Power Indicator (Indicateur de puissance à lecture directe), H. Guillaud. Société d'Encouragement pour l'Industrie Nationale—Bul., vol. 135, no. 10, Dec. 1923, pp. 1163-1170, 7 figs. Apparatus developed by author which, in contrast to simple dynamometer, registers actual power transmission at any moment; can be applied in all cases where power is transmitted by means of rotating shaft.

**Hub.** Dynamometer Hub for 200-M-Kg. Torsional Moment and 1200-Kg. Tension (Die Messnabe für 200 mkg Drehmoment und 1200 kg Zug, Bauart Stieber),

W. Stieber. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 7-8, Apr. 26, 1924, pp. 69-73, 18 figs. Describes development of dynamometer hub, of Stieber design, suitable for Liberty-12 engine; results of tests.

## E

## ECONOMIZERS

**Operation.** The Efficient Operation of the Economiser. Eng. & Boiler House Rev., vol. 37, no. 11, June 1924, pp. 425-427, 3 figs. Discusses methods whereby maximum efficiency may be obtained, both as regards reduction in coal bill and satisfactory operation of installation, especially from point of view of length of service.

## EDUCATION, ENGINEERING

**Calculus, Value of.** Value of Calculus to the Engineer, R. Fleming. Can. Engr., vol. 46, no. 23, June 3, 1924, pp. 587-588. Divergent views as to value of calculus. Personality of instructor of more importance than text-book; better to learn calculus at college than after.

## ELECTRIC DRIVE

**Shipyards.** Electrical Power Transmission for Shipyards, T. Schwarz. Eng. Progress, vol. 5, no. 5, May 1924, pp. 85-88, 7 figs. Show how all kinds of power transmission, especially hydraulic transmission, have been substituted by electrical drives, which has recently even mastered largest machines for handling plates.

## ELECTRIC FURNACES

**Brass.** Present Tendencies in Electric Brass-Furnace Practice, H. W. Gillett and E. L. Mack. U. S. Bur. Mines, Reports of Investigations, No. 2597, Apr. 1924, 10 pp. Also Brass Wld., vol. 20, no. 5, May 1924, pp. 163-166. Trend of developments in practice in last two years. Bibliography.

**Electrode-Regulating Motors.** Electrode Regulating Motors of Electric Steel Furnaces (Die Elektrodenregulierungsmotoren der Elektrotahlöfen), K. Kerpely. Giesserei-Zeitung, vol. 21, no. 8, Apr. 15, 1924, pp. 153-157. Principle and design of d. c. regulating motors; calculation of speeds; method of three-phase regulation; induction motor; speed regulation and braking.

**Heat-Treating Razor Blades.** Electric Furnaces for the Heat Treatment of Razor Blades. Engineering, vol. 117, no. 3048, May 30, 1924, pp. 713-714, 4 figs. Wild-Barfield electric hardening and tempering furnaces, installed at works of Wilkinson Sword Co. for heat treatment of hollow-ground blades for safety razors.

**Heating in Vacuum.** Apparatus for Heating Electrically in a Vacuum to a High Temperature (Sur un dispositif permettant de chauffer électriquement dans le vide à haute température), P. Lebeau and M. Picon. Académie des Sciences—Comptes Rendus, vol. 178, no. 14, Mar. 31, 1924, pp. 1151-1153. Apparatus consists essentially of tube of carbon, molybdenum, or tungsten, which forms resistance and which is placed in flask of Pyrex glass or quartz; authors describe use and calibration of optical pyrometer of double-scale, disappearing-filament type which was used in connection with apparatus.

**Pig-Iron.** New Norwegian Electric Pig Iron Furnace, F. Hodson and M. Sem. Iron Age, vol. 113, no. 22, June 7, 1924, p. 1585, 1 fig. Open-top furnace successfully operating with charcoal or coke; new ore-reduction process.

**Principles and Design.** Electric Furnaces (Les Fourneaux électriques). Electricien, vol. 55, nos. 1347 and 1348, May 1 and 15, 1924, pp. 193-197 and 221-225, 15 figs. General considerations; electrothermal problem; resistance furnaces; arc and induction furnaces.

**Steel.** Progress in the Production of Electric Steel (Die Fortschritte der Elektrotahlherzeugung), F. Sommer. Stahl u. Eisen, vol. 44, nos. 18, 19 and 20, May 1, 8 and 15, 1924, pp. 490-496, 526-530 and 553-558 (and discussion) 558-560. Statistical data; arc and induction furnace; economical and metallurgical features.

## ELECTRIC LOCOMOTIVES

**Norfolk & West. Ry.** New Electric Locomotives of the N. & W. Ry., T. C. Wurts. Ry. Rev., vol. 74, no. 23, June 7, 1924, pp. 1018-1022, 9 figs. Equipment just put in service illustrates advances of 30 years' experience in electric motive power.

**Switching.** Electric Switchers for Paulista Railway, W. D. Bearce. Elec. Traction, vol. 20, no. 5, May 1924, pp. 214-215, 2 figs. Steeple cab-type electric switching locomotives used on railway in Brazil; running gear consists of two swivel trucks each equipped with two GE-255-1500/3000 volt motors.

**2-8-2.** The Pennsylvania 2-8-2 Type Electric Locomotive, W. H. Eunson. Ry. & Locomotive Eng., vol. 37, no. 6, June 1924, pp. 173-175, 3 figs. Details of L-5 locomotives for passenger and freight service.

## ELECTRIC RAILWAYS

**Traction Exhibit, Erie, Pa.** Electric Traction Exhibit Held at Erie, Pa. Ry. Age, vol. 67, no. 25, May 24, 1924, pp. 1267-1269, 5 figs. Demonstration includes 3000-volt d. c. multiple-unit train for suburban service; current-collection tests; otheograph for recording action on rails of each separate wheel of locomotive or motor car; locomotive tests.

## ELECTRIC WELDING

**Oil Tanks.** Electric Welding of Large Storage Tanks, H. C. Price. Am. Inst. Min. & Met. Engrs.—

Trans., no. 1345-P, June 1924, 11 pp., 12 figs. Describes construction of welded roofs and bottoms and gives their advantages over riveted construction; data and conclusions obtained from observations made during welding of tanks by Welding Eng. Co., Texas City, Tex., and Tonkawa and Burbank, Okla.

## ELECTRIC WELDING, ARC

**Alternating-Current.** Electric Welding with A. C. Arc (Die elektrische Schweißung mit dem Wechselstrom-Lichtbogen), F. Wörtmann. Elektrischer Betrieb, vol. 22, no. 9, May 10, 1924, pp. 73-77, 12 figs. Investigations carried out in laboratory for electric plants and railways of Technical High School of Hannover.

**Rail Joints.** Improvements in Arc-Welded Rail Joints, R. B. Fehr. Elec. Ry. J., vol. 63, no. 20, May 17, 1924, pp. 783-785. Recent developments in method of welding joint plates by means of carbon arc process, and tests on several types of joints.

## ELEVATORS

**Gearless Traction Motor and Brake.** Mechanical Features of the Gearless Traction Elevator Motor and Brake, J. J. Matson. Gen. Elec. Rev., vol. 27, no. 6, June 1924, pp. 390-394, 7 figs. Shows how manufacturer's engineers have made a thorough study of each part and have developed a most capable elevator hoist.

## ENGINEERING

**Mechanical, in Military Service.** The Progress of Mechanical Engineering in the Military Service, G. LeQ. Martel. Instn. Mech. Engrs.—Proc., no. 2, Jan. 1924, pp. 101-138, 9 figs. Brief historical survey of work of mechanical engineer in army up to outbreak of Great War; how work of mechanical engineer was organized and carried out during war and progress made since war; account of work in connection with repair of munitions of war of every kind in field.

## ENGINEERS

**Training.** The Training of Works Students (Praktikantenausbildung), J. Hanner. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 22, May 31, 1924, pp. 589-573. Length of training course; training in and outside of shop.

## EVAPORATION

**Heat of.** The Heat of Vaporization and the Pressure of Saturated Vapor at Very Low Temperatures (Ueber die Verdampfungswärme und den Druck gesättigter Dämpfe bei sehr niedrigen Temperaturen), A. Brandt. Annalen der Physik, vol. 73, no. 5-6, Feb. 1924, pp. 406-408, 3 figs. Discussion of theorem of Nernst, Clapeyron's equation, and deduction thereof by E. Aries.

## F

## FIRE EXTINGUISHERS

**Foam.** Testing of Foam for Use on Fires, C. K. Swift. Indus. & Eng. Chem., vol. 16, no. 6, June 1924, pp. 580-582, 1 fig. Describes desirable characteristics of foams and foam solutions; analytical methods applicable to solutions, and methods for comparing fire resistance and other physical characteristics of foams.

## FLIGHT

**Motorless.** Scientific Principles and Prospects of Motorless Flight (Wissenschaftliche Grundlagen und Aussichten des Motorlosen Fluges), A. Pröll. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 22, May 31, 1924, pp. 557-561, 6 figs. General mechanical principles of gliding flight and of static and dynamic soaring flight; constructive peculiarities and performances of soaring planes; applications of soaring flight for scientific and traffic purposes.

## FLOW OF FLUIDS

**Pipes.** The Pressure Drop in Smooth Pipes and the Coefficient of Flow of Standard Nozzles (Der Druckabfall in glatten Röhren und die Durchflusskoeffizienten von Normaldüsen), M. Jakob and S. Erk. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 22, May 31, 1924, pp. 581-584, 7 figs. Law of pressure drop of a flowing liquid in smooth pipe is tested within range of Reynolds values with water and air.

## FLOW OF WATER

**Channels.** Calculation of the Flow of Water in a Channel (Bijdrage tot de berekening van den afvoer van zijdelingsche overlaten), O. J. Herz. Waterstaats-Ingenieur, vol. 12, no. 3, Mar. 1924, pp. 59-67, 3 figs. Theory and formulas for calculation of flow of water in a channel from changes of level produced by introduction of a barrier.

## FLUE-GAS ANALYSIS

**CO Meters.** Electrical Carbonic Oxide and Hydrogen Meters, E. Zopf. Eng. Progress, vol. 5, no. 5, May 1924, pp. 91-92, 6 figs. Electric apparatus for testing flue gases for their content of combustible components (especially carbonic oxide and hydrogen).

**CO<sub>2</sub> Recorders.** A New Measuring Instrument for the Registration of CO<sub>2</sub> and CO Based on Physical Principles (Ein neues Messgerät zur Registrierung von CO<sub>2</sub> und CO auf physikalischer Grundlage), R. Duncle. Gas- u. Wasserfach, vol. 67, no. 15, Apr. 12, 1924, pp. 197-199, 3 figs. New double recorder for determination of CO together with CO<sub>2</sub> in flue gases.

The "Positif" CO<sub>2</sub> Recorder (Analyseur de CO<sub>2</sub> "positif"). Chaleur & Industrie, vol. 5, no. 48, Apr. 1924, pp. 195-197, 5 figs. Describes new and simple apparatus manufactured by Société Anonyme des Appareils de Manutention & Fours Stein, Paris.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

**FLYWHEELS**

**Rolling-Mill Engines.** Heavy Flywheels for Rolling-Mill Engines (Schwere Schwungräder für Walzenzugmaschinen), Luck. Maschinenbau, vol. 3, no. 15, May 8, 1924, pp. 525-526, 3 figs. Based on drawings, best forms and materials for heavy flywheels are discussed.

**FORESTRY**

**Fire-Statistics Collection.** Some Suggestions for Proposed Changes in the Methods of Collecting Forest Fire Statistics, P. W. Stickel. J. of Forestry, vol. 22, no. 3, Mar. 1924, pp. 266-274. Discusses importance of forest-fire statistics in relation to question of forest-fire insurance, and suggests some changes in method of collecting such statistics. Bibliography.

**Forest Colonization.** Forest Colonization in Sweden, H. I. Baldwin. J. of Forestry, vol. 22, no. 3, Mar. 1924, pp. 241-257. Character of forest; climate. Primary object of colonization has been development of a settled population of forest workers. Relation between population and intensity of forestry; previous efforts at colonization in state forests; present grants for colonization; general extent and results of colonization. References.

**Research.** Use of Statistical Methods in Forest Research, J. Kittredge, Jr. J. of Forestry, vol. 22, no. 3, Mar. 1924, pp. 306-314. Author outlines what seems to him to be most promising statistical methods for use in forest research and gives examples of kinds of problems in which their application might prove useful. References.

**FORGING**

**Safety Code for.** Safety Code for Forging, Nat. Safety News, vol. 9, no. 6, June 1924, pp. 55-61, 23 figs. Tentative draft formulated under general auspices of Am. Eng. Standards Committee, to provide reasonable safety for life, limb and health. Applies to all power forging hammers and incidental operations in connection therewith, including hot saws.

**FORGINGS**

**Testing Large.** How English Test Big Forgings, Iron Trade Rev., vol. 74, no. 24, June 12, 1924, pp. 1557-1558, 4 figs. Stresses encountered by turbine rotors and other large forgings have led British steel-makers to examine core by means of special optical instrument; defects usually develop along axis.

**FOUNDRIES**

**Quantity Production in.** Practical Problems from the Foundry and Pattern Shop (Praktische Betriebsfragen aus der Giesserei und der Modellwerkstatt), König. Giesserei-Zeitung, vol. 21, no. 7, Apr. 1, 1924, pp. 121-124, 8 figs. Quantity production, for example, of electric-motor housings, by means of molding machines with use of green sand cores.

**FUELS**

**Combined-Water Content in Solid.** Content of Combined Water in Solid Fuels (Over het gebonden watergehalte van vaste brandstoffen), D. J. W. Kreulen. Chemisch Weekblad, vol. 21, no. 15, Apr. 12, 1924, pp. 174-176, 1 fig. Determination of dehydration curves of peat, lignite, and some 20 coals of recent formation; combined water can be detected by hygroscopic nature of dried fuel; those fuels which contain only colloidal held water are not hygroscopic when dried.

**Heating Value.** Direct Determination of Heating Value of Solid and Liquid Fuels (Détermination directe du Pouvoir calorifique des combustibles solides ou liquides), Ch. de la Condamine. Chaleur & Industrie, vol. 5, no. 46, Feb. 1924, pp. 85-91, 2 figs. Describes method and apparatus used; numerical example. Bibliography.

**Sludge.** Sewage Sludge as a Source of Heat. Contract Rec. & Eng. Rev., vol. 38, no. 20, May 14, 1924, pp. 478-479. Experiments carried out in England by burning sludge direct in a furnace and by utilizing gas made by carbonizing it; special furnace is solution.

[See also COAL; COKE; LIGNITE; OIL FUEL; PEAT; PULVERIZED COAL.]

**FURNACES, INDUSTRIAL**

**Gas-Fired.** Gas-Furnace Installations, Hems. Gas J., vol. 166, no. 3182, May 7, 1924, pp. 400-403, 1 fig. Describes some of the different types of furnaces and industrial apparatus which manufactures of a city demand, including oven and muffle furnaces, furnaces for melting, tube manufacture, sugar boiling, cyanide hardening, etc. Paper read before Midland Jr. Gas Assn.

**Recuperators for.** Recuperation—Design Requirements, E. R. Posnack. Combustion, vol. 10, no. 6, June 1924, pp. 439-440. Features of design which should be incorporated to eliminate objections usually raised to use of recuperators.

**G****GAGES**

**Ordnance-Dept. Problems.** Gage Problems of the Ordnance Department, C. C. Williams. Am. Mach., vol. 60, no. 22, May 29, 1924, pp. 791-793, 1 fig. Safeguarding gages on hand; studying allowances and tolerances; multiplicity of gages needed.

**Sine Bar for Planer Work.** The Sine Bar as a Universal Planing Gage, R. H. Rausch. Mech. Eng., vol. 46, no. 6, June 1924, pp. 345-348, 15 figs. Details of accurate system of gaging for use where large pieces are machined at comparatively long intervals; use of sine bar as templet for setting planer head and tools; formulas.

**GALVANIZING**

**Fluxing.** A Study of Fluxing in Galvanizing, H. Bablik. Metal Industry (Lond.), vol. 24, no. 23, June 6, 1924, pp. 541-543. Author describes tests carried out to determine mechanism of sal-ammoniac as a fluxing agent, from which he draws conclusions to guide in efficient control of a galvanizing bath.

**GAS ENGINES**

**Starting and Starters.** Gas Engine Starting and Starters, E. Pagett. Southern Engr., vol. 41, no. 3, May 1924, pp. 58-60, 7 figs. Explanation of various kinds of gas-engine starters and some of the difficulties encountered in starting an engine.

**Temperature Distribution and Losses.** Temperature Distribution and Losses during Combustion in Gas Engines (Die Temperaturverteilung sowie die Verluste während der Verbrennung bei Gasmotoren), Schmolke. Wärme, vol. 47, no. 15, Apr. 11, 1924, pp. 151-154, 1 fig. Method of determining temperature distribution in walls of Diesel engine under change of load, and explanation of heavy heat losses during combustion.

**GAS PRODUCERS**

**Practice.** Gas Producer Practice, W. Dyrrsen. Blast Furnace & Steel Plant, vol. 12, no. 6, June 1924, pp. 271-273. Savings possible by use of waste gases in place of steam for cooling fire zone; modern types of gas producers. (Abstract.) Paper presented before Am. Iron & Steel Inst.

Notes on Gas-Producer Practice, J. D. Troup. Iron & Coal Trades Rev., vol. 108, nos. 2929 and 2930, Apr. 18 and 25, 1924, pp. 631-632 and 678-679, 4 figs. British and American practice.

**GAS TURBINES**

**Problems of.** The Gas Turbine, H. Campbell. Inst. Mar. Engrs.—Trans., vol. 35, Apr. 1924, pp. 684-694 and (discussion) 694-701, 5 figs. Review of what is known about gas turbines up to date. Difficulties which have been experienced in dealing with gas turbines both theoretically and practically. Points out that a new material has to be found to stand high temperatures.

**Waste-Heat Recovery.** Gas Turbines for Waste Heat Recovery, Colliery Engr., vol. 1, no. 2, Apr. 1924, pp. 96-98, 4 figs. Notes on German developments with their possible applications to conditions in Great Britain.

**GEAR CUTTING**

**Instrument.** Cutting Instrument Gears, Machy. (Lond.), vol. 24, nos. 604 and 609, Apr. 24 and May 29, 1924, pp. 103-107 and 273-274, 17 figs. Apr. 24: Production of small gears by means of hand-operated and automatic machines of formed-cutter and hobbing types. May 29: Application of hobbing process and production of small pinions in rod form.

**Racks.** Rack Cutting, Machy. (Lond.), vol. 24, no. 608, May 22, 1924, pp. 235-237, 5 figs. General practice in cutting racks on machines designed for this work.

**GRINDING**

**Methods.** Grinding Shop Practice Described, F. B. Jacobs. Abrasive Industry, vol. 5, no. 5, May 1924, pp. 111-115, 11 figs. Methods followed at shops of L. Lawrence Co., Detroit, Mich. Worn cylinders reground and new pistons fitted; large crankshafts re-finished by regrinding; broken units welded.

**H****HAMMERS**

**Pneumatic.** Pneumatic Hammers (Luft-Hämmer), A. Halse. Werkstattstechnik, vol. 18, no. 9, May 4, 1924, pp. 251-255, 16 figs. Conditions governing choice of steam or pneumatic hammers; description with test results of Hartmann double-blow pneumatic hammers.

**HARDNESS**

**Testing.** Duration of Load in the Hardness Testing of Soft Metals (Bearing Metals) [Die Belastungsdauer bei der Härteprüfung weicher Metalle (Lagermetalle)], P. Leiber. Zeit. für Metallkunde, vol. 16, no. 4, Apr. 1924, pp. 128-131, 5 figs. Hardness determinations with different time durations of load; measurement of depth of indentation because of hardness differences inside of different sample pieces; experimental results and conclusions for practical application of ball test.

The Hardness of Metals and Hardness Testing, Mech. Eng., vol. 46, no. 6, June 1924, pp. 360-362. Observations on nature of hardness, together with descriptions of various methods used in testing. Report prepared at request of Special Research Committee on Cutting & Forming of Metals.

Work-Hardening of Various Metals, E. G. Herbert. Iron Age, vol. 113, no. 25, June 19, 1924, pp. 1792-1793, 3 figs. Measuring extent of progressive change with Herbert pendulum hardness tester.

**HEALTH**

**Physiological Reactions to Air Cooling.** Cooling Effect on Human Beings Produced by Various Air Velocities, F. C. Houghten and C. P. Vagloglou. Am. Soc. Heat & Vent. Engrs.—Jl., vol. 30, no. 2, Feb. 1924, pp. 169-184, 13 figs. Study of relation of temperature, humidity and air motion to human comfort, giving details of tests and results obtained.

**Physiological Reactions to High Temperatures.** Air Motion—High Temperatures and Various Humidities—Reactions on Human Beings, W. J. McConnell

and C. P. Vagloglou. Am. Soc. Heat & Vent. Engrs.—Jl., vol. 30, no. 3, Mar. 1924, pp. 199-224, 19 figs. Results of experiments on physiological reactions to high temperatures and humidities, presented with the view of illustrating influence moving air exerts over still air.

**HEAT PUMPS**

**Principle and Applications.** The Heat Pump (Die Wärme-Pumpe), K. Schreiber. Gesundheits-Ingenieur, vol. 47, nos. 14 and 15, Apr. 5 and 12, 1924, pp. 105-108 and 119-121, 8 figs. Heat pumps are described as plants with which, under use of mechanical work, heat quantities are heated from colder to warmer temperature; deals especially with concentrating plants, in which steam from solution is compressed and then used for heating solution which is to be concentrated; and heating plants in which working value of gases coming from grate is recovered as far as possible and used as work energy and for heating of rooms.

**HEAT STORAGE**

**Applications in Industry.** The Application of Heat Storage in Industry (Verwendbarkeit der Dampfspeicherung in der Industrie), Trautmann. Gesundheits-Ingenieur, vol. 47, no. 16, Apr. 19, 1924, pp. 137-139. Discusses different systems of heat storage, their useful possibilities, and advantages.

**Hot-Water Accumulators.** Heat Storage Plants in Connection with Boilers (Die Wärmespeicher in Verbindung mit Dampfkesseln), H. E. Witz. Wärme, vol. 47, no. 9, Feb. 29, 1924, pp. 83-87, 16 figs. Influence of pressure fluctuations and their elimination by use of hot-water accumulators; importance of such accumulators for maximum-pressure boilers.

**HEAT TRANSMISSION**

**Buildings.** Measuring Heat Transmission in Building Structures and a Heat Transmission Meter, P. Nicholls. Am. Soc. Heat & Vent. Engrs.—Jl., vol. 30, no. 1, Jan. 1924, pp. 35-70, 30 figs. Deals with measurement of heat flow through walls, more particularly of existing structures. Outlines principles employed and describes in detail work done at A. S. H.-V. E. research laboratory in an attempt to develop a heat transmission meter which will indicate instantaneous flows. Difficulties involved in such measurements and variable factors in building materials that will influence heat-transmission constants. Short review of present state of knowledge, future requirements, and indications of probable trend of investigational work.

**Thermal-Conductivity Values.** New Tests on the Thermal Conductivity of Liquids, Insulating Materials and Metals (Nouveaux essais sur la conductibilité calorifique des liquides, matières isolantes et métaux), M. Jakob. Chaleur & Industrie, vol. 5, no. 46, Feb. 1924, pp. 62-65, 3 figs. Shows how to utilize to advantage relations between thermal properties of bodies, and their employment in industry.

**HEAT TREATMENT**

**Electrical Process.** Annealing, Hardening, and Tempering by the Electrical Process, Machy. (Lond.), vol. 24, no. 609, May 29, 1924, pp. 263-265, 5 figs. Heat treatment of ferrous and non-ferrous wire and strip.

**HEATING, ELECTRIC**

**Advantages and Uses.** The Place of Electricity in the General Heating Field, L. P. Hynes. Am. Soc. Heat & Vent. Engrs.—Jl., vol. 30, no. 1, Jan. 1924, pp. 17-24, 1 fig. Peculiar advantages of electric heat, and practical data for readily determining when and how to use it in solving some of the especially perplexing problems which confront heating engineer.

**HEATING, HOT-AIR**

**Pipe Sizes.** Principles of Design in Furnace Heating, Sheet Metal Worker, vol. 15, no. 10, June 6, 1924, pp. 373-376 and 404. Simplified method of determining leader sizes based on standard code for regulating installation of warm-air furnaces in residences.

**HEATING, STEAM**

**Central.** Central Station Heating Requirements, H. A. Woodworth. Power Plant Eng., vol. 28, no. 12, June 15, 1924, pp. 658-662, 7 figs. Conservation of fuel due to double use of steam, that is, for electric generation and commercial heating purposes; modern heating system at Grand Rapids, Mich.; modern underground construction.

The Economical Utilization of Heat from Central Station Plants, N. W. Calvert and J. E. Seiter. Am. Soc. Heat & Vent. Engrs.—Jl., vol. 30, no. 1, Jan. 1924, pp. 1-16, 15 figs. Shutting off of steam at night and during day; thermostatic control; vacuum systems; building details for efficient heating; data on heat consumption; etc.

The Municipal Central Heating Station in Barmen, Germany (Das städtische Fernheizwerk Barmen), Schilling. Gesundheits-Ingenieur, vol. 47, nos. 15 and 17, Apr. 12 and 26, 1924, pp. 115-119 and 145-148, 10 figs. Details of boiler station consisting of 4 water-tube boilers, each having 180 sq. m. heating surface; steam pipe-line distribution system; steam pressure-reduction stations and stations for conversion of steam into hot water; operation of plant; numerous investigations show economy of central-heating system.

**HOISTS**

**Mine.** Novel Features of Electric Mine Hoists Recently Installed in Northern Ontario, H. V. Haight. Elec. News, vol. 33, no. 9, May 1, 1924, pp. 52-55, 5 figs. Details of two hoists recently built for use in Porcupine mining districts; double-drum type; controlled by compressed air; 250-hp. motor used in each case; liquid rheostat found most suitable.

**HYDRAULIC MACHINERY**

**Glycerine.** Use in. The Use of Glycerine in Hydraulic Machinery, F. Mercier. Mech. Eng., vol. 46, no. 6, June 1924, p. 353. Results of investigation.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

(Abstract.) Translated from *Revue Industrielle*, vol. 54, no. 29, Apr. 1924.

### HYDRAULIC TURBINES

**Characteristic Curves.** The Characteristic Equations of Reaction and Impulse Water Turbines, H. W. Coultes. *World Power*, vol. 1, no. 5, May 1924, pp. 292-296, 5 figs. Shows how quantities are related and how equations can be obtained for characteristic curves of turbines.

**Draft Tubes for.** Draft Tubes for Hydraulic Turbines, J. M. Dymond. *Univ. of Toronto Eng. Soc.—Trans. & Year Book*, Apr. 1924, pp. 63-81, 10 figs. Functions of draft tubes; past types of draft tubes, and present outstanding types; present-day tendencies; special devices. List of references.

**Factory.** The Control of Power Production, Chas. L. Hubbard. *Factory*, vol. 32, no. 6, June 1924, pp. 822-825 and 908, 20 figs. Hydraulic turbines as factory power source.

**Governors.** Study of Speed Regulators of Hydraulic Turbines with Regard to Their Influence on Efficiency of Installations (Etude des régulateurs de vitesse des turbines hydrauliques au point de vue de leur influence sur le rendement global des installations), Cayère. *Houille Blanche*, vol. 23, no. 85-86, Jan.-Feb. 1924, pp. 10-18, 21 figs. Examination of three distinct elements of problem: Role of governors in maximum distribution of load among the different stations; in maximum utilization of hydraulic energy in plants having no reserve; and in maximum utilization of energy of plants having hydraulic reserve supply.

**Hydroelectric Equipment.** Recent Developments in Hydroelectric Equipment, Wm. M. White. *Am. Inst. Elec. Engrs.—Jl.*, vol. 43, no. 6, June 1924, pp. 510-524, 10 figs. Facts relating to recent developments in hydroelectric machinery, such as that installed at power house at Mitchell Dam, Alabama.

### HYDROELECTRIC DEVELOPMENTS

**Carolinas.** The Catawba River Development. *Elec. World*, vol. 83, no. 24, June 14, 1924, pp. 1234-1236, 1 fig. How hydroelectric power is utilized in Carolina to supply large group of textile industries; operating conditions.

**Interdependence of Irrigation and.** The Interdependence of Irrigation and Hydroelectric Power, J. D. Galloway. *Jl. of Elec.*, vol. 52, no. 10, May 15, 1924, pp. 351-354, 2 figs. Exposition of relation of these two factors in Western development and of use of water for both purposes.

**Italy.** A Daring Engineering Feat Succeeds, C. Semenza. *Explosives Engr.*, vol. 2, no. 5, May 1924, pp. 155-162, 14 figs. How Italian engineers solved unusual and difficult problem of connecting an outlet tunnel 65 ft. beneath surface of Lake Santa Croce.

**LaGabelle, Can.** Power Developments on S. T. Maurice River, L. H. Burpee. *Can. Engr.*, vol. 46, no. 22, May 27, 1924, pp. 553-556 and 570, 6 figs. Existing hydroelectric plants on St. Maurice river produce 450,000 hp.; new development at LaGabelle will increase this by 150,000 hp. Some power-house construction details. Paper read at Toronto branch, Eng. Inst. Canada.

**Sardinia.** The Tirso Hydro-Electric Scheme. *Elec. Rev.*, vol. 94, no. 2428, June 6, 1924, pp. 925-929, 8 figs. Describes dam, and power house and its equipment; equipped with two double turbines of 6000 b.h.p. each, two double turbines of 9000 b.h.p. each, and a small auxiliary turbine of 60 b.h.p., which provides power for internal uses.

**Scandinavia.** Water Power in Scandinavia, F. Johnstone-Taylor. *Elec. Times*, vol. 65, no. 1691, Mar. 13, 1924, pp. 299-301, 7 figs. Brief outline of machinery of hydroelectric stations at Vamma, Herlandfossen, Raanaafoss, and Nore Falls in Norway, and at Forshuvudfossen, Finspongs and Untraverket in Sweden, which have been put into operation within last three or four years, to give idea of present-day hydroelectric practice in Northern Europe.

### HYDROELECTRIC PLANTS

**Automatic Operation.** Present Practice in the Automatic Operation of Hydroelectric Generating Stations, R. J. Wensley. *Am. Inst. Elec. Engrs.—Jl.*, vol. 43, no. 6, June 1924, pp. 508-513, 3 figs. Various methods of starting and controlling together with their limitations; sequence of operations in modern automatic switching equipment.

**France.** The Hydroelectric Plant at Eguzon (France) (L'Usine Hydroélectrique d'Eguzon), G. Laporte. *Revue Industrielle*, vol. 54, nos. 2174, 2176, 2178 and 2179, Jan., Mar., May and June, 1924, pp. 447-450, 1-5, 102-105 and 129-141, 34 figs. Details of work under construction for exploitation of Eguzon waterfall; dam is 60 ft. high at foot of which is located a plant with five sets of generators of 12,500 hp. each, which feeds three groups of transformers connected to transmission lines of Paris-Orleans railway.

**Scheme of Arrangement.** The Arrangement of Hydroelectric Plants of High and Medium Head (Quelques notes sur l'organisation des hautes et moyennes chutes d'eau), E. Maurein. *Arts & Metiers*, vol. 77, no. 43, Apr. 1924, pp. 126-135, 20 figs. Study of scheme of arrangement whereby weir pond is eliminated and head race is replaced by supply tunnel driven in mountain.

## I

### ICE PLANTS

**Charlestown, W. Va.** Performance of a Modern Ice Plant, C. P. Gore, Jr. *Refrig. Wld.*, vol. 59, no. 5, Apr. 1924, pp. 16-20, 7 figs. Description of 100-ton

ice-making plant of Diamond Ice & Coal Co., Charlestown, W. Va., with complete operating results for June 1923.

**Distilled-Water.** Ice Plant Installs Unaflo Engines. *Power*, vol. 59, no. 25, June 17, 1924, pp. 981-982, 4 figs. Plant at Memphis, Tenn., economizes by purchasing governmental excess machinery; how water is treated; ice-storage facilities.

**Oil Engines in.** Oil Engines as a Prime Mover in the Ice Plant, C. T. Baker. *Ice & Refrigeration*, vol. 66, no. 5, May 1924, pp. 467-469. Discusses various features of primary interest to business man, including dependability, maintenance costs, different methods of drive, kind of fuel, etc. See also *Refrig. Wld.*, vol. 59, no. 5, Apr. 1924, pp. 13-15.

### IGNITION

**Automobile Engines.** Vacuum Tubes Applied to Engine Ignition. *Automotive Industries*, vol. 50, no. 24, June 12, 1924, pp. 1287-1289, 4 figs. Automotive application of thermionic valve, patented by Robert Bosch, makes it possible to place ignition system anywhere on car and eliminate mechanical interrupter.

### INDUSTRIAL MANAGEMENT

**Cost Control.** Increased Yield from Industry (Voksende Udbytte i Industrien), I. Jantzen. *Ingeniøren*, vol. 33, nos. 7 and 8, Feb. 16 and 23, 1924, pp. 73-84 and 85-96, 26 figs. Scientific investigation of economic factors on basis of engineering principles. Gives diagrams illustrating relations of manufacturing cost, price, profit, etc.

**Production Control.** Results of Scientific Management from the Viewpoint of Corporate Control, M. M. Baker. *Mgt. & Administration*, vol. 7, no. 6, June 1924, pp. 645-646. Discusses general effect of scientific management upon entire organization of manufacturing institution.

**Records.** The Works Records Department, W. J. Hiscox. *Indus. Management (Lond.)*, vol. 11, nos. 1, 3, 6 and 10, Jan. 10, Feb. 7, Mar. 20 and May 15, 1924, pp. 6-7, 67-69, 151-152 and 265-266, 9 figs. Describes its function, dealing with delays, what records should show, stock records and costing, and employment records.

**Suggestion System.** A Suggestion System That Works, K. H. Condit. *Am. Mach.*, vol. 60, no. 25, June 19, 1924, pp. 923-925, 4 figs. Description of system used by the Gilbreths; purpose is to secure from men on job suggestions for improvement in manufacturing methods; useful by-products of system.

### INDUSTRIAL ORGANIZATION

**Basic Principles.** The Basic Principles of Organization, T. H. Jackson. *Military Engr.*, vol. 16, no. 86, Mar.-Apr. 1924, pp. 95-99. Discusses decentralization, selection of group leaders, policy of command, creation of new groups, appointment of group leaders, specialist command, organizing around leaders, support of group leaders, and excessive overhead.

### INTERNAL-COMBUSTION ENGINES

**Naphthalene.** Naphthalene Engines (Les moteurs à naphthaline), C. Anguenot. *Société Industrielle de Mulhouse—Bul.*, vol. 90, no. 1, Jan. 1924, pp. 57-71, 6 figs. Describes types of engine for burning naphthalene, constructed by Société anonyme des moteurs économiques à naphthaline (A. A. M. E. N.), which are said to be particularly well adapted to light industry and farming.

**Two-Cycle Double-Acting.** A New Two-Cycle Double-Acting Engine (Un nouveau moteur à deux temps et à double effet), R. Mathieu. *Outillage*, vol. 344, no. 3, Mar. 1924, pp. 17-18, 2 figs. Details of Leroy light explosion-type engine.

[See also AIRPLANE ENGINES; AUTOMOBILE ENGINES; DIESEL ENGINES; GAS ENGINES; OIL ENGINES.]

### IRON

**Corrosion.** The Relation of Hydrogen Ion Concentration to the Corrosion of Iron, J. W. Shipley and I. R. McHaffie. *Can. Chem. & Metallurgy*, vol. 8, no. 5, May 1924, pp. 121-124, 6 figs. Corrosion of iron in contact with graphite; corrosion of iron in absence of oxygen; corrosion of gray cast iron in soil water of pH 7.4 and saturated with oxygen; hydrogen-ion concentration obtained when iron is in contact with water; rate of corrosion of iron in absence of oxygen in solutions of various hydrogen-ion concentrations.

**Electrolytic, Recrystallization.** The Recrystallization of Electrolytic Iron (Die Rekristallisation des Elektrolytseisens), P. Oberhoffer and W. Oertel. *Stahl u. Eisen*, vol. 44, no. 20, May 15, 1924, pp. 560-561, 1 fig. Results of investigation at Iron Met. Inst. of Tech. High School of Aachen (Aix-la-Chapelle).

### IRON, PIG

**Oxygen, Use in Production.** The Use of Oxygen and Oxygenated Air in the Production of Pig Iron (Die Verwendung von Sauerstoff und sauerstoffreicher Luft bei der Roheisenerzeugung), R. Schenck. *Stahl u. Eisen*, vol. 44, no. 19, May 8, 1924, pp. 521-526, 3 figs. Reviews previous works and discusses phenomena in blast furnace and effect on them of nitrogen-free air and oxygen enrichment; summary of advantages to be gained by use of pure oxygen.

### IRON CASTINGS

**Cupola Mixtures for.** Simplifying Cupola Mixtures, Geo. A. Drysdale. *Foundry*, vol. 52, no. 11, June 1, 1924, pp. 433-434. Claims that chemical composition of pig irons used should closely parallel that for castings required; uniform amounts used in cupola mixture produce more even product.

**Monobloc Cylinder.** Making a Monobloc Cylinder Casting. *Eng. Production*, vol. 7, no. 141, June 1924, pp. 176-180, 25 figs. Describes equipment de-

signed for intensive manufacture of small monobloc cylinder castings of 63 mm. bore by 69 mm. stroke. Methods adopted to secure quality in quantity production.

## L

### LATHES

**High-Speed.** Modern High-Speed Lathes. *Eng. Progress*, vol. 5, no. 5, May 1924, pp. 81-84, 9 figs. Design of headstock, feed gear, etc. of high-speed lathe manufactured by Heidenreich & Harbeck, Hamburg; comparison of economy with ordinary lathes.

**Interchangeable Construction.** Building Lathes Interchangeably, Chas. O. Herb. *Machy. (N. Y.)*, vol. 30, no. 10, June 1924, pp. 758-761, 8 figs. Manufacturing methods used by Chard Lathe Co., New Castle, Ind., to facilitate assembly of machines and supply of replacement parts.

### LIGHTING

**Factories.** The Relation of Illumination to Production, W. E. Bush. *Eng. Production*, vol. 7, no. 140, May 1924, pp. 124-129 (includes discussion), 14 figs. Foot-candle meter; shadows; illumination and vision; effect of light on output.

**Industrial, Unit Costs of.** Unit Costs of Industrial Lighting, D. H. Tuck. *Illuminating Eng. Soc.—Trans.*, vol. 19, no. 5, May 1924, pp. 411-419 and (discussion) 419-423, 1 fig. Unit costs of installation and operation of various actual systems of lighting in industrial plants. Value of unit costs is in comparing economy of installation and operating costs of various types of lighting and in arriving at a quick estimate of cost of any industrial lighting installation when area to be illuminated, foot-candle intensity to be obtained and type of equipment to be used are known.

### LIGNITE

**Source of Heat.** Lignite Fuel Source of Heat for Industries, W. Roth. *Gas Age-Rec.*, vol. 53, no. 22, May 31, 1924, pp. 763-764. Recent development, in Germany, described by editor of *Chemiker Zeitung*, including gas from lignite, by-products from lignite, and lignite for central stations.

### LIQUIDS

**Compressible, Vortex Motion in.** The Vortex Motion in a Compressible Liquid (Ueber Wirbelbewegung in einer kompressiblen Flüssigkeit), A. Friedmann. *Zeit. für angewandte Mathematik u. Mechanik*, vol. 4, no. 2, Apr. 1924, pp. 102-107. Author derives equations on conditions of dynamic possibility of motion of a compressible liquid.

**Heat Transfer.** Heat Transfer vs. Agitation, D. E. Pierce and P. B. Terry. *Chem. & Met. Eng.*, vol. 30, no. 22, June 2, 1924, pp. 872-873, 3 figs. Discusses use of agitation as means of increase of heating or cooling in places where it is difficult to provide more transfer surface.

**Inflammable, Storage of.** The Storage of Inflammable Liquids (Zur Frage der Lagerung feuergefährlicher Flüssigkeiten), A. Neuburger. *Chemiker-Zeitung*, vol. 48, no. 53, May 1, 1924, pp. 277-278. Describes Schilde-Eickemeyer system for storage of different kinds of inflammable liquids, including two kinds of pumping apparatus manufactured by firm of Benno Schilde, Berlin.

### LOCOMOTIVE BOILERS

**Flue Holes and Patches.** Flue Holes and Patches, T. P. Tulin. *Boiler Maker*, vol. 24, no. 5, May 1924, pp. 134-135, 6 figs. Methods of installing flue "blind-ers" with welding process and flue-sheet patches.

### LOCOMOTIVES

**British Empire Exhibition.** Locomotive Development, J. H. Brittain. *Engineer*, vol. 137, no. 3568, May 16, 1924, pp. 528-531, 9 figs. partly on supp. plate. Description and comparison of Lond. & North-Eastern Ry. (Great Northern) 3-cylinder locomotive, Flying Scotsman, Great Western 4-cylinder locomotive, Caerphilly Castle, both of which are exhibited at Brit. Empire Exhibition, and Vincent Raven's 3-cylinder Pacific, which is not exhibited.

**Compound.** 1 E Superheater Two-Cylinder Compound Locomotive of the Austrian Federal Railway—(1 E-Heissdampf-Zweizylinder-Verbundlokomotive der österreichischen Bundesbahnen), J. Rihosek. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, no. 1, Jan. 15, 1924, pp. 8-11, 1 fig. Construction and characteristics of new freight locomotives.

**Consolidation.** Consolidation Type Locomotives for the Reading Company. *Ry. & Locomotive Eng.*, vol. 37, no. 6, June 1924, pp. 179-180, 1 fig. Heavy consolidation 2-8-0 type built by Baldwin Locomotive Works; boiler is of Wootton type.

**Daily Program and Performance.** Daily Program and Performance of a Locomotive, R. S. Parsons. *Ry. Rev.*, vol. 74, no. 20, May 17, 1924, pp. 884-886. Discussion from transportation viewpoint of locomotive performance in fast-freight, slow-freight and switching service. (Abstract.) Paper read before Central Ry. Club.

**Drafting Conditions, Control of.** Exhaust Nozzle and Front End Adjustment, D. L. Derrom. *Ry. Mech. Engr.*, vol. 98, no. 6, June 1924, pp. 362-365, 2 figs. Outlines effective means of controlling changes in drafting conditions.

**Driving Boxes, Machining.** Machining Driving Boxes, Shoes and Wedges. *Ry. Rev.*, vol. 74, no. 23, June 7, 1924, pp. 1029-1039, 25 figs. Variations in design necessitate use of different practices in finishing these parts in railway machine shop.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

**Electric.** See ELECTRIC LOCOMOTIVES.

**Mallet, Reconstruction of.** Motive Power of the Carolina Clinchfield & Ohio Ry. Ry. Rev., vol. 74, no. 23, June 7, 1924, pp. 1005-1017, 7 figs. Describes rebuilding of original Mallet locomotives and makes comparison with two types of new engines.

**Mechanical Draft.** Report on Front-Ends, Grates and Ashpans. E. C. Schmidt. Ry. Rev., vol. 74, no. 23, June 7, 1924, pp. 999-1004, 6 figs. Devices for creating mechanical draft in locomotives and description of draft arrangements of oil-burning locomotive. (Abstract.) Report of committee to Int. Ry. Fuel Assn.

**Staybolts.** Oversize Staybolts for Locomotive Boilers (Im Gewinde dicke Stehbolzen). Glasers Annalen, vol. 94, nos. 9, 10 and 11, May 1, 15 and June 1, 1924, pp. 113-118, 123-129 and (discussion) 139-147, 37 figs. Different methods of expanding bolts in locomotive boilers so as to secure tight joints.

**Steam-Turbine.** Economy, Design and Development of the Steam-Turbine Locomotive (Die Turbolokomotive, ihre Wirtschaftlichkeit, Bauart und Entwicklung). R. P. Wagner. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, nos. 1 and 2, Jan. 15 and Feb. 15, 1924, pp. 1-8 and 25-34, 17 figs. Discusses problems of design, and describes Ljungström, Ramsay and Zoelly types.

#### LUBRICATING OILS

**Specific Heats.** Specific Heats of Lubricating Oils. E. H. Leslie and J. C. Geniesse. Indus. & Eng. Chem., vol. 16, no. 6, June 1924, pp. 582-583, 1 fig. Measurement of specific heats of six typical lubricating oils over range of temperature from 37.78 to 143.33 deg. cent.

#### LUBRICATION

**Economics.** Economics of Lubrication—Suggestions for a Research Program. W. F. Parish. Nat. Petroleum News, vol. 16, no. 19, May 7, 1924, pp. 59-60 and 63. Deals with lubrication of steam railroads, electric roads, and farming, marine, automotive and industrial machinery.

## M

#### MACHINE SHOPS

**Economical Machining Methods.** Analysis of a Machine-Shop Problem on a Quantity and Final-Economy Basis. A. L. DeLeeuw. Mech. Eng. vol. 46, no. 6, June 1924, pp. 335-338 and 362, 1 fig. Discusses nature of analysis which should be followed in determining most economical method of machining work, either in large or small quantities; deals only with items relating to actual machining processes; particular attention is called to difference between saving of labor cost and ultimate economy; as example some of operations on automobile connecting rod are taken. (Abridged.)

**Single Pieces, Machining of.** Economical Machining of Single Pieces. A. A. Dowd. Iron Age, vol. 113, no. 14, Apr. 3, 1924, pp. 989-991, 4 figs. Cause of loss in setting up machine tools for repair or replacement jobs; handling of work by planning department advantageous.

#### MACHINE TOOLS

**British Empire Exhibition.** The British Empire Exhibition. Machy. (Lond.), vol. 24, no. 608, May 22, 1924, pp. 241-250, 17 figs. Machine tools and mechanical equipment.

**Magnetic Control.** Electric Drive and Magnetic Control for Machine Tools. A. L. Harvey. Elec. JI., vol. 21, no. 6, June 1924, pp. 265-269, 9 figs. Advantages of use of electric drive with magnetic control; reversing drive; suggestions in connection with operation.

**Slotting Machines.** Tooling Reciprocating Machine Tools. Eng. Production, vol. 7, no. 141, June 1924, pp. 166-169, 6 figs. Various methods of extending utility and scope of slotting machines.

#### MACHINERY

**Stress in Parts.** Optical Investigation of State of Stress in Machinery Parts with Sharp and with Rounded-Off Corners (Optische Untersuchung des Spannungszustandes in Maschinenteilen mit scharfen und abgerundeten Ecken). W. Birnbaum. Zeit. für technische Physik, vol. 5, no. 4, 1924, pp. 143-149, 20 figs. Apparatus consists of optical bench, upon which luminous source, polarization, load, and compensation apparatus, as well as photographic equipment are arranged on movable slides; special investigations on turbine-blade feet and T-pieces.

**Torsional Oscillations.** Investigation of Oscillations Around an Axis in a Machine (Beitrag zur Untersuchung von Drehbewegungen bei Maschinen). E. v. Brauchitsch. Zeit. für technische Physik, vol. 4, no. 11, 1923, pp. 426-430, 5 figs. New method for analytical determination of natural frequency of each of the component parts of a rotating system and for investigation of oscillations in a torsional-elastic system.

#### MATERIALS HANDLING

**Automobile Assembly.** Material-Handling Problems Encountered in the Assembly of Automobiles. M. R. Denison. Mech. Eng., vol. 46, no. 6, June 1924, pp. 339-342. Time- and labor-saving methods devised for handling and inspection of raw materials and finished parts in large modern automobile-manufacturing plant; deals with functioning of stores divisions as service departments, loss of material, reductions effected in amount of clerical labor required, instruction of store-room men, location of store rooms, handling sheet metal, transportation, final car assembly, etc.

**Glass Factories.** Materials Handling in Glass Works (Materialbewegung in Glashütten). C. Michenfelder. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 21, May 24, 1924, pp. 515-519, 20 figs. Nature and quantity of material to be handled; problems connected with transport of coal, mixtures and glass.

**Mechanical Equipment.** Speeding Industrial Progress. M. W. Potts. Indus. Mgt. (N. Y.), vol. 67, no. 6, June 1924, pp. 348-355, 12 figs. How mechanical handling is revolutionizing all industry.

**Metallurgical Works, Ruhr.** Materials Handling in the Metallurgical Industry of the Ruhr (Les engins de manutention dans l'industrie de la Ruhr). R. de Boysson. Vie Technique & Industrielle, vol. 5, no. 54, Mar. 1924, pp. 365-371, 12 figs. Describes gantries and cranes employed in storage houses and yards, blast-furnace, rolling-mill equipment, and foundry equipment, inter-plant transportation, and private railways connecting mines and plants.

#### MEASUREMENTS

**Shop.** Shop Measurements. E. Buckingham. Univ. of Toronto Eng. Soc.—Trans. & Year Book, Apr. 1924, pp. 26-34. English standards of length; metric standards of length; purposes of shop measurement.

#### METALS

**Intensity Distribution in Spectra of Alkali.** Intensity Distribution, Term Sequence, and Exciting Function in the Spectra of the Alkali Metals (Intensitätsverteilung, Termfolge und Anregungsfunktion bei den Alkalispektren). H. Bartels. Zeit. für Physik, vol. 20, no. 6, Jan. 11, 1924, pp. 398-412, 3 figs. It is shown that by two simple assumptions a close relationship exists between exciting function of separate energy levels and term system of atom concerned.

**Molten, Temperature Determination of.** The Temperature Determination of Molten Metals. R. L. Binney and N. I. Terbill. Metal Industry (N. Y.), vol. 22, no. 5, May 1924, pp. 189-190. A combination of base-metal and rare-metal couples which proved trustworthy in brass foundry.

**Notch Action, Reduction of.** New Ways of Reducing Notch Action (Neue Wege zur Herabsetzung der Kerbwirkung). H. Kändler. Zeit. für technische Physik, vol. 5, no. 4, 1924, pp. 150-154, 7 figs. Influence of acid etching on notches in metal surfaces; etching of notches in chrome-nickel steel; increasing life of rods by etching treatment.

**Sulphurizing and Desulphurizing of.** Sulphurizing and Desulphurizing of Metals by Basic Slags and Fluxes. B. Bogitch. Metal Industry (Lond.), vol. 24, no. 21, May 23, 1924, pp. 498-499. Describes methods and results of experiments. Translated from French, and contributed at symposium arranged by Faraday Soc. Inst. Metals, Inst. British Foundrymen, and Non-Ferrous Research Assn.

**Thermal Emissive Power.** The Relation Between the Total Thermal Emissive Power of a Metal and Its Electrical Resistivity. C. Davison and J. R. Weeks, Jr. Optical Soc. of Am.—Jl., vol. 8, no. 5, May 1924, pp. 581-605, 6 figs. Theoretical considerations. Details of experiments, and results obtained. Bibliography.

#### MOLDING METHODS

**Propeller in Loam.** Molding a Propeller in Loam. L. V. Johnston. Foundry, vol. 52, no. 11, June 1, 1924, pp. 446-448, 1 fig. Methods and rigging employed for purpose; necessity for skill and observance of care and accuracy.

#### MOLDING MACHINES

**Squeezer.** The Squeezer Molding Machine. R. E. Search. Metal Industry (N. Y.), vol. 22, no. 5, May 1924, pp. 191-194, 7 figs. Principles of this type of machine. Various makes and their applications.

#### MOTOR BUSES

**International Harvester Co.** International Bus Has Four-Wheel Air-Operated Brakes. Automotive Industries, vol. 50, no. 23, June 5, 1924, pp. 1216-1217, 2 figs. Chassis adapted for 30-passenger bodies, is furnished in three different gear ratios, and has ball-bearing removable cylinder sleeve engine and internal-gear final drive.

**Lighting.** Present Practice in Motor Bus Lighting and Suggestions for Improvement. L. C. Porter and A. C. Roy. Illuminating Eng. Soc.—Trans., vol. 19, no. 5, May 1924, pp. 456-471 and (discussion) 471-474, 14 figs. Points out lighting conditions as found in present practice and suggests way to improve these conditions. Advantages of glass reflector over enclosing-dome unit; coordination of battery, generator, body and lamp manufacturers in bringing about better lighting conditions.

**Talbot.** A Passenger Talbot. Motor Transport (Lond.), vol. 38, no. 1004, May 26, 1924, pp. 637-639, 6 figs. New 25-50-hp. chassis specially designed for passenger carrying; four-cylinder engine; overall length 19 ft., overall width 6 ft. 3 in.

**Transportation with.** Motorbus Transportation. A. E. Hutt. Soc. Automotive Engrs.—Jl., vol. 14, no. 6, June 1924, pp. 591-593. Outlines underlying principles of motor-bus transportation and makes suggestions concerning certain features conducive to successful operation.

#### MOTOR PLOWS

**Development.** The Motor Plow (Der Motorpflug). Th. Wolff. Automobil-Rundschau, vol. 23, nos. 3 and 4, Mar. and Apr. 1924, pp. 28-32 and 40-41, 4 figs. Review of development.

#### MOTOR-TRUCK TRANSPORTATION

**Cost Calculation.** Cost of Motor-Truck Transportation in Public Works (Cout des transports par camions automobiles dans les travaux publics). A. Mettler. Société des Ingenieurs civils—Mémoires

et Compte Rendu des Travaux, vol. 76, no. 10-12, Oct.-Dec. 1923, pp. 1138-1144, 2 figs. Develops formula and chart for calculating cost of transportation of cubic meter of material for a given distance.

#### MOTOR TRUCKS

**Electric.** Why American Railway Express Uses 1,800 Electric Trucks. Rob. E. M. Cowie. Elec. World, vol. 83, no. 21, May 24, 1924, pp. 1084-1085. Definite reasons for adoption of electric transportation; fifteen specific advantages of electric truck as compared with gasoline and other types of vehicles are enumerated. (Abstract.) Address delivered before Nat. Elec. Light Assn.

**German.** A New Type of Motor Truck (Eine neue Lastkraftwagen-Konstruktion). Wirtschafts-motor, vol. 6, no. 4, Apr. 25, 1924, pp. 5-8, 6 figs. Details of L. W. D. 3-ton truck.

**Loading and Unloading.** Loading and Unloading Bulk Materials to and from Motor Vehicles. Indus. Mgt. (Lond.), vol. 11, nos. 8, 9 and 10, Apr. 17, May 1 and 15, 1924, pp. 215-217, 246-249 and 277-279, 12 figs. Describes different methods.

**London Gen. Omnibus Co.** An L. G. O. Van. Motor Transport (Lond.), vol. 38, no. 1004, May 26, 1924, pp. 653-655, 9 figs. Particulars of a 15-cwt. van that Lond. Gen. Omnibus Co. has constructed for its own garage transport requirements.

**Semi-Trailer Tanker.** 3,000 Gallons by Semi-Trailer. Motor Transport (Lond.), vol. 38, no. 1005, June 2, 1924, pp. 664-666, 7 figs. Frameless semi-trailer tanker introduced by Scammell Lorries, Ltd., for fuel-oil transport and with other important possibilities.

**Specifications.** Gas Truck and Tractor Specifications. Power Wagon, vol. 32, no. 234, May 1924, pp. 40-47. Table giving specifications for different makes.

#### MOTORCYCLES

**Vienna Show.** Vienna Sport and Motorcycle Exhibition 1924 (Wiener Sport- und Motorradausstellung 1924). Allgemeine Automobil-Zeitung, vol. 25, no. 18, May 3, 1924, pp. 28-30, 5 figs. Details of exhibits.

## N

#### NICKEL ALLOYS

**Permalloy.** The Reluctivity of the Recently Discovered Magnetic Metal Permalloy. A. E. Kennedy. Franklin Inst.—Jl., vol. 197, no. 5, May 1924, pp. 623-627, 2 figs. Gives data on observations of permalloy.

## O

#### OFFICE MANAGEMENT

**Standard Paper Forms.** Standard Forms for Office and Shop Use. Mgt. & Administration, vol. 7, no. 6, June 1924, pp. 695-698, 1 fig. Notes on selection of paper and sizes of forms.

#### OIL ENGINES

**Fullagar Land.** The Fullagar Oil Engine for Land Purposes. World Power, vol. 1, no. 5, May 1924, pp. 305-309, 6 figs. Design and features of engine constructed by English Elec. Co.

**Heavy Oil.** The Fraser and Chalmers Heavy Oil Engine. Engineering, vol. 117, no. 3049, June 6, 1924, pp. 731-734, 10 figs. Totally enclosed forced-lubrication, vertical engine working on 4-stroke cycle with compressed-air injection; test results.

**Production Methods.** Production Methods on Large Oil Engines. L. S. Love. Iron Age, vol. 113, no. 25, June 19, 1924, pp. 1777-1782, 14 figs. Savings effected in use of some special machines; ingenious fixtures on standard machines help to reduce costs.

#### OIL FUEL

**Ignition Point, Determination of.** Determination of Ignition Point under Pressure (Bestimmung des Zündpunktes unter Druck). J. Tauss and F. Schutte. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 22, May 31, 1924, pp. 574-578, 11 figs. Two series of tests were carried out to determine ignition under any given pressure, first for constant and second for variable pressure; values obtained vary greatly and show that testing under pressure for investigation of motor oils and mixtures in laboratory is very useful.

#### OPEN-HEARTH FURNACES

**Charging Equipment.** Charging Devices in Modern Open-Hearth Plants (Beschiebvorrichtungen in neuzeitlichen Martinwerken). E. Blau. Chemiker-Zeitung, vol. 46, no. 44, Apr. 10, 1924, pp. 222-225, 6 figs. Deals with trough charging machines and cranes and ingot charging and withdrawing cranes.

**Extensions, Inland Steel Co.** Increases Steel-making Capacity. E. C. Boehringer. Iron Trade Rev., vol. 74, no. 24, June 12, 1924, pp. 1566-1567, 3 figs. Extension at open-hearth department of Inland Steel Co. plant at Indiana Harbor, Ind.; augments output 18 per cent; charging doors and reversing valves electrically operated; describes new units.

**Heat Losses in.** Heat Losses in Open Hearth Furnaces. W. Dyrssen. Fuels & Furnaces, vol. 2, no. 6,

June 1924, pp. 565-569, 3 figs. Heat balance showing how 40 per cent of heat in fuel may be obtained in total steam in a furnace without gas checkers passing part of waste gases from melting chamber direct to boiler.

#### OXY-ACETYLENE WELDING

**Cast Iron, Bronze Welding of.** A New Field for the Oxy-Acetylene Process. Acetylene JI, vol. 25, no. 11, May 1924, pp. 533-536, 9 figs. Bronze welding of cast iron pipe. Bronze welding overcomes practically all of the difficulties of preheating in the field and enables construction of cast-iron lines upon an economic basis.

## P

#### PAPER

**Analysis.** Rapid Analysis of Paper. J. Crolard. Paper, vol. 34, no. 3, May 8, 1924, pp. 87-89. Necessary conditions in analysis of sizing substances and description of methods employed. From *Moniteur de la Papeterie Française*.

**Coated, Analysis of.** Analysis of Coated Papers. Paper, vol. 34, no. 2, May 1, 1924, pp. 48-51. Methods available to paper chemists for ready determination and estimation of binding materials and surface coatings used in manufacture of coated paper.

#### PAPER MACHINERY

**Newsprint Machines.** Anti-Friction Bearings on High-Speed Newsprint Machines. G. H. Spencer. Paper Trade JI, vol. 78, no. 22, May 29, 1924, pp. 46-49, 11 figs. Fundamentals of plain and of anti-friction bearings, and advantages of anti-friction bearings. Paper read at Am. Pulp & Paper Mill Supts. Assn. convention. See also Wood Pulp News, vol. 48, no. 23, June 7, 1924, pp. 16, 18 and 38, 8 figs.

**Section Rolls on News Machines.** W. H. Theroux. Paper Mill, vol. 48, no. 21, May 24, 1924, pp. 44, 46 and 48. Treatment of subject from papermaker's standpoint.

**The Modern News Print Machine.** A. N. Russell. Paper Mill, vol. 48, no. 22, May 31, 1924, pp. 26, 28 and 30. Discusses recent improvements, including Fourdriniers, improvements in press sections and in dryer section, etc.; advantages to be derived from driving paper machines by sectional electric drive.

#### PAPER MANUFACTURE

**Beaters.** Shartle Continuous Beater. Paper, vol. 34, no. 2, May 1, 1924, pp. 38-39, 8 figs. Describes new invention providing a battery of beaters for continuous operation in combination with raw stock breaker for manufacture of paperboard.

**Drying.** Drying Paper. F. C. Stamm and E. P. Gleason. Paper Trade JI, vol. 78, no. 21, May 22, 1924, pp. 54-56, 5 figs. Discusses briefly drying methods in use today and brings out factors affecting drying. Outlines simple method of detecting some of the faults most commonly found. Paper read at Am. Pulp & Paper Mills Supts. Assn. annual convention.

**Photographic Paper.** Making Photographic Paper. E. Arnold. Paper, vol. 34, no. 4, May 15, 1924, pp. 137-140. Details of its manufacture and characteristic properties; preparation of pulps calls for extra care in preventing contamination by iron; difficulties in sizing and coating; preferred tinting substances.

**Pulp, Decay of.** Decay of Wood and Groundwood Pulp. M. W. Bray. Paper Trade JI, vol. 78, no. 23, June 5, 1924, pp. 58-60, 3 figs. Relation of loss in weight to chemical properties.

**Pulp Manufacture.** Soda Pulp Production. H. J. Payne. Chem. & Met. Eng., vol. 30, no. 21, May 26, 1924, pp. 817-822, 11 figs. Survey of methods and equipment, with emphasis on recent developments.

**Pulp Sources.** Sources of Pulp in North America. G. J. Drucker. Paper Trade JI, vol. 78, nos. 23 and 24, June 5 and 12, 1924, pp. 44, 46, 48, 50 and 52; and 36, 38 and 64, 2 figs. Compilation of statistics relating to North American resources in wood and woody substitutes for manufacture of paper.

**The Use of Wood of the Common Fir in the Manufacture of Wood Pulp and Cellulose.** (Eignung von Tannenholz zu Holzstoff und Cellulose). W. Freund. Chemiker-Zeitung, vol. 48, no. 53, May 1, 1924, pp. 279-280. Although wood of common fir is very similar to that of spruce, it finds little application in manufacture of wood pulp and cellulose, chiefly because its fibers are coarser than those of spruce wood; in winter, however, the fibers are shorter and finer than in summer; pulp produced from fir wood has much more constant and stable color than that produced from spruce wood, and is very suitable for soda pulp or for steamed mechanical pulp for leather board.

**Water Removal.** Removal of Water by Couch System. Paper, vol. 34, no. 8, June 12, 1924, pp. 328-329. Account of new system of operating couch rolls on a paper machine, in which mechanism of water removal is described in connection with a new vacuum system recently patented in Germany. How pressure of roll acts in abstraction of water from sheet and affects speed of machine.

#### PAPER MILLS

**Electric Drive.** Application of Electric Drive to Finishing Room Machinery. O. C. Cordes and W. W. Spratt. Paper Mill, vol. 48, no. 21, May 24, 1924, pp. 50 and 52. Covers in a general way, machinery used in finishing room, touching on the various methods of electric drive and discussing their relative merits.

**Rubber Bearings, Application of.** The Adaption of "Cutless" Rubber Bearings to Pulp and Paper Mill Use. C. F. Sherwood. Paper Mill, vol. 48, no.

21, May 24, 1924, pp. 34, 36 and 48. It is impossible to imbed sand or grit in smooth resilient surface of live Olivite rubber, which is used in making rubber bearings. Construction of "cutless" rubber bearings, and its use in pulp and paper mills.

**Sulphite Mills, Steam Economy in.** Heat Problems in a Sulphite Mill. A. H. Lundberg. Paper Trade JI, vol. 78, no. 22, May 29, 1924, pp. 41-45. Actual steam consumption for cooking, bleaching and drying of sulphite pulp and possibilities of savings. Paper read at Am. Pulp & Paper Mill Supts. Assn. convention. See also Paper Mill, vol. 48, no. 21, May 24, 1924, pp. 14-16, 62 and 64.

#### PEAT

**Industrial Uses, Germany.** Industrial and Agricultural Use of Peat Bog (Industrielle und landwirtschaftliche Moornutzung). G. Keppeler. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 22, May 31, 1924, pp. 585-591, 10 figs. Discusses uses of German peat bog, its origin, peat production and briquetting, refinement, gasification and distillation.

#### PISTONS

**Accurate, Securing.** Maxwell Method of Securing Accurate Pistons. F. H. Colvin. Am. Mach., vol. 60, no. 24, June 12, 1924, pp. 873-874, 4 figs. Novel chuck by which piston is squared with piston-pin hole before final turning; gages used in measuring checking and grading.

**Inwardly Sprung Rings.** The Design of Piston Rods and Pistons with Inwardly Sprung Piston Rings (Gestaltung der Kolbenstangen und Kolben mit nach innen federnden Kolbenringen). O. Graf. Maschinenbau, vol. 3, no. 15, May 8, 1924, pp. 520-522, 7 figs. Characteristics of inwardly sprung piston rings; examples of application to piston rods and pistons; stress curve; stress and diameter measuring instrument; universal piston-ring diameter; measuring clock.

#### PLATES

**Elastic Deformation.** Elastic Deformation of a Uniformly Loaded Contour-Supported Thick Plate (Plaques rectangulaires épaisses). C. A. Garabedian. Acad. des Sciences—Comptes Rendus, vol. 178, no. 7, Feb. 11, 1924, pp. 619-622. Author indicates his method of investigation by employment of series, as previously applied by him to investigation of circular plates; also gives complete solution for displacements. Note by Mesnager calls attention to interest and importance of work.

#### PNEUMATIC TOOLS

**Repair and Upkeep.** Repair and Upkeep of Pneumatic Tools. R. W. Wilson. Instn. Mech. Engrs.—Proc. no. 2, Jan. 1924, pp. 151-163 and (discussion) 163-207, 19 figs. Consideration of what is necessary to maintain in efficient operation and in economical service pneumatic tools commonly used in engineering workshops and shipbuilding yards; these are roughly classified as reciprocating tools or pneumatic hammers, and rotating tools or pneumatic drills.

#### POWER GENERATION

**Steam.** Modern Steam Power Generation. R. W. Angus. Univ. of Toronto Eng. Soc.—Trans. & Year Book, Apr. 1924, pp. 35-41, 3 figs. Brief discussion of some of the developments in economical generation of power by steam made during past 10 years, including bleeding of steam from turbines, mercury turbines, etc.

#### PULVERIZED COAL

**Alpine Anthracite.** The Alpine Anthracite and Its Use as Powdered Fuel. M. Dagallier. Fuel, vol. 3, no. 5, May 1924, pp. 151-160. Combustion of anthracite on grate as steam coal—results obtained; observations on combustion of pulverized anthracite; boiler firing by pulverized fuel; use of pulverized fuel in rotary cement kilns; firing of metallurgical furnaces by pulverized fuel. Paper read at Congrès de Chauffage Industriel in Paris, 1923.

**Combustion.** The Combustion of Pulverized Coal. E. Audibert. Colliery Guardian, vol. 127, no. 3306, May 9, 1924, pp. 1188-1189, 3 figs. Results obtained up to the present in a study, made by Comité Centrale des Houillères de France, of combustion of pulverized coal, with object of ascertaining precautions to be observed in its application to boiler firing. Primary object of experiments were measurement of duration of combustion, and determination of essential conditions for use of a given coal in form of powder. From *Revue de l'Industrie Minérale*.

**Developments and Advantages.** Pulverized Fuel and Efficient Steam Generation. D. Brownlie. Instn. Elec. Engrs.—JI, vol. 62, no. 329, May 1924, pp. 385-418 and (discussion) 418-469, 1 fig. Detailed consideration of latest developments in use of pulverized coal for steam generation, and comparison of its advantages and disadvantages as compared with mechanical stoking under most modern conditions; full account of Lakeside station at Milwaukee with exact working costs, and description of River Rouge plant at Dearborn, Detroit, as representatives of modern pulverized-fuel practice; comparison with Dalmarnock power station, Glasgow, characteristic of best British mechanical-stoker practice; in author's opinion advantages of pulverized fuel are so great that they constitute almost revolution in boiler practice.

**Heating Furnaces, Use in.** The Prospects of Pulverized-Coal-Fired Heating Furnaces in Rolling Mills (Aussichten der Staubeuerung an Wärmeöfen in Walzwerken). H. Hochgesand. Wärme, vol. 47, nos. 12, 13, 14, 15 and 16, Mar. 21, 28, Apr. 4, 11 and 18, 1924, pp. 117-119, 128-132, 141-144, 154-157 and 166-169, 14 figs. Investigation on an ingot-heating furnace with former half-gas firing; influence of fineness of grinding and size of chamber on furnace efficiency and coal consumption; economy of pulverized-coal over half-gas firing; discussion of results.

**Physical Properties.** A Study of the Physical Properties of Powdered Coal of Varying Degrees of

Fineness; and of the Distribution of Ash and Volatile Matter among the Fractions of Different Size, Chas. Roszak. Fuel, vol. 3, no. 5, May 1924, pp. 161-165, 7 figs. Paper read at Congrès de Chauffage Industriel in Paris, 1923. See reference to original article in Eng. Index 1923, p. 526.

**Use, Development in.** Development in Use of Pulverized Coal. C. F. Herington. Elec. Light & Power, vol. 2, no. 5, May 1924, pp. 121-125 and 166, 6 figs. Review of development of its use in industrial furnaces, boilers, locomotives, etc.; comparisons between pulverized coal and other fuels; future possibilities.

#### PUMPING STATIONS

**Diesel-Engine Operation.** Operating Experiences of a Diesel Engine Pumping Station. W. De Witt Vosbury. Fire & Water Eng., vol. 75, no. 23, June 4, 1924, pp. 1215, 1219 and 1224, 4 figs. Statistics showing experiments in use of Diesel engine in Gloucester, N. J. station, a typical small water-works pumping station.

**Electrically Driven.** Illinois Central Builds Modern Pumping Station. C. R. Knowles. Ry. Age, vol. 76, no. 26, May 31, 1924, pp. 1309-1311, 3 figs. Facilities at Clinton, Ill., consist of three deep wells equipped with turbine pumps and 50,000-gal.-per-hr. water softener, all of which are electrically driven, together with filters, pipe lines, and additional storage tank having capacity of 100,000 gal. See also Ry. Eng. & Maintenance, vol. 20, no. 6, June 1924, pp. 233-236, 5 figs.

**Irrigation.** An Electrically Operated Irrigation Plant. C. W. Geiger. Nat. Engr., vol. 28, no. 6, June 1924, pp. 259-261, 3 figs. Description of irrigation pumping plant of River Farm company in California; capacity 504,000,000 gal. per day; screw pumps designed to operate very efficiently at low heads and driven by synchronous motors constitute present equipment.

**Irrigation Pumping Machinery** (Gezira Scheme), Sudan. R. W. Allen. Engineering, vol. 117, nos. 3046 and 3047, May 16 and 23, 1924, pp. 654-656 and 685-687, 11 figs. Object of scheme is to provide, for purpose of growing cotton, irrigation of northern portion of Gezira plain; construction details of Wad-el-Nau pumping station; drainage arrangements; suction wells and pipes; discharge pipes; labor employed on erection; trials of machinery. See also Engineer, vol. 137, no. 3568, May 16, 1924, pp. 549-550, 5 figs.

#### PUMPS

**Air-Lift.** An Experimental Study of Air-Lift Pumps. C. N. Ward. Eng. & Contracting (Water Works), vol. 61, no. 6, June 11, 1924, pp. 1273-1278, 6 figs. Conclusions from investigation of 13 air-lift pumps at hydraulic laboratory of Univ. of Wis.

**Gas.** In This Gas Pump Water Acts as a Piston. F. J. Taylor. Fire & Water Eng., vol. 75, no. 20, May 14, 1924, pp. 1001, 1054 and 1056, 4 figs. An English self-contained internal-combustion gas pump, resulting energy of which is used to pump water without assistance of connecting rod, crankshaft or other parts.

#### PUMPS, CENTRIFUGAL

**Electric vs. Steam Drive.** Electric Motors for Driving Centrifugal Water Pumps. E. G. Sohler. Chem. & Met. Eng., vol. 30, no. 21, May 26, 1924, pp. 832-833, 3 figs. Comparison of cost of pumping water by this method, using central-station current with steam turbine and engine drives.

## R

#### RAILS

**Rupture.** Split Head Type of Rail Rupture. Railroad Herald, vol. 28, no. 6, May 1924, pp. 26-28, 2 figs. Abstract of report of J. E. Howard, on accident which occurred Nov. 21, 1923 on Phila. & Reading Ry., near Annville, Pa., which was due to fracture of a rail which displaced a split-head type of rupture.

**Steel, Milling.** Late Developments in Steel Rail Practice. C. W. Gennet, Jr. Iron Age, vol. 113, no. 24, June 12, 1924, pp. 1721-1722. Lengths of 39 ft. with ends milled; tie plates, from steel from top of ingots; improved hot-bed treatment regarded important.

**Wheel Stress on.** The Othograph of the General Electric Company. Ry. & Locomotive Eng., vol. 37, no. 6, June 1924, pp. 163-168, 5 figs. Instrument designed to measure lateral and vertical stresses imposed on rails.

#### RAILWAY ELECTRIFICATION

**Switzerland.** Main Line Railway Electrification. Phil. Dawson and S. Parker Smith. Engineer, vol. 137, no. 3571, June 6, 1924, pp. 633-636, 23 figs. partly on supp. plate. Electrification of Swiss railways; reasons for electrification; choice of system; tabular data on electric rolling stock on Swiss railways; present state of electrification; Berne-Loetschberg-Simplon railway. Includes tabular data on supp. plate of different lines.

**Virginian Ry.** The Virginian Railway Electrification. H. K. Smith. Ry. Age, vol. 76, no. 27, June 7, 1924, pp. 1353-1358, 9 figs. Outline of conditions which caused management to adopt electric traction; electric locomotives; plan of operation with electric locomotives; power equipments; transmission and distribution system. See also Ry. Elec. Engr., vol. 15, no. 6, June 1924, pp. 169-174, 10 figs.

#### RAILWAY MOTOR CARS

**Development.** Automotive Rail-Cars and Their Development. Soc. Automotive Engrs.—JI, vol. 14, no. 6, June 1924. Contains following papers: The

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

Modern Motor Rail-Car, M. L. McGrew, pp. 649-656, 4 figs.; Motorized Railroad Equipment, E. J. Brennan, pp. 656-659, 2 figs.; Motorization of "Light-Service" Rail-Transportation, E. Wanamaker, pp. 659-662.

**Gasoline.** New Swedish Rail Cars (Neue Autotriebwagen für Schweden), Breuer, Glaser Annalen, vol. 94, no. 10, May 15, 1924, pp. 133-134, 2 figs. One-man cars for operation on Swedish railways, built in Germany, equipped with Buessing gasoline motors and Jaeger roller bearings, and heated by exhaust gases.

**Motorized Passenger Coach.** Gasoline Motorized Coach Minnesota Dakota & Western Ry. Ry. Rev., vol. 74, no. 21, May 24, 1924, pp. 934-935, 3 figs. Gasoline motor power equipment which may be applied to existing passenger coaches accomplishing their conversion to efficient type of motor car.

**Narrow-Gage.** Internal-Combustion Rail Coach for the Barbados Government Railway, Ry. Gaz., vol. 40, no. 22, May 30, 1924, pp. 774-776, 4 figs. New design for narrow-gage traffic on lines having steep gradients; built by Drury Car Co.

#### RAILWAY OPERATION

**Great Western Ry.** The Bristol Division of the Great Western Railway, Ry. Gaz., vol. 40, no. 21, May 23, 1924, pp. 739-734, 4 figs. Describes Great West. Ry. traffic methods and equipment of Bristol Division.

**Train Control.** Hearing on Automatic Train Control at Washington, Ry. Rev., vol. 74, nos. 20 and 21, May 17 and 24, 1924, pp. 888-889 and 893-896, and 927-929 and 933-934. Testimony of railroad, signal engineers and representatives of manufacturers before Interstate Commerce Commission. See also Ry. Age, vol. 76, no. 25, May 24, 1924, pp. 1255-1258.

New Design of Brookins Train Control, Ry. Signaling, vol. 17, no. 6, June 1924, pp. 247-249, 7 figs. Features normally raised descending-type show and flexible brush contact.

**Train Despatching.** Recent Developments in Telephone Train Despatching Circuits, Wm. H. Capen, Ry. Signaling, vol. 17, no. 6, June 1924, pp. 253-256, 15 figs. Line-transmission equipment, train-despatching circuits and location of apparatus. (Abstract.) Paper presented before Telegraph and Telephone Section, Am. Ry. Assn.

The "Dispatching System" by Telephone on the Belgian State Railways, H. De Caestecker, Int. Ry. Congress Assn.—Bul., vol. 6, no. 5, May 1924, pp. 331-395, 20 figs. New method of controlling running and composition of trains. Lines on which "dispatching system" is already in operation or on which its adoption has been decided upon or is under consideration; administrative organization of system; choice of staff; financial results.

#### RAILWAY REPAIR SHOPS

**Car Repairs.** A Construction Study of Railroad Car Repairs, Ry. Rev., vol. 74, no. 23, June 7, 1924, pp. 989-999, 14 figs. Results of extended investigation of actual facilities with view to suggestions for introduction of economies and elimination of losses.

**Machine Tools and Methods.** Southern Pacific Repairs, H. Campbell, Am. Mach., vol. 60, no. 24, June 12, 1924, pp. 869-872, 14 figs. Saving time and work by use of air cylinders; ball-bearing roller tools; friction chuck for taps and reamers; turning lift shafts; and other tools employed in repair shop at Houston, Tex.

**Santa Fe Ry., Albuquerque, N. M.** Improved Shop Operation of Albuquerque, N. M. Ry. Mech. Engr., vol. 98, no. 6, June 1924, pp. 333-342, 12 figs. New Santa Fe shops repaired 302 locomotives in 1923; marked reduction in man-hours per engine.

**Southern Pacific Lines.** Southern Pacific Lines Extending Repair Facilities, Ry. Rev., vol. 74, no. 20, May 17, 1924, pp. 881-884, 6 figs. Building program; extensions to El Paso, San Antonio and Houston shops, together with complete oil fuel-handling plant at El Paso, modern engine terminal at Lafayette, and replacement of coach paint shop at Houston.

**Street-Car.** Shop and Storage for Eighth Avenue Road, Elec. Ry. J., vol. 63, no. 22, May 31, 1924, pp. 849-852, 7 figs. New York City line rebuilds old foundry for repair and inspection shops, at 155th Street and Eighth Ave.; storage yard for cars is without special trackwork on account of expensive conduit construction; transfer tables used as substitute; new type of slot-track construction.

#### RAILWAY SHOPS

**Locomotive.** Locomotive Boiler Work in a Modern British Shop, Eng. Production, vol. 7, no. 140, May 1924, pp. 142-143, 5 figs. Notes on equipment and methods employed at Elswick Works of W. G. Armstrong, Whitworth & Co., Ltd., at Newcastle-on-Tyne.

#### RAILWAY SIGNALING

**Automatic Block.** Engineering and Installation of Automatic Block Signals, L. R. Stahl, Ry. Signaling, vol. 17, no. 6, June 1924, pp. 242-243. Method of selling signaling to operating men; estimating and securing authority for installation; detail plans and construction program.

**Brake-Distance Calculation.** Calculating Brake Distance by Chart, C. A. Melhuish, Ry. Signaling, vol. 17, no. 5, May 1924, pp. 204-205, 2 figs. Chart for establishing overlap distances devised according to formulas.

**Colored-Light Signals.** New Signals on Burlington Expedite Traffic, Ry. Age, vol. 76, no. 25, May 24, 1924, pp. 1260-1262, 3 figs. Delays reduced from 15 min. to hour by replacing positive block with automatic; color-light automatic signal installation placed in service between Guernsey, Wyo., and Wendover.

**Increasing Track Capacity.** How Signals In-

crease Track Capacity, Ry. Signaling, vol. 17, no. 5, May 1924, pp. 198-200. Contest papers, sponsored by this journal, as follows: Increasing Track Capacity by Signaling, Geo. S. Pfisterer; Automatics Help on the I. C., C. W. Shaw; Signaling Delays Double Track on Branch of Pennsylvania, L. L. Banks; Signaling Postposed Heavier Expenditures on N. & W., R. H. Smith; Cash Saving Accomplished by Signals on the B. & O., J. C. Hoffman.

**Interlocking.** New Plant on the Pennsylvania, F. A. Beck, Ry. Signaling, vol. 17, no. 5, May 1924, pp. 191-194, 8 figs. Installation of low-pressure electropneumatic interlocking at Aspinwall, Pa., replaces three old mechanical plants at saving of \$36,690 per yr.

**Single-Track.** Single Track Signaling on C. B. & Q. Ry. Signaling, vol. 17, no. 6, June 1924, pp. 230-233, 9 figs. Delco generator used as power source for a.c. floating system; unique control for tunnel protection.

**Track Circuiting.** Maintenance of D. C. Track Circuits, R. J. Cox, Ry. Signaling, vol. 17, no. 5, May 1924, pp. 205-206. Track-circuit troubles and their causes; bonding and track connection as cause of trouble.

#### RAILWAY SWITCHES

**Automatic Block.** The Switches of Automatic Section-Block Installations (Die Schaltungen der selbsttätigen Streckenblockanlagen), Arndt, Siemens-Zeit., vol. 4, nos. 3 and 4-5, Mar. and Apr.-May 1924, pp. 89-93 and 108-112, 14 figs. Describes system of Siemens & Halske.

**Spring.** Spring Switches Reduce Delays on Santa Fe, D. K. Crawford, Ry. Age, vol. 76, no. 26, May 31, 1924, pp. 1313-1314, 3 figs. Installations at ends of passing tracks and yard outlets under signal protection prevent train stops. See also Ry. Eng. & Maintenance, vol. 20, no. 6, June 1924, pp. 222-223, 3 figs.

Use Spring Switches to Eliminate Interlockers on Santa Fe, D. K. Crawford, Ry. Signaling, vol. 17, no. 6, June 1924, pp. 244-245, 5 figs. Novel method of operating yard and siding turnouts, and savings produced.

#### RAILWAY TIES

**Tests.** Tests of Substitute Ties, Eng. & Contracting (Railways), vol. 61, no. 5, May 21, 1924, pp. 1123-1129, 8 figs. Reports from railways making tests, submitted at annual convention of Am. Ry. Eng. Assn., as Appendix A of report of Committee on Ties.

**Treating Plant.** New Tie-Treating Plant on the Oregon-Washington R. R., Eng. News-Rec., vol. 92, no. 21, May 22, 1924, pp. 894-896, 6 figs. Four retorts for zinc-chloride process; long narrow tie storage yard served by hammer-head gantry crane; methods of treatment.

#### REFRIGERATING PLANTS

**Tests.** Additional Data Regarding the Reliability of Fluid Meters in Refrigerating Tests, L. S. Morse, Refrig. Eng., vol. 10, no. 11, May 1924, pp. 385-398 and (discussion) 398-404, 12 figs. Results of comparisons and calculations of orifice, brine venturi, water venturi, and ammonia venturi meters.

#### REFRIGERATION

**Meat and Fish.** New Investigations on the Preservation of Meat and Fish by the Freezing Process, Ice & Cold Storage, vol. 27, no. 314, May 1924, pp. 114-116, 8 figs. Changes on tissue of interior organs, heart, liver, kidneys, and spleen that result from freezing process. From article by E. Kallert in Zeit. für die Gesamte Kälte Industrie.

#### REGULATORS

**Arca.** Arca Regulators at the British Empire Exhibition, Engineering, vol. 117, no. 3048, May 30, 1924, pp. 714-716, 7 figs. Recent applications of system and improved forms of components lately introduced and shown by firm at Exhibition.

#### RESEARCH

**Industrial, Utilization of Statistics in.** The Utilization of Statistics, A New and Valuable Aid in Industrial Research and in the Evaluation of Test Data, K. H. Daevs, Testing, vol. 1, no. 3, Mar. 1924, pp. 173-189, 11 figs. Attempt is made to apply results of experience to industrial research; demonstration is given, by a number of examples, of how new "large figure research" may be applied to plant operation, to testing of materials, and control of services rendered, and how important conclusions may be drawn from the very simple application of method; relation is established in which this statistical research stands to pure science, its value to industrial research and operating engineer is demonstrated, and other fields of application are intimated.

#### RIVETED JOINTS

**Slip in Single and Repetitive Loading.** Slip of Riveted Joints in Single and Repetitive Loading, D. H. Blakelock, Eng. News-Rec., vol. 92, no. 23, June 5, 1924, pp. 972-973, 3 figs. Results of 70 tests carried out at Cornell University on butt joints indicate first slip at average rivet shear of 5900 lb. per sq. in.

#### RIVETING

**Machines.** Hydraulically Compressed Boiler Riveting (Hydraulisch gepresste Kesselriemung), Schiffbau, vol. 25, no. 12, Mar. 26, 1924, pp. 310-312, 6 figs. Describes stationary and portable types of hydraulic riveting machines and their operation.

#### ROLLING MILLS

**Atlantic Steel Co., Atlanta, Ga.** A Southern Rolling Mill, M. P. Lawton, Blast Furnace & Steel Plant, vol. 12, no. 6, June 1924, pp. 291-294 and 305, 9 figs. Equipment and methods of Atlantic Steel Co.'s plant, Atlanta, for manufacture of hoop and cotton ties.

**Sheet Mills.** Sheet Steel Plant on Pacific Coast, Iron Age, vol. 113, no. 23, June 5, 1924, pp. 1650-1652, 5 figs. Six-mill installation put in operation by Pac. Sheet Corp. at South San Francisco, Cal.; blue annealed, black and galvanized sheets to suit local market.

#### ROLLS

**Grinding.** How Chilled Iron Rolls are Ground, Abrasive Industry, vol. 5, no. 5, May 1924, pp. 119-122, 5 figs. Special machines are provided for finishing steel-mill rolls. Value of grinding over turning.

## S

#### SCREW MACHINES

**Magazine Attachments.** Design of Magazine Attachments, A. A. Dowd, Machy. (N. Y.), vol. 30, no. 10, June 1924, pp. 771-773, 4 figs. Problems of design; details of bar-stock magazine.

#### SEAPLANES

**Metal.** The L. F. G.-V20a Commercial Airplane (Das Verkehrsflugzeug "L.F.G.-V20a"), R. Rosoph, Motorwagen, vol. 27, no. 13, May 10, 1924, pp. 223-224, 3 figs. Improved type of metal seaplane with empty weight of 1150 kg.

#### SEPARATORS

**Ash and Fuel.** A New Fuel-Recovery Plant (Ash Washer) [Ein neuer Brennstoffrückgewinner (Schlackenwäscher)], H. Kiesel, Gas- u. Wasserfach, vol. 67, no. 12, Mar. 22, 1924, pp. 153-154, 2 figs. New type of ash separator, known as eukonomator, employed at gas works in Heilbronn, Germany, which has not heretofore been described.

Recovering Unburned Fuel and Other Matter from Ash, C. H. S. Tupholme, Gas Age-Rec., vol. 53, no. 20, May 17, 1924, pp. 679-682, 7 figs. Description of British apparatus employed for this purpose with results of operation; a type of washer, known as the Columbus, which is actuated by difference in specific gravity between coke and clinker.

#### SHEET METAL

**Standardization.** Standardization of Sheet Metal, L. D. Mercer, Sheet Metal Worker, vol. 15, no. 9, May 23, 1924, pp. 327-328 and 350. Facts about waste in this industry, with recommendations on its elimination and on expansion of business.

#### SPECIFIC HEAT

**Liquid and Its Vapor.** The Difference of the Specific Heats, at Constant Volume, of a Liquid and Its Vapor (Ueber die Differenz der spezifischen Wärmen, bei konstantem Volumen, einer Flüssigkeit und ihres Dampfes), A. Brandt, Annalen der Physik, vol. 73, no. 5-6, Feb. 1924, pp. 412-414. Shows that specific heat at constant volume consists of two quantities: (a) constant specific heat; (b) varying quantity of heat which on raising temperature 1 deg. cent. is used up in dissociation.

#### STEAM ENGINES

**Admission and Exhaust in.** The Zeuner Valve Diagram, H. Smith, Pacific Mar. Rev., vol. 21, no. 5, May 1924, pp. 269-270, 1 fig. Practical use and solution of Zeuner diagram, a method by which a study of the various conditions governing admission and exhaust of steam can be made, in order to obtain a more thorough knowledge of events which take place inside cylinder. Relation to valve positions and indicator diagram.

**Rolling Mills.** British Rolling Mill Engine Design, Johnstone-Taylor, Iron Age, vol. 113, no. 24, June 12, 1924, pp. 1717-1719, 5 figs. Large and massive engines of marine type with special features; both horizontal and vertical 3-cylinder designs.

#### STEAM GENERATORS

**Benson High-Pressure.** The Scientific Principles of the Benson High Pressure Steam Generator, D. Brownlie, Eng. & Boiler House Rev., vol. 37, no. 10, May 1924, pp. 358-360, 2 figs.

#### STEAM PIPES

**Calculation.** Calculation of Steam Piping (Berechnung von Dampfleitungen), Praktische Maschinen-Konstrukteur, vol. 57, no. 10, Mar. 25, 1924, pp. 118-121, 6 figs. Method for determination of pressure and heat losses in steam pipes.

**High-Pressure.** Progress in High Pressure Piping Details, Power Plant Eng., vol. 28, no. 12, June 15, 1924, pp. 656-657. Recent tests show effects of expansion stresses in pipe; progress being made in flange-bolt materials and design. (Abstract.) Report of Prime Movers Committee of N.E.L.A.

#### STEAM POWER PLANTS

**Bonus Systems for.** Practical Bonus Systems for Power Plants, G. Burgess, Nat. Engr., vol. 28, no. 6, June 1924, pp. 255-258, 4 figs. Outline of bonus system methods for average power plant. Value of a bonus system in increasing interest of operators and efficiency of plant.

**British and American Practice.** Power Station Practice and Progress, W. H. Patchell, Power Plant Eng., vol. 28, no. 11, June 1, 1924, pp. 611-612. Comparison of British and American practice. (Abstract.) Address before (Brit.) Inst. Mech. Engrs.

**Modern Economical Developments.** The Influence of Modern Thermotechnical Development on Power-Plant Design (Der Einfluss der neueren wärmetechnischen Entwicklung auf den Kraftwerksbau), F. Ohlmüller, Elektrotechnische Zeit., vol. 45, no. 17, Apr. 24, 1924, pp. 385-389, 9 figs. It is shown

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

that modern furnace types permit development of larger boiler units, and larger boilers permit savings in cost of installation; position and arrangement of economizer has great bearing on design and costs of boiler houses; the Benson process; design and advantages of multi-cylinder Brünnert-type turbines.

**Oil Refinery.** Vacuum Oil Co. Plant at Paulsboro, N. J. Power Plant Eng., vol. 28, no. 12, June 15, 1924, pp. 31-636, 9 figs. All electric power used in refining processes is generated at plant by turbo-generators at potential of 2300 volts; all turbines operate non-condensing against back pressure of about 20 lb.; details of boiler room and furnace design.

**Wood-Refuse Burnin.** New Plant of American Seating Co. Burns Wood Refuse. Power, vol. 59, no. 23, June 3, 1924, pp. 892-897, 8 figs. Model 1500-kw. industrial plant employing condensing turbo-generators with bleeder connections to balance exhaust-steam demands; high-pressure steam supplied to manufacturing departments.

#### STEAM TURBINES

**Assembling Runners.** Assembling 15,000-Horsepower Impulse-Turbine Runners, Ralph Brown. Power, vol. 59, no. 22, May 27, 1924, pp. 867-868, 3 figs. Methods employed in assembling rotor spiders for 22,222-kva. generator.

**Developments.** Developments in Steam-Turbine Field, E. H. Brown. Power, vol. 59, no. 25, June 17, 1924, pp. 989-992, 2 figs. Steam turbine from its inception in 1884, with particular reference to recent developments in American and European practice, such as general application of stage heating, use of high pressures with superheating, and improvements designed to give high efficiency at moderate peripheral velocities for rotating parts. Paper presented at W. Utilities Assn.

**Mixed-Pressure.** Mixed-Pressure Turbine versus a New Steam Plant, F. S. Vontsey. Power, vol. 59, no. 24, June 10, 1924, pp. 934-936, 3 figs. To supply power to new mine  $4\frac{1}{2}$  mi. distance, mixed-pressure turbine in home plant was selected over steam plant at new mine or additional high-pressure capacity in original plant; salient features are condenser and cooling-water installations.

#### STEEL

**Alloy.** See ALLOY STEELS.

**Identification by Grindstone Sparks.** Differentiation of Steels by Examination of the Grindstone Sparks in Air and in Oxygen (Différenciation des aciers par l'examen des étincelles de meulage dans l'air et dans l'oxygène), E. Pitois. Académie des Sciences—Comptes Rendus, vol. 178, no. 11, Mar. 10, 1924, pp. 942-944. By placing sheet of glass in path of sparks and examining incrustations so obtained, it is found that, in air, most of particles obtained by grinding from ordinary steels undergo fusion; these incrustations are not wholly pearlitic, but exhibit wide regions of ferrite resulting from decarburization, latter becoming complete in atmosphere of oxygen; photographic representations of sparks were obtained; this method of examination is of special value for valve steels.

**Structural.** See STRUCTURAL STEEL.

#### STEEL CASTINGS

**Design.** Designing Steel Castings, E. R. Young. Machy. (N. Y.), vol. 30, nos. 9 and 10, May and June 1924, pp. 701-703 and 790-792, 8 figs. Problems encountered in production. May: Pattern design; effect of dry sand and green sand molds on shrinkage; cores; rig design; size and shape of castings; chemical composition; finish allowances. June: Engineering or structural design; castings of intricate design; fatigue strength of castings.

**Manufacture.** The Manufacture of American Steel Castings, W. H. Woodhall. Foundry Trade J., vol. 29, no. 404, pp. 399-401. Molding methods, acid or basic melting, physical properties and tests, dirty versus clean steel, sampling, cleaning and inspection, annealing furnaces, annealing period, etc.

#### STEEL HEAT TREATMENT OF

**Carburizing.** Practical Views on Carburizing, J. Sorenson. Fuels & Furnaces, vol. 2, no. 6, June 1924, pp. 583-584 and 587-588, 2 figs. Outlines the various thermal treatments in carburizing and results to be secured with each.

**Production Methods.** Heat-treatment of Steel with Special Reference to Production, J. W. Urquhart. Machy. (Lond.), vol. 24, no. 608, May 22, 1924, pp. 230-233. Locomotive and car-axle treatments; mild treatment; production of unequal stresses; importance of reduction forging and steel selection for this work; quenching media; dynamic endurance and tensile strength; quenching of coreless pieces.

#### STEEL MANUFACTURE

**Austria.** Böhler Steel, H. Obermeyer and A. L. Greene. Blast Furnace & Steel Plant, vol. 12, no. 6, June 1924, pp. 281-284, 4 figs. Practice and equipment of the steel works of Böhler Bros. & Co. in Austria.

**Ordnance Steel.** Making Steel for Ordnance Use, J. B. Rhodes. Iron Trade Rev., vol. 74, no. 22, May 29, 1924, pp. 1429-1430 and 1433. Points out that reduction of iron oxide to minimum is essential; sulphur and phosphorus should be eliminated; steel quality affected by slag; shop-practice instructions are suggested. (Abstract.) Paper presented before Am. Iron & Steel Inst.

**Processes.** The Manufacture of Iron and Steel and Tubular Products, R. J. Kaylor. St. Louis Ry. Club—Proc., vol. 28, no. 12, Apr. 11, 1924, pp. 258-273. Describes some of the major processes connected with manufacture of steel of various kinds.

#### STEEL WORKS

**Developments.** A Gigantic Automaton, A. R. R.

Jones. Iron & Steel of Canada, vol. 7, nos. 4 and 6. Apr. and June 1924, pp. 61-65 and 99-103, 12 figs. Part that mechanism is playing in steel industry, and amelioration that has lately taken place in working conditions.

#### STOKERS

**Efficiency.** Calculation of. Computing Guaranteed Stoker Efficiency, H. F. Gauss. Power, vol. 59, no. 22, May 27, 1924, pp. 858-860, 3 figs. Deals with unaccountable losses, moisture in coal, available hydrogen content and combustible matter in ash.

**Water-Tube and Cylindrical Boilers.** Mechanical Stokers and Boiler Furnaces, Eng. & Boiler House Rev., vol. 37, no. 11, June 1924, 18 pp. between pp. 397-422, 19 figs. Notes on present-day practice describing some leading types in use for water-tube and cylindrical boilers.

#### STRESSES

**Shearing, on Flat Elastic Strips.** On the Stability under Shearing Forces of a Flat Elastic Strip, R. V. Southwell and S. W. Skan. Royal Soc.—Proc. vol. 105, no. A 733, May 1, 1924, pp. 582-607, 6 figs. Investigation relating to a flat elastic strip, of uniform breadth, thickness and material, upon which a uniform shear is imposed by tangential tractions applied at its edges and in its plane.

#### STRUCTURAL STEEL

**Beauty in Structures.** The Beauty of the Forms of Iron and Steel Structures, Gruetz. Eng. Progress, vol. 5, no. 5, May 1924, pp. 96-99, 10 figs. Gives examples of designs produced by Maschinenfabrik Augsburg-Nürnberg (MAN), Gustavsburg Works, showing how interesting and beautiful forms may result, even when using such stubborn material as iron, if engineer and architect collaborate harmoniously.

#### SUPERPOWER

**Interconnection and.** Superpower and Interconnection, Herbert Hoover. Elec. World, vol. 83, no. 21, May 24, 1924, pp. 1078-1080. Points out that economical expansion is possible in these twin developments and shows necessity of keeping initiative free from deadening influence both of bureaucracy and of socialistic experiment. (Abstract.) Address before Nat. Elec. Light Assn.

## T

#### TERMINALS, LOCOMOTIVE

**Turntables.** Types of Turntable Developed for Heavier Locomotives. Eng. News-Rec., vol. 92, no. 23, June 5, 1924, pp. 964-967, 6 figs. Continuous and 2-span tables replace cantilever type; larger and heavier locomotives introduce problems not present with light power; lower maintenance cost and quicker operation.

#### TEXTILE MACHINERY

**Gas-Fired Hot-Air Furnace for.** Hot-Air Furnaces with Gas Firing (Heissluftofen mit Gasfeuerung), Riemer. Gas- u. Wasserfach, vol. 67, no. 14, Apr. 5, 1924, pp. 182-184, 3 figs. Describes gas-fired hot-air furnace for heating of textile machines; results of preliminary tests; economy and efficiency.

#### TEXTILES

**Fibers, Elasticity of.** An Investigation of the Nature of the Elasticity of Fibres, S. A. Shorter. Textile Inst.—Jl., vol. 15, no. 4, Apr. 1924, pp. T207-T229, 14 figs. Experimental investigation of fiber elasticity. Formulates theory of fiber elasticity, basis of which is a dynamical model, which imitates behavior of a fiber. Properties of actual fibers studied in light of this theory. Relation between behavior of fibers and that of yarns. Possible future development of work.

**Yarns.** Wearing Tests for Yarns and Some Observations on Reeds, G. F. New. Textile Inst.—Jl., vol. 15, no. 4, Apr. 1924, pp. T230-T236, 13 figs. Describes instruments developed with a view of obtaining by their means, both easily and quickly, knowledge of probable behavior of any particular yarn or dressing under working conditions.

#### TIRES, RUBBER

**Manufacturing Costs.** Tire Factory Manufacturing Costs, J. J. Dawson. India Rubber Wld., vol. 70, nos. 1, 2 and 3, Apr. 1, May 1 and June 1, 1924, pp. 436-438, 503-505 and 576-578, 8 figs. Continuous process system; purchases and material accounts; purchase register and material ledger; payroll and payroll analysis; production reports.

#### TOOLS

**Cutting Trials.** Tool-Steel and Cutting Trials, D. Smith and I. Hey. Mech. Wld., vol. 75, nos. 1947 and 1948, Apr. 25 and May 2, 1924, pp. 255-258 and 272-274, 9 figs. Investigation of behavior of tools when taking extremely fine cuts over a wide range of speeds and quality and treatment of tool steel most suitable for use under such conditions. Report of Lathe Tool Research Committee.

**Locating Holes in Angular Face.** Tool-room Formulae for Locating Holes in Work with Angular Faces. Machy. (Lond.), vol. 24, no. 607, May 15, 1924, pp. 201-203, 4 figs. Formulae developed for use of toolmaker when work requires accurate location of hole in angular face.

#### TRACTORS

**Caterpillar.** The M.T.W. Caterpillar Tractors (Der "M.T.W."-Raupenschlepper). Wirtschafts-motor, vol. 6, no. 3, Mar. 25, 1924, pp. 7-8, 3 figs. Type of small tractor developed by firm of Pöchl, Berlin, Germany.

**Farm.** Farm Tractors (Landwirtschaftliche Traktoren), L. von Münchow. Automobil-Rundschau, vol. 23, no. 5, May 1924, pp. 55-56, 5 figs. German types.

#### TRAFFIC

**Control.** Traffic Control by Wireless, R. Twelvetrees. Motor Transport (Lond.), vol. 38, no. 1006, June 9, 1924, pp. 714-716, 6 figs. How London Metropolitan Police Force engineers controlled flow of vehicles to and from Epsom on Derby Day. Explains general scheme and gives details of vehicles used as wireless tenders.

#### TUBES

**Copper, Manufacture of.** Manufacture of Brass and Copper Sheets and Seamless Drawn Tubes, A. Spittle. Metal Industry (Lond.), vol. 24, nos. 16, 17 and 18, Apr. 18, 25 and May 2, 1924, pp. 375-376, 399-402 and 427-430, 13 figs. In its broad outlines deals with methods common to the trade in general, and in detail with procedure practiced at a particular works. From paper before Bradford Eng. Soc.

## V

#### VAPORS

**Pressures.** Graphical Vapor Pressure and Specific Gravity Tables, H. G. Deming. Indus. & Eng. Chem., vol. 16, no. 6, June 1924, pp. 614-615, 3 figs. Tables present information commonly given in 40 or 50 pages of print in very much condensed form, and offer advantage of instant visual interpolation between values given in ordinary tables.

#### VENTILATION

**Air-Duct Calculations.** Cold Air Ventilating Ducts, H. J. Macintire. Southern Engr., vol. 41, no. 3, May 1924, pp. 47-49, 3 figs. Determining friction heat due to flow of air in ducts, and methods of designing air-duct systems.

**Department Stores.** Problems in Ventilation of Department Stores, A. M. Feldman. Am. Soc. Heat. & Vent. Engrs.—Jl., vol. 30, no. 1, Jan. 1924, pp. 24-28, 2 figs. System designed by author for ventilating ground floor of a large department store so as not only to provide an ample supply of fresh air large enough for an unlimited number of customers and sales force but also to eliminate all danger of drafts.

## W

#### WAGES

**Incentive Systems.** Installing Wage Incentive Systems that Work, E. Beck. Factory, vol. 32, no. 6, June 1924, pp. 826-829, 940, 941, 942 and 943, 4 figs. Describes system installed 10 years ago in an Indianapolis pharmaceutical plant which, it is claimed, has raised hourly wage of employees, reduced unit cost in factory, and materially bettered working conditions in laboratories.

#### WASTE HEAT

**Utilization.** Heat Utilization in the Sugar Refinery at Nestomitz (Die Energiewirtschaft in der Nestomitzer Zuckerraffinerie A.-G.), Niethammer. Archiv für Wärmewirtschaft, vol. 5, no. 5, May 1924, pp. 81-84, 6 figs. Installation of a new steam turbine has made it possible to utilize energy of superheated steam and to cover nearly one-quarter of requirements of a big system of power distribution.

The Utilization of Exhaust Steam (A propos de l'utilisation de la vapeur d'échappement), F. D'Espine. Chaleur & Industrie, vol. 5, no. 46, Feb. 1924, pp. 53-61, 8 figs. Calls attention to fuel economy which can be effected by rational utilization of waste heat, and gives numerical values showing profits which can be realized by installations for this purpose; examples of waste-heat installations.

#### WELDING

**Chemical Aspects.** Some Chemical Aspects of Welding, J. R. Boorer. Welding Engr., vol. 9, nos. 4 and 5, Apr. and May 1924, pp. 29, 44 and 46; and 29 and 32-33. Notes on physical phenomena; principles of oxidation and reduction. Paper read before Instn. Welding Engrs. See also Acetylene Jl., vol. 25, nos. 10 and 11, Apr. and May 1924, pp. 487-488 and 492-494, and 537-539.

**Electric.** See ELECTRIC WELDING; ELECTRIC WELDING, ARC.

**Fluxes and Slags in.** Fluxes and Slags in Welding, W. Spragen. Foundry Trade J., vol. 29, no. 405, May 22, 1924, pp. 414-416. Deals with fluxes in electric-arc and gas welding, and welding of monel metal and cast iron. Abridged from paper read at symposium arranged by Faraday Soc., Inst. Metals, Inst. British Foundrymen, and Non-Ferrous Research Assn.

**Oxy-Acetylene.** See OXY-ACETYLENE WELDING.

#### WIND TUNNELS

**Resistance of Spheres.** The Resistance of Spheres in Wind Tunnels and in Air, D. L. Bacon and E. G. Reid. Nat. Advisory Committee for Aeronautics—Report, no. 185, 1924, 21 pp., 18 figs. Satisfactory confirmation of Reynolds law has been accomplished, effect of means of support determined, range of experiment greatly extended by work in new variable-density tunnel, and effects of turbulence investigated by work in tunnels and by towing and dropping tests in free air.

# THE ENGINEERING INDEX

(Registered United States, Great Britain and Canada)

**THE ENGINEERING INDEX** presents each month, in conveniently classified form, items descriptive of the articles appearing in the current issues of the world's engineering and scientific press of particular interest to mechanical engineers. At the end of the year the monthly installments are combined along with items dealing with civil, electrical, mining and other branches of engineering, and published in book form, this annual volume having regularly appeared since 1906. In the preparation of the Index by the engineering staff of The American Society of Mechanical Engineers some 1200 technical publications received by the Engineering Societies Library (New York) are regularly reviewed, thus bringing the great resources of that library to the entire engineering profession.

Photoprint copies (white printing on a black background) of any of the articles listed in the Index may be obtained at a price of 25 cents a page. When ordering photoprints identify the article by quoting from the Index item: (1) Title of article; (2) Name of periodical in which it appeared; (3) Volume, number, and date of publication of periodical; (4) Page numbers. A remittance of 25 cents a page should accompany the order. Orders should be sent to the Engineering Societies Library, 29 West 39th Street, New York.

(See also page 574 of this issue for supplementary items.)

## AERONAUTICAL INSTRUMENTS

**Rate-of-Climb Recorders.** Optical Rate-of-Climb Recorders—Their Uses, Theory, and Description, A. H. Mears and D. H. Strother. Optical Soc. of Am.—Jl., vol. 8, no. 6, June 1924, pp. 787-801, 7 figs. Describes instruments developed by staff of Bur. Standards at request and with financial assistance of Air Service, U. S. Army, and Bur. Aeronautics, U. S. Navy.

## AIRCRAFT CONSTRUCTION MATERIALS

**Three-Ply.** Three-Ply and Its Uses in Aircraft Construction, R. N. Liptrot. Instn. Aeronautical Engrs., Min. of Proc. No. 8, 1923, pp. 7-17 and (discussion) 18-22. Discusses physical properties of plywood; shrinkage and prevention of warping; effect of number of plies; figures for use in design; method of manufacture; true monocoque fuselage, semi-monocoque type, and three-ply braced fuselages. Abstract of paper read before Instn. Engrs.' Club.

## AIRPLANE ENGINES

**Radiators.** The Andre Hexagonal Tube Radiator, R. F. Steidel. Aviation, vol. 16, no. 26, June 30, 1924, pp. 697-698, 7 figs. Basic feature of improved honeycomb radiator manufactured by French concern; results of official tests; how weight is saved.

## AIRPLANE PROPELLERS

**Design and Performance Calculations.** The Application of Propeller Test Data to Design and Performance Calculations, W. S. Diehl. Nat. Advisory Com. for Aeronautics, report no. 186, 1924. Study of test data on family of Durand's propellers (nos. 3, 7, 11, 82, 113, 139).

## AIRPLANES

**German.** German Light Airplanes (Deutsche Leichtflugzeuge), W. v. Langsdorff. Luftfahrt, vol. 28, no. 4, Apr. 1924, pp. 64-67, 5 figs. Structural and technical details of Daimler 7 to 9-hp. airplane and account of author's record flight with this machine.

**Prague Show.** The Third International Aero Show at Prague. Flight, vol. 16, nos. 23, 24 and 25, June 5, 12 and 19, 1924, pp. 356-365, 380-386 and 395-401, 81 figs. June 5: Descriptions of Czechoslovak airplanes exhibited. June 12: Descriptions of French and German airplanes exhibited. June 19: Construction of machines that merit closer inspection.

**Wings.** A Generalization of the Schukowsky Wing Model (Eine Verallgemeinerung der Schukowskyschen Flügelbildung), A. Betz. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 10, May 26, 1924, p. 100, 2 figs. Points out that by slight change in original Schukowsky method, useful profiles can be obtained.

**Calculation of Self-Contained Wings in Two- and Three-Ribbed Rigid-Frame Form [Zur Berechnung freitragender Flugzeugflügel in zwei- und dreiholmiger Stützrahmenform (Vierendeel-Rostträger)], K. Thälau. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 10, May 26, 1924, pp. 103-109, 15 figs. Calculations for both two-ribbed and three-ribbed wings.**

**Experimental Results with Slotted Wings (Neuere Versuchsergebnisse mit Spaltflügeln), G. Lachmann. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 10, May 26, 1924, pp. 109-116, 20 figs. Influence of arrangement of slots; reduction of profile resistance with normal flight; improvement of steering capacity with lower speeds.**

**Wood, Use in Construction.** Some Recent Developments in the Use of Wood in Airplane Construction, W. M. Moore. Jl. of Forestry, vol. 22, no. 4,

Apr. 1924, pp. 353-371. Kinds of wood used, species of wood permitted by Air Service specifications, use of plywood, defects in wood which affect its suitability for airplane manufacture, storage of airplane parts, balloon baskets, and wood versus metal in airplane construction.

## AIRSHIPS

**Atmospheric Electricity, Effect on.** Airship Flight and Atmospheric Electricity (Luftschiffahrt und atmosphärische Elektrizität), E. Herrera. Luftfahrt, vol. 28, no. 4, Apr. 1924, pp. 59-61, 6 figs. Study of storm hazard with regard to balloon and airship flight. Translated from Spanish.

**Italian.** The Italian N-Airship (Das italienische N-Luftschiff), W. Scherz. Luftfahrt, vol. 28, no. 4, Apr. 1924, pp. 62-64, 3 figs. Structural details of airship developed by U. Nobile, with carrying capacity of 20 passengers, and equipped with three 240-hp. Maybach engines; max. speed, 100 km. per hr.

## ALLOY STEELS

**Brittle Range.** Brittle Range in Low-Alloy Steels, M. A. Grossman. Iron Age, vol. 114, no. 3, July 17, 1924, pp. 149-151, 4 figs. Behavior of austenite during quenching and drawing a probable cause. Sensitive method of measuring change in volume.

**Development.** The Development of Alloy Steels, R. Hadfield. Iron & Coal Trades Rev., vol. 108, no. 2939, June 27, 1924, pp. 1120-1122, 1 fig. Gives comprehensive survey, largely historical, of development of alloy steels and important position they have attained in metallurgical and engineering industries. Paper read before Iron & Steel Sec., Empire Min. & Met. Congress.

**Locomotives.** Alloy Steels versus Carbon Steels for Locomotives, Ry. Engr., vol. 45, no. 533, June 1924, pp. 198-200. Review of subject of alloy steel, advantages of "straight" carbon steels, case-hardening steel, special steels for locomotive work, and alloy-steel "defects."

## ALLOYS

**Aluminum.** See ALUMINUM ALLOYS.

**Copper.** See COPPER ALLOYS.

**Corrosion-Resisting, Properties of.** Tabular Presentation of Chemical and Physical Properties of Corrosion-Resisting Alloys. Chem. & Met. Eng., vol. 31, no. 2, July 14, 1924, pp. 79-83. Tables incorporated that part of systemized compilation made by a committee of members of Am. Soc. for Testing Mats. of available data regarding those alloys having iron, nickel or copper as predominating element and offering resistance to various destructive agencies, which is of value to chemical engineer.

## ALUMINUM ALLOYS

**Use on Board Ship.** Aluminum and Aluminum Alloys for Use on Board Ship, E. M. Hewlett and D. Basch. Am. Soc. Nav. Engrs.—Jl., vol. 36, nos. 1 and 2, Feb. and May 1924, pp. 1-17 and 288-301. Feb.: Fabricated alloys; rolling; forging. May: Soldering of aluminum; welding; aluminum in contact with other metals; use for electrical purposes.

## APPRENTICES, TRAINING OF

**Germany.** Workers' Education and Training. Monthly Labor Rev., vol. 18, no. 5, May 1924, pp. 178-181. Apprenticeship on German State railroads and in Berlin metal industry.

## ASH HANDLING

**Plants.** Ash-Removing Plants (Entschungsanlagen), H. Esselbach. Wärme, vol. 47, no. 22, May 30, 1924, pp. 255-256, 3 figs. Describes plants of Roath Power Works in Cardiff and of Underfeed Stoker Co.

lagen), H. Esselbach. Wärme, vol. 47, no. 22, May 30, 1924, pp. 255-256, 3 figs. Describes plants of Roath Power Works in Cardiff and of Underfeed Stoker Co.

## AUTOMOBILE ENGINES

**Air Cleaners.** Air-Filters, L. L. Dollinger. Soc. Automotive Engrs.—Jl., vol. 15, no. 1, July 1924, pp. 66-68. Effect of road dust and grit on cylinders and valves; benefits derived from filtering air; requirements of a filter.

**Recent Observations of Air-Cleaning Devices,** C. P. Grimes. Soc. Automotive Engrs.—Jl., vol. 15, no. 1, July 1924, pp. 63-65, 1 fig. Author summarizes his experiences and conclusions covering last 3 years. Reasons and experiences leading up to recommendation of self-ejecting centrifugal dry air cleaner.

**Testing of Air-Cleaners,** A. B. Squyer. Soc. Automotive Engrs.—Jl., vol. 15, no. 1, July 1924, pp. 33-37, 5 figs. Requirements of a good air cleaner are maximum efficiency, minimum of attention from operator and minimum power loss. Deals with development of laboratory methods to determine relative values of various air cleaners as such, especially first requirement, maximum efficiency.

**Crankcase-Oil Dilution.** A Possible Solution of the Crankcase-Oil Dilution Problem, I. L. Anderson. Soc. Automotive Engrs.—Jl., vol. 15, no. 1, July 1924, pp. 43-46, 6 figs. Describes method which consists of removing gasoline from crankcase by ventilation; apparatus used and results of tests.

**Water in Crankcase Oils,** A. L. Clayden. Soc. Automotive Engrs.—Jl., vol. 15, no. 1, July 1924, pp. 47-50, 3 figs. Effect of using an emulsifying oil; amounts of water actually deposited because of cylinder-wall condensation; effects on lubrication; determination of water-deposition rate.

**Oil Consumption and Dilution.** Engine-Oil Consumption and Dilution, N. MacCull. Soc. Automotive Engrs.—Jl., vol. 15, no. 1, July 1924, pp. 93-100, 15 figs. First results of tests made by Texas Co., New York City, on five 7½-ton trucks during regular course of business deliveries. Curves plotted from data obtained. Details of dynamometer tests. Description of dynamometer apparatus and engine used, and analysis of result of wear of test engine.

## AUTOMOBILE MANUFACTURING PLANTS

**Ford Motor Company of Canada.** Building a Car a Minute at Ford City, H. P. Armon. Can. Machy., vol. 31, no. 26, June 26, 1924, pp. 41-48 and 80, 9 figs. Description of 15-acre machine shop of Ford Motor Co. of Canada, and of some operations.

**Building A Car A Minute At Ford City,** A. Murphy Power House, vol. 17, no. 11, June 5, 1924, pp. 29-36, 8 figs. Description of new power plant of Ford Motor Co. of Canada.

**Ford's New \$10,000,000 Factory at Ford.** Can. Mfr., vol. 44, no. 6, June 1924, pp. 11-15, 5 figs. Layout of plant, construction of buildings and description of machine shop.

**Parts Handling.** Cutting Costs by the Use of Conveyors, F. H. Colvin. Am. Mach., vol. 60, no. 26, June 26, 1924, pp. 969-971, 7 figs. Some of the Maxwell methods of handling chassis and bodies in their various stages, and some time-saving devices employed.

# Classified List of Mechanical Equipment

## Manufactured by Firms Represented in MECHANICAL ENGINEERING

FOR ALPHABETICAL LIST OF ADVERTISERS, SEE PAGE 148

**Accumulators, Hydraulic**  
 \* Farrel Foundry & Machine Co.  
 \* Mackintosh-Hemphill Co.  
 \* Worthington Pump & Mchry. Corp'n

**Aftercoolers, Air**  
 \* Ingersoll-Rand Co.

**Agitators**  
 \* Hill Clutch Machine & Fdry. Co.

**Air Compressors, Receivers, etc.**  
 (See Compressors, Receivers, etc., Air)

**Air Conditioning Apparatus**  
 \* American Blower Co.  
 \* Carrier Engineering Corp'n  
 \* Clamage Fan Co.  
 \* Sturtevant, B. F. Co.

**Air-Jet Lifts**  
 \* Schutte & Koerting Co.

**Air Washers**  
 \* American Blower Co.  
 \* Carrier Engineering Corp'n  
 \* Clamage Fan Co.  
 \* Cooling Tower Co. (Inc.)  
 \* Sturtevant, B. F. Co.

**Alloys**  
 \* Driver-Harris Co.

**Alloys (Calite)**  
 \* Calorizing Co.

**Ammeters**  
 \* Bristol Co.  
 \* General Electric Co.  
 \* Westinghouse Electric & Mfg. Co.

**Anemometers**  
 \* Taylor Instrument Cos.  
 \* Weber, F. Co. (Inc.)

**Annealing**  
 \* American Metal Treatment Co.  
 \* Nuttall, R. D. Co.

**Arc Welding Equipment**  
 \* Westinghouse Elec. & Mfg. Co.

**Arches, Boiler Furnace**  
 \* McLeod & Henry Co.  
 \* Titusville Iron Works Co.

**Arches, Fire Door**  
 \* McLeod & Henry Co.

**Arches, Ignition (Flat Suspended)**  
 \* Combustion Engineering Corp'n  
 \* McLeod & Henry Co.

**Asbestos Products**  
 \* Carey, Philip Co.  
 \* Garlock Packing Co.  
 \* Johns-Manville (Inc.)

**Ash Lifts, Telescopic**  
 \* Palmer-Bee Co.

**Autoclaves**  
 \* Farrel Foundry & Machine Co.

**Babbitt Metal**  
 \* Medart Co.  
 \* Westinghouse Elec. & Mfg. Co.

**Ball Bearings, Gages, etc.**  
 (See Bearings, Gages, Ball)

**Balls, Brass and Bronze**  
 \* Atlas Ball Co.  
 \* Gwilliam Co.

**Balls, Steel**  
 \* Atlas Ball Co.  
 \* Gwilliam Co.  
 \* New Departure Mfg. Co.  
 \* S K F Industries (Inc.)

**Barometers**  
 \* American Schaeffer & Budenberg Corp'n  
 \* Taylor Instrument Cos.

**Barometers, Mercurial**  
 \* Tagliabue, C. J. Mfg. Co.

**Bearings, Ball**  
 \* Fafnir Bearing Co.  
 \* Gwilliam Co.  
 \* Marlin-Rockwell Corp'n  
 \* New Departure Mfg. Co.  
 \* Norma-Hoffmann Bearings Corp'n  
 \* S K F Industries (Inc.)  
 \* Strom Ball Bearing Mfg. Co.

**Bearings, Collar Oiling**  
 \* Hill Clutch Machine & Foundry Co.

**Bearings, Radial Thrust**  
 \* New Departure Mfg. Co.

**Bearings, Roller**

\* Gwilliam Co.  
 \* Hyatt Roller Bearing Co.  
 \* Norma-Hoffmann Bearings Corp'n  
 \* Royersford Fdry. & Mach. Co.  
 \* Timken Roller Bearing Co.

**Bearings, Self-Oiling**

\* Brown, A. & F. Co.  
 \* Doehler Die-Casting Co.  
 \* Falls Clutch & Machinery Co.  
 \* Hill Clutch Machine & Fdry. Co.  
 \* Jones, W. A. Fdry. & Mach. Co.  
 \* Link-Belt Co.  
 \* Royersford Fdry. & Mach. Co.  
 \* Wood's, T. B. Sons Co.

**Bearings, Tapered**  
 \* Timken Roller Bearing Co.

**Bearings, Thrust**

\* Fafnir Bearing Co.  
 \* General Electric Co.  
 \* Gwilliam Co.  
 \* Hill Clutch Machine & Fdry. Co.  
 \* Norma-Hoffmann Bearings Corp'n  
 \* S K F Industries (Inc.)  
 \* Strom Ball Bearing Mfg. Co.  
 \* Timken Roller Bearing Co.

**Belt Dressing**  
 \* Dixon, Joseph Crucible Co.  
 \* Gandy Belting Co.

**Belt Lacing, Steel**  
 \* Bristol Co.

**Belt Tighteners**  
 \* Brown, A. & F. Co.  
 \* Hill Clutch Machine & Fdry. Co.  
 \* Jones, W. A. Fdry. & Mach. Co.  
 \* Link-Belt Co.  
 \* Medart Co.  
 \* Smith, F. L. & Co.  
 \* Wood's, T. B. Sons Co.

**Belt Tighteners, Automatic**  
 \* Hill Clutch Machine & Foundry Co.

**Belting, Canvas (Stitched)**  
 \* Gandy Belting Co.  
 \* U. S. Rubber Company

**Belting, Conveyor**  
 \* Gandy Belting Co.  
 \* Goodrich, B. F. Rubber Co.  
 \* United States Rubber Co.

**Belting, Elevator**  
 \* Gandy Belting Co.  
 \* Goodrich, B. F. Rubber Co.  
 \* United States Rubber Co.

**Belting, Endless**  
 \* Gandy Belting Co.

**Belting, Fabric**  
 \* Gandy Belting Co.

**Belting, Rubber**  
 \* Goodrich, B. F. Rubber Co.  
 \* United States Rubber Co.

**Belting, Waterproof**  
 \* Gandy Belting Co.

**Bending & Straightening Machines**  
 \* Long & Allstatter Co.

**Bends, Pipe**  
 \* Frick Co. (Inc.)  
 \* Vogt, Henry Machine Co.

**Billets, Steel**  
 \* Timken Roller Bearing Co.

**Blocks, Tackle**  
 \* Clyde Iron Work Sales Co.  
 \* Roebbing's, John A. Sons Co.

**Blowers, Centrifugal**  
 \* American Blower Co.  
 \* Clamage Fan Co.  
 \* Coppus Engineering Corp'n  
 \* De Laval Steam Turbine Co.  
 \* General Electric Co.  
 \* Ingersoll-Rand Co.  
 \* Kerr Turbine Co.  
 \* Sturtevant, B. F. Co.  
 \* Westinghouse Electric & Mfg. Co.

**Blowers, Fan**  
 \* American Blower Co.  
 \* Clamage Fan Co.  
 \* Coppus Engineering Corp'n  
 \* Green Fuel Economizer Co.  
 \* Sturtevant, B. F. Co.

**Blowers, Forge**  
 \* American Blower Co.  
 \* Sturtevant, B. F. Co.

**Blowers, Pressure**

\* American Blower Co.  
 \* Clamage Fan Co.  
 \* Lammett & Mann Co.  
 \* Sturtevant, B. F. Co.

**Blowers, Rotary**  
 \* Lammett & Mann Co.  
 \* Schutte & Koerting Co.  
 \* Sturtevant, B. F. Co.

**Blowers, Soot**  
 \* Diamond Power Specialty Corp'n  
 \* Sturtevant, B. F. Co.

**Blowers, Steam Jet**  
 \* Schutte & Koerting Co.

**Blowers, Turbine**  
 \* Coppus Engineering Corp'n  
 \* Sturtevant, B. F. Co.

**Blueing (Metal)**  
 \* American Metal Treatment Co.

**Boards, Drawing**  
 \* Dietzgen, Eugene Co.  
 \* Keuffel & Esser Co.  
 \* New York Blue Print Paper Co.  
 \* Parvell Laboratories  
 \* U. S. Blue Co.  
 \* Weber, F. Co. (Inc.)

**Boiler Baffles**  
 \* King Refractories Co. (Inc.)  
 \* McLeod & Henry Co.

**Boiler Compounds**  
 \* Dixon, Joseph Crucible Co.  
 \* Unisol Mfg. Co.

**Boiler Coverings, Furnaces, Tube Cleaners, etc.**  
 (See Coverings, Furnaces, Tube Cleaners, etc., Boiler)

**Boiler Fronts**  
 \* O'Brien, John Boiler Works Co.  
 \* Titusville Iron Works Co.

**Boiler Settings, Steel Cased**  
 \* Casey-Hedges Co.  
 \* McLeod & Henry Co.  
 \* O'Brien, John Boiler Works Co.  
 \* Vogt, Henry Machine Co.  
 \* Walsh & Weidner Boiler Co.

**Boilers, Heating**  
 \* Casey-Hedges Co.  
 \* Erie City Iron Works  
 \* Keeler, E. Co.  
 \* Leffel, James & Co.  
 \* Lidgerwood Mfg. Co.  
 \* O'Brien, John Boiler Works Co.  
 \* Union Iron Works  
 \* Walsh & Weidner Boiler Co.

**Boilers, Locomotive**  
 \* Casey-Hedges Co.  
 \* Keeler, E. Co.  
 \* Leffel, James & Co.  
 \* Titusville Iron Works Co.  
 \* Union Iron Works  
 \* Walsh & Weidner Boiler Co.

**Boilers, Marine (Scotch)**  
 \* Bethlehem Shipbldg. Corp'n (Ltd.)  
 \* Casey-Hedges Co.  
 \* Leffel, James & Co.  
 \* Titusville Iron Works Co.  
 \* Walsh & Weidner Boiler Co.

**Boilers, Marine (Water Tube)**  
 \* Babcock & Wilcox Co.  
 \* Bethlehem Shipbldg. Corp'n (Ltd.)  
 \* Casey-Hedges Co.  
 \* Connelly, D. Boiler Co.  
 \* O'Brien, John Boiler Works Co.  
 \* Springfield Boiler Co.  
 \* Titusville Iron Works Co.  
 \* Walsh & Weidner Boiler Co.

**Boilers, Portable**  
 \* Casey-Hedges Co.  
 \* Erie City Iron Works  
 \* Frick Co. (Inc.)  
 \* Keeler, E. Co.  
 \* Leffel, James & Co.  
 \* Lidgerwood Mfg. Co.  
 \* O'Brien, John Boiler Works Co.  
 \* Titusville Iron Works Co.  
 \* Union Iron Works  
 \* Walsh & Weidner Boiler Co.

**Boilers, Tubular (Horizontal Return)**  
 \* Bigelow Co.  
 \* Casey-Hedges Co.  
 \* Cole, R. D. Mfg. Co.  
 \* Connelly, D. Boiler Co.  
 \* Erie City Iron Works  
 \* Keeler, E. Co.  
 \* Leffel, James & Co.

**Boilers, Tubular (Horizontal Return)**

\* Lidgerwood Mfg. Co.  
 \* Morrison Boiler Co.  
 \* O'Brien, John Boiler Works Co.  
 \* Titusville Iron Works Co.  
 \* Union Iron Works  
 \* Vogt, Henry Machine Co.  
 \* Walsh & Weidner Boiler Co.  
 \* Webster, Howard J.  
 \* Wickes Boiler Co.

**Boilers, Tubular (Vertical Fire)**

\* Bigelow Co.  
 \* Casey-Hedges Co.  
 \* Clyde Iron Works Sales Co.  
 \* Keeler, E. Co.  
 \* Leffel, James & Co.  
 \* Lidgerwood Mfg. Co.  
 \* Morrison Boiler Co.  
 \* O'Brien, John Boiler Works Co.  
 \* Titusville Iron Works Co.  
 \* Union Iron Works  
 \* Walsh & Weidner Boiler Co.

**Boilers, Water Tube (Horizontal)**

\* Babcock & Wilcox Co.  
 \* Bethlehem Shipbldg. Corp'n (Ltd.)  
 \* Casey-Hedges Co.  
 \* Cole, R. D. Mfg. Co.  
 \* Connelly, D. Boiler Co.  
 \* Edge Moor Iron Co.  
 \* Erie City Iron Works  
 \* Keeler, E. Co.  
 \* Ladd, George T. Co.  
 \* Morrison Boiler Co.  
 \* O'Brien, John Boiler Works Co.  
 \* Springfield Boiler Co.  
 \* Union Iron Works  
 \* Vogt, Henry Machine Co.  
 \* Walsh & Weidner Boiler Co.  
 \* Wickes Boiler Co.

**Boilers, Water Tube (Inclined)**

\* Babcock & Wilcox Co.  
 \* Bethlehem Shipbldg. Corp'n (Ltd.)  
 \* Bigelow Co.  
 \* Casey-Hedges Co.  
 \* Keeler, E. Co.  
 \* Ladd, George T. Co.  
 \* Morrison Boiler Co.  
 \* O'Brien, John Boiler Works Co.  
 \* Vogt, Henry Machine Co.  
 \* Walsh & Weidner Boiler Co.

**Boilers, Water Tube (Vertical)**

\* Babcock & Wilcox Co.  
 \* Bigelow Co.  
 \* Casey-Hedges Co.  
 \* Erie City Iron Works  
 \* Keeler, E. Co.  
 \* Ladd, George T. Co.  
 \* Morrison Boiler Co.  
 \* O'Brien, John Boiler Works Co.  
 \* Walsh & Weidner Boiler Co.  
 \* Wickes Boiler Co.

**Boring and Drilling Machines**  
 \* Universal Boring Machine Co.

**Boring, Drilling and Milling Machines (Horizontally Combined)**  
 \* Universal Boring Machine Co.

**Boxes, Carbonizing**  
 \* Driver-Harris Co.

**Boxes, Case Hardening**  
 \* Driver-Harris Co.

**Brake Blocks**  
 \* Johns-Manville (Inc.)

**Brakes, Air**  
 \* Allis-Chalmers Mfg. Co.  
 \* General Electric Co.

**Brass Goods**  
 \* Scovill Mfg. Co.

**Brass Mill Machinery**  
 \* Farrel Foundry & Machine Co.

**Breechings, Smoke**  
 \* Morrison Boiler Co.  
 \* Titusville Iron Works Co.  
 \* Vogt, Henry Machine Co.

**Brick, Fire**  
 \* Bernitz Furnace Appliance Co.  
 \* Celite Products Co.  
 \* Drake Non-Clinkering Furnace Block Co.  
 \* Keystone Refractories Co.  
 \* King Refractories Co. (Inc.)  
 \* McLeod & Henry Co.  
 \* Maplight Co. of Amer.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

Steel Automobile Bodies, J. W. Meadowcroft. Am. Welding Soc.—Jl., vol. 3, no. 5, May 1924, pp. 24-26. Particulars of welding operations.

Rover Develops Modified Type of Weymann Fabric Body, M. W. Bourdon. Automotive Industries, vol. 51, no. 2, July 10, 1924, pp. 104-107, 12 figs. New design incorporates some metal panels where rounded corners are desired, but entire structure is covered with leather fabric. Lining materials are waterproofed. Door pillars have inward curve. Air gap or cloth strip used at all joints to prevent squeaks.

Body Finishing. Automobile Body Finishing with Abrasives. Abrasive Industry, vol. 5, no. 7, July 1924, pp. 171-173, 6 figs. Notes on methods followed by Chandler Motor Car Co., Cleveland.

Brakes, Four-Wheel. Hydraulic Brakes on Test, H. F. Blanchard. Autocar, vol. 52, no. 1495, June 13, 1924, pp. 1070-1072, 5 figs. Further details of Lockheed four-wheel system with data gleaned from actual trials.

British Empire Exhibition. The British Empire Exhibition. Automobile Engr., vol. 14, no. 190, June 1924, pp. 175-181, 14 figs. Notes on automobile manufacturers' exhibits.

Buick. Buick Adds a New Six to Its Line with Slight Changes in Design. Automotive Industries, vol. 51, no. 2, July 10, 1924, pp. 92-96, 9 figs. Particulars of Standard Six, having 3 by 4 1/2 in. cylinders, giving it a displacement of 191 cu. in., and 114 1/4 in. wheelbase. New Fisher self-ventilating windshield used on Buick closed cars.

Chassis Construction. Lighter Chassis Is Not Likely Until Body Weight Is Decreased, W. L. Carver. Automotive Industries, vol. 51, no. 1, July 3, 1924, pp. 30-33, 4 figs. Advent of leather in place of steel panels among promising possibilities. Balloon tires, smaller wheels and tubular axles help decrease mass of unsprung parts. Present stiff and heavy frames considered necessary to prevent wearing and rattles.

Cleveland. New Cleveland Model Has Centralized Chassis Lubricating System. Automotive Industries, vol. 50, no. 25, June 19, 1924, pp. 1314-1318, 7 figs. Nearly all mechanical units are redesigned and wheelbase is lengthened; 31 M 5.25-in. balloon tires are standard equipment.

Crossley. The 14 H.P. Crossley Car. Auto-Motor Jl., vol. 29, no. 26, June 26, 1924, pp. 539-541, 9 figs. Has wheelbase of 9 ft. 4 1/2 in.; 4 cylinders; engine is supported in chassis frame by 2 arms; cylinder heads are detachable in one water-jacketed casting; carburetor is vertical type Solex.

Diatto. The Two-Litre Diatto. Automobile Engr., vol. 14, no. 190, June 1924, pp. 158-164, 13 figs. Details of medium-power Italian chassis, with 4-cylinder overhead valve engine, assembled in one unit with gear box, and enclosed propeller shaft transmitting power to spiral bevel axle.

Electric, Small. Small Electric Motorcars. Eng. Progress, vol. 5, no. 6, June 1924, pp. 117-119, 7 figs. Describes two types of small electric automobiles manufactured in Germany, one by SB-Automobil-Ges. of Charlottenburg, and Hava car, made by Hannoversche Waggonfabrik, Hannover-Linden.

Finishing Materials. What Basic Materials Go Into Automobile Finishes? Automotive Industries, vol. 51, no. 1, July 3, 1924, pp. 34-38. Information regarding nature of materials used in finishing of automobile bodies and chassis.

Franklin. Franklin Increases Power 33 Per Cent by Changes in Air Cooling System, P. M. Heldt. Automotive Industries, vol. 51, no. 2, July 10, 1924, pp. 101-103, 7 figs. Improvements include quickened acceleration, greater maximum speed and a more plentiful supply of oil to cylinder walls. Balloon-type tires on all models.

German. Small German Automobiles (Neue "Berufs-Kleinkraftwagen"), E. Meyer. Motorwagen, vol. 27, no. 15, May 31, 1924, pp. 262-264, 2 figs. Details of new 4/14-hp. Tatra small car.

Grand Prix. Three Grand Prix Cars. Autocar, vol. 53, no. 1498, July 4, 1924, pp. 19-23, 9 figs. Gives details of 12-cylinder Delage, 8-cylinder Bugatti and 6-cylinder Sunbeam races to compete in 2-liter struggle at Lyons. Delage: 12 cylinders are in 2 groups of 6, mounted on aluminum base chamber, cylinder bore is 51.3; Bugatti: 8 cylinders of 60 X 88 mm. bore and stroke with 3 valves per cylinder; Sunbeam: 6-cylinder of 67 M 94 mm. bore and stroke.

Headlighting Devices, Laboratory Tests for. Specifications of Laboratory Tests for Approval of Electric Headlighting Devices for Motor Vehicles. U. S. Bur. Labor Statistics—Bul., no. 350, Jan. 1924, 5 pp., 1 fig. Tentative American standard approved Nov. 11, 1922 by Am. Eng. Standards Committee.

Hillman. The Hillman Car. Auto-Motor Jl., vol. 29, no. 25, June 19, 1924, pp. 517-519, 9 figs. Describes well-designed all-weather vehicle with most efficient power and transmission plant; 4-cylinder engine, with bore of 65 mm. and piston travel of 120 mm.; R. A. C. rating of 10.4 hp.

Humber. The 11.4 H.P. Humber, E. N. Duffield. Auto-Motor Jl., vol. 29, no. 26, June 26, 1924, pp. 531-533, 5 figs. Car is smaller edition of 15.9; the four cylinders have their inlet valves overhead and lower section of crankcase is flared to form clutch pit, continued to constitute lower portion of gear box.

Morris. Morris Cars. Auto-Motor Jl., vol. 29, no. 24, June 12, 1924, pp. 499-501, 10 figs. Particulars of latest models. Made in two types, the Cowley, having 11.9-hp. engine, 69.5 bore and 102 stroke, and the Oxford, rated at 14.28 hp., and having bore of 75 and a stroke of 102.

Rickenbacker. New Rickenbacker Vertical Eight Will Supplement the Six, J. E. Schipper. Automotive Industries, vol. 50, no. 26, June 26, 1924, pp. 1369-1372, 5 figs. Airplane type of oil tubing, radiating fins on cast-aluminum oil pan, cold blast for cooling

oil in summer, duplex carburetor and camshaft always immersed in oil are features.

Sangiusto. New Type of Automobile (Nuovo tipo di automobile). Industria, vol. 38, no. 8, Apr. 30, 1924, pp. 224-225, 2 figs. Details of 8-hp. car made by Sangiusto Company, Milan; car has box-girder type of chassis, with engine mounted at rear.

Shock Absorbers. The D. N. Shock Absorber. Auto-Motor Jl., vol. 29, no. 27, July 3, 1924, pp. 562-563, 2 figs. Principle underlying D. N. device is that of allowing compression or extension of spring to be always free and unrestrained, while rebound only and in each direction is checked or damped.

Talbot. New 16-50 hp. Talbot Car. Autocar, vol. 53, no. 1498, July 4, 1924, pp. 24-25, 5 figs. New family model 6-cylinder with engine of just over 2 1/2 liters; 3-speed and reverse gear box and one unit with engine.

## B

### BAGASSE

Drying with Flue Gases. Calculation of the Economy of Fuel Realized on Drying Bagasse with Flue Gases, E. Mooyant. Int. Sugar Jl., vol. 26, no. 305, May 1924, pp. 252-254. According to given calculations, if bagasse having 47 per cent of water be dried by means of flue gases to material having 15 per cent of water, an economy of 15 per cent of fuel can be realized.

### BALANCING MACHINES

Dynamic. Balancing of Rotating Masses (Das Auswuchten Umlaufender Massen), M. Krause. Praktische Maschinen-Konstrukteur, vol. 57, no. 17, May 13, 1924, pp. 229-232, 20 figs. Shows that static balancing of machine parts is by no means adequate; describes machine which enables correct dynamic balancing.

### BEARINGS

Sealed-Sleeve Motor. Sleeve Bearing Keeps Oil From Spattering Motor, R. Pruger. Coal Age, vol. 25, no. 26, June 26, 1924, pp. 945-947, 4 figs. Describes "sealed-sleeve" bearing which excludes dirt and prevents oil leakage.

### BEARINGS, BALL

Function and Mounting of. Ball Bearings: Their Proper Function and Methods of Mounting, F. J. Taylor. Mech. Wld., vol. 75, no. 1953, June 6, 1924, pp. 353-354, 9 figs.

### BEARINGS, ROLLER

Design. Roller Bearings Facilitate Speed, D. E. Batesole. Iron Trade Rev., vol. 75, no. 3, July 17, 1924, pp. 164-166, 6 figs. High-precision units of roller type withstand heavy load capacity and resistance to severe shock. Choice of bearing depends upon operating conditions and design. Describes principle of construction.

Mill Motors. Roller Bearing Service in Mill-Type Motors, L. J. Hess. Indus. Engr., vol. 82, no. 4, Apr. 1924, pp. 164-168, 6 figs. Methods of installation and results obtained from use of roller bearings in 300 heavy-duty motors.

### BLAST FURNACES

Air Heaters for. The Development of Air-Heater Apparatus in Blast Furnaces (Die Entwicklung der Winderhitzer-Apparate beim Hochofen), Illies. Feuerungstechnik, vol. 12, nos. 16 and 17, May 15 and June 1, 1924, pp. 133-136 and 144-145, 9 figs. The beginning of air heating in Germany; steel air-heating apparatus; introduction of checkerbrick heaters; the Pfoser-Strack-Stumm process.

British Practice. Modern British Blast Furnaces, F. Clements. Iron & Coal Trades Rev., vol. 108, nos. 2936 and 2937, June 6 and 13, 1924, pp. 959-965 and (discussion) 1024, 9 figs. Description with statistics of certain blast-furnace plants in England of a more modern type as representing position to which British design and practice has advanced. Paper read at Empire Mining and Metallurgical Congress.

Design. Interior Profiles of Modern Blast Furnaces (Die inneren Formen neuerzeitlicher Hochofen), G. Jantzen. Stahl u. Eisen, vol. 44, no. 24, June 12, 1924, pp. 681-684. Examples of old and new cross-sectional profiles; dropping of charge, conclusions for interior profile of furnace, gasification of coke and diameter of hearth, uniform sizing of elements of charge, etc.

Design. Progress Made in the Production of Pig Iron and the Construction of Blast Furnaces (Progrès réalisés dans la fabrication de la fonte et la construction des hauts fourneaux), J. Estour. Technique Moderne, vol. 16, no. 9, May 1, 1924, pp. 309-319, 13 figs. Notes on constitution of pig iron; manufacture and combustibility of coke; enrichment, briquetting and sintering of ore; cross-section and dimensions of blast furnaces; design; charging apparatus.

Fuel Economy. The Law of Heat Concentration and Fuel Economy in Blast Furnaces (La loi de la compression de la chaleur et l'économie de combustible dans les hauts fourneaux), A. Korevaar. Chimie & Industrie, vol. 11, no. 4, Apr. 1924, pp. 642-650, 2 figs. Deduction of law of heat concentration; variations of factors depending on carbon; problem of combustibility of fuels; factors depending on air and concentration of heat, and on furnace and concentration of heat; influence of conduction; analysis of fuel consumption in blast furnace; influence of inflammability of coke on fuel consumption; influence of preheating of air and of furnace diameter on carbon.

### BOILER FURNACES

Coal vs. Oil Fuel. Fuel Oil or Coal for Steam Generation, F. H. Daniels. Steam Coal Buyer, vol. 1, no. 2, Feb. 1924, pp. 11-15, 8 figs. Shows that fuel oil cannot compete with coal for generation of steam in land plants except for short periods of time.

Firing. Firing a Hand-Fired Down-Draft Furnace, J. F. Barkley. U. S. Bur. Mines, Reports of Investigations, No. 2609, May 1924, 6 pp. Method used and results obtained in testing a hand-fired down-draft furnace at a plant in Wash., D. C. in order to determine method of firing that would give best results with a minimum of smoke.

Lining. Reducing the Cost of Relining Boiler Furnaces. Power, vol. 59, no. 26, June 24, 1924, pp. 1028-1030, 5 figs. Most successful and economical lining material has been found to be combination of crushed used firebrick, fireclay and sodium silicate (water glass) applied by means of air gun in form of spray.

### BOILER PLANTS

Flue-Dust Separator. Flue Dust and Forced Draught. Engineer, vol. 137, no. 3573, June 20, 1924, p. 696, 3 figs. Describes "cindervane" fan for Stepney power house which combines dual functions of dust separator and induced-draft fan.

Instruments. Modern Boiler-room Instruments, J. Wolf. Combustion, vol. 11, no. 1, July 1924, pp. 40-42. Discussion of place held by instruments in modern boiler room and of particular functions and advantages of some of the more important types.

Wembley Exhibition, England. The Boiler House at the British Empire Exhibition, Wembley, London, J. D. Troup. Combustion, vol. 11, no. 1, July 1924, pp. 36-39, 5 figs. Description of boiler plant which is not only an exhibit of a number of different types of equipment, but actually furnishes power used at the Exhibition.

Wembley Boiler House. Eng. & Boiler House Rev., vol. 37, nos. 6, 7, 8 and 9, Jan., Feb., Mar. and Apr. 1924, pp. 191-193, 236-238, 284, and 316-318, 12 figs. Description of installations at British Empire Exhibition, Wembley, Jan.: Babcock & Wilcox boilers. Feb.: Installation by John Thompson Water-Tube Boilers, Ltd. Mar. and Apr.: Instruments for recording coal, water, and steam used, and for recording temperatures, draft, and flue-gas contents.

### BOILER OPERATION

Efficiency. Operation of Steam Boiler Plants, E. B. Ricketts. Power Plant Eng., vol. 28, no. 14, July 15, 1924, pp. 749-751. Discussion of some of the more important factors which contribute to efficient boiler operation. Emphasizes fact that basis of good boiler operation is a thorough knowledge on part of all men in plant of materials and apparatus with which they must deal and thorough and consistent cooperation of management and men in common aim of stopping all leaks and keeping them stopped. Address before Nat. District Heat. Assn.

The Control of Power Production, C. L. Hubbard. Factory, vol. 33, no. 1, July 1924, pp. 26-29, 96, 98 and 100, 13 figs. Fundamental functions of a good boiler.

### BOILER ROOMS

Electric Drive. Motor Applications in the Boiler Room, H. W. Smith. Power Plant Eng., vol. 28, no. 13, July 1, 1924, pp. 700-703, 6 figs. D.c. motors and control for stoker and clinker grinders; 2- and 4-speed squirrel-cage motors; wound rotor motors; forced- and induced-draft fans; boiler feed pump; coal-handling equipment.

Steam-Generating Units, Standardization of. Standardized Steam Generating Units, A. J. T. Taylor. Combustion, vol. 11, no. 1, July 1924, pp. 64-66. A plan suggested for purchase of boiler room equipment as a complete unit.

### BOILERS

Benson Superpressure. Testing the Benson Superpressure Generator, D. Brownlie. Power House, vol. 17, no. 11, June 5, 1924, pp. 43 and 60. Success of coil boiler operated at approximately 3200 lb. pressure per sq. in. and 706 deg. Fahr. in Rugby Works of English Elec. Co., reported.

Combustion Control. Combustion Control for Boilers, R. J. S. Pigott. Paper, vol. 34, no. 9, June 19, 1924, pp. 368-371. What automatic regulation of boilers will accomplish in the way of efficiency and control of capacity. Principle of design.

Heat Transmission. Heat Transmission in Boilers Chas. F. Wade. Power Engr., vol. 19, no. 219, June 1924, pp. 224-226, 4 figs. Discussion of principles and suggestions for improvements; deals with "luminous" flames, conduction, gas films and temperatures.

Heating, Smokeless. Smokeless Heating Boilers, T. N. Thomson. Plumbers Trade Jl., vol. 77, no. 1, July 1, 1924, pp. 26-28 and 92, 3 figs. Development and manufacture of Utica Imperial smokeless boiler.

Large-Capacity. Large-Capacity Boilers for Central Stations. Pulverized-Coal-Fired Boilers (Chaudières à grande capacité pour centrales électriques. Les chaudières au charbon pulvérisé), M. Demoulin. Génie Civil, vol. 84, no. 20, May 17, 1924, pp. 465-471, 7 figs. Characteristics of large boiler types; evolution of boilers; the Ladd-Belleville in Vitry (Seine) central station; new boilers of the Union d'Electricité for burning of pulverized coal.

Marine. See MARINE BOILERS.

### BRAKES

Air. The Air Brake Problem. Car Foremen's Assn. of Chicago—Proc., May 1924, pp. 15-35 and (discussion) 35-55. Deals with maintenance, discussing fundamentals of air brakes to the end that proper significance be applied to relative parts.

- \* Hendrick Mfg. Co.
- \* Link-Belt Co.

**Circuit Breakers**

- \* General Electric Co.
- \* Westinghouse Elec. & Mfg. Co.

**Circulators, Feed Water**

- \* Schutte & Koerting Co.

**Circulators, Steam Heating**

- \* Schutte & Koerting Co.

**Cloth, Rubber**

- \* Garlock Packing Co.
- \* Goodrich, B. F. Rubber Co.

**Cloth, Tracing**

- \* Dietzgen, Eugene Co.
- \* Keuffel & Esser Co.
- \* New York Blue Print Paper Co.
- \* ParVell Laboratories
- \* U. S. Blue Co.
- \* Weber, F. Co. (Inc.)

**Clutches, Friction**

- \* Allis-Chalmers Mfg. Co.
- \* Brown, A. & F. Co.
- \* Falls Clutch & Machinery Co.
- \* Farrell Foundry & Machine Co.
- \* Gifford-Wood Co.
- \* Hill Clutch Mach. & Fdry. Co.
- \* Johnson, Carlyle Machine Co.
- \* Jones, W. A. Fdry. & Mach. Co.
- \* Link-Belt Co.
- \* Medart Co.
- \* Philadelphia Gear Works
- \* Western Engineering & Mfg. Co.
- \* Wood's, T. B. Sons Co.

**Coal**

- \* Pennsylvania Coal & Coke Co.

**Coal and Ash Handling Machinery**

- \* Brown Hoisting Machinery Co.
- \* Chain Belt Co.
- \* Combustion Engineering Corp'n
- \* Gifford-Wood Co.
- \* Link-Belt Co.
- \* Palmer-Bee Co.

**Coal Bins**

- \* Brown Hoisting Machinery Co.
- \* Chain Belt Co.
- \* Link-Belt Co.

**Coal Breakers and Cleaners**

- \* Pennsylvania Crusher Co.

**Coal Mine Equipment and Supplies**

- \* General Electric Co.

**Coal Mining Machinery**

- \* General Electric Co.
- \* Ingersoll-Rand Co.

**Coal Preparing Equipment**

- \* Grindie Fuel Equipment Co.

**Coaling Stations, Locomotive**

- \* Chain Belt Co.
- \* Gifford-Wood Co.
- \* Link-Belt Co.

**Cocks, Air and Gage**

- \* American Schaeffer & Budenberg Corp'n
- \* Ashton Valve Co.
- \* Crane Co.
- \* Jenkins Bros.
- \* Lunkenheimer Co.
- \* Reading Steel Casting Co. (Inc.)
- \* (Pratt & Cady Division)
- \* Vogt, Henry Machine Co.

**Cocks, Blow-off**

- \* Crane Co.
- \* Lunkenheimer Co.
- \* Pittsburgh Valve, Fdry. & Const. Co.
- \* Reading Steel Casting Co. (Inc.)
- \* (Pratt & Cady Division)

**Cocks, Three-Way and Four-Way**

- \* American Schaeffer & Budenberg Corp'n
- \* Crane Co.
- \* Crosby Steam Gage & Valve Co.
- \* Lunkenheimer Co.
- \* Pittsburgh Valve, Fdry. & Const. Co.
- \* Reading Steel Casting Co. (Inc.)
- \* (Pratt & Cady Division)

**Coils, Pipe**

- \* Superheater Co.
- \* Vilter Mfg. Co.
- \* Vogt, Henry Machine Co.

**Coke**

- \* Pennsylvania Coal & Coke Co.

**Cold Storage Plants**

- \* De La Vergne Machine Co.

**Collars, Shafting**

- \* Chain Belt Co.
- \* Hill Clutch Machine & Fdry. Co.
- \* Link-Belt Co.
- \* Medart Co.
- \* Royersford Fdry. & Mach. Co.
- \* Wood's, T. B. Sons Co.

**Coloring (Metal)**

- \* American Metal Treatment Co.

**Combustion (CO) Recorders**

- \* Sarco Co. (Inc.)
- \* Tagliabue, C. J. Mfg. Co.
- \* Uehling Instrument Co.

**Compressors, Air**

- \* Allis-Chalmers Mfg. Co.
- \* General Electric Co.
- \* Goulds Mfg. Co.
- \* Ingersoll-Rand Co.
- \* Mackintosh-Hemphill Co.
- \* Nordberg Mfg. Co.
- \* Titusville Iron Works Co.
- \* Wayne Tank & Pump Co.
- \* Worthington Pump & Machinery Corp'n

**Compressors, Air, Centrifugal**

- \* De Laval Steam Turbine Co.
- \* General Electric Co.

**Compressors, Air, Compound**

- \* Ingersoll-Rand Co.
- \* Nordberg Mfg. Co.
- \* Worthington Pump & Machinery Corp'n

**Compressors, Ammonia**

- \* Frick Co. (Inc.)
- \* Ingersoll-Rand Co.
- \* Vilter Mfg. Co.
- \* Vogt, Henry Machine Co.
- \* Worthington Pump & Machinery Corp'n

**Compressors, Gas**

- \* De Laval Steam Turbine Co.
- \* General Electric Co.
- \* Ingersoll-Rand Co.
- \* Nordberg Mfg. Co.
- \* Worthington Pump & Machinery Corp'n

**Condensers, Ammonia**

- \* De La Vergne Machine Co.
- \* Frick Co. (Inc.)
- \* Ingersoll-Rand Co.
- \* Vilter Mfg. Co.
- \* Vogt, Henry Machine Co.

**Condensers, Barometric**

- \* Allis-Chalmers Mfg. Co.
- \* Buffalo Steam Pump Co.
- \* Ingersoll-Rand Co.
- \* U. S. Cast Iron Pipe & Fdry. Co.
- \* Wheeler, C. H. Mfg. Co.
- \* Wheeler Condenser & Engrg. Co.
- \* Worthington Pump & Machinery Corp'n

**Condensers, Jet**

- \* Allis-Chalmers Mfg. Co.
- \* Buffalo Steam Pump Co.
- \* Elliott Co.
- \* Ingersoll-Rand Co.
- \* Nordberg Mfg. Co.
- \* Westinghouse Electric & Mfg. Co.
- \* Wheeler, C. H. Mfg. Co.
- \* Wheeler Condenser & Engrg. Co.
- \* Worthington Pump & Machinery Corp'n

**Condensers, Surface**

- \* Allis-Chalmers Mfg. Co.
- \* Bethlehem Shipbldg. Corp'n (Ltd.)
- \* Elliott Co.
- \* Ingersoll-Rand Co.
- \* Nordberg Mfg. Co.
- \* Westinghouse Electric & Mfg. Co.
- \* Wheeler, C. H. Mfg. Co.
- \* Wheeler Condenser & Engrg. Co.
- \* Worthington Pump & Machinery Corp'n

**Conduits**

- \* Johns-Manville (Inc.)

**Controllers, Automatic, for Temperature or for Pressure**

- (See Regulators)

**Controllers, Electric**

- \* General Electric Co.
- \* Westinghouse Electric & Mfg. Co.

**Controllers, Filter Rate**

- \* Builders Iron Foundry
- \* Simplex Valve & Meter Co.

**Controllers, Liquid Level**

- \* General Electric Co.
- \* Simplex Valve & Meter Co.
- \* Tagliabue, C. J. Mfg. Co.

**Converters, Steel**

- \* Whiting Corporation

**Converters, Synchronous**

- \* Allis-Chalmers Mfg. Co.
- \* General Electric Co.
- \* Ridgway Dynamo & Engine Co.
- \* Westinghouse Electric & Mfg. Co.

- \* Chain Belt Co.
- \* Combustion Engineering Corp'n
- \* Gifford-Wood Co.
- \* Hill Clutch Machine & Fdry. Co.
- \* Jones, W. A. Fdry. & Mach. Co.
- \* Link-Belt Co.
- \* Palmer-Bee Co.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

**BRAZING**

**Production.** Brazing, B. Heyman. Welding Engr., vol. 9, nos. 3, 5 and 6, Mar., May, and June 1924, pp. 19-21, 19-21 and 17-20, 9 figs. Underlying principles. Description of devices and methods employed in carrying through a series of machine-brazing operations on a single product in which numerous difficulties were encountered both from an engineering standpoint in design and also from operating standpoint in shop.

**C****CABLES, HOISTING**

**Dynamic-Stress Determination.** Dynamic Stress of Winding Cables (Die dynamische Beanspruchung der Forderseile), G. Berg. Glückauf, vol. 60, no. 20, May 17, 1924, pp. 4004-02, 8 figs. Describes instruments for measuring and recording width between guides, also processes and trials for determining dynamic forces acting on cables.

**CABLEWAYS**

**Aerial.** Cableways and Suspended Railways (Schwebende Drahtseilbahnen und Schienenhängebahnen), M. Buhle. Bautechnik, vol. 2, no. 26, June 17, 1924, pp. 268-288, 88 figs. Describes and illustrates number of types manufactured by A. Bleichert & Co., Leipzig, for passengers and freight, on land and water, and installed in various parts of world.

**Coal-Mine.** Aerial Wire Ropeways, J. W. White. Instn. Min. Engrs.—Trans., vol. 67, Pt. 2, May 1924, pp. 114-128, 13 figs. Details of different types designed principally for colliery purposes.

**Electric Suspension.** Details of Electric Suspension Railways (Einzelheiten der Elektrohängebahnen), P. Stephan. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 28, June 7, 1924, pp. 606-609, 11 figs. Discusses modern examples of rails, switches and cars.

**CAMERAS**

**Photographing Moving Projectiles.** A Camera for Studying Projectiles in Flight, H. L. Curtis, W. H. Wadleigh and A. H. Sellman. U. S. Bur. Standards, Technologic Papers, No. 255, Mar. 19, 1924, pp. 189-202, 10 figs. partly on supp. plates. Describes camera which will take pictures of objects moving with high speed, and also measure their velocity. Number of pictures depends on number of lenses, 50 pictures per second per lens being easily obtained.

**CAR LIGHTING**

**Equipment.** Report of Committee on Locomotive and Car Lighting, W. E. Dunham. Ry. Age (Daily Edition), vol. 76, no. 32, June 14, 1924, pp. 1558-1560, 3 figs. Discusses design of axle-generator belt drive and photometry of locomotive headlights. Report presented before Am. Ry. Assn.

**CAR WHEELS**

**Chilled-Iron.** The Chilled Iron Wheel in Railroad Service, E. Ruker. Assn. Chinese & Am. Engrs.—Jl., vol. 5, no. 3, Mar. 1924, pp. 11-16. Evolution, production, and use of this special kind of wheel, and its action in service.

**Rolled-Steel.** The Manufacture of Solid Rolled Steel Car Wheels, G. A. Richardson. Ry. Club Pittsburgh—Official Proc., vol. 23, no. 5, Mar. 27, 1924, pp. 119-124 and (discussion) 124-126. Factors influencing delivery times and determining extra costs.

**Specifications.** Report of Committee on Wheels, Ry. Rev., vol. 74, no. 25, June 21, 1924, pp. 1211-1213, 3 figs. Cooling of rolled-steel wheels; specifications for cast-iron and steel wheels; development of cast-iron wheel design; wheel mounting gage; standard steel-wheel gage; tread-worn hollow wheels; grinding of cast-iron wheels. Report presented to Am. Ry. Assn. See also Ry. Age (daily edition), vol. 76, no. 36, June 19, pp. 1730-1735 and (discussion) pp. 1734-1737, 3 figs.

**CARS, FREIGHT**

**Design.** Report of the Committee on Car Construction, Ry. Age (Daily Edition), vol. 76, no. 34, June 17, 1924, pp. 1634-1638 (including discussion), 1 fig. Reviews objects of fundamentals of design adopted by Association prior to development of present standard box-car designs; development of theoretical basis of car-framing design. Report presented to Am. Ry. Assn. See also Ry. Rev., vol. 74, no. 25, June 21, 1924, pp. 1186-1189, 1 fig.

**Scraping.** Scraping Steel Freight Cars. Welding Engr., vol. 9, no. 6, June 1924, pp. 21-23, 5 figs. Application of electric-arc cutting process to reclaiming and scraping of rolling stock.

**Standard, Pennsylvania R. R.** Pennsylvania Exhibits Standard Cars. Ry. Age (Daily Edition), vol. 76, no. 34, June 17, 1924, pp. 1661-1663, 4 figs. Double-sheathed box and automobile cars among exhibits; single-sheathed frame finished for stock loading.

**CARS, PASSENGER**

**History and Development.** History and Development of Passenger Car Building, Geo. A. Richardson. Ry. Rev., vol. 74, no. 24, June 14, 1924, pp. 1133-1141, 26 figs. Account of history and present facilities of Bethlehem Shipbuilding Corp., Wilmington, Del., which was pioneer in manufacture of passenger cars.

**CARS, TANK**

**Specifications.** Report of Committee on Tank Cars. Ry. Age (Daily Edition), vol. 76, no. 35, June

18, 1924, pp. 1675-1680 and (discussion) 1680-1684, 3 figs. Specifications for Class V and VI tank cars; report on dome covers, bottom-discharge outlets, etc. Report of committee before Am. Ry. Assn. See also Ry. Rev., vol. 74, no. 25, June 21, 1924, pp. 1175-1177, on committee specifications for Class VI tank cars for transportation of helium gas.

**CASE-HARDENING**

**Steel.** The Case-hardening of Steel, R. N. Richardson. Eng. Production, vol. 7, no. 142, July 1924, pp. 214-215. Discusses heat treatment of case-hardened steel, methods for preventing carburizing of parts, case-hardening compounds, and causes of failure of case-hardened parts.

**CAST IRON**

**Graphite Formation in.** The Formation of Graphite in Cast Iron, L. Northcott. Foundry Trade Jl., vol. 29, nos. 409 and 410, June 19 and 26, 1924, pp. 515-521 and (discussion) 548-550, 37 figs. Describes work undertaken in order to examine process. Effect of annealing white cast iron at different temperatures and under such conditions as to produce temper-carbon or nodular graphite. Observations regarding precipitation of carbon. Experiments on a typical gray cast iron of good quality to determine mechanism of formation of flaky or primary graphite as commonly found in gray irons.

**Gray, Liquid Contraction in.** The Problem of the Liquid Contraction in Grey Cast Iron, R. Buchanan. Foundry Trade Jl., vol. 29, no. 411, July 3, 1924, pp. 11-12. Review of subject.

**CENTRAL STATIONS**

**Europe.** Central Station Practice in Europe, B. G. Jamieson. West. Soc. Engrs.—Jl., vol. 29, no. 6, June 1924, pp. 247-256, 5 figs. Some noticeable differences in electrical engineering practice including use of mercury-arc rectifiers in place of converters, high-voltage direct current and lack of interconnection of networks, extensive use of underground cable. Attention is given to appearance of central-station buildings and surroundings.

**Heat Balance.** Heat Balance at Hudson Avenue Station (Brooklyn), Power Plant Eng., vol. 28, no. 13, July 1, 1924, pp. 706-709, 3 figs. Six sources of heat are involved in cycle; control is automatic; vertical isolation of phases is feature of electrical design.

**Tri-Cities, Iowa.** 150,000-Kw. Plant for the Tri-Cities (Iowa). Power Plant Eng., vol. 28, no. 13, July 1, 1924, pp. 726-728, 4 figs. Main turbine unit to be bled at four stages, three for stage feedwater heating and one for evaporator.

**Wabash River Plant, Indiana.** Mine Mouth Plant in Indiana Just Put in Service. Power Plant Eng., vol. 28, no. 13, July 1, 1924, pp. 682-692, 10 figs. Wabash River plant of Indiana Elec. Corp. transmits energy at 132,000 volts 75 mi. to Indianapolis for distribution; summary of mechanical equipment.

**CHAINS**

**Connecting Links, Pulling Tests of.** Results of Pulling Tests of Chain Connecting Links (Mededeeling omtrent de resultaten van trekproeven met sluitings), L. R. Mulder. Ingenieur, vol. 39, no. 20, May 17, 1924, pp. 364-369, 8 figs. Photographs, diagrams and tables of test results for chain connecting links of various sizes, pin diameters varying from 1/4 in. to 2 in.

**CHIMNEYS**

**Design.** The Design of Chimneys, W. S. Findlay. Power Engr., vol. 19, no. 219, June 1924, pp. 226-228, 5 figs. Factors in design of chimney shafts, with special reference to their stability.

**Flue.** Chimneys for Heating Boilers, A. G. King. Domestic Eng. (Chicago), vol. 106, no. 7, Feb. 16, 1924, pp. 20-23, 5 figs. Elements of a chimney flue and its proper position and construction.

**CHROMIUM**

**Uses and Alloys.** Chromium—Its Uses and Its Alloys, W. M. Mitchell. Forging—Stamping—Heat Treating, vol. 10, nos. 3 and 6, May and June, 1924, pp. 199-202 and 235-238, 7 figs. May: Sources of chromium, chemical properties and technical uses. June: Ferrochromium; chromium steels.

**CLUTCHES**

**Conical.** Conical Clutch Designs, A. Clegg. Machy. (N. Y.), vol. 30, no. 11, July 1924, pp. 867-869, 5 figs. Advantages of conical clutches; construction of conical clutch for radial drilling machine; principles to be followed in design; conical clutch for lathe feed control and applied to planer drive.

**Friction.** Considerations in Clutch Design, A. Clegg. Machy. (London), vol. 24, no. 612, June 19, 1924, pp. 363-367, 6 figs. Deals with friction clutches and expanding and contracting ring clutches.

**COAL**

**Carbonization.** Practical Coal Carbonization, A. R. Powell. Mech. Engr., vol. 46, no. 7, July 1924, pp. 389-394, 6 figs. Enumeration of technical problems of low-temperature carbonization and classification and description of the various processes.

**COAL HANDLING**

**Plants.** Coal and Ore Handling Plant at Waalhaven, Rotterdam. Engineer, vol. 137, no. 3574, June 27, 1924, pp. 722-725, 8 figs. Details of installation of Coal Trading Assn. which, when completed, will comprise two quays 350 m. long, with accommodation for ocean-going vessels up to 10 m. draft, and between quays a dock 160 m. long available for river vessels with drafts up to 6 m.; description of transporter bridges, and transformer and load-equalizing station.

**COMBUSTION**

**Control.** Combustion Control Based on CO<sub>2</sub> in Gas, G. E. Gaster. Power Plant Eng., vol. 28, no. 14, July 15, 1924, pp. 768-769, 2 figs. Variations in CO<sub>2</sub> operate rheostat controlling speed of fan motor.

**The Evils of Close Regulation in Automatic Combustion Control.** T. A. Peebles. Power, vol. 60, no. 1, July 1, 1924, pp. 13-14. Points out that close regulation is desirable from viewpoint of production or utilization; on other hand, it tends to introduce wear, hunting or surging, and other undesirable conditions; this is particularly true of combustion-control apparatus, as herein described.

**COMPRESSED AIR**

**Machinery.** Air Machinery, A. Hinz. Mech. Engr., vol. 46, no. 7, July 1924, p. 417. Possibilities of improvements in compressed-air plant operation. Translated and abstracted from Glückauf, nos. 15 and 16, Apr. 12 and 19, 1924.

**CONDENSERS, STEAM**

**Evaporative.** The Evaporative Condenser, N. E. Webster. Instn. Min. Engrs.—Trans., vol. 67, Pt. 2, May 1924, pp. 192-198, 3 figs. Description of conditions for which this type of condenser seems peculiarly suitable.

**Tubes.** Condenser Tubes Pulled in Record Time. Power, vol. 59, no. 26, June 24, 1924, pp. 1032-1033, 5 figs. Special devices facilitate removal of 6000 plugs and 9000 tubes from large surface condenser.

**CONVEYORS**

**Flour Mills.** Conveying Apparatus in Flour Mills, Their Construction, Efficiency and Power Requirements (Die Fördervorrichtungen in Mühlen, deren Konstruktion, Leistungsfähigkeit und Kraftbedarf), F. Baumgarten. Fördertechnik u. Frachtverkehr, vol. 17, no. 11, June 3, 1924, pp. 153-155. Discusses development of conveying in connection with automatic grinding, conveying of flour in bulk and in sacks, ascending and descending conveyors, etc.

**Pneumatic.** Experimental Investigation of Pneumatic Conveying Process (Die experimentelle Untersuchung des pneumatischen Fördervorganges), M. Gasterstädt. Zeit. des Vereines Deutscher Ingenieure, vol. 68, no. 24, June 14, 1924, pp. 617-624, 22 figs. Describes experimental plant and measuring arrangements. Effect of quantity conveyed and velocity on pressure drop in conveying system; shows uniform connection between quantity conveyed and drop in pressure, and between velocity of air current and of material.

**Shaking-Chute.** Conveying by Shaking Chute and the Acceleration Process by Marcus (Die Schüttelrutschenförderung und das Beschleunigungsverfahren von Marcus), O. Ohnesorge. Fördertechnik u. Frachtverkehr, vol. 17, no. 11, June 3, 1924, pp. 150-153, 5 figs. Discusses deviation of angle, intercalation of inclined planes, curved conveyor paths, etc.

**COPPER ALLOYS**

**Hardness.** The Variation in Hardness of Copper Alloys with Temperature (La variation de la dureté des alliages de cuivre avec la température), L. Guillet. Revue de Métallurgie, vol. 21, no. 5, May 1924, pp. 295-302, 7 figs. Results of tests show that variations of hardness with temperature follow laws which vary considerably for alloys of same category; but in same range of thermal diagram, variations follow same laws to great extent; ternary alloys conserve their hardness better than binary alloys.

**CORE BOXES**

**Valves.** Making Globe Valve Corebox, W. C. Ewalt. Foundry, vol. 52, no. 12, June 15, 1924, pp. 483-485, 15 figs. Metal boxes are cast from carefully constructed wood master patterns where foundry output is large; in many cases pattern is built up from number of small segments.

**CORES**

**Oil-Sand.** The Technical Side of Oil-Sand Cores, C. W. H. Holmes. Foundry Trade Jl., vol. 29, no. 410, June 26, 1924, pp. 543-547. Selection of suitable sand and oil, preparation of core mixture, baking of oil-sand cores, and description of finished core.

**Supports for.** Core and Mould Supports, B. Shaw and J. Edgar. Mech. Wld., vol. 75, nos. 1942 and 1945, Mar. 21 and Apr. 11, 1924, pp. 178-179 and 229-230, 17 figs. Information regarding core and mold grids.

**COST ACCOUNTING**

**Wastage in Relation to.** The Wastage of Industrial Plant in Relation to Cost Accounting, A. Stewart. World Power, vol. 1, no. 6, June 1924, pp. 318-324, 4 figs. Nature of wastage; methods of measuring depreciation; plant register; cost of additions; repairs and renewals; inclusion of plant register.

**COTTON**

**Breaking Load of.** The Effect of Treatment with Sulphuric Acid on the Breaking Load of Cotton, P. D. Vincent. Textile Inst.—Jl., vol. 15, no. 5, May 1924, pp. T281-T290, 7 figs. Effect of treatment with sulphuric acid of various concentrations at room temperature on breaking load of cotton hairs and yarns has been actually measured; klier boiling increases breaking load of untreated yarn but still further weakens weaker acid-treated yarns.

**CRANES**

**Industrial.** Devices for Grappling Loads for Cranes (Die Lastaufnahmegeräte der Krane), R. Hänchen. Maschinenbau, vol. 3, no. 16, May 22, 1924, pp. 567-575, 31 figs. Discusses conveying apparatus for bulk goods; describes types of grabs, tippers, etc.

**Jib.** "Toplis" Luffing Cranes at Southampton Docks. Engineering, vol. 117, no. 3050, June 13,

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

1924, pp. 762-763, 4 figs. partly on p. 768. Patent horizontal-luffing type, consisting of traveling truck, in which is mounted a rotating steel lattice structure, forming a mast and carrying jib and combined machinery house and operator's cabin.

**Traveling.** Materials-Handling Equipment of the New Docks of Cambrai, France (Les appareils de manutention mécanique des nouveaux docks de Cambrai). Génie Civil, vol. 84, no. 22, May 31, 1924, pp. 513-516, 7 figs. Traveling cranes for transportation of sugar in sacks.

**Monorail Traveling Crane.** Min. & Oil Bul., vol. 10, no. 7, July 1924, pp. 717-719, 2 figs. Describes overhead crane and monorail system located at plant of Chanslor-Canfield Midway Oil Co. Crane requires only half usual amount of trackage and makes transfer of large and heavy articles such as beams, pipes, lathes and engines, very simple.

**Standard Traveling Cranes (Normale Dampkrane).** W. Benedict. Maschinenbau, vol. 3, no. 16, May 22, 1924, pp. 576-577, 1 fig. Discusses construction of steam slewing cranes, especially control services; adaptability for many purposes.

#### CRANKSHAFTS

**Failures.** Stress Distribution in Crankshafts and Its Relation to Crankshaft Failures, D. J. McAdam, Jr. and G. F. Wohlgenuth. Am. Soc. Naval Engrs.—Jl., vol. 36, no. 2, May 1924, pp. 244-281, 29 figs. Causes of crankshaft failures; stress distribution in crankshafts as affected by restraint of journals; stress-strain relationship in typical naval crankshafts; measured and calculated angular deflections of Liberty crankshaft; typical crankshaft failures; desirable stress distribution in crankshafts.

**Machining.** Machining Automobile Crankshafts, W. E. Groene. Machy. (N. Y.), vol. 30, no. 11, July 1924, pp. 855-858, 4 figs. New manufacturing method involving use of automatic crankshaft lathe in conjunction with multi-cut lathe.

#### CUPOLAS

**Experimental Results.** The Dimensions of Cupolas, Their Relation to Volume of Coke and Iron Charges and Their Influence on Melting Process and Coke Consumption (Die Abmessungen der Kuppelöfen, ihr Verhältnis zur Grösse der Koks- und Eisensätze und ihr Einfluss auf Schmelzgang und Koksverbrauch), A. Wagner. Stahl u. Eisen, vol. 44, no. 22, May 29, 1924, pp. 617-622, 1 fig. Results of experiments on two larger cupolas and one smaller one.

**Fuel Economy.** Economical Melting with Cupolas, H. Van Aarst. Foundry Trade Jl., vol. 29, no. 409, June 19, 1924, pp. 522-524, 3 figs. How to be economical with fuel in cupola. Influence of iron on fuel economy, influence of mechanical properties of coke, air supply, and cupola linings. See also Foundry, vol. 52, no. 13, July 1, 1924, pp. 514-515, 3 figs.

**Waste Utilization.** Operating Experience with the Grau Iron and Coke Recovery Machine (Betriebsverfahren mit der Graueschen Eisen- und Koks-Rückgewinnungsmaschine), M. Kupper. Giesserei Zeitung, vol. 21, no. 11, June 1, 1924, pp. 223-225. Discusses possible applications of machine, results of operations, profit and loss. Describes tests with cupola furnace, and foundry and other wastes.

#### CYLINDERS

**Locomotive, Welding of.** Locomotive Cylinder Welding, J. S. Heaton. Welding Engr., vol. 9, no. 6, June 1924, pp. 24-25, 10 figs. Firepot made of front end netting greatly reduces cost of preheating cylinders; special preheating torch.

## D

#### DIESEL ENGINES

**Fuel Injection.** Investigation of the Fuel-Injection Process in Diesel Engines (Untersuchungen über den Einspritzvorgang bei Dieselmotoren), W. Riehm. Zeit. des Vereines Deutscher Ingenieure, vol. 68, no. 25, June 21, 1924, pp. 641-645, 10 figs. Discusses fundamentals of injection process; describes experimental plant, tests with water and oil, absorption of heat up to ignition.

**Low-Powered.** Low-Powered Diesel Engines (La question du Diesel de faible puissance), P. Simondet. Arts & Métiers, vol. 77, no. 42, Mar. 1924, pp. 81-105, 22 figs. Deals with technical, financial and manufacturing problems of low-power engines working on Diesel cycle, with special reference to difficulties which may account for comparatively restricted extent to which they have hitherto been employed; among types of engines described are Hindl and Hvid engines.

**Smit-M.A.N.** A New Dutch Diesel Engine Mar. Engr. & Motorship Bldr., vol. 47, no. 562, July 1924, pp. 265-266, 5 figs. J. & K. Smit of Kinderdijk, Holland, have commenced manufacture of M. A. N. Diesel engines. Particulars of unit recently completed, 3-cylinder 60-hp. M. A. N. 4-stroke Diesel engine.

**Sulzer.** A New Sulzer Engine with Independent Scavenging, Mar. Engr. & Motorship Bldr., vol. 47, no. 562, July 1924, pp. 267-268 and 270, 2 figs. Particulars of first Diesel engine constructed by Wallsend Slipway & Eng. Co.; Sulzer 4-cylinder unit of 2000 h.p.

#### DRILLING MACHINES

**Angle-Plate Fixture.** Universal Angle-plate Drilling Fixture, Machy. (Lond.), vol. 24, no. 610, June 5, 1924, pp. 315-316, 3 figs. Use and general application of universal drilling fixture for handling casings for turbines.

**Radial.** New 6-ft. Radial Drilling Machine.

Machy. (Lond.) vol. 24, no. 610, June 5, 1924, pp. 305-306, 1 fig. High-speed radial drilling, boring, facing, tapping, and studding machine, constructed by Geo. Swift & Sons, Halifax.

#### DROP FORGING

**Crankshafts.** Precautions Needed in Production of Automotive Drop Forgings. Automotive Industries, vol. 50, no. 26, June 26, 1924, pp. 1388-1391, 6 figs. Wyman-Gordon employ special machine to prove running balance of crankshafts and etch section to show direction of flow in finished product, in addition to standard tests.

#### DRYING

**Methods.** Drying Methods in Modern Industrial Processes, Chas. L. Hubbard. Nat. Engr., vol. 28, no. 7, July 1924, pp. 309-314, 7 figs. Fundamentals of drying processes and basic factors affecting their operation.

## E

#### EDUCATION, ENGINEERING

**Courses.** Engineering Courses for the Functional Rather than the Industrial Divisions of Engineering, E. Bennett. Eng. Education, vol. 14, no. 10, June 1924, pp. 582-590. Functional divisions of engineering are considered to be functional divisions found within any of the large industrial organizations.

**Leaders and Routine Practitioners.** Educating Leaders and Routine Practitioners, C. C. Williams. Eng. Education, vol. 14, no. 9, May 1924, pp. 528-535. Considers question of whether colleges can effectively train both leaders and routine practitioners simultaneously.

**Tabulated Recapitulations, Use of.** Tabulated Recapitulations as a Means of Education, P. A. Cushman. Eng. Education, vol. 14, no. 8, Apr. 1924, pp. 450-458, 4 figs. Points out in what ways engineering students would gain by use of tabular recapitulations during their study of fundamental courses.

**Teaching, Methods of.** At What Are We Aiming and With What? F. W. Springer. Eng. Education, vol. 14, no. 10, June 1924, pp. 565-581. Proposes a key or outline of educational theory and makes more apparent desirability and possibility of finding cues for application of theory to engineering education.

#### ELECTRIC DRIVE

**Group and Individual.** When to Use Group and Individual Drives, R. W. Drake. Indus. Engr., vol. 82, no. 2, 3 and 4, Feb., Mar. and Apr., 1924, pp. 56-60 and 106-107; 118-122; and 174-177, 15 figs. Comparative advantages and disadvantages of group and individual drives in industrial plants; points on layout, installation and operation; fan drives; line-shaft losses.

#### ELECTRIC FURNACES

**Development.** Electric Furnace Development, F. Hodson. Blast Furnace & Steel Plant, vol. 12, no. 7, July 1924, pp. 314-318, 8 figs. Many supposed limitations now being removed suggests unlimited growth.

**Electrodes.** The Use of Söderberg Self-Baking Electrodes in Electric Steel Furnaces (Die Verwendung der Söderbergschen Dauerelektrode an Elektrostaahlöfen), W. Ellender and L. Lyche. Berichte der Fachausschüsse des Vereines deutscher Eisenhüttenleute, Stahlwerksausschuss, report no. 78, Jan. 30, 1924, 5 pp. Use of self-baking electrode in 6-ton Héroult furnace; results show decrease in use of electrodes per ton steel; reduction of current consumption per ton steel; reduction in production cost per ton electrodes.

**Iron-Melting.** Melts Iron in Twin Furnaces, A. W. Bryant. Foundry, vol. 52, no. 14, July 15, 1924, pp. 556-559, 4 figs. Two electric units mounted on turntable 180 deg. apart and having one set of electrodes, provide small batches of hot iron at short even intervals.

**Metallic-Resistor.** The Metallic Resistor in Industrial Heating Furnaces, E. F. Collins. Chem. & Met. Eng., vol. 30, nos. 24 and 25, June 16 and 23, 1924, pp. 936-941 and 981-985, 18 figs. Application and design of electrical heating equipment; comparison of types of resistors; advantages of furnace. Chemical, physical and economic laws governing use of equipment.

**Steel.** Some Applications of Electric Heat to the Reheating of Steel, E. F. Collins. Fuels & Furnaces, vol. 2, nos. 6 and 7, June and July 1924, pp. 575-578 and 655-660, 2 figs. Brief review of past and present day conceptions of heat and laws governing it. Metallic resistors in unmuffled furnaces.

#### ELECTRIC LOCOMOTIVES

**Current-Generating System.** Railway Electrification (Considerations sur l'électrification des chemins de fer), E. Stassano. Génie Civil, vol. 84, no. 20, May 17, 1924, pp. 472-475. Notes on Stassano system of generation of current on locomotive. Supplementary note is appended on observations on Stassano system of traction, setting forth its shortcomings.

**Development.** Development of the Electric Locomotive, F. H. Shepard. Ry. Age (Daily Edition), vol. 76, no. 32, June 14, 1924, pp. 1568-1579, 17 figs. History of development, with tabulation of practically every electric locomotive in world, built or under construction, showing wheel and cab arrangement of each type in diagram; advantages and disadvantages of each type of drive. Paper presented before Am. Ry. Assn.

**German State Rys.** Electric Locomotives with

Special Reference to the Locomotives of the German Railways (Die elektrischen Lokomotiven unter besonderer Berücksichtigung der Lokomotiven der Deutschen Reichsbahn), M. Kleinow. Elektrotechnische Zeit., vol. 45, nos. 22 and 23, May 29 and June 5, 1924, pp. 547-553 and 583-588, 16 figs. Discusses a.c. locomotives of 15,000 volts and 16 $\frac{2}{3}$  periods used for long distance traffic, their development and construction, and equipment.

**Japanese.** Electric Locomotives for the Imperial Government Railways of Japan. English Elec. Jl., vol. 2, no. 6, Apr. 1924, pp. 294-301, 9 figs. Particulars of the three types ordered, namely, local passenger, freight, and express passenger locomotives. All fitted with same motor, 306 hp., 750 volts.

**Midi Railway, France.** High-Speed Electric Traction (La traction électrique à grande vitesse), F. Broussou. Technique Moderne, vol. 16, no. 9, May 1, 1924, pp. 324-328, 5 figs. New locomotives with vertical motors of the Midi Railway.

**South African Ry.** Electric Locomotives for South African Railway. Ry. Age, vol. 77, no. 2, July 12, 1924, pp. 53-56, 6 figs. Description of combined passenger and freight locomotives for Glencoe to Pietermaritzburg section. Three motive-power units are coupled together, driven in multiple, and controlled from one driver's cab. Maximum tractive force 40,000 lb.; traction system 3000 volts d.c.

**Swiss.** The I-C-I (2-6-2) Electric Locomotives of the Swiss Federal Railways, E. Savary. Int. Ry. Congress Assn.—Bul., vol. 6, no. 6, June 1924, pp. 457-461, 4 figs. Details of locomotive for express trains, having 6 driving wheels and 4 carrying wheels, weight in running order 60 tons, maximum speed 56 m.p.h.; single-phase traction. Translated from Bulletin Technique de la Suisse Romande.

**Three-Phase.** New Three-Phase Electric Locomotives of the Italian State Railways (I nuovi locomotori elettrici trifasi a 5 sale accoppiate delle F.F.S.S.), Amedeo Savoia. Rivista tecnica delle Ferrovie Italiane, vol. 25, no. 4, April 15, 1924, pp. 128-134, 1 fig. Details of new three-phase locomotive with five coupled axles (type Gr. E 551).

#### ELECTRIC WELDING

**Boiler Tubes.** The Repair of Boiler Tubes by Electric Welding (Réparation des tubes à fumée), Renaud. Revue Générale des Chemins de Fer & des Tramways, vol. 43, no. 5, May 1924, pp. 341-347, 7 figs. Methods and machinery employed at shops of Sotteville-les-Rouen, France.

**Spot-Welding Machines.** Reflex Action of Material to be Welded on Current and Tension Conditions of a Spot-Welding Machine (Rückwirkung des Schweissgutes auf die Strom- und Spannungverhältnisse der Punktschweissmaschine), F. H. Hellmuth. Elektrotechnische Zeit., vol. 45, no. 25, June 19, 1924, pp. 657-658, 3 figs. Tests with 15-kva. spot-welding machine as to effect of large masses of sheet iron, in form of plane or cylinder between electrodes.

#### ELEMENTS

**Non-Metallic.** The Non-Metallic Elements. Connections between their Dielectric and other Physical Properties, G. L. Addenbrooke. Lond., Edinburgh, & Dublin Philosophical Mag. & Jl. Sci., vol. 47, no. 281, May 1924, pp. 945-965, 1 fig. Consideration of two actions taking place when dielectric is placed in electric field; relation of attraction to energy reversibly stored; comparison of relative electric values found with relative values of other physical properties; comparison of electric actions with absolute melting points and with absolute boiling points; relation of relative molecular electric actions to heat of vaporization; relations with surface tensions; comparison with capillarity; etc.

#### ELEVATORS

**Standards.** Purpose of the S. I. A. Regulations for Construction and Operation of Elevators (Was bezwecken die S. I. A.-Vorschriften für Einrichtung und Betrieb von Aufzügen?), A. Bernheim, Jr. Schweizerische Bauzeitung, vol. 83, no. 24, June 14, 1924, pp. 280-284, 1 fig. Review of standards by S. I. A. commission, suggesting further improvements and more stringent regulations.

#### EMPLOYMENT MANAGEMENT

**Personal-Interview Method.** Pitfalls of the Employment Interview, D. A. Laird. Indus. Mgt. (N. Y.), vol. 68, no. 1, July 1924, pp. 58-62, 4 figs. Pitfalls of personal interview employment procedure, and suggestions for eliminating them.

#### EMPLOYEES, TRAINING OF

**Railway, in Air-Brake Equipment.** Instructing Railway Employees in Air Brake Equipment, J. P. Stewart. Ry. Rev., vol. 74, no. 24, June 14, 1924, pp. 1131-1132. Methods of interesting and instructing employees in operation and maintenance of air-brake equipment; value of instruction cars and instruction rooms; class instruction preferred. (Abstract.) Paper read before Air Brake Assn.

#### ENERGY

**Transforming and Distributing.** The Value of Efficiency in Transforming and Distributing Energy, Chas. E. Lucke. Mech. Engr., vol. 46, nos. 6 and 7, June and July 1924, pp. 317-324 and 380-385, 10 figs. Importance of energy costs; estimates of costs for primary energy and for its power-plant transformation into electrical energy through appropriate steps.

#### ENGINEERS

**Responsibility of.** The Engineer's Responsibility, M. Knowles. Engrs. Soc. West. Pa.—Proc., vol. 40, no. 4, May 1924, pp. 143-158 and (discussion) 159-162. Definition of engineer; public influence of engineering work; distribution of responsibility; what engineer can do for himself; directing public opinion; etc.

# Manufactured by **CLASSIFIED LIST OF MECHANICAL EQUIPMENT** Alphabetical List on page 148

**Engines, Steam, High Speed**

- \* American Blower Co.
- \* Clarage Fan Co.
- \* Engberg's Electric & Mech. Wks.
- \* Erie City Iron Works
- \* Harrisburg Fdry. & Mach. Wks.
- \* Nordberg Mfg. Co.
- \* Ridgway Dynamo & Engine Co.
- \* Skinner Engine Co.

**Engines, Steam, Poppet Valve**

- \* Erie City Iron Works
- \* Nordberg Mfg. Co.
- \* Ridgway Dynamo & Engine Co.
- \* Vilter Mfg. Co.

**Engines, Steam, Throttling**

- \* American Blower Co.
- \* Clarage Fan Co.
- \* Engberg's Electric & Mech. Wks.
- \* Ridgway Dynamo & Engine Co.

**Engines, Steam, Una-Flow**

- \* Frick Co. (Inc.)
- \* Harrisburg Fdry. & Mach. Wks.
- \* Nordberg Mfg. Co.
- \* Ridgway Dynamo & Engine Co.
- \* Skinner Engine Co.

**Engines, Steam, Variable Speed**

- \* American Blower Co.
- \* Harrisburg Fdry. & Mach. Wks.
- \* Nordberg Mfg. Co.
- \* Ridgway Dynamo & Engine Co.

**Engines, Steam, Vertical (Fully Enclosed, Self-Oiling)**

- \* American Blower Co.
- \* Clarage Fan Co.
- \* Engberg's Electric & Mech. Wks.
- \* Troy Engine & Machine Co.

**Engines, Steering**

- \* Bethlehem Shipbldg. Corp'n (Ltd.)
- \* Lidgerwood Mfg. Co.

**Evaporators**

- \* Bethlehem Shipbldg. Corp'n (Ltd.)
- \* Corl-Reynolds Engrg. Co. (Inc.)
- \* Farrel Foundry & Machine Co.
- \* Vogt, Henry Machine Co.
- \* Wheeler Condenser & Engrg. Co.

**Excavating Machinery**

- \* Clyde Iron Works Sales Co.
- \* Lidgerwood Mfg. Co.
- \* Link-Belt Co.

**Exhaust Heads**

- \* Hoppes Mfg. Co.

**Exhaust Systems**

- \* Allington & Curtis Mfg. Co.
- \* American Blower Co.
- \* Clarage Fan Co.
- \* Sturtevant, B. F. Co.

**Exhausters, Gas**

- \* American Blower Co.
- \* Clarage Fan Co.
- \* General Electric Co.
- \* Green Fuel Economizer Co.
- \* Ingersoll-Rand Co.
- \* Schutte & Koerting Co.
- \* Sturtevant, B. F. Co.

**Extractors, Centrifugal**

- \* Tolhurst Machine Works

**Extractors, Oil and Grease**

- \* American Schaeffer & Budenberg Corp'n
- \* Kieley & Mueller (Inc.)

**Fans, Exhaust**

- \* American Blower Co.
- \* Clarage Fan Co.
- \* Coppus Engineering Corp'n
- \* General Electric Co.
- \* Green Fuel Economizer Co.
- \* Sturtevant, B. F. Co.

**Fans, Exhaust, Mine**

- \* American Blower Co.
- \* Sturtevant, B. F. Co.

**Feeders, Pulverized Fuel**

- \* Combustion Engineering Corp'n
- \* Grindley Fuel Equipment Co.
- \* Smith, F. L. & Co.

**Filters, Air**

- \* Reed Air Filter Co. (Inc.)

**Filters, Feed Water, Boiler**

- \* Permutit Co.

**Filters, Feed Water, Demulsifying**

- \* Permutit Co.

**Filters, Gravity**

- \* Permutit Co.

**Filters, Mechanical**

- \* Permutit Co.

**Filters, Oil**

- \* Bowser, S. F. & Co. (Inc.)
- \* Elliott Co.
- \* General Electric Co.
- \* Permutit Co.

**Filters, Pressure**

- \* Graver Corp'n
- \* Permutit Co.

**Filters, Water**

- \* Cochrane Corp'n
- \* Elliott Co.
- \* Graver Corp'n
- \* Permutit Co.
- \* Scaife, Wm. B. & Sons Co.

**Filtration Plants**

- \* Cochrane Corp'n
- \* Graver Corp'n
- \* International Filter Co.
- \* Permutit Co.
- \* Scaife, Wm. B. & Sons Co.

**Fire Brick, Fire Hydrants, etc.**

- (See Brick, Hydrants, Fire, etc.)

**Fittings, Ammonia**

- \* Crane Co.
- \* De La Vergne Machine Co.
- \* Frick Co. (Inc.)
- \* Vilter Mfg. Co.
- \* Vogt, Henry Machine Co.

**Fittings, Compression**

- \* Bowser, S. F. & Co. (Inc.)
- \* Lunkenheimer Co.

**Fittings, Flanged**

- \* Builders Iron Foundry
- \* Central Foundry Co.
- \* Crane Co.
- \* Edward Valve & Mfg. Co.
- \* Kennedy Valve Mfg. Co.
- \* Lunkenheimer Co.
- \* Pittsburgh Valve, Fdry. & Const. Co.

**Fittings, Hydraulic**

- \* Crane Co.
- \* Pittsburgh Valve, Fdry. & Const. Co.
- \* Reading Steel Casting Co. (Inc.)
- \* U. S. Cast Iron Pipe & Fdry. Co.
- \* Vogt, Henry Machine Co.

**Fittings, Pipe**

- \* Barco Mfg. Co.
- \* Bethlehem Shipbldg. Corp'n (Ltd.)
- \* Central Foundry Co.
- \* Crane Co.
- \* Kennedy Valve Mfg. Co.
- \* Lunkenheimer Co.
- \* Pittsburgh Valve, Fdry. & Const. Co.
- \* Reading Steel Casting Co. (Inc.)
- \* (Reading Valve & Fittings Div.)
- \* Vogt, Henry Machine Co.

**Fittings, Steel**

- \* Crane Co.
- \* Edward Valve & Mfg. Co.
- \* Lunkenheimer Co.
- \* Pittsburgh Valve, Fdry. & Const. Co.
- \* Reading Steel Casting Co. (Inc.)
- \* (Reading Valve & Fittings Div.)
- \* Steere Engineering Co.
- \* Vogt, Henry Machine Co.

**Fittings, Steel**

- \* Crane Co.
- \* Edward Valve & Mfg. Co.
- \* Lunkenheimer Co.
- \* Pittsburgh Valve, Fdry. & Const. Co.
- \* Reading Steel Casting Co. (Inc.)
- \* (Reading Valve & Fittings Div.)
- \* Steere Engineering Co.
- \* Vogt, Henry Machine Co.

**Fittings, Steel**

- \* Crane Co.
- \* Edward Valve & Mfg. Co.
- \* Lunkenheimer Co.
- \* Pittsburgh Valve, Fdry. & Const. Co.
- \* Reading Steel Casting Co. (Inc.)
- \* (Reading Valve & Fittings Div.)
- \* Steere Engineering Co.
- \* Vogt, Henry Machine Co.

**Flanges, Forged Steel**

- \* American Spiral Pipe Works
- \* Crane Co.
- \* Edward Valve & Mfg. Co.
- \* Kennedy Valve Mfg. Co.
- \* Lunkenheimer Co.
- \* Pittsburgh Valve, Fdry. & Const. Co.
- \* Reading Steel Casting Co. (Inc.)
- \* (Reading Valve & Fittings Div.)
- \* Vogt, Henry Machine Co.

**Flanges, Forged Steel**

- \* American Spiral Pipe Works
- \* Crane Co.
- \* Edward Valve & Mfg. Co.
- \* Kennedy Valve Mfg. Co.
- \* Lunkenheimer Co.
- \* Pittsburgh Valve, Fdry. & Const. Co.
- \* Reading Steel Casting Co. (Inc.)
- \* (Reading Valve & Fittings Div.)
- \* Vogt, Henry Machine Co.

**Flanges, Forged Steel**

- \* American Spiral Pipe Works
- \* Crane Co.
- \* Edward Valve & Mfg. Co.
- \* Kennedy Valve Mfg. Co.
- \* Lunkenheimer Co.
- \* Pittsburgh Valve, Fdry. & Const. Co.
- \* Reading Steel Casting Co. (Inc.)
- \* (Reading Valve & Fittings Div.)
- \* Vogt, Henry Machine Co.

**Flanges, Forged Steel**

- \* American Spiral Pipe Works
- \* Crane Co.
- \* Edward Valve & Mfg. Co.
- \* Kennedy Valve Mfg. Co.
- \* Lunkenheimer Co.
- \* Pittsburgh Valve, Fdry. & Const. Co.
- \* Reading Steel Casting Co. (Inc.)
- \* (Reading Valve & Fittings Div.)
- \* Vogt, Henry Machine Co.

**Flanges, Forged Steel**

- \* American Spiral Pipe Works
- \* Crane Co.
- \* Edward Valve & Mfg. Co.
- \* Kennedy Valve Mfg. Co.
- \* Lunkenheimer Co.
- \* Pittsburgh Valve, Fdry. & Const. Co.
- \* Reading Steel Casting Co. (Inc.)
- \* (Reading Valve & Fittings Div.)
- \* Vogt, Henry Machine Co.

**Flanges, Forged Steel**

- \* American Spiral Pipe Works
- \* Crane Co.
- \* Edward Valve & Mfg. Co.
- \* Kennedy Valve Mfg. Co.
- \* Lunkenheimer Co.
- \* Pittsburgh Valve, Fdry. & Const. Co.
- \* Reading Steel Casting Co. (Inc.)
- \* (Reading Valve & Fittings Div.)
- \* Vogt, Henry Machine Co.

**Flanges, Forged Steel**

- \* American Spiral Pipe Works
- \* Crane Co.
- \* Edward Valve & Mfg. Co.
- \* Kennedy Valve Mfg. Co.
- \* Lunkenheimer Co.
- \* Pittsburgh Valve, Fdry. & Const. Co.
- \* Reading Steel Casting Co. (Inc.)
- \* (Reading Valve & Fittings Div.)
- \* Vogt, Henry Machine Co.

**Flanges, Forged Steel**

- \* American Spiral Pipe Works
- \* Crane Co.
- \* Edward Valve & Mfg. Co.
- \* Kennedy Valve Mfg. Co.
- \* Lunkenheimer Co.
- \* Pittsburgh Valve, Fdry. & Const. Co.
- \* Reading Steel Casting Co. (Inc.)
- \* (Reading Valve & Fittings Div.)
- \* Vogt, Henry Machine Co.

**Flanges, Forged Steel**

- \* American Spiral Pipe Works
- \* Crane Co.
- \* Edward Valve & Mfg. Co.
- \* Kennedy Valve Mfg. Co.
- \* Lunkenheimer Co.
- \* Pittsburgh Valve, Fdry. & Const. Co.
- \* Reading Steel Casting Co. (Inc.)
- \* (Reading Valve & Fittings Div.)
- \* Vogt, Henry Machine Co.

**Flanges, Forged Steel**

- \* American Spiral Pipe Works
- \* Crane Co.
- \* Edward Valve & Mfg. Co.
- \* Kennedy Valve Mfg. Co.
- \* Lunkenheimer Co.
- \* Pittsburgh Valve, Fdry. & Const. Co.
- \* Reading Steel Casting Co. (Inc.)
- \* (Reading Valve & Fittings Div.)
- \* Vogt, Henry Machine Co.

**Fly Wheels**

- \* Hill Clutch Machine & Fdry. Co.
- \* Medart Co.
- \* Nordberg Mfg. Co.
- \* Wood's, T. B. Sons Co.

**Forgings, Drop**

- \* Vogt, Henry Machine Co.

**Forgings, Hammered**

- \* Cann & Saul Steel Co.

**Forgings, Iron and Steel**

- \* Cann & Saul Steel Co.

**Foundry Equipment**

- \* Whiting Corp'n

**Friction Clutches, Hoists, etc.**

- (See Clutches, Hoists, etc., Friction)

**Friction, Paper and Iron**

- \* Link-Belt Co.

**Fuel Economizers**

- (See Economizers, Fuel)

**Furnace Construction**

- \* Furnace Engineering Co.

**Furnaces, Annealing and Tempering**

- \* Combustion Engineering Corp'n
- \* General Electric Co.
- \* Whiting Corp'n

**Furnaces, Boiler**

- \* American Engineering Co.
- \* American Spiral Pipe Wks.
- \* Babcock & Wilcox Co.
- \* Bernitz Furnace Appliance Co.
- \* Combustion Engineering Corp'n
- \* Detroit Stoker Co.
- \* Riley, Sanford Stoker Co.

**Furnaces, Down Draft**

- \* O'Brien, John Boiler Works Co.

**Furnaces, Electric**

- \* Detroit Electric Furnace Co.
- \* Westinghouse Elect. & Mfg. Co.

**Furnaces, Heat Treating**

- \* Combustion Engineering Corp'n
- \* General Electric Co.

**Furnaces, Melting**

- \* Combustion Engineering Corp'n
- \* Detroit Electric Furnace Co.
- \* General Electric Co.
- \* Whiting Corp'n

**Furnaces, Non-Ferrous**

- \* Combustion Engineering Corp'n
- \* Detroit Electric Furnace Co.

**Furnaces, Powdered Coal**

- \* Combustion Engineering Corp'n
- \* Grindley Fuel Equipment Co.

**Furnaces, Smokeless**

- \* American Engineering Co.
- \* Babcock & Wilcox Co.
- \* Combustion Engineering Corp'n
- \* Detroit Stoker Co.
- \* Riley, Sanford Stoker Co.

**Fuses**

- \* General Electric Co.
- \* Johns-Manville (Inc.)
- \* Westinghouse Elect. & Mfg. Co.

**Gage Boards**

- \* American Schaeffer & Budenberg Corp'n
- \* Ashton Valve Co.
- \* Crosby Steam Gage & Valve Co.

**Gage Glasses**

- \* American Schaeffer & Budenberg Corp'n

**Gage Glasses, Inclined**

- \* Sessure Water Gauge Co.

**Gage Testers**

- \* American Schaeffer & Budenberg Corp'n
- \* Ashton Valve Co.
- \* Crosby Steam Gage & Valve Co.

**Gages, Altitudes**

- \* American Schaeffer & Budenberg Corp'n
- \* Ashton Valve Co.
- \* Crosby Steam Gage & Valve Co.

**Gages, Ammonia**

- \* American Schaeffer & Budenberg Corp'n
- \* Ashton Valve Co.
- \* Crosby Steam Gage & Valve Co.
- \* Vogt, Henry Machine Co.

**Gages, Differential Pressure**

- \* American Schaeffer & Budenberg Corp'n
- \* Bacharach Industrial Instrument Co.
- \* Bailey Meter Co.
- \* Tagliabue, C. J. Mfg. Co.

**Gages, Draft**

- \* American Schaeffer & Budenberg Corp'n
- \* Ashton Valve Co.
- \* Bacharach Industrial Instrument Co.

## F

## FIRE PREVENTION

**Industrial Plants.** Modern Maintenance of Plant and Equipment. W. G. Ziegler. Indus. Mgt. (N. Y.), vol. 68, no. 1, July 1924, pp. 6-13, 14 figs. Fire and accident prevention in industrial plants.

## FIRES

**Loss Statistics.** Fire Loss Statistics for 1923. Fire & Water Eng., vol. 75, no. 25, June 18, 1924, pp. 1315-1317, 1319-1320, 1322-1323 and 1351. Tabulation showing number of alarms, number of fires in various types of buildings, how controlled, property values, losses, etc.

## FLAX

**Retting.** An Experimental Study of Flax Retting. J. V. Eyre and C. R. Nodder. Textile Inst.—Jl., vol. 15, no. 5, May 1924, pp. T237-T272, 24 figs. Development of acidity during retting of flax: its interpretation and technical significance.

## FLOW OF GASES

**Aeration of Jet of Gas.** The Entrainment of Air by a Jet of Gas issuing from a Small Orifice in a Thin Plate. J. S. G. Thomas. Lond., Edinburgh, & Dublin Philosophical Mag. & J. Sci., vol. 47, no. 281, May 1924, pp. 1048-1056, 4 figs. It is shown that constant value of aeration of jet of gas issuing at different pressures from orifice, as referred to in Technologic Paper no. 193 (1921) of Bur. of Standards, characterizes induction-flow system in which induction of air is effected under conditions such that flow of stream of air induced by jet is considerably reduced from its normal value in free air by restricting effective area of induction tube or otherwise.

## FLUE-GAS ANALYSIS

**CO Indicator.** A New Instrument for the Continuous Indication of Carbon Monoxide in Boiler-Flue Gases. W. O. Andrews. S. African Instn. Engrs.—Jl., vol. 22, no. 10, May 1924, pp. 145-152 and (discussion) 152-153, 3 figs. Instrument devised by author as simple and inexpensive means of indicating, by means of color of liquid, presence or absence of small quantities of combustible carbon gases in flue gas.

**CO Recorders.** Electrically Heated Platinum Tubes Used in CO<sub>2</sub> Recorder. Power Plant Eng., vol. 28, no. 13, July 1, 1924, pp. 729-730, 1 fig. In new recorder made by Uehling Instrument Co., Paterson, N. J., novel scheme is employed to secure motive power for actuating recorder by burning combustible in electrically heated platinum tubes.

## FORGING

**Stamping and Equipment for.** The Modern Forging and Stamping of Steel. Metal Industry (Lond.), vol. 24, nos. 25 and 26, and vol. 25, no. 1, June 20, 27 and July 4, 1924, pp. 605-606, 627-628 and 9-11. Survey of forging and stamping work, from questions of shop equipment and layout to causes of defective stampings and heat treatment considerations.

## FOUNDRIES

**Automobile.** Metallurgical Control in Automobile Foundry Practice. A. Harley. Foundry Trade Jl., vol. 29, no. 395 and 396, Mar. 13 and 20, 1924, pp. 207-210 and 235-237, 19 figs. Modern conditions and tendencies; organization of labor conditions; discusses cast iron, semi-steel, malleable iron, and cast steel castings; molding sands; non-ferrous metals castings; production of a cast-iron cylinder.

The Foundry of the Sunbeam Motor Car Company. Foundry Trade Jl., vol. 29, no. 407, June 5, 1924, pp. 455-459, 11 figs. Particulars of equipment and methods employed.

**Birmingham Exhibition, England.** The International Foundry Trades' Exhibition. Foundry Trade Jl., vol. 29, nos. 409 and 410, June 19 and 26, 1924, pp. 502-508, 525-526, 528 and 530; and 557-542; 24 figs. Brief descriptions of exhibits at show being held at Birmingham, Eng., which cover general foundry plant, foundry requisites, patterns and patternmaking machinery and tools, molding sands, refractories, die-casting plant and laboratory equipment, raw materials, fuel and finished castings of all kinds. See also Metal Industry (Lond.), vol. 24, nos. 25 and 26, June 20 and 27, 1924, pp. 599-604 and 622-626, 24 figs.

**Malleable-Iron.** Operates New Malleable Foundry. E. C. Boehringer. Iron Trade Rev., vol. 75, no. 1, July 3, 1924, pp. 29-33, 6 figs. Describes plant, including equipment, and practice of Belle City Malleable Iron Co., Racine, Wis. See also Foundry, vol. 52, no. 13, July 1, 1924, pp. 521-526 and 533, 13 figs.

## FUEL ECONOMY

**Metallurgical Works.** Works Problems and Methods in Fuel Economy. R. Hadfield. Iron & Coal Trades Rev., vol. 108, no. 2938, June 20, 1924, pp. 1066-1067. Certain problems met with in practice and some methods by which they may be attached; general considerations regarding heat balance; furnace efficiency; importance of high-temperature research, use of pyrometers, and temperature colors. Abstract of paper read before Iron & Steel Sec., Empire Min. & Met. Congress.

## FUELS

**Canadian Resources.** Canada's Fuel Problem. C. Camell. Combustion, vol. 11, no. 1, July 1924, pp. 46-50. Discussion of Canada's fuel resources and fuel requirements and of possibilities for eliminating uncertainties due to importation of fuel.

The Fuel Resources of Canada and Their Utilization for the Production of Power and Other Purposes. B. F. Haanel. Eng. Jl., vol. 7, no. 7, July 1924, pp. 361-382, 15 figs. Fuel resources; production, consumption,

imports and exports; preparation of solid fuels for industrial and other uses; value of Canadian solid fuels for steam raising and production of a power and industrial gas; carbonization of peat, oil shales, and lower-grade coals and relation of carbonization of coals to production of power. Paper read at World Power Conference.

**Combustion.** An Investigation of the Maximum Temperatures and Pressures Attainable in the Combustion of Gaseous and Liquid Fuels. G. A. Goodenough and G. T. Felbeck. Univ. of Ill. Bul., Eng. Experiment Station, No. 139, Mar. 1924, 158 pp., 27 figs. Details of investigation to study conditions of equilibrium and establish necessary equilibrium equations, and to incorporate these equilibrium equations into a formulation by means of which maximum temperature resulting from combustion of a fuel under predetermined conditions may be calculated.

**Gaseous.** Theoretical Comparative Study of the Principal Gaseous Fuels from Viewpoints of Lighting and of Power Generation (Etude théorique comparée des principaux combustibles gazeux aux points de vue de l'éclairage et de la force motrice). H. Pariselle. Chimie & Industrie, vol. 11, no. 4, Apr. 1924, pp. 651-656. Calculation of combustion temperatures, and conclusions to be drawn therefrom; evaluation of power developed in engine by gaseous fuel.

**Oil.** See OIL FUEL.

**Pulverized Coal.** See PULVERIZED COAL.

## FURNACES, ENAMELING

**Electricity vs. Oil Heating.** Electricity Versus Oil for Heating Iron Enameling Furnaces. H. A. Mulvaney. Jl. of Elec., vol. 52, no. 12, June 15, 1924, pp. 487-490, 6 figs. Description of application of electricity to manufacturing with resultant improvement in product, reduced spoilage and decreased cost of production.

## FURNACES, HEATING

**Reheating.** Operation Costs of Reheating Furnaces Reduced. H. L. Read. Iron Age, vol. 113, no. 26, June 26, 1924, pp. 1864-1865, 2 figs. Installation of burners for coke-oven gas in which air proportion is maintained automatically.

## FURNACES, HEAT-TREATING

**Continuous, Conveyor-Type.** Heat Treating at the Chevrolet Plant. Iron Age, vol. 114, no. 3, July 17, 1924, pp. 129-131, 2 figs. Describes conveyor-type continuous heat-treating furnace of new design recently made in axle and gear plant of Chevrolet Motor Co., Detroit, and its operation. Is a combination continuous hardening and drawing furnace of a double-deck type and a unique feature is that drawing furnace is located above hardening furnace and is fired by waste heat from latter.

## FURNACES, METALLURGICAL

**Oil-Fired Melting.** Use Oil in Malleable Furnace. B. R. Mayne and C. Joseph. Foundry, vol. 52, no. 12, June 15, 1924, pp. 472-475, 5 figs. New method installed when costs become prohibitive; use same construction as was employed in coal-fired furnace; oil consumption considered low.

## G

## GAGES

**Precision Measurement with.** Fine Measurement. J. E. Sears. Machy. (Lond.), vol. 24, nos. 607, 609 and 610, May 15, 29 and June 5, 1924, pp. 209-212, 266-271 and 299-303, 22 figs. Deals with precision measurement in its relation to mechanical work; methods by which control of standard gages is effected in laboratory; recent developments in methods of precision measurement. Paper read before Instn. Mech. Engrs.

## GAS PRODUCERS

**Coke.** Experiments with Gas Producers (Untersuchungen an Koksgebläsen). E. Terres and J. Schierenbeck. Gas- und Wasser-fach, vol. 67, nos. 19, 20, 21, 22, and 23, May 10, 17, 24, 31 and June 7, 1924, pp. 257-263, 279-282, 296-299, 311-314 and 325-327, 11 figs. Discusses experiments carried out with gas producers to replace empirical data by exact experimental data and to study effect of constructional changes on processes under consideration. Discusses experimental arrangements, results with flat grates and inclined grates, composition of gas, etc.

## GAS TURBINES

**Development.** History of the Progress of Gas and Oil Turbines (Die Arbeit an der Gas- und Oelturbine). W. Gentsch. Brennstoff- und Wärmewirtschaft, vol. 6, nos. 2, 3 and 4, Feb., Mar. and Apr. 1924, pp. 28-35, 48-55 and 71-79, 18 figs. Various attempts to solve problem of economical internal-combustion turbine are recorded and described, including Brown-Boveri, Schneider, Westinghouse, Stodola, General Electric, Francke, Rateau, Nash Eng. Co., etc.

## GASES

**Combustion, Dewpoint Temperature of.** The Dewpoint Temperature of Gases from Combustion. J. N. Waite. Elec. Rev., vol. 94, nos. 2429 and 2430, June 13 and 20, 1924, pp. 954-956 and 994-996, 6 figs. Methods of calculating dewpoint temperature for gases resulting for a given fuel, fuel taken being a medium grade bituminous coal having a medium hydrogen and moisture content. Effect of change of fuel analysis on dewpoint temperature of resultant gases of combustion. Curves and tables.

**Combustion of.** The Combustion of Gases [Die Verbrennung von gasförmigen Brennstoffen (Generatortags)], A. Dosch. Sprechsaal, vol. 57, nos. 14, 15 and 16, Apr. 3, 14 and 17, 1924, pp. 147-149, 157-159 and 171-173, 5 figs. Processes of combustion of various gases analyzed and explained. Quantities of air required for combustion of various gas mixtures computed and illustrated with aid of several examples.

**Specific Heat.** Measurement of Specific Heat  $C_v$  of Gases by Means of the Differential Method (Die Messung der spezifischen Wärme  $C_v$  von Gasen mittels der Differentialmethode), M. Trautz and K. Hebbel. Annalen der Physik, vol. 74, no. 12, 1924, pp. 285-324, 13 figs. Discusses principles of differential method and describes apparatus used.

## GASOLINE

**Natural-Gas.** Natural-Gas Gasoline in 1922. G. B. Richardson. U. S. Geol. Surv., no. II:30, Apr. 24, 1924, pp. 347-351. United States production statistics.

## GASOLINE ENGINES

**Two-Cycle.** Two-Cycle Gasoline Engines (Il motore a benzina a due tempi), Pasquale Borraconi. Industria, vol. 38, no. 1, Jan. 15, 1924, pp. 7-11, 4 figs. Discusses their advantages in relation to their possible application in automotive work.

## GEARS

**Helical.** High-Grade Helical Spur Wheel Gears. E. Meyer. Eng. Progress, vol. 5, no. 6, June 1924, pp. 113-117, 7 figs. Cutting teeth; materials; tooth load and velocity; angle of pitch and pitch of teeth; bearings of pinion shaft; toothed wheel gears for vertical shafts; ratio of gearing and output; assembly; lubrication; efficiency; silent running; life and use.

**Hob Tooth Form.** Hob Tooth Form, H. E. Merritt. Machy. (Lond.), vol. 24, no. 613, June 26, 1924, pp. 391-395, 4 figs. Shows that a hob can produce teeth which are mathematically exact involute teeth (neglecting effect of gashes in hob) and examines necessary axial section which hob teeth must have in order to achieve this result.

**Lubrication.** Gearing and Gear Lubricants. A. F. Brewer. Indus. Mgt. (N. Y.), vol. 68, no. 1, July 1924, pp. 18-24, 10 figs. Specialized needs of various types of modern gears.

## GRINDING MACHINES

**Electrically Driven.** Electrically-driven Grinding Machines. Machy. (Lond.), vol. 24, no. 610, June 5, 1924, pp. 312-315, 8 figs. New range of self-contained grinding units by B. R. Rowland & Co., Reddish, England.

**Internal Attachment.** Internal Grinding Attachment. Machy. (Lond.), vol. 24, no. 610, June 5, 1924, p. 297, 2 figs. Attachment developed by Kershaw Internal Grinder Co., Manchester, more particularly for garage use in regrinding of worn automobile cylinder bores.

## H

## HARDNESS

**Metal-Products Hardness Testing.** The Logical Course of Development of Additional Apparatus for Investigating the Hardness of Metal Products in Works' Practice. H. A. Holz. Testing, vol. 1, nos. 3 and 4, Mar. and Apr. 1924, pp. 247-262, and 308-325, 29 figs. States that logical course of development of additional apparatus for investigating hardness of metals and metal products lies entirely in direction of appliances for application of Brinell test to problems for which this method has not been or could not be applied heretofore. Discusses some of the results established by Bur. Standards in its investigation of Brinell Meter, developed by F. H. Schoenfuß.

## HEAT TRANSMISSION

**Research.** Research in Heat Transmission. E. Buckingham. Mech. Eng., vol. 46, no. 7, July 1924, pp. 386-388. Conduction, radiation, and convection; conduct of research in heat transmission; employment of dimensional analysis; variables involved in complete mathematical theory of heat transmission; suggestions in regard to planning of research programs.

## HEATING AND VENTILATING

**Code.** Heating and Ventilating Code. Domestic Eng., vol. 105, no. 12, Dec. 22, 1923, and vol. 106, no. 2, Jan. 12, 1924, pp. 574-576 and 26-28, 2 figs. Condensed form of code of Wisconsin. See also Heat. & Vent. Mag., vol. 21, no. 2, Feb. 1924, pp. 84-87.

## HEATING, HOT-AIR

**Furnaces and Heating Systems.** Investigation of Warm-Air Furnaces and Heating Systems—II. A. C. Willard, A. P. Kratz, V. S. Day. Univ. of Ill. Bul., Eng. Experiment Station, No. 141, May 1924, 149 pp., 91 figs. Details of investigation to determine efficiency and capacity of commercial warm-air furnaces; satisfactory and simple methods for rating furnaces; methods of increasing efficiency and capacity of furnace heating equipment; heat losses in furnace heating systems; proper sizes and proportions of leaders, stacks, and registers; etc.

## HEATING, HOT-WATER

**Effective Pressures in Systems.** Theory of the Effective Pressures in Hot-Water Heating Systems. (Theorie des wirksamen Druckes in Warmwasserheizungen), M. Wierz. Gesundheits-Ingenieur, vol. 47, no. 18, May 3, 1924, pp. 159-164, 14 figs. Forces which produce circulation are computed for various types of hot-water heating systems. Investigations

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

are limited to cases where flow has attained constant conditions.

### HEATING, STEAM

**Central.** Low Pressure Steam for District Heating, H. A. Woodworth. Power Plant Eng., vol. 28, no. 14, July 15, 1924, pp. 763-768, 4 figs. Service to customers insures success. Estimating radiation, advantages of district heating, customer's installations, atmospheric steam heating, and operation of a heating system.

### HOBBING MACHINES

**Spur-Gear.** An Interesting Gear Cutting Development. British Machine Tool Eng., vol. 3, no. 27, May-June 1924, pp. 61-62, 1 fig. Describes automatic, spur-gear hobbing machine.

### HYDRAULIC TURBINES

**15,000-B.Hp.** 15,000 H.P. Water Turbine for the Tata Hydro-Electric Supply Company. English Electric Jl., vol. 2, no. 6, Apr. 1924, pp. 185-293, 8 figs. Description of unit for extension of existing Khopoli Station of Tata Hydroelectric Supply Co., in India; head 1655 ft., output 15,000 b.hp., speed 300 r.p.m. Brief reference to geographical situation of Tata power system.

**Installations, Japan.** Modern Hydraulic-Turbine Installations in Japan (Neuere Wasserturbinenanlagen in Japan). J. Moser. Schweizerische Bauzeitung, vol. 83, no. 19, May 10, 1924, pp. 224-226, 4 figs. Details of turbines installed by Escher Wyss & Co.

**Runner Design.** Hydraulic Turbine Progress, F. J. Taylor. Elec. Times, vol. 65, no. 1703, June 5, 1924, pp. 659-661, 6 figs. Trend of runner design. Increased speeds with lighter runners and lower heads.

**Storck-Kaplan.** Tests on Storck-Kaplan Hydraulic Turbines, H. Mikyska. Mech. Eng., vol. 46, no. 7, July 1924, pp. 420-421, 3 figs. Tests carried out on turbines of various sizes by firm of Ignaz Storck, licensee for Kaplan turbine.

### HYDROELECTRIC DEVELOPMENTS

**Canada.** The Generation of Hydro-Electric Power in Canada, H. G. Acres. Eng. Jl., vol. 7, no. 7, July 1924, pp. 383-420, 65 figs. Progress in Canadian practice in connection with hydraulic power development. Paper read at World Power Conference.

**Italy.** The Italian Hydroelectric Industry, L. Dominian. Commerce Reports—Suppl., Trade Information Bul. No. 238, June 2, 1924, 17 pp. Data on extent of use of electricity in the various districts of Italy, together with specific information on many of the important hydroelectric power systems of the country.

**N. E. L. A. Report.** Many Developments in Hydroelectric Field. Power Plant Eng., vol. 28, no. 14, July 15, 1924, pp. 759-763, 6 figs. Report of Hydroelectric Power Committee of Nat. Elec. Light Assn., giving features of equipment of new projects and problems of operation.

**Pacific Coast, United States.** Hydroelectric Practices and Equipment on the Pacific Coast, S. Barfoed. A.I.E.E.—Jl., vol. 43, no. 7, July 1924, pp. 641-646, 1 fig. Physical features having deciding influence on design and construction of hydroelectric plants.

**Tasmania.** The Great Lake Hydro-Electric Scheme, Tasmania. Engineering, vol. 117, nos. 3038, 3041, 3044, 3045, 3048 and 3051, Mar. 21, Apr. 11, May 2, 9, 30 and June 20, 1924, pp. 355-357, 451-452 and 466, 568-570, 595, 694 and 704, and 792-793, 84 figs. partly on supp. plates. Describes recently completed extension for bringing continuous capacity of scheme up to 58,000 hp.; details of most important features, including reinforced-concrete flume, Ouse River diversion works, multiple-arch dam, substations, etc.

### HYDROELECTRIC PLANTS

**Austria.** The Mechanical and Electrical Equipment of the Partenstein Plant (Austria) (Die maschinellen und elektrischen Einrichtungen und die Stromwirtschaft des Werkes Partenstein), A. Kvetensky. Elektrotechnik u. Maschinenbau, vol. 42, no. 20, May 18, 1924, pp. 309-323, 10 figs. Description of Francis spiral turbines with vertical shafts and their control, generators, transformers, auxiliary machinery, measuring instruments, etc.; distribution system.

**New Zealand.** The Mangahao Power Station. Elec. Times, vol. 65, no. 1706, June 26, 1924, pp. 759-761, 5 figs. Further particulars of Mangahao power house. Capacity of plant is 24,000 kva.

### HYGROMETERS

**Types.** Humidity and Its Measurement. Sci. & Art of Min., vol. 34, nos. 22 and 23, May 24 and June 7, 1924, pp. 342-343 and 358-359, 2 figs. Deals with chemical and physical hygrometers of different types.

**Hygrometers** (Die Feuchtigkeitsmessgeräte), K. Holthausen. Feuerungstechnik, vol. 12, no. 17, June 1, 1924, pp. 141-144, 10 figs. Describes instruments with empirical calibration; by psychrometric method according to August; for air only; and for air and gases with sensible heat and impurities

## I

### ICE PLANTS

**New York, N. Y.** Mammoth Ice Plant Adopts New Methods, V. H. Vandiver and A. S. Taylor. Compressed Air Mag., vol. 29, no. 5, May 1924, pp. 851-856, 18 figs. Describes plant and equipment of Arctic Hygeia Ice Mfg. Co., New York City; 1000 tons ice per day capacity; electric drive and raw-water system replace steam drive and distilled-water system.

**Raw-Water.** New Ice Service Co. Plant. Refrig. Wld., vol. 59, no. 6, June 1924, pp. 11-15, 9 figs. Description of 300-ton, electrically driven raw-water ice plant on West 40th Street, New York City.

**Oil Engine-Driven Raw Water Ice Plant at Mattoon, Ill.** Ice & Refrigeration, vol. 66, no. 6, June 1924, pp. 513-517, 8 figs. Description of 30-ton plant of Mattoon Crystal Ice Co., intended primarily for production of ice for refrigerator car service; 50 per cent of production to be used for requirements of local ice trade.

**Serv-Ice Co.** Builds New Electrically Driven Raw Ice Plant in Columbus, Ind. Power Plant Eng., vol. 28, no. 14, July 15, 1924, pp. 734-738, 5 figs. Describes new 30-ton compression system ice plant built to supply local retail trade. Unusually clear product is obtained by use of lime and soda softening and high-pressure agitation.

### INDICATORS

**Precision Weak-Spring.** A New Precision Type Weak-Spring Indicator, J. Geiger. Oil Engine Power, vol. 2, no. 5, May 1924, pp. 278-279, 9 figs. Advantages of author's new type of engine indicator are illustrated.

### INDUSTRIAL MANAGEMENT

**Branch Plants, Management of.** How We Get Uniform Output from Widely Separated Plants, P. W. Litchfield. Factory, vol. 33, no. 1, July 1924, pp. 23-25, 116, 118 and 120-123, 2 figs. How to manage branch plants so that they function as one; how to do it and get a uniform product; how economies of one plant get themselves adopted in others located at distant points.

**Budgeting.** Applying the Budget System to Railroads, H. Bruere and A. Lazarus. Indus. Mgt. (N. Y.), vol. 68, no. 1, July 1924, pp. 35-46, 12 figs. Review of present practice and forecast of future possibilities.

**Control of Idleness.** The Control of Idleness in Industry, W. L. Conrad. Mech. Eng., vol. 46, no. 7, July 1924, pp. 402-404. Points out that one of chief causes of loss in industry is idleness of plant and personnel, due both to lack of orders or to causes within plant itself; accounting system can be made to show not only cost of idleness, but also its causes, and to indicate means of their control.

**Definition of Who Can Hire Management?** H. S. Dennison. Taylor Soc.—Bul., vol. 9, no. 3, June 1924, pp. 101-110. Notes on what is "managing," who manages, and who can best choose managers.

**Sales Management.** An Example of Scientific Marketing Procedure, S. Cowan. Taylor Soc.—Bul., vol. 9, no. 3, June 1924, pp. 143-151, 3 figs. Method of analyzing buying groups and circulation; comparing occupational and income groups; analysis of magazine circulation; circulation by occupational groups. Practical applications.

**Sales-Production Schedules.** Coordination of Sales and Production, Jos. H. Barber. Taylor Soc.—Bul., vol. 9, no. 3, June 1924, pp. 111-131, 10 figs. How Walworth Mfg. Co. establishes precise sales-production schedules.

**Shipping Methods.** From "Order Received" to Freight-Car Door, J. M. Schappert. Factory, vol. 33, no. 1, July 1924, pp. 45-47 and 141-142, 13 figs. Complete shipping system of Metal Stamping Co.

**Stores Accounting.** Balance-of-Stores Accounting System, I. D. Murfield. Elec. Wld., vol. 84, no. 2, July 12, 1924, pp. 66-69, 5 figs. Description of a stores accounting system which has resulted in a reduction of amount of money tied up, also a reduction of stock carried. Maximum and minimum stocks to be carried are specified by utility department heads.

**Stores Management.** The Care and Control of Raw Materials. Factory, vol. 33, no. 1, July 1924, pp. 34-35 and 135-136, 1 fig. Practice at plant of Bausch & Lomb Optical Co.

**Time Study.** See TIME STUDY.

### INDUSTRIAL ORGANIZATION

**Factory, Medium-Size.** The Problems of Industrial Organization and Their Solution (Brennende Probleme der Betriebsorganisation und der Weg zu ihrer natürlichen Lösung), Geo. Schlesinger. Schweizerische Bauzeitung, vol. 83, no. 21, May 24, 1924, pp. 243-247, 3 figs. Describes plan, design and equipment of medium-size factory, employing 150 workmen, constructed and organized by author, as example of economy of scientific organization.

### INDUSTRIAL PLANTS

**Railways.** Industrial Transportation Over Definite Lines of Travel, M. W. Potts. Indus. Mgt. (N. Y.), vol. 68, no. 1, July 1924, pp. 50-57, 10 figs. Summary of advantages and limitations of industrial railway as a means for efficient handling of materials.

### INSULATION, HEAT

**Air Spaces.** The Heat-Insulating Capacity of Air Spaces (Die Isolierfähigkeit von Luftschichten nach neuen Forschungen), H. Hamster. Wärme- und Kälte-Technik, vol. 26, no. 8, Apr. 30, 1924, pp. 64-66. Modern investigations covering conduction connection and radiation of heat through air spaces are reported.

### INTEGRATION

**Graphic Methods.** Graphic Integration Methods (Graphische Integrationsmethoden), C. Runge. Zeit. für Technische Physik, vol. 5, no. 5, 1924, pp. 161-165, 6 figs. Discusses linear and quadratic interpolation, calculation of values of whole functions, graphic integration and differential of curves, graphic integration of linear differential equations of first order.

### INTERNAL-COMBUSTION ENGINES

**Chemical Structure.** Chemical Structure of Motor Engine, E. Sokal. Oil & Gas Jl., vol. 23, no. 5, June 26, 1924, pp. 88, 126-127 and 130-131. Catalytic coating for surface of cylinder head suggested for

counteracting carbon and detonation. Accelerates combustion.

**Cooling Water, Utilization of Heat in.** Utilization of the Heat in the Cooling Water of Internal Combustion Engines (Die Ausnutzung der im Kühlwasser der Verbrennungsmotoren enthaltenen Wärme), Wärme- und Kälte-Technik, vol. 26, no. 8, Apr. 30, 1924, pp. 63-64, 3 figs. Various combinations of radiators with water jackets of internal-combustion engines are shown.

**Heat Transmission from Working Fluid.** The Rate of Heat Transmission from the Working Fluid in an Internal Combustion Engine, A. H. Gibson. Lond., Edinburgh, & Dublin Philosophical Mag. & Jl., Sci., vol. 47, no. 281, May 1924, pp. 883-895. Results from investigations and conclusions.

**Inert Diluents.** Inert Diluents, J. F. Alcock. Automobile Engr., vol. 14, no. 190, June 1924, pp. 165-170, 10 figs. Their effect on working fluid of internal-combustion engine.

[See also AIRPLANE ENGINES; AUTOMOBILE ENGINES; DIESEL ENGINES; GASOLINE ENGINES; OIL ENGINES]

### IRON AND STEEL

**Canadian Industry.** The Iron and Steel Industry in Canada, C. S. Cameron. Iron & Coal Trades Rev., vol. 108, no. 2936, June 6, 1924, pp. 971-974. Data regarding different steel works. Confines attention to fundamental processes, smelting of ore and production of primary forms of steel and those made directly from them, such as merchant bars, structural shapes, rails, plates, wire rods, and generally those that are sent from works of origin to others for further fabrication. From paper read at Empire Mining and Metallurgical Congress.

**Chemical Specifications.** Are Chemical Specifications for Iron and Steel Too Rigid? Iron & Steel Engr., vol. 7, no. 7, July 1924, pp. 130 and 133. Investigation by British Chemical Standards movement. From paper read by C. H. Ridsdale at joint mtg. of Cleveland Instn. Engrs., Soc. Chem. Industry and Inst.

**Fatigue.** Fatigue Phenomena and Endurance Tests (Ermüdungserscheinungen und Dauerversuche), R. Mailänder. Berichte der Fachausschüsse des Vereins deutscher Eisenhüttenleute, Werkstoffausschuss, report no. 38, Mar. 15, 1924, 27 pp. Determination of working strength; shortened endurance tests; machines and devices for endurance tests; fracture and its appearance; different kinds of stress; influence of heat treatment, composition and structure. Bibliography.

**Indian Industry.** India's Iron and Steel Industry, H. M. S. Tuckwell. Iron & Coal Trades Rev., vol. 108, no. 2939, June 27, 1924, pp. 1123-1125. Data regarding Tata Iron & Steel Co., Bengal Iron Co., Indian Iron & Steel Co., United Steel Corporation of Asia, and Mysore Ironworks; present position and future prospects. Paper read before Iron & Steel Sec., Empire Min. & Met. Congress.

## L

### LABOR

**Bibliographies.** Publications Relating to Labor. Monthly Labor Rev., U. S. Bur. Labor Statistics, vol. 18, no. 6, June 1924, pp. 205-212.

**Hours of Work.** Hours of Work and Output, O. Lipmann. Int. Labour Rev., vol. 9, no. 4, Apr. 1924, pp. 481-506. Economic aspect of 8-hour day; author surveys existing data on relation between hours of work and output and finds few of them scientifically satisfactory; analyzing various factors determining hourly output, he shows extreme complexity of problem and danger of attributing changes in output solely to changes in hours; he believes that solution of problem of increasing output is to be found rather in increased intensity of work than in change in working hours. Bibliography.

**Legislation, Mexico.** Labor Law of Jalisco, Mexico, E. Y. Larson. Monthly Labor Rev., U. S. Bur. Labor Statistics, vol. 18, no. 6, June 1924, pp. 21-36. Law covers labor contracts, rights and obligations of contracting parties, hours and wages, conciliation and arbitration, employers' organizations and trade unions, strikes and lockouts, private employees, shop rules, apprentices, safety and hygiene regulations, workmen's compensation and labor inspection.

**Wages and Hours.** Wages and Hours of Labor in the Automobile Tire Industry, 1923. U. S. Bur. Labor Statistics—Bul., no. 358, Apr. 1924, pp. 1-58. Report shows results of study of wages and hours of labor in automobile tire industry in 1923. Information compiled covers 22,535 male wage earners and 1624 female wage earners working in 49 representative establishments located in Connecticut, Indiana, Massachusetts, Michigan, New Jersey, New York, Ohio, Pennsylvania and Wisconsin. Tables show earnings as per hour, full time or customary hours per week, hours and days actually worked, and earnings actually received in representative pay period taken.

### LABOR TURNOVER

**Reduction of.** What 86 Years Have Taught Us About Selecting Labor, H. B. Cheney. Monthly Labor Rev., vol. 18, no. 5, May 1924, pp. 1-13, 5 figs. Factors affecting labor cost; how to fit applicant to right job; keeping labor turnover down to minimum; how "credit rating" plan aids in reducing turnover.

### LATHES

**Developments.** Notes on Lathe Developments, F. Horner. English Mechanics, vol. 119, nos. 3088, 3084 and 3085, Apr. 25, May 2 and 9, 1924, pp. 196-197, 215-216 and 231, 4 figs. Brief résumé of progress in lathe construction.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

**Inspection in Building.** The Inspection System in a Lathe Building Plant, H. S. Riggs. Machy. (N. Y.), vol. 30, no. 11, July 1924, pp. 835-841, 12 figs. Checking accuracy of lathe parts, assembled units and completed machines.

**Interchangeable Manufacture.** Building Lathes Interchangeably. Machy. (Lond.), vol. 24, no. 613, June 26, 1924, pp. 389-392, 8 figs. Manufacturing methods used to facilitate assembly of machines and supply of replacement parts.

**Magazine Attachments.** Design of Magazine Attachments, A. A. Dowd. Machy. (N. Y.), vol. 30, no. 11, July 1924, pp. 847-850, 8 figs. Magazine attachments for irregular work.

**Semi-Automatic.** Semi-Automatic Lathe of Interesting Design, C. C. Walker. Machy. (N. Y.), vol. 30, no. 11, July 1924, pp. 870-873, 6 figs. Construction of machine; character of work; special form cutter used.

**Turret.** The Ungeared Capstan Lathe as a Chucking Machine, R. W. Field. British Machine Tool Eng., vol. 3, no. 27, May-June 1924, pp. 54-60, 10 figs. Includes layout for cone-driven friction-gear lathe of 8 1/2 in. centers built by H. W. Ward & Co., and examples on ungeared range by same maker. Describes various processes.

## LIGHTING

**Research.** Coordination of Research in Illuminating Engineering and Some Practical Applications, J. S. Dow. Illuminating Engr., vol. 17, no. 1-3, Jan.-Mar. 1924, pp. 6-15 and (discussion) 16-18. Classification of research; research on photometry and standards of light; illuminants and lighting appliances; research on glare; collection of statistical data on illumination; facilities for research.

**Workshops.** Rules and Regulations for the Illumination of Factories and Other Industrial Workshops (Leitsätze für die Beleuchtung von Fabriken und anderen gewerblichen Arbeitsstätten), H. Lux. Licht u. Lampe, no. 10, May 8, 1924, pp. 255-257. Established by a number of interested German societies and authorities.

## LIQUIDS

**Distilling, Evaporating and Condensing.** Distilling, Concentrating, Evaporating and Condensing Liquids. Abridgments of Specifications, class 32, period 1916-20, 1924, 152 pp. Patents for inventions.

**Thermal Conductivity.** Convective Cooling in Liquids—Some Thermal Conductivity Data, A. H. Davis. Lond., Edinburgh, & Dublin Philosophical Mag. & J. Sci., vol. 47, no. 281, May 1924, pp. 972-975. Direct determinations of thermal conductivity at various temperatures, to supplement information previously given.

## LOCOMOTIVES

**Behavior of Wheels on Track.** Behaviour and Movement of Locomotive Wheels on the Track, J. Buchli. Int. Ry. Congress Assn.—Bul., vol. 6, no. 6, June 1924, pp. 417-437, 30 figs. Trials carried out on model which reproduced conditions encountered in practice as accurately as possible with object of ascertaining lateral adhesion of wheel on rail under most widely different service conditions. Translated from Schweizerische Bauzeitung.

**Diesel-Electric.** The American Diesel-Electric Locomotive is Here. Oil Engine Power, vol. 2, no. 5, May 1924, pp. 257-259, 5 figs. 300-b.h.p. locomotive constructed by Gen. Elec. and Ingersoll-Rand Companies, with 6-cylinder airless-injection 4-cycle type Ingersoll-Rand oil engine directly connected to 200-kw. Gen. Elec. generator.

**Electric.** See ELECTRIC LOCOMOTIVES.

**Erection.** An Improved Method of Locomotive Erection by the Use of Erecting Forms, S. R. Limerick. Baldwin Locomotives, vol. 3, no. 1, July 1924, pp. 28-32, 8 figs. Describes mechanical erector, developed by Baldwin Locomotive Wks., a device for absolute control of work of erecting a locomotive, eliminating all possibility of errors in alignment, inequalities of measurement and all variances formerly existent in locomotives incidental to exercise of personal judgment or skill on part of workman. Erection of locomotive by this method.

**Four-Cylinder.** New Four-Cylinder "Baltic" Tank Engines, London Midland & Scottish Railway. Ry. Engr., vol. 45, no. 533, June 1924, pp. 207-209, 5 figs. Details of 4-6-4-type locomotive, ten of which are being introduced for working suburban passenger and shorter-distance residential main-line traffic.

**4-6-0 Type.** A New Pennsylvania R. R. Locomotive. Ry. Gaz., vol. 40, no. 25, June 20, 1924, pp. 891-892, 2 figs. Particulars of first of a new class of locomotives designed for passenger train service and built at company's shops at Altoona, Pa.; 4-6-0 type, with outside cylinders driving middle pair of coupled wheels, steam being distributed to cylinders by piston valves actuated by Walschaerts valve gear; light reciprocating parts; high tractive effort.

**Garratt.** The First "Garratt" Locomotive in Great Britain. Ry. Gaz., vol. 40, no. 24, June 13, 1924, pp. 844-847, 7 figs. Working of Garratt locomotive employed at Hafod copper mills of Vivian & Sons, Swansea.

**Meter-Gauge.** New 4-6-0 Type Metre Gauge Locomotives, Bombay, Baroda & Central India Railway. Ry. Gaz., vol. 40, no. 24, June 13, 1924, pp. 848-850, 6 figs. Features of interest of engines which are largest in use on Indian meter-gauge lines.

**Mikado.** New Mikado-Type Locomotive for Heavy High-Speed Traffic (Nuove locomotive Mikado (1-4-1) a grande velocità per treni diretti pesanti su linee accatate delle Ferrovie dello Stato Italiano), Enrico Levi. Rivista tecnica delle Ferrovie Italiane, vol. 25, no. 4, April 15, 1924, pp. 109-117, 7 figs. Illustrated description of new 4-cylinder compound 2-8-2 engine designed by engineers of Italian State Railways.

**Rods, Boring and Testing of.** Fixtures for Boring and Testing Locomotive Rods, F. H. Colvin. Am. Mach., vol. 60, no. 26, June 26, 1924, pp. 947-949, 8 figs. Some of the methods and tools used by Lima Locomotive Works in boring and testing side rods of plain and articulated types.

**Steam-Turbine.** A New Geared Turbine Condensing Locomotive. Ry. Engr., vol. 45, no. 533, June 1924, pp. 200-201, 2 figs. Constructed on Reid-Macleod system and patented by North Brit. Locomotive Co.

**Thermal Efficiency.** Engineering and Business Considerations of the Steam Locomotive, W. H. Winterrowd. Ry. Age, vol. 76, no. 30, June 13, 1924, pp. 1468-1471 and (discussion) 1471-1473, 3 figs.; also Ry. Rev., vol. 74, no. 24, June 14, 1924, pp. 1103-1108, 4 figs. Author disputes impression that steam locomotive is inefficient and losing its vitality; comparison of thermal efficiency curves of locomotive and stationary boiler proves conclusively that locomotive boiler is more efficient generator of steam; and by further development of superheated steam, larger grate area and higher boiler pressure, still greater maximum thermal efficiency can be obtained. Paper read before Am. Ry. Assn.

**Three-Cylinder.** Lehigh Valley Three-Cylinder Locomotive. Ry. Age (Daily Edition), vol. 76, no. 32, June 14, 1924, pp. 1585-1587, 6 figs. Details of 4-8-2 type, weighing 369,000 lb.; boiler is of inverted wagon-top type. See also article, entitled, Performance of 3-Cylinder Locomotive No. 5000, in Ry. Rev., vol. 74, no. 24, June 14, 1924, pp. 1079-1093, 13 figs. Gives details of construction and record of results.

The Three-Cylinder Locomotive, J. G. Blunt. Ry. Age, vol. 76, no. 30, June 13, 1924, pp. 1473-1476 and (discussion) 1476-1479, 7 figs. Normal tractive force; economy of 3-cylinder locomotive; crank-axle driving box; middle main rod, valve gear and crosshead.

**Tires, Shrink Fits.** Material Stresses in Shrink-on Wheel Tires (Beräkning av materialpåkänningar vid påkympning av hjulringar), J. S. Fries. Teknisk Tidskrift, vol. 54, no. 5, May 17, 1924, pp. 54-55 (Mekanik) 4 figs. Theoretical investigations moderate that allowance for shrink fit should not exceed 0.001 in. diameter in case of soft steel and 0.00075 in. in case of hard steel tires.

## LUBRICATING OILS

**Purifier for.** The Centrifugal Oil Purifier. Power Engr., vol. 19, no. 219, June 1924, pp. 207-208, 2 figs. Methods and functions of centrifugal oil filters and cleaners, with particular reference to the De Laval machine.

## LUBRICATION

**Journal.** Journal Lubricating System. Ry. Age, vol. 76, no. 37, June 21, 1924, p. 1783, 2 figs. Phee system of journal lubrication developed by Froedtert Equipment Corp., Milwaukee, Wis.

**Machinery.** The Development of Automatic Lubrication. Lubrication, vol. 10, no. 4, Apr. 1924, pp. 37-48, 27 figs. A study of the various devices that have been involved.

**Prime Movers.** Prime Movers and Their Lubrication. Power Plant Eng., vol. 28, no. 14, July 15, 1924, pp. 739-742, 4 figs. What oil must lubricate, method of applying lubricant, operating conditions that must be met, and determination of correct lubrication; continuous lubrication; steam-turbine lubrication.

# M

## MACHINE SHOPS

**Equipment.** American Machinist Shop Equipment Review. Am. Mach., vol. 61, no. 3, July 17, 1924, pp. 89-131, 238 figs. Semi-annual résumé of machines, tools, and accessories described in Shop Equipment News section of Am. Mach. during first six months of 1924.

**Progress.** Six Months in the Machine Shop Field. Am. Mach., vol. 61, no. 3, July 17, 1924, pp. 81-87. A review, in seven articles, of progress made during first half of 1924 in machinery field, railroad field, automotive industry, electric power and manufacturing industries, distribution of materials and supplies, and in exporting.

## MACHINE TOOLS

**British Design.** British Machine-Tool Design, W. E. Sykes. Mech. Eng., vol. 46, no. 7, July 1924, pp. 395-401, 21 figs. Present status as shown by examples representative of current practice.

**Development, New England.** Development of Machine Tools in New England, G. Hubbard. Am. Mach., vol. 60, nos. 4, 5, 6, 7, 8, 12, 17, 24 and 26, Jan. 24, 31, Feb. 7, 14, 21, Mar. 20, Apr. 24, June 12 and 26, 1924, pp. 129-132, 171-173, 205-209, 255-258, 271-274, 437-441, 617-620, 875-878 and 951-954, 70 figs. Jan. 24: American exhibit at Crystal Palace; famous Enfield (England) Armory equipped with machinery and tools from New England; gages sent from England made of wood. Jan. 31: Hartford plant of Robbins & Lawrence turns out world-famous products and finally becomes part of Pratt & Whitney plant. Feb. 7: Windsor machine tools still in use; development of drilling machine. Feb. 14: Examples of early milling machines; first universal milling machine; edging or profiling machine. Feb. 21: Lathes and swiveling headstocks; tailstocks with square spindles; an early bolt-threading machine; evolution of turret lathe. Mar. 20: Officers of Robbins & Lawrence Co.; New England mechanics who have become famous. June 12: Drawings of machine tools in colors; interchangeable work at Harper's Ferry. June 26: Circumstances that led to formation of Jones & Lamson Machine Co.

**Railway Exhibit, Atlantic City.** Digest of New Machine Tools and Shop Equipment. Iron Trade Rev., vol. 75, no. 1, July 3, 1924, pp. 39-45, 23 figs. Descriptions of machine tools and other equipment exhibited at joint convention of Am. Ry. Assn. and Ry. Supply Mfrs. Assn. at Atlantic City. Exhibition was intended primarily for railway shop tools and appliances, but nearly all of the machines and much of the equipment were applicable to all branches of metal-working industry.

**Speed Charts.** Alignment Charts for Speeds (Fluchtlinientafel für Drehzahlen), H. Behr. Werkstattstechnik, vol. 18, no. 11, June 1, 1924, pp. 294-296, 3 figs. Plotting of alignment chart for determination of geometrical-series speeds, magnitude of average cutting-speed reduction and of quotients of geometrical series.

## MANGANESE STEEL

**Welding of.** Welding of Manganese Steel. Am. Welding Soc.—Jl., vol. 3, no. 5, May 1924, pp. 10-23, 14 figs. Discusses briefly what manganese steel is, its properties, and why it has those properties. Investigations of what happens during welding of manganese steel, how actual operation may be best conducted, and what structural results of welding are in both base metal and weld. Preliminary report of Gas Welding Committee of Am. Bur. Welding.

## MARINE BOILERS

**Tests.** Tests of Marine Boilers, H. Kreisinger, J. Blizard, A. R. Mumford, B. J. Cross, W. R. Argyle and R. A. Sherman. U. S. Bur. Mines, Bul. 214, 1924, 302 pp., 181 figs. partly on supp. plates. Describes evaporative tests of marine water-tube boilers, and of Scotch marine boiler, including description of method of conducting tests, and of such special studies as were made of: combustion in furnaces; heat absorption by boilers; flow of gases through boilers by means of temperature, pitot-tube, and draft measurements; insulation of furnace walls; circulation of water in boiler; effect on heat transmission of blowing soot off heating surfaces with steam blowers; and use of special equipment to improve combustion or to improve heat absorption.

## MATERIALS

**Rupture.** Conditions Causing Rupture of Material (Betingelserna för materialbrott), A. F. Samsöe. Teknisk Tidskrift, vol. 54, no. 24, June 14, 1924, pp. 221-223 (Allmänna Avdelningen), 7 figs. Older theories are recorded. Guest's experiments with tough metals are described. Shearing stress or greatest difference between stresses occurring in different directions are proved to cause ruptures of material. Mohr's theory for brittle materials is explained.

## MATERIALS HANDLING

**Economies of.** Fundamental Economies of Materials Handling, M. L. Begeman. Mech. Eng., vol. 46, no. 7, July 1924, pp. 405-409 and (discussion) 410. Discusses advantages of handling materials mechanically without reference to particular types of equipment; deals with necessity for substitution of mechanical handling of materials for labor and economies to be gained by such substitution; points to be considered in analysis of proposed installation.

**Factories.** Development of Conveying and Unloading Plants into Large Scale Installations (Die Entwicklung der Förder- und Verladeanlagen zu grossen Abmessungen und Leistungen), G. v. Hanffstengel. Maschinenbau, vol. 3, no. 16, May 22, 1924, pp. 557-567, 34 figs. Discusses extensions of conveying and unloading plants generally; advantages of large capacities; progress in various conveying systems; conveying by air or water.

**Machine Shops.** Train-Despatching in an Automotive-Parts Shop, R. S. Spencer. Am. Mach., vol. 60, no. 26, June 26, 1924, pp. 945-946, 3 figs. How a force of 250 truckers has been reduced to 9 men by application of railroad train-despatching methods to inter-departmental transportation of materials.

## MEASURING INSTRUMENTS

**Thread Recorder.** Some Uses of the Thread Recorder in the Measurement of Physical Properties, J. L. Haughton and W. T. Griffiths. Jl. of Sci. Instruments, vol. 1, no. 8, May 1924, pp. 225-233, 9 figs. Methods of employing thread recorder for recording changes of dilation and resistivity of metals and alloys with temperature. Describes also method of combining recorded time-temperature and time-property curves to give a single temperature-property curve.

**Torsion Meter.** The Moulin Torsion Meter. Engineering, vol. 117, no. 3050, June 13, 1924, pp. 764-765, 12 figs. Apparatus for measuring torque in shafts up to 10 in. diam. and transmitting 1500 hp.

## MERCURY-VAPOR PROCESS

**Principles and Applications.** Mercury Vapor as an Industrial Heating Medium, C. Field. Chem. & Met. Eng., vol. 30, no. 25, June 23, 1924, pp. 987-991, 8 figs. Outline of system, with discussion of various other sources of heat at high temperature available for industrial use.

## METALS

**Cold Working.** Effect of Severe Cold Working on Scratch and Brinell Hardness, H. S. Rawdon and W. H. Mutchler. Am. Inst. Min. & Met. Engrs.—Trans., No. 1340-N, May 1924, pp. 3-14, 4 figs. Discussion of above paper, presented at New York Mtg., Feb. 1924, and issued as Paper No. 1291-M, with Min. & Metallurgy, Jan. 1924.

**Interpretation of Cold Working on the Basis of Electric Measurements (Zur Deutung der Kaltbearbeitung auf Grund elektrischer Messungen), W. Geiss and J. A. M. vanLiempt. Zeit. für Anorganische und Allgemeine Chemie, vol. 133, no. 1, Feb. 11, 1924, pp. 107-112. Discusses deformation of metal crystals in cold working and current hypotheses; application of X-ray analysis and its limitations.**

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

**Corrosive Agents, Behavior under Action of.** How Metals Stand Up Against Corrosion. Chem. & Met. Eng., vol. 31, no. 2, July 14, 1924, pp. 70-79. General and specific data from many sources on behavior of iron and steel, copper, aluminum, lead, nickel, tin, and zinc, under action of many destructive agencies encountered in industrial world.

**Fatigue.** An Investigation of the Fatigue of Metals. H. F. Moore and T. M. Jasper. University of Ill.—Bul., vol. 21, no. 39, May 26, 1924, 86 pp., 22 figs. Theory of fatigue of metals; evidence of existence of endurance limit for wrought ferrous metals and of improvement in strength of such metals by cycles of reversed stress at or below that limit; resistance to reversed axial stress (tension-compression); miscellaneous tests and results; resistance to repeated stress other than reversed stress. Bibliography.

**Fatigue Phenomena and Endurance Tests** (Ermüdungserscheinungen und Dauerversuche), R. Mailänder. Stahl u. Eisen, vol. 44, nos. 21, 22, 23, 24 and 25, May 22, 29, June 5, 12, and 19, 1924, pp. 585-589, 624-629, 657, 661, 684-691 and 719-725, 31 figs. Summarized report of investigations up to end of 1923. Determination of working strength; machines and arrangements for endurance tests; notch action; deformation and hysteresis; fracture. Relations between strength and varying load, various ways of loading, change in strength due to sustained tests, effect of cold working and annealing, composition, structure, etc. Bibliography.

**Surfaces, Properties of.** The Properties of Metallic Surfaces, J. B. Nevitt. Birmingham Met. Soc.—Jl., vol. 8, no. 10, pp. 425-440 and (discussion) 441-446. Reviews means by which variations in surface conditions may be produced, and outlines effect of these surface conditions upon properties of metal.

#### MOLDING MACHINES

**Applications.** Molding Machine Practice, R. R. Clarke. Metal Industry (N. Y.), vol. 22, nos. 6 and 7, June and July, 1924, pp. 237-238 and 272-275, 8 figs. Range of application, difficulties, and solution of difficulties. Describes various methods of pattern mounting.

#### MOLDS

**Drier for Portable Gas.** Designs Portable Gas Mold Drier, A. Zander. Foundry, vol. 52, no. 12, June 15, 1924, p. 482, 2 figs. Apparatus for drying molds with manufactured gas, which is applicable to great variety of work, introduced at Kedzie Foundry Co., Chicago.

**Permanent.** Discusses Permanent Molds, R. J. Anderson and M. E. Boyd. Foundry, vol. 52, nos. 12 and 13, June 15 and July 1, 1924, pp. 463-468 and 510-513, 17 figs. Describes five different permanent-mold processes and discusses principles involved; typical molds; materials for molds and cores; mold design; methods of gating; various types of commercial alloys and typical castings. Annual exchange paper of Am. Foundrymen's Assn. presented at Inst. Brit. Foundrymen. See also Foundry Trade Jl., vol. 29, nos. 407 and 408, June 5 and 12, 1924, pp. 464-468 and 477-485, 17 figs. Bibliography.

#### MOTOR BUSES

**Six-Wheel.** Six-Wheel Bus, Marketed by New Concern, Has Novel Features, H. Chase. Automotive Industries, vol. 51, no. 2, July 10, 1924, pp. 97-100, 9 figs. Particulars of new bus recently announced by a new concern to be known as Six-Wheel Co. of Philadelphia. Easy riding qualities and design which permits all important units to be detached quickly and replaced by spares. Frame of massive and rigid construction. Six-cylinder Continental engine is mounted on rubber blocks.

#### MOTOR TRUCKS

**Electric.** A Front-driven Electric Van, W. F. Bradley. Motor Transport (Lond.), vol. 38, no. 1007, June 16, 1924, pp. 745-746, 3 figs. Details of a battery-driven vehicle which is being used in France for load-up to half a ton; presented by Société d'Applications. Electro-Mécaniques; also steered by its front wheels; uses compound-wound electric motor of 4 kw. capacity, capable of taking a temporary overload of 300 per cent.

**Maudslay.** A 40-50 cwt. Maudslay. Motor Transport (Lond.), vol. 38, no. 1007, June 16, 1924, pp. 741-743, 6 figs. First of a new improved model for goods or passenger transport recently completed at Coventry (Eng.) factory.

**Refuse Collector.** The Milnes-Daimler Refuse Collector. Motor Transport (Lond.), vol. 38, no. 1009, June 30, 1924, pp. 809-810, 4 figs. Describes 3-4-ton power vehicle designed to work in combination with independent horse-drawn containers.

**Steam.** Novelty in Steam Waggon Design. Motor Transport (Lond.), vol. 38, no. 1009, June 30, 1924, pp. 787-790, 9 figs. New shaft-driven 6-7 tonner introduced by John Fowler & Co., Eng., having many features new to steam vehicle practice.

**Six-Seven Ton Steam Wagon.** Engineer, vol. 137, no. 3574, June 27, 1924, pp. 714-715, 4 figs. Details of steam truck which will be shown by John Fowler & Co., Ltd., at Royal Show at Leicester. Is of end-tipping type, designed to carry from 6 to 7 tons and haul a trailer; fitted with rubber tires; boiler is of vertical fire-tube type, devoid of stays, centrally fired, and designed for working pressure of 225 lb. per sq. in.

#### MOTORCYCLES

**Manufacture.** Manufacturing a Popular Motor Cycle. Eng. Production, vol. 7, no. 142, July 1924, pp. 208-213, 18 figs. Describes works and methods of Douglas Motors, Ltd., Kingswood, Eng.

**Types.** International Motorcycle Show in Stuttgart (Germany) (Internationale Motorradausstellung in Stuttgart). Allgemeine Automobil-Zeitung, vol. 25, no. 21, May 24, 1924, pp. 19-21, 21 figs. Description of exhibits.

## O

#### OIL ENGINES

**Surface-Ignition.** Types of Modern Power-Plant Oil Engines. Oil Engine Power, vol. 2, no. 5, May 1924, pp. 271-272, 3 figs. New model of Italian surface-ignition engine has crosshead and main oiling system entirely separated from cylinder bore, arrangement which results in low lubricating-oil consumption; Corliss-type valve controls admission of scavenging air, amount of which is regulated by governor.

#### OIL FUEL

**Burners.** Lighting Oil and Gas Burners, M. H. Mawhinney. Fuels & Furnaces, vol. 2, no. 7, July 1924, pp. 687-688 and 691. Gives general information on lighting different kinds of oil and gas burners.

#### OIL TANKS

**Cushing, Okla.** Tankage Installation Holds All Gas from Well to Pipe Line, L. E. Smith. Nat. Petroleum News, vol. 16, no. 28, July 9, 1924, pp. 58-62, 4 figs. Describes system in use in Vida Way lease in north Cushing district of Magnolia Petroleum Co., Okla. From time oil comes from well to time it leaves stock tank to pipe line it is not exposed in any degree to air.

**Fire Prevention.** Vapor Tight Tanks, Well Vented, Will Reduce Fire Hazard, W. C. Platt. Nat. Petroleum News, vol. 16, no. 22, May 28, 1924, pp. 111-119. Proposed revision of regulations for construction and installation of oil-burning equipments where competent attendant is constantly on premises and for storage and use of oil fuels used therewith; general requirements of piping.

#### OPEN-HEARTH FURNACES

**Design and Calculation.** Performance and Efficiency as Fundamentals for the Design and Calculation of Open-Hearth Furnaces (Leistung und Wirkungsgrad als Unterlagen für Bau und Berechnung der Siemens-Martin-Oefen), H. Bansen. Berichte der Fachausschüsse des Vereins deutscher Eisenhüttenleute, Stahlschmelzsausschuss, report no. 82, May 10, 1924, 23 pp., 19 figs. Functions of furnace; working conditions for temperature drop; heat circulation; relations of fuel supply and preheating to furnace efficiency and fuel consumption; calculation of heat required and efficiency; special means of influencing temperature drop; combustion, temperature conditions and heat transmission; heat accumulators; waste-heat utilization.

**Dimensions and Performances.** Dimensions and Performances of Open-Hearth Furnaces (Ueber Abmessungen und Leistungen von Siemens-Martin-Oefen), H. Bansen. Berichte der Fachausschüsse des Vereins deutscher Eisenhüttenleute, Stahlschmelzsausschuss, report no. 81, May 10, 1924, 7 figs. and supp. table, 8 figs. Report on result of questionnaire; includes table showing comparative performance and dimensions of German open-hearth furnaces.

**Efficiency.** The Efficiency of Open-Hearth Furnaces (Wirkungsgrade im Betriebe des Siemens-Martin-Oefens), G. Bulle. Berichte der Fachausschüsse des Vereins deutscher Eisenhüttenleute, Stahlschmelzsausschuss, report no. 80, May 10, 1924, 3 pp. Committee report on metallurgical, furnace and producer performance.

## P

#### PAINTING

**Industrial-Plant Practice.** Standardization of Painting Practice, R. C. Sheeler. Indus. Mgt. (N. Y.), vol. 68, no. 1, July 1924, pp. 25-28, 5 figs. Extremes of moisture or steam cause all metal surfaces to rust and corrode with extreme rapidity; other surfaces come in contact with gaseous fumes, weak acid vapors, etc. Much money wasted and much good paint condemned through use of wrong material for protective coat to withstand such contact. Discusses application of standardization to maintenance of plant and equipment through proper use of paint and varnish.

#### PAPER

**Area and Weight Standards.** Standards for Area, Count and Weight, S. L. Willson. Paper Trade Jl., vol. 79, no. 2, July 10, 1924, pp. 51-54, 58 and 64. Shows that in manufacturing size to-day there is little or no relation to use of paper in this size. Discusses proposed plan of changes and benefits to be derived.

**Sizing-Quality Destruction.** The Destruction and Restoration of Sizing Quality in Paper, N. D. Ivanov. Paper Trade Jl., vol. 79, no. 2, July 10, 1924, pp. 41-44, 10 figs. Details of experiments made in connection with phenomenon of destruction of sizing quality by sunlight. Translated from Bumazhnaia Promyshlennost (Russia), Dec. 1924, pp. 634-643.

#### PAPER MACHINERY

**Beaters.** Modified Beater for Bamboo. Paper, vol. 24, no. 9, June 19, 1924, pp. 379-380, 1 fig. Describes improved machine patented in England by W. A. R. MacRae.

**Finishing-Room Machinery.** Finishing Room Machinery, O. C. Cordes and W. W. Spratt. Paper, vol. 34, no. 10, June 26, 1924, pp. 422-425, 8 figs. Describes and illustrates operation of calender drives, platers and cutters by Westinghouse dual-frequency system.

**High-Speed.** High Speed Machine Construction, E. J. Neese. Paper, vol. 34, no. 10, June 26, 1924, pp.

428-431. Increased width and speed of newsprint machines bring many improvements in design and construction.

**Wood Grinders.** How Caterpillar Grinders Operate. Paper, vol. 34, no. 12, July 10, 1924, pp. 516-517, 8 figs. Essential features of magazine wood grinder invented by P. Priem, Heidenheim, Germany, which is now owned and controlled by Am. Voith Contact Co., Inc., New York. Endless-chain device presses wood laterally as it tears stone, and feed mechanism is driven by fluid motor.

#### PAPER MANUFACTURE

**Beating.** New Ideas on Beating, J. W. Brassington. Paper, vol. 34, no. 11, July 3, 1924, pp. 461-464, 3 figs. More speed and less weight of rolls is suggested in describing new type of beater using centrifugal force.

**Bibliography.** Bibliography of Papermaking for 1923, Compiled by C. J. West. Paper Trade Jl., vol. 78, nos. 17, 18, 19, 20, 21, 22, 23, 24 and 25, Apr. 24, May 1, 8, 15, 22, 29, June 5, 12 and 19, 1924, pp. 52-54, 49-54, 53-56, 49-52, 45-47, 51-52, 55-57, 45-46 and 41-43.

**Bleaching Beaters.** Function of the Washing Drum, R. Haas. Paper, vol. 34, no. 11, July 3, 1924, pp. 471-475, 6 figs. Determines consumption of energy and best method of operating washing drum of bleaching beater. Translated from Papierfabrikant.

**Drying.** Methods of Drying Paper, T. J. Keenan. Paper, vol. 34, no. 10, June 26, 1924, pp. 427-428. Principles of drying by steam-heated drums and review of recent novelties and difficulties caused by faulty ventilation.

**Centrifugal Force, Application of.** Flywheel Power or Centrifugal Force, J. W. Brassington. Paper, vol. 34, no. 9, June 19, 1924, pp. 365-367, 2 figs. Possibilities of application of centrifugal force to manufacture of pulp and paper. Now used in a limited way.

#### PIPE

**Intersections, Volumes and Areas of.** Formulas for Volumes and Areas of Pipe Intersections, C. Paaswell. Eng. News-Rec., vol. 93, no. 1, July 3, 1924, pp. 28-29, 3 figs. Data covering determination of volumes of cylinder intersections such as those at junction of arches or in special pipe castings.

#### PIPE, CAST-IRON

**Centrifugal.** The Manufacture of Centrifugal Cast Iron Pipe, Acetylene Jl., vol. 25, no. 12, June 1924, pp. 590-592, 2 figs. Description of de Lavaud process.

**Welding with Bronze.** Welding Cast Pipe with Bronze, H. V. Carson. Iron Trade Rev., vol. 75, no. 2, July 10, 1924, pp. 97-98, 2 figs. In method developed by author for welding cast iron, an ordinary welding rod of tobin bronze is used, joint being preheated by playing an oxy-acetylene flame back and forth transversely across joint area; bronze rod is melted and allowed to flow along joint spreading about one inch in width entirely around pipe. Only moderate temperatures required. Abstract of paper read before Nat. Gas Assn. Am. See also Foundry, vol. 52, no. 12, June 15, 1924, pp. 469-470, 2 figs.

#### PISTON RINGS

**Groove Finishing.** Methods of Finishing Piston Ring Grooves. Automotive Mfr., vol. 66, no. 3, June 1924, pp. 15 and 26. Current practice of leading American firms; ordinary formed cutters leave tool marks and result in gas leakage.

#### PLATES

**Flanging Tests.** Tests on the Flanging of Thin Plates (Essai d'emboutissage sur tôles minces), M. Guillery. Revue de Métallurgie, vol. 21, no. 5, May 1924, pp. 303-311, 17 figs. Describes two machines for testing thin plate, in order to determine their resistance to cold flanging; method of testing, and results of tests.

#### PRESSES

**Drawing.** Press for Motor-cycle Mud Guards. Machy. (Lond.), vol. 24, no. 611, June 12, 1924, p. 348, 1 fig. Double-crank toggle press installed in works of Raleigh Cycle Co., Nottingham, for drawing and forming motorcycle mud guards at one operation.

**Hydraulic.** Hydraulic Presses and Pumps (Hydraulische Pressen und Pumpen), E. Feyer. Werkstattstechnik, vol. 18, no. 11, June 1, 1924, pp. 289-293, 15 figs. Describes types manufactured by M. Hasse & Co., Berlin, Germany.

**Inclinable.** Design of Inclinable Power Presses, P. A. Friedell. Machy. (Lond.), vol. 24, no. 613, June 26, 1924, pp. 409-411, 1 fig. Calculations for designing gearing, driving shaft, back-shaft bearing, flywheel and pulleys.

#### PRESSWORK

**Pressed-Metal Production.** Pressed-Metal Production. Machy. (Lond.), vol. 24, no. 611, June 12, 1924, pp. 328-331, 6 figs. Practice of Fisher & Ludlow, Birmingham, featuring combination tools, deep-drawn work, and pressings to replace castings.

**Pressed-Steel Cycle Parts.** Pressed-Steel Cycle Parts. Machy. (Lond.), vol. 24, no. 611, June 12, 1924, pp. 321-327, 17 figs. Replacing castings and machined parts by pressed components; presswork methods employed by Raleigh Cycle Co., Nottingham.

#### PRODUCER GAS

**Combustion, Excess Air Determination in.** A Graphical Chart for Determining Excess Air in the Combustion of Producer Gas, G. M. Peltz. Am. Ceramic Soc.—Jl., vol. 7, no. 6, June 1924, pp. 437-441 and (discussion) 441-443, 1 fig. Presents a calculating chart by which it is possible to determine percentage of excess air existing in any producer-gas-fired furnace

# Manufactured by **CLASSIFIED LIST OF MECHANICAL EQUIPMENT** Alphabetical List on page 148

- Pyrometers, Electric**  
\* American Schaeffer & Budenberg Corp'n  
\* Bristol Co.  
\* Crosby Steam Gage & Valve Co.  
\* Superheater Co.  
\* Taylor Instrument Cos.
- Pyrometers, Expansion Stem**  
\* Tagliabue, C. J. Mfg. Co.
- Pyrometers, Optical**  
\* Taylor Instrument Cos.
- Pyrometers, Pneumatic**  
\* Uehling Instrument Co.
- Pyrometers, Radiation**  
\* Taylor Instrument Cos.
- Racks, Machine, Cut**  
\* James, D. O. Mfg. Co.  
\* Jones, W. A. Fdry. & Mach. Co.  
\* Nuttall, R. D. Co.
- Radiators, Steam and Water**  
\* American Radiator Co.  
\* Smith, H. B. Co.
- Railways, Industrial**  
\* Easton Car & Construction Co.  
\* Link-Belt Co.
- Rams, Hydraulic**  
\* Goulds Mfg. Co.  
\* Worthington Pump & Machinery Corp'n
- Receivers, Air**  
\* Ingersoll-Rand Co.  
\* Scaife, Wm. B. & Sons Co.  
\* Walsh & Weidner Boiler Co.  
\* Wheeler Cond. & Engrg. Co.  
\* Worthington Pump & Machinery Corp'n
- Receivers, Ammonia**  
\* Frick Co. (Inc.)
- Recorders, CO**  
\* Tagliabue, C. J. Mfg. Co.
- Recorders, CO<sub>2</sub>**  
\* Tagliabue, C. J. Mfg. Co.
- Recorders, SO<sub>2</sub>**  
\* Tagliabue, C. J. Mfg. Co.
- Recording Instruments**  
(See Instruments, Recording)
- Reducing Motions**  
\* Crosby Steam Gage & Valve Co.
- Refractories**  
\* Drake Non-Clinkering Furnace Block Co.  
\* Keystone Refractories Co.  
\* King Refractories Co. (Inc.)  
\* Mapheite Co. of Amer.
- Refrigerating Machinery**  
\* De La Vergne Machine Co.  
\* Frick Co. (Inc.)  
\* Ingersoll-Rand Co.  
\* Johns-Manville (Inc.)  
\* Nordberg Mfg. Co.  
\* Vilter Mfg. Co.  
\* Vogt, Henry Machine Co.  
\* Westinghouse Electric & Mfg. Co.
- Regulators, Automatic Arc-Furnace**  
\* Westinghouse Elec. & Mfg. Co.
- Regulators, Blower**  
\* Foster Engineering Co.  
\* Mason Regulator Co.
- Regulators, Condensation**  
\* Tagliabue, C. J. Mfg. Co.
- Regulators, Damper**  
\* Coppus Engineering Corp'n  
\* Fulton Co.  
\* Kieley & Mueller (Inc.)  
\* Mason Regulator Co.
- Regulators, Electric**  
\* General Electric Co.  
\* Westinghouse Electric & Mfg. Co.
- Regulators, Fan Engine**  
\* Foster Engineering Co.
- Regulators, Feed Water**  
\* Edward Valve & Mfg. Co.  
\* Elliott Co.  
\* Kieley & Mueller (Inc.)  
\* Squires, C. E. Co.
- Regulators, Flow (Steam)**  
\* Schutte & Koerting Co.
- Regulators, Humidity**  
\* Fulton Co.  
\* Tagliabue, C. J. Mfg. Co.
- Regulators, Hydraulic Pressure**  
\* Foster Engineering Co.  
\* Mason Regulator Co.
- Regulators, Liquid Level**  
\* Tagliabue, C. J. Mfg. Co.
- Regulators, Pressure**  
\* Edward Valve & Mfg. Co.  
\* Foster Engineering Co.  
\* Fulton Co.  
\* General Electric Co.  
\* Kieley & Mueller (Inc.)  
\* Mason Regulator Co.  
\* Tagliabue, C. J. Mfg. Co.  
\* Taylor Instrument Cos.
- Regulators, Pump**  
(See Governors, Pump)
- Regulators, Temperature**  
\* Bristol Co.  
\* Fulton Co.  
\* Kieley & Mueller (Inc.)  
\* Sarco Co. (Inc.)  
\* Tagliabue, C. J. Mfg. Co.  
\* Taylor Instrument Cos.
- Regulators, Time**  
\* Tagliabue, C. J. Mfg. Co.
- Regulators, Vacuum**  
\* Foster Engineering Co.
- Resistance Material (Electrical)**  
\* Driver-Harris Co.
- Revolution Counters**  
(See Counters, Revolution)
- Rings, Weldless**  
\* Cann & Saul Steel Co.
- Rivet Heaters, Electric**  
\* General Electric Co.
- Riveters, Hydraulic**  
\* Mackintosh-Hemphill Co.
- Riveters, Pneumatic**  
\* Ingersoll-Rand Co.
- Riveting Machines**  
\* Long & Allstatter Co.
- Roller Bearings**  
(See Bearings, Roller)
- Rolling Mill Machinery**  
\* Farrell Foundry & Machine Co.  
\* Mackintosh-Hemphill Co.  
\* Treadwell Engineering Co.
- Rolls, Bending**  
\* Niagara Machine & Tool Works
- Rolls, Crushing**  
\* Farrell Foundry & Machine Co.  
\* Link-Belt Co.  
\* Worthington Pump & Machinery Corp'n
- Rolls, Forming (Sheet Metal)**  
\* Niagara Machine & Tool Wks
- Rolls, Rubber**  
\* Goodrich, B. F. Rubber Co.  
\* United States Rubber Co.
- Rolls, Steel**  
\* Mackintosh-Hemphill Co.
- Roofing**  
\* Johns-Manville (Inc.)
- Roofing, Asbestos**  
\* Johns-Manville (Inc.)
- Rope, Hoisting**  
\* Clyde Iron Works Sales Co.  
\* Roebbing's, John A. Sons Co.
- Rope, Transmission**  
\* Hill Clutch Machine & Fdry. Co.  
\* Link-Belt Co.  
\* Roebbing's, John A. Sons Co.
- Rope, Wire**  
\* Clyde, Iron Works Sales Co.  
\* Hill Clutch Machine & Fdry. Co.  
\* Roebbing's, John A. Sons Co.
- Rope Drives**  
\* Allis-Chalmers Mfg. Co.  
\* Brown, A. & F. Co.  
\* Falls Clutch & Machinery Co.  
\* Hill Clutch Machine & Fdry. Co.  
\* Link-Belt Co.  
\* Medart Co.  
\* Wood's, T. B. Sons Co.
- Rubber Goods, Mechanical**  
\* Goodrich, B. F. Rubber Co.  
\* Jenkins Bros.  
\* United States Rubber Co.
- Rubber Mill Machinery**  
\* Farrell Foundry & Machine Co.
- Sand Blast Apparatus**  
\* De La Vergne Machine Co.
- Saw Mill Machinery**  
\* Allis-Chalmers Mfg. Co.
- Saw Mills, Portable**  
\* Frick Co. (Inc.)
- Scales, Fluid Pressure**  
\* Crosby Steam Gage & Valve Co.
- Screens, Perforated Metal**  
\* Hendrick Mfg. Co.
- Screen, Revolving**  
\* Allis-Chalmers Mfg. Co.  
\* Chain Belt Co.  
\* Gifford-Wood Co.  
\* Hendrick Mfg. Co.  
\* Link-Belt Co.  
\* Smidth, F. L. & Co.
- Screens, Shaking**  
\* Allis-Chalmers Mfg. Co.  
\* Chain Belt Co.  
\* Gifford-Wood Co.  
\* Hendrick Mfg. Co.  
\* Link-Belt Co.
- Screens, Water Intake (Traveling)**  
\* Chain Belt Co.  
\* Link-Belt Co.
- Screw Cutting Dies**  
(See Dies, Thread Cutting)
- Screw Machines, Hand**  
\* Jones & Lamson Mach. Co.  
\* Warner & Swasey Co.
- Screws, Cap**  
\* Scovill Mfg. Co.
- Screws, Safety Set**  
\* Allen Mfg. Co.  
\* Bristol Co.
- Screws, Set**  
\* Allen Mfg. Co.
- Separators, Ammonia**  
\* De La Vergne Machine Co.  
\* Elliott Co.  
\* Frick Co. (Inc.)  
\* United Machine & Mfg. Co.  
\* Vogt, Henry Machine Co.
- Separators, Compressed Air**  
\* United Machine & Mfg. Co.
- Separators, Oil**  
\* Bethlehem Shipbldg. Corp'n (Ltd.)  
\* Cochrane Corp'n  
\* Crane Co.  
\* De La Vergne Machine Co.  
\* Elliott Co.  
\* Hoppes Mfg. Co.  
\* Kieley & Mueller (Inc.)  
\* United Machine & Mfg. Co.  
\* Vogt, Henry Machine Co.
- Separators, Steam**  
\* Cochrane Corp'n  
\* Crane Co.  
\* Elliott Co.  
\* Hoppes Mfg. Co.  
\* Kieley & Mueller (Inc.)  
\* Pittsburgh Valve, Fdry. & Const. Co.  
\* United Machine & Mfg. Co.  
\* Vogt, Henry Machine Co.
- Shafting**  
\* Allis-Chalmers Mfg. Co.  
\* Brown, A. & F. Co.  
\* Cumberland Steel Co.  
\* Falls Clutch & Mchry. Co.  
\* Hill Clutch Machine & Foundry Co.  
\* Medart Co.  
\* Union Drawn Steel Co.  
\* Wood's, T. B. Sons Co.
- Shafting, Cold Drawn**  
\* Hill Clutch Machine & Fdry. Co.  
\* Medart Co.
- Shafting, Flexible**  
\* Gwilliam Co.
- Shafting, Turned and Polished**  
\* Cumberland Steel Co.  
\* Hill Clutch Machine & Fdry. Co.  
\* Link-Belt Co.
- Shapes, Brick**  
\* McLeod & Henry Co.
- Shapes, Cold Drawn Steel**  
\* Union Drawn Steel Co.
- Shears, Alligator**  
\* Farrell Foundry & Machine Co.  
\* Long & Allstatter Co.  
\* Roversford Foundry & Machine Co.
- Shears, Hydraulic**  
\* Mackintosh-Hemphill Co.
- Shears, Plate**  
\* Long & Allstatter Co.  
\* Mackintosh-Hemphill Co.
- Shears, Rotary**  
\* Niagara Machine & Tool Works
- Shears, Squaring**  
\* Niagara Machine & Tool Wks
- Sheaves, Rope**  
\* Brown, A. & F. Co.  
\* Clyde Iron Works Sales Co.  
\* Falls Clutch & Machinery Co.  
\* Hill Clutch Machine & Fdry. Co.  
\* Jones, W. A. Fdry. & Mach. Co.  
\* Link-Belt Co.  
\* Mackintosh-Hemphill Co.  
\* Medart Co.  
\* Nordberg Mfg. Co.  
\* Wood's, T. B. Sons Co.
- Sheet Metal Work**  
\* Allington & Curtis Mfg. Co.  
\* Hendrick Mfg. Co.
- Sheet Metal Working Machinery**  
\* Farrell Foundry & Machine Co.  
\* Niagara Machine & Tool Works
- Sheets, Brass**  
\* Scovill Mfg. Co.
- Sheets, Bronze**  
\* Hendrick Mfg. Co.
- Sheets, Rubber, Hard**  
\* Goodrich, B. F. Rubber Co.  
\* United States Rubber Co.
- Sheets, Steel**  
\* Central Steel Co.
- Siphons (Steam-Jet)**  
\* Schutte & Koerting Co.
- Slide Rules**  
\* Dietzen, Eugene Co.  
\* Keuffel & Esser Co.
- New York Blue Print Paper Co.**  
\* Parvell Laboratories  
\* U. S. Blue Co.  
\* Weber, F. Co. (Inc.)
- Smoke Recorders**  
\* Sarco Co. (Inc.)
- Smoke Stacks and Flues**  
(See Stacks, Steel)
- Sockets, Wire Rope**  
(See Wire Rope Fastenings)
- Soot Blowing Systems**  
\* Diamond Power Specialty Corp'n
- Space Heaters**  
\* Westinghouse Elec. & Mfg. Co.
- Special Machinery**  
\* Brown, A. & F. Co.  
\* Builders Iron Foundry  
\* Cramp, Wm. & Sons Ship & Engine Bldg. Co.  
\* Farrell Foundry & Machine Co.  
\* Fawcett Machine Co.  
\* Franklin Machine Co.  
\* Hill Clutch Machine & Fdry. Co.  
\* Lammet & Mann  
\* Mackintosh-Hemphill Co.  
\* Nordberg Mfg. Co.  
\* Smidth, F. L. & Co.  
\* Vilter Mfg. Co.
- Speed Reducing Transmissions**  
\* Cleveland Worm & Gear Co.  
\* De Laval Steam Turbine Co.  
\* Foote Bros. Gear & Machine Co.  
\* General Electric Co.  
\* Hill Clutch Machine & Foundry Co.  
\* James, D. O. Mfg. Co.  
\* Jones, W. A. Fdry. & Mach. Co.  
\* Link-Belt Co.  
\* Palmer-Bee Co.
- Spray Cooling Systems**  
\* Cooling Tower Co. (Inc.)
- Sprays, Water**  
\* Cooling Tower Co. (Inc.)
- Sprinkler Systems**  
\* Rockwood Sprinkler Co.
- Sprinklers, Spray**  
\* Cooling Tower Co. (Inc.)
- Sprockets**  
\* Baldwin Chain & Mfg. Co.  
\* Diamond Chain & Mfg. Co.  
\* Foote Bros. Gear & Machine Co.  
\* Gifford-Wood Co.  
\* Hill Clutch Machine & Mfg. Co.  
\* Link-Belt Co.  
\* Medart Co.  
\* Philadelphia Gear Works
- Stacks, Steel**  
\* Bigelow Co.  
\* Casey-Hedges Co.  
\* Cole, R. D. Mfg. Co.  
\* Hendrick Mfg. Co.  
\* Morrison Boiler Co.  
\* Titusville Iron Works Co.  
\* Union Iron Works  
\* Vogt, Henry Machine Co.  
\* Walsh & Weidner Boiler Co.
- Stair Treads**  
\* Irving Iron Works Co.
- Stampings, Sheet Metal**  
\* Rockwood Sprinkler Co.
- Standpipes**  
\* Cole, R. D. Mfg. Co.  
\* Golden-Anderson Valve Specialty Co.  
\* Morrison Boiler Co.  
\* Walsh & Weidner Boiler Co.
- Static Condensers**  
\* Westinghouse Elec. & Mfg. Co.
- Steam Specialties**  
\* Crane Co.  
\* Foster Engineering Co.  
\* Fulton Co.

- Steel, Bright Finished**  
\* Union Drawn Steel Co.
- Steel, Chrome**  
\* Central Steel Co.
- Steel, Chrome Nickel**  
\* Central Steel Co.
- Steel, Chromium Alloy**  
\* Central Steel Co.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

when analysis of gas and percentage of CO<sub>2</sub> in products of combustion are known.

#### PULLEYS

**Pressed-Steel Belt.** Application of Pressed Metal to Pulleys, S. G. Gaillard, Jr. Forging—Stamping—Heat Treating, vol. 10, no. 6, June 1924, pp. 226-229, 12 figs. Various operations in manufacture of pressed-steel belt pulleys.

#### PULVERIZED COAL

**Combustion of.** The Combustion of Pulverized Coal, E. Audibert. Colliery Guardian, vol. 127, nos. 3306 and 3307, May 9 and 10, 1924, pp. 1185-1189 and 1251-1252, 4 figs. Details of experiments made by Comité Centrale des Houillères de France, primary object of which is measurement of duration of combustion, and subsidiary object determination of essential conditions for use of a given coal in form of powder. Translated from Revue de l'Industrie Minière.

**Systems.** Pulverized-Fuel Systems, A. L. Cole. Power, vol. 59, nos. 23, 24, 25 and 26, June 3, 10, 17 and 24, 1924, pp. 900-905, 16 figs.; 940-945, 17 figs.; 985-988, 16 figs.; and 1022-1027, 26 figs. Different types of equipment in general use for drying, pulverizing, transporting and burning coal in pulverized form. June 3: Types of dryers. June 10: Types of pulverizers used in unit and multiple systems. June 17: Systems used for conveying coal in pulverized form, construction and operation. Type of feeders and burners used with different systems of firing coal in pulverized form; review of earlier types; typical boiler settings designed in last four years.

#### PUMPS

**Air-Lift.** Experimental Study of Air Lift Pumps and Application of Results to Design, C. N. Ward and L. H. Kessler. Univ. of Wis.—Bul., Eng. Experiment Station, vol. 9, no. 4, 1924, 166 pp., 60 figs. partly on supp. plates.

**Vacuum.** An All-metal High-vacuum Pump System, I. Backhurst and G. W. C. Kaye. Lond., Edinburgh & Dublin Philosophical Mag. & J. Sci., vol. 47, no. 281, May 1924, pp. 918-929, 3 figs. Describes pump system of two-stage type, constructed wholly of metal and consisting of (1) mercury-vapor jet pump in series with (2) mercury-vapor condensation pump; advantages of system. Bibliography. See also paper by same authors, entitled, A Metal Annular-Jet Vacuum Pump, describing modification of pump described in first paper, pp. 1016-1020, 2 figs.

#### PUMPS, CENTRIFUGAL

**Flow Phenomena in.** Experimental Investigation of Flow of Water Through a Turbine Acting as Centrifugal Pump (Experimentelle Untersuchung der Wasserströmung durch ein rotierendes Zellen-Kreiselschiff), H. Oertli. Schweizerische Bauzeitung, vol. 43, no. 20, May 17, 1924, pp. 231-234, 13 figs. Results of tests to investigate flow phenomena in rotary water wheel.

**Internal Leakage.** Determination of Internal Leakage in Centrifugal Pumps, A. F. Sherzer. Eng. News-Rec., vol. 92, no. 25, June 19, 1924, pp. 1056-1058, 5 figs. Facts regarding coefficient of discharge established by research in hydraulic laboratory of Univ. of Mich.

**Suction Pipes, Evacuating.** Evacuating the Suction Pipes of Centrifugal Pumps, W. S. Douglas. Power Engr., vol. 19, no. 219, June 1924, pp. 205-207, 4 figs. Study of conditions obtaining during process; develops formulas for predetermination of pump capacities, etc., for given plants.

## R

#### RAILLESS TRACTION

**Rochester, N. Y.** Rochester Trackless Trolley Construction, Elec. Ry. J., vol. 64, no. 1, July 5, 1924, pp. 11-13, 4 figs. Line is about 3 mi. long and runs through densely populated district; it crosses five electric-car lines and one steam railroad at grade; some of overhead equipment is of special design.

#### RAILS

**Frogs and Crossings, Finishing of.** Finishing Steel Track Equipment, F. B. Jacobs. Iron Trade Rev., vol. 74, no. 26, June 26, 1924, pp. 1701-1702, 3 figs. Notes on methods and equipment used at plant of Indianapolis Switch & Frog Co., Springfield, O., in production of solid manganese-steel frogs, switches and crossings.

**Quality Improvement.** How the Quality of Rails Can Be Improved, C. W. Gennet, Jr. Ry. Age, vol. 77, no. 2, July 12, 1924, pp. 63-65, 2 figs. Suggestions for changes in specifications to secure a better grade of steel.

#### RAILWAY ELECTRIFICATION

**France.** Paris Suburban Lines Electrification, Elec. Ry. & Tramway J., vol. 49, no. 1206, Oct. 12, 1923, and vol. 50, no. 1219, Jan. 11, 1924, pp. 201-205 and 19-22, 14 figs. Changes in construction and general arrangement of St. Lazare station; describes electric motor car to be used on State Rys., designed so as to allow of reduction to a strict minimum of stopping time at stations.

**Illinois Central.** Electrification Progress on the C. & N. W. Elec. Traction, vol. 20, no. 6, June 1924, pp. 256-257, 4 figs. Work on complete elimination of grade crossings from Chicago to Kankakee are well under way; next cars purchased will be completely equipped for electrical operation.

**Switzerland.** Railway Electrification Progress in Switzerland, A. Rohn. Eng. News-Rec., vol. 93, no. 1,

July 3, 1924, pp. 18-19, 4 figs. Progress of electrification movement of Swiss Federal Railways. More than 400 km. of lines operating by electric power; will equip 1150 km. in next four years.

**United States.** The Electrification of Foreign Railways including Recent Developments and Projects, S. Parker Smith. World Power, vol. 1, no. 6, June 1924, pp. 338-346, 4 figs. United States of America.

#### RAILWAY MANAGEMENT

**Purchases and Stores.** Purchases and Stores, Ry. Age (Daily Edition), vol. 76, no. 34, June 17, 1924, pp. 1641-1659, 6 figs. Contains following articles: Purchasing Function of the Government, H. C. Smith; Committee recommendation: Stores Department Book of Rules; Method for Material Procurement, E. J. Remensnyder; Committee report on Material Accounting and Office Appliances; report of Committee on General Accounting; Bonus System for Efficient Stockmen, J. E. Mahaney; Report on Department Buildings and Facilities; Duties of a Traveling Storekeeper, W. Dixon; and other addresses. Papers and reports presented before Am. Ry. Assn. See also Ry. Rev., vol. 74, no. 25, June 21, 1924, pp. 1204-1211.

**S. P. Houston Store Has Many Fine Features.** Ry. Rev., vol. 74, no. 24, June 14, 1924, pp. 1094-1103, 22 figs. Among practices followed at purchases and stores department of Southern Pac. Co., are unit piling of materials, stores delivery and supply-train operation.

**Material Investment.** The Railways' Material Investment, L. C. Thomson. Can. Ry. Club, vol. 23, no. 3, Mar. 1924, pp. 20-29 and (discussion) 29-38. Deals with organization, facilities, inspection, distribution, rail, and reclamation.

**Tonnage Volume, Forecasting.** Railroad Traffic and the Business Cycle, H. B. Vanderblue. Ry. Age, vol. 76, no. 20, Apr. 19, 1924, pp. 987-990, 7 figs. Shows how individual carrier is assisted in forecasting tonnage volume; traffic of Southern Ry.

**Supervisory Forces, Training of.** Proper Training of Shop Supervisory Forces, L. W. Baldwin. Ry. Rev., vol. 74, no. 26, June 28, 1924, pp. 1256-1258. Discusses training of supervision and developing of men better fitted for mechanical positions. Systematic record of progressive steps should be kept and stipulated examinations at stated intervals should be given. From paper read before Am. Ry. Assn. annual convention.

#### RAILWAY MOTOR CARS

**Drewry.** Drewry Motor Rail Vehicles. Motor Transport (Lond.), vol. 38, no. 1008, June 23, 1924, pp. 769-770, 4 figs. Three representative types for inspection and haulage work which were shown at British Empire exhibition.

**Hydraulic-Drive.** Gasoline Passenger Car with Hydraulic Drive, Ry. Age, vol. 76, no. 31, June 14, 1924, pp. 1507-1509, 5 figs. Combination passenger and baggage unit car propelled by 150-hp. Ricardo engine through transmission consisting of one hydraulic variable-delivery pump and two hydraulic variable-speed motors; in operation on New York, New Haven & Hartford.

**Italy.** Italians Build Railcars to Meet Motor Bus Competition, F. A. Shepley. Automotive Industries, vol. 50, no. 25, June 19, 1924, pp. 1319-1320, 1 fig. Fitted with two 60-hp. engines, Westinghouse electrical equipment and air brakes; gear sets used provide four forward and reverse speeds of which maximum is 32 m.p.h.

#### RAILWAY OPERATION

**Car Switching.** Switching Devices (Hilfsmittel zum Verschleichen), Wernecke. Fördertechnik u. Frachtverkehr, vol. 17, no. 8, Apr. 30, 1924, pp. 103-105, 6 figs. Various devices for switching railway cars by means of wire ropes; for use in cases where use of switching locomotives would not be economical. Types of electric motors and controllers for devices.

#### RAILWAY REPAIR SHOPS

**Delivery System.** Transportation of Material in the Roanoke Shops, Jas. M. Thomas. Ry. Rev., vol. 74, no. 24, June 14, 1924, pp. 1126-1130, 9 figs. Describes delivery system of shops of Norfolk & West. Ry.; how materials are delivered to and from shops and yards; organization and system; schedules maintained and equipment used.

**Design.** Report on Design of Shops and Engine Terminals, Ry. Age, vol. 76, no. 30, June 13, 1924, pp. 1464-1468. Seven specific recommendations for freight-car and repair shops. Am. Ry. Assn. committee report and discussion.

**Grand Rapids, Mich.** How the Grand Rapids Shops were Modernized, Ry. Age, vol. 76, no. 31, June 14, 1924, pp. 1497-1502, 9 figs. Details of reconstruction of general repair shops of Pere Marquette plant; method of handling locomotive repairs; improved arrangement of car-repair shops; power plant. See also Ry. Rev., vol. 74, no. 24, June 14, 1924, pp. 1108-1119, 16 figs.

#### RAILWAY SHOPS

**Car-Building.** Car Building Program in a Railroad Shop, Ry. Rev., vol. 74, no. 25, June 21, 1924, pp. 1177-1185, 19 figs. Describes production activities introduced in new Wyoming car shops of Pere Marquette Ry. at Grand Rapids, Mich., where 300 refrigerator cars are being built after production schedule at rate of 2 1/2 cars per day.

**Central of Georgia Ry.** A Good Railway Shop in the South, F. H. Colvin. Am. Mach., vol. 61, no. 1, July 3, 1924, pp. 5-6, 5 figs. A few methods found in a well-equipped shop of an old railroad, the Central of Georgia, at Macon.

**Equipment Standardization.** Standardized Shop Work at Topeka, F. H. Colvin. Am. Mach., vol. 61, no. 2, July 10, 1924, pp. 63-64, 1 fig. Outline of how

equipment is standardized and manufactured at Topeka shops of Santa Fe, and economies effected by standardization.

**Kansas City Southern Ry.** Kansas City Southern Enlarges Its Main Shops, Ry. Age, vol. 76, no. 38, June 28, 1924, pp. 1807-1811, 10 figs. Extensions at Pittsburg, Kan., which enable boiler, blacksmith and erecting shops to be consolidated.

**Machine Tools for.** Machine Tools for Railway Shops, Ry. Engr., vol. 45, nos. 532 and 533, May and June, 1924, pp. 171-173, and 204-206, 8 figs. Boring and turning mills; extra-heavy wheel lathe; cylinder grinding machine; boring rolling-stock wheels; drilling and ovaling rails; boring axle-boxes; new boiler-shop tool; car-wheel-center boring machine.

**Training of Forces.** The Training of Shop Supervisory Forces, L. W. Baldwin. Ry. Age (Daily Edition), vol. 76, no. 34, June 17, 1924, pp. 1627-1630. Selection of apprentices; supervision and encouragement of mechanic; selecting men for promotion; duties of foreman; study of new tools and appliances. Address before Am. Ry. Assn.

#### RAILWAY SIGNALING

**Colored-Light Signals.** Canadian National Color-Light Signals, T. A. Allen. Ry. Signaling, vol. 17, no. 7, July 1924, pp. 268-270, 6 figs. Expanded steel trusses in place of bridges save money; main line switches electrically bridged.

**Interlocking.** New Interlocking Construction Ideas, J. E. Jacobs. Ry. Signaling, vol. 17, no. 7, July 1924, pp. 271-274, 13 figs. Chicago & West Indiana installs 120-lever plant using park-way cable, unique outlets and novel charging apparatus.

**Neon, Application in.** Neon—A New Gas for Electrical Use, C. S. Treacy. Ry. Signaling, vol. 17, no. 7, July 1924, pp. 279-280, 1 fig. Development of new gas and its application to signal lights and lightning arresters.

#### RAILWAY TIES

**Treated vs. Untreated.** Superiority of Treated Ties Proved by a Nine Years' Test on Chicago & North Western Railway, Wood Preserving News, vol. 2, no. 5, May 1924, pp. 72-73. Seven varieties of timber, untreated and treated by three standard processes, installed on eight divisions show great economy of tie preservation.

#### RAILWAY TRACK

**Crossing Gates.** Electrically Operated Gates at Mount Pleasant Crossing, Southampton, Southern Railway, W. J. Thorowgood. Ry. Gaz., vol. 40, no. 25, June 20, 1924, pp. 379-382, 4 figs. Results of power tests of gates; describes operating mechanism; emergency arrangements.

**Stress on, Relation to Locomotive Design.** Relation of Track Stress to Locomotive Design, C. T. Ripley. Ry. Age (Daily Edition), vol. 76, no. 32, June 14, 1924, pp. 1457-1553 and (discussion) 1553-1558, 10 figs. History of study of track stresses; describes stremmatograph and its use in measuring rail stresses and gives results of number of tests run on A. T. & S. F. Paper read before Am. Ry. Assn.

**Water-Supply Stations.** Santa Fe Builds New Water Stations Where Supply Is Limited, E. H. Olson. Ry. Eng. & Maintenance, vol. 20, no. 7, July 1924, pp. 268-272, 12 figs. Description of two water stations, one at Bazar, and second at Aikman, having pumping capacities of 550 ga. per min., built to increase water supply because of new low-grade cut-off line from Ellinor, Kan., to Eldorado.

#### RAILWAY YARDS

**Freight.** Markham Yard, W. P. Cronican. West. Soc. Engrs.—Jl., vol. 29, no. 6, June 1924, pp. 257-262. Principal features of design of new classification yard of Ill. Central R. R. Co. Will handle practically all freight entering or leaving Chicago district. See also paper by A. Bernard giving operating features, pp. 263-264.

**Flood Lighting.** Floodlighting Railroad Yards, E. G. McAllister. Elec. World, vol. 83, no. 26, June 28, 1924, pp. 1329-1332, 6 figs. Adoption of this practice has materially increased operating efficiency and safety on Norfolk & West. R. R.; details of installation; costs and operating results.

#### RAILWAYS

**Government Regulation.** The Development of Railroad Regulation, F. McManamy. Ry. Age (Daily Edition), vol. 76, no. 34, June 17, 1924, pp. 1623-1627. Review of scope and effect of what U. S. Government has done in way of legislation affecting railroads; unification; provisions to stabilize credit. Paper read before Am. Ry. Assn.

**Materials Specifications.** Report on Specifications and Tests for Materials, Ry. Age (Daily Edition), vol. 76, no. 34, June 17, 1924, pp. 1638-1639, 1 fig. New proposed form for specification of welding wire and rods; specifications for lumber; etc. Report presented to Am. Ry. Assn.

#### REAMERS

**Taper.** Taper Machine Reamers, F. Cooke. Machy. (Lond.), vol. 24, no. 613, June 26, 1924, pp. 385-388, 8 figs. Deals with back piloting roughing reamers and finishing reamers; gives dimensions and formulas.

#### REFRIGERATING MACHINES

**CO<sub>2</sub> Compressors.** The Carbon Dioxide Compressor, H. J. Macintire. Refrig. Wld., vol. 69, no. 6, June 1924, pp. 16-18, 2 figs. Improvements in recent years have followed along same lines as in ammonia-compressor design.

**Precooling in.** Pre-Cooling by Primary Evaporation and Multiple Effect Compression, as Applied to CO<sub>2</sub> Refrigerating Machines, Henry Brier. Cold

Manufactured by  
Advertisers**CLASSIFIED LIST OF MECHANICAL EQUIPMENT**Alphabetical List

United States Rubber Co.

**Trolleys**  
Brown Hoisting Machinery Co.  
Whiting Corp'n

**Trolleys, Monorail**  
Palmer-Bee Co.

**Trucks, Industrial (Storage Battery)**  
Yale & Towne Mfg. Co.

**Trucks, Trailer**  
Yale & Towne Mfg. Co.

**Tubes, Boiler, Seamless Steel**  
Casey-Hedges Co.

**Tubes, Condenser**  
Scovill Mfg. Co.  
Wheeler Condenser & Engrg. Co.

**Tubes, Pitot**  
American Blower Co.  
Bacharach Industrial Instrument Co.

**Tubing, Rubber**  
Goodrich, B. F. Rubber Co.  
United States Rubber Co.

**Tubing, Rubber (Hard)**  
Goodrich, B. F. Rubber Co.

**Tumbling Barrels**  
Farrel Foundry & Machine Co.  
Rorysford Fdry. & Mach. Co.  
Whiting Corp'n

**Turbines, Hydraulic**  
Allis-Chalmers Mfg. Co.  
Cramp, Wm. & Sons Ship & Engine Bldg. Co.  
Hopps Water Wheel Co.  
Lefel, James & Co.  
Newport News Shipbuilding & Dry Dock Co.  
Smith, S. Morgan Co.  
Worthington Pump & Machinery Corp'n

**Turbines, Steam**  
Allis-Chalmers Mfg. Co.  
Coppus Engineering Corp'n  
De Laval Steam Turbine Co.  
General Electric Co.  
Kerr Turbine Co.  
Ridgway Dynamo & Engine Co.  
Sturtevant, B. F. Co.  
Terry Steam Turbine Co.  
Westinghouse Elec. & Mfg. Co.  
Wheeler Condenser & Engrg. Co.

**Turbo-Blowers**  
Coppus Engineering Corp'n  
General Electric Co.  
Ingersoll-Rand Co.  
Kerr Turbine Co.  
Sturtevant, B. F. Co.

**Turbo-Compressors**  
Ingersoll-Rand Co.

**Turbo-Generators**  
Allis-Chalmers Mfg. Co.  
De Laval Steam Turbine Co.  
General Electric Co.  
Kerr Turbine Co.  
Ridgway Dynamo & Engine Co.  
Sturtevant, B. F. Co.  
Terry Steam Turbine Co.  
Westinghouse Electric & Mfg. Co.

**Turbo-Pumps**  
Bethlehem Shipbldg. Corp'n (Ltd.)  
Coppus Engineering Corp'n  
Kerr Turbine Co.  
Terry Steam Turbine Co.  
Wheeler Condenser & Engineering Co.

**Turntables**  
Easton Car & Construction Co.  
Link-Belt Co.  
Palmer-Bee Co.  
Whiting Corp'n

**Turret Machines**  
(See Lathes, Turret)

**Unions**  
Crane Co.  
Edward Valve & Mfg. Co.  
Lunkenheimer Co.  
Pittsburgh Valve, Fdry. & Const. Co.  
Vogt, Henry Machine Co.

**Unions, Pressed Steel**  
Rockwood Sprinkler Co.

**Unloaders, Air Compressor**  
Ingersoll-Rand Co.  
Worthington Pump & Machinery Corp'n

**Unloaders, Ballast**  
Lidgerwood Mfg. Co.

**Unloaders, Car**  
Gifford-Wood Co.  
Link-Belt Co.

**Vacuum Breakers**  
Foster Engineering Co.

**Vacuum Dryers, Pans, Pumps, Traps, etc.**  
(See Pans, Pumps, Traps, etc., Vacuum)

**Valve Discs**  
Edward Valve & Mfg. Co.  
Garlock Packing Co.  
Goodrich, B. F. Rubber Co.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

Storage, vol. 27, no. 315, June 19, 1924, pp. 240-248, 6 figs. Shows that multiple-effect compression is preeminently suited for dealing satisfactorily with two evaporations in closed cycle of CO<sub>2</sub> refrigerating plant arranged for precooling by partial or primary evaporation.

#### REFRIGERATION

**Brine and Direct-Expansion Cooling.** Comparison of Direct Expansion and Brine in Applying Refrigeration, H. J. Macintire. Chem. & Met. Eng., vol. 30, no. 26, June 30, 1924, pp. 1027-1029, 4 figs. Conditions governing application of cooling by two methods, with particular emphasis on brine cooling.

#### RIVETED JOINTS

**Stresses in.** Stresses in the Riveted Joints of Steel Structures (Die Beanspruchung des Nietverbindungen bei Eisenkonstruktionen), Möllenhoff. Zentralblatt der Bauverwaltung, vol. 43, nos. 101/102, Dec. 19, 1923, pp. 607-611, 13 figs. Theoretical investigations and scientific measurements of stresses occurring. Great influence of quality of workmanship is emphasized.

#### RIVETING

**Machines for.** Giant Portable Compressed Air Riveting Machine, J. C. Hanna. Compressed Air Mag., vol. 29, no. 5, May 1924, pp. 861-863, 4 figs. Description of 150-ton riveter designed and manufactured by Hanna Eng. Wks., Chicago, Ill.; makes use of compressed air in forming rivet heads, and compressed air is also drawn upon in rotating machine as well as in tilting it. Character of work that it performs.

#### ROLLING MILLS

**Butt-Weld.** New Butt Weld Mills at Indiana Harbor. Iron Age, vol. 914, no. 1, July 3, 1924, pp. 1-4, 5 figs. Mills, which are part of expansion program of Youngstown Sheet & Tube Co., will roll pipe from 1/4 to 3 in. and will produce 400 tons daily.

**Plate Mills.** New Three-high Plate Mill at the Clydebridge Works of Messrs. David Colville & Sons, Ltd. English Elec. J., vol. 2, no. 6, Apr. 1924, pp. 311-319, 8 figs. Mill drive with slow-speed motor direct-coupled to mill and flywheel energy embodied in a separate motor-generator equalizer set. Plant designed to deal with 3000 tons of plates per week.

**Power Consumed in Rolling Steel.** Power Consumed in Rolling Steel, Iron Age, vol. 113, no. 22, May 1924, pp. 1564-1565, 1 fig.; and Iron Trade Rev., vol. 74, no. 22, May 29, 1924, pp. 1431-1433, 5 figs. Factors governing amount of power required for rolling steel; graphical presentation of power consumption as related to displacement of metal; load variation contingent upon rolling temperature.

## S

#### SAND BLAST

**Sands for.** Sand Blast Sand, W. M. Weigel. U. S. Bur. Mines, Reports of Investigations, no. 2615, June 1924, 6 pp. Discusses different grades of sand, mining and preparation, and utilization of waste blast sand.

#### SAND, MOLDING

**Reclamation Tests.** Reports on Sand Reclamation Tests. Foundry, vol. 52, no. 12, June 15, 1924, pp. 470-471. (Abstract.) Progress report of committee of Am. Foundrymen's Assn.

**Steel Castings.** Moulding Sands for Steel Castings, A. Rhydderch. Foundry Trade J., vol. 29, nos. 406 and 407, May 29 and June 5, 1924, pp. 445-448 and 460-463, 6 figs. Refractoriness, naturally-bonded sand, examination of clay grades, stripping properties of sands, "compos," mechanical strength and permeability, controlling variables, standardization of testing methods, preparation, strength as affected by milling, drying of sands and compo molds, etc.

**Testing.** Notes Sand Test Methods, C. W. H. Holmes. Foundry, vol. 52, nos. 10 and 11, May 15 and June 1, 1924, pp. 385-388 and 435-438, 1 fig. May 15: Discusses formation of sand and chemical, mineral and mechanical properties most desired for molding purposes; nature of bond. June 1: Results obtained with sieve test and elutriator compared, with special reference to distribution of bond; selecting and standardizing tests. (Abstract.) Paper presented at Paris Mtg. of Int. Foundry Congress.

**The Testing of Molding Sands,** H. Ries. Sibley J. Eng., vol. 38, no. 6, June 1924, pp. 136-138 and 156, 5 figs. Describes three tests thus far adopted, namely permeability, bonding-strength, and fineness test.

#### SAWS

**Circular.** Recent Investigations of Cold Circular Sowing Machines and Circular Saw Blades (Neuere Untersuchungen an Kaltkreissägemaschinen und Kreis-sägeblättern), A. Stotz. Maschinenbau, vol. 3, no. 12, Mar. 27, 1924, pp. 404-408, 14 figs. Results of investigations demonstrate superiority of rapid blades over tool-steel full blades, and also show that cold circular saws can compete successfully with ripping process by means of toothless friction saws.

#### SCREWS

**Lead Screws, Chasing.** Chasing Lead-screws, Chas. O. Herb. Machy. (N. Y.), vol. 30, no. 11, July 1924, pp. 883-884, 2 figs. Practice of Am. Tool Works Co.

#### SCREW THREADS

**Rolling.** Rolling Threads on Thin Brass Shells, V. P. Doolittle. Am. Mach., vol. 60, no. 22, May 29, 1924, pp. 793-794, 8 figs. Causes of troubles experienced in holding work to plug, or ring, thread pipe, tools for thread rolling and beading.

#### SILICON STEEL

**Annealing, Effect of.** Effect of Annealing on the Magnetic Properties of Sheets of Silicon Steel Employed in Electrical Construction (Influence du recuit sur les propriétés magnétiques des tôles au silicium employées dans la construction électrique), R. Cazaud. Académie des Sciences—Comptes Rendus des Séances, vol. 178, no. 20, May 12, 1924, pp. 1610-1611. Results of a study of effect of varying conditions of annealing of rolled sheets of steel containing various percentages of silicon, on magnetic permeability, hysteresis losses, reluctance, and Foucault losses.

#### SMOKE

**Filtration of.** Electrical Smoke Filtration (Elektrisk gasrening, Cottrell-Möllers metod), Ake Dahlgren. Teknisk Tidskrift, vol. 54, no. 19, May 10, 1924, pp. 34-38 (Kemi), 11 figs. Historical review of development of art of smoke filtration and detailed description of electrical method proposed by Cottrell and a later improved upon by Möller. Number of photographs and figures showing recent installations in Europe.

#### SOLIDS

**Internal Pressures of.** The Internal Pressures of Solids, T. W. Richards. Am. Chem. Soc.—J., vol. 46, no. 6, June 1924, pp. 1419-1436, 1 fig. Brief analysis of nature of an approximate hyperbolic pressure-volume equation for solids; relation of this hyperbolic equation to an equation of state, in which each of the quantities has definite physical meaning; method which gives a plausible means of calculating internal pressure of isotropic elements from coefficient of expansion by means of a certain equation.

#### STANDARDS

**German N. D. I. Reports.** Report of the German Industrial Standards Committee (Normenausschuss der Deutschen Industrie), Maschinenbau, vol. 3, no. 17, June 12, 1924, pp. N 109-116, 14 figs. Proposals for rope sheaves for hoisting machinery, pipe threads, screwed pipe couplings, screw caps.

#### STEAM

**Pressure Equation.** Steam Pressure Equation at Low Temperature (Über die Dampfsparnungsgleichung bei tiefen Temperaturen), V. Fischer. Zeit. für technische Physik, vol. 5, no. 5, 1924, pp. 187-192. Deduction of equation by means of MacLaurin series.

**Specific Heat.** The Specific Heat of Steam, H. L. Callendar. World Power, vol. 1, nos. 5 and 6, May and June 1924, pp. 274-280 and 324-328, 1 fig. May: Explains principles of new methods of research, and illustrates difficulties to be encountered in neighborhood of saturation, which have led to abandonment of many of older methods. June: Rational equation for steam up to its critical point; comparison with experimental results for CO<sub>2</sub>.

#### STEAM ACCUMULATORS

**Types.** High-, Medium- and Low-Pressure Accumulators (Der Gefäßespeicher für Hoch-, Mittel- und Niederdruck), C. Hieselbach. Wärme, vol. 47, no. 17, Apr. 25, 1924, pp. 175-177, 4 figs. Discusses necessary conditions for economic working, describes Ruths and other types, also new type said to fill requirements.

#### STEAM ENGINES

**Uniflow.** Auxiliary Exhaust Valves Versus Additional Clearance in Back-Pressure Uniflow Engines, P. Langer. Power, vol. 59, no. 24, June 10, 1924, pp. 937-939, 6 figs. States that uniflow engine with normal clearance and exhaust valves will give larger output from given amount of steam at greater economy under all conditions of back pressure than uniflow engine with additional clearance space.

**The Carmichael Uniflow Steam Engine.** Engineering, vol. 117, no. 3051, June 20, 1924, pp. 808-810, 4 figs. Particulars of engine exhibited at British Empire Exhibition, developing 115 b.h.p. at 180 r.p.m.; cylinder has a bore of 15 in. and a stroke of 18 in.; works condensing, a jet condenser being fitted beneath it and air pump being operated from crankshaft.

**Valve Gears.** Positive Piston Slide-Valve Gear, Proell Patent (Zwangläufige Kolbenventilsteuerung Patent Proell), F. Lehmann. Zeit. des Vereines Deutscher Ingenieure, vol. 68, no. 24, June 14, 1924, pp. 625-628, 16 figs. Detailed description; results of steam consumption tests with 1000-h.p. steam engine fitted with new gear.

#### STEAM METERS

**Types and Characteristics.** Meter Types and Their Characteristics, C. D. Zimmerman. Power Plant Eng., vol. 28, no. 13, July 1, 1924, pp. 696-698. Temperature recorders; instruments for boilers in small boiler plants and power plants; economizer instruments, turbine and miscellaneous instruments; improvements.

#### STEAM PIPES

**Coverings, Heat Loss Through.** Heat Loss through Insulating Materials, R. H. Heilmann. Power Plant Eng., vol. 28, no. 14, July 15, 1924, pp. 742-745, 1 fig. Method for calculating heat loss through pipe covering used for high steam temperatures. Outlined before A.S.M.E.

**Dimensioning.** The Correct Dimensioning of Steam Pipes on the Basis of Heat Economy (Die richtige Bemessung von Dampfrohrleitungen auf Grund der besten Wärme-Oekonomie), A. Sachs. Schweizerische Bauzeitung, vol. 83, no. 18, May 3, 1924, pp. 203-205, 2 figs. Numerical and graphical determination of best pipe diameter in which sum of radiation loss and loss due to pressure drop is a minimum.

#### STEAM POWER PLANTS

**Anthracite-Slush-Burning.** Pulverized Anthracite Slush Burned at Lykens (Pa.). Power, vol. 60,

no. 1, July 1, 1924, pp. 2-7, 9 figs. One of first power plants to utilize anthracite slush in pulverized form. coal mixed with 75 per cent water pumped 2500 ft. under 400 ft. head and dewatered at plant; boiler plant contains six 5000 and six 6000-sq. ft. water-tube boilers; present generating capacity 6400 kw.

**Isolated Plant vs. Centralized Power.** Slow-speed Steam Engines for Industrial Purposes, D. S. Capper. World Power, vol. 1, no. 6, June 1924, pp. 353-357, 6 figs. Deals with factors which combine to determine best method of power supply, namely, first cost, working cost, suitability to particular work, liability to stoppage, and insurance risk.

#### STEAM POWER PLANTS

**Pine Grove, Pa.** Electrical Features of Pine Grove Station, C. D. Gray and M. M. Samuels. Elec. Wld., vol. 81, no. 2, July 12, 1924, pp. 56-62, 13 figs. How electrical features of a large steam plant, built at mouth of a mine, remote from load center, differ from those of large city plant. Power house of East Penn Elec. Co., on Swatara Creek at Pine Grove, Pa., used to illustrate the various electrical features involved.

**Reconstruction of.** Rebuilding an Old Steam Engine Plant, Power Plant Eng., vol. 28, no. 14, July 15, 1924, pp. 746-748, 7 figs. Description of plant of Stearns Light & Power Co., Ludington, Mich., which is being rebuilt. Owners bought steam under contract, used it to generate electric power and then sold it back to original owners after it had served its purpose.

#### STEAM TURBINES

**Cross-Compound.** The Cross-Compound Turbine Adaptable to a Variety of Conditions, E. H. Thompson. Power, vol. 60, no. 2, July 8, 1924, pp. 50-51, 1 fig. Applications of cross-compound principle indicate a growing appreciation of desirable characteristics of this type. Consideration of such units of to-day brings to light a number of ways in which this construction may be utilized and suggests an increasingly important field in future.

**High Pressures and Temperatures.** Tendencies in Steam Turbine Plant, Eskil Berg. Power Plant Eng., vol. 28, no. 11, June 1, 1924, pp. 592-594, 8 figs. High pressures and temperatures; stage extraction and reheating. Paper read before New York Section of A.S.M.E.

**Parsons Line.** Is the Parsons Line Straight or Curved? C. F. Merriam. Power, vol. 60, no. 1, July 1, 1924, pp. 8-10, 4 figs. Shows fallacy of assuming that Parsons line is necessarily straight.

**Reaction.** Largest Straight Reaction Turbine—How Internal Conditions Vary with Load, E. H. Thompson. Power, vol. 59, no. 26, June 24, 1924, pp. 1016-1019, 6 figs. Turbine of Brooklyn Edison Co.'s Hudson Ave. station contains no impulse velocity wheel and is entirely a reaction type; it is served by largest surface condenser so far constructed; conical cylinder bores give improved efficiency.

#### STEEL

**Alloy.** See ALLOY STEELS.

**Blowholes.** An Hypothesis on the Origin of Blowholes in Steel Ingots (Une hypothèse relative à l'origine des ruchages de soufflures dans les lingots d'acier), K.-C. Troubine. Revue de Métallurgie, J. 21, no. 5, May 1924, pp. 288-294, 6 figs. Author propounds theory on origin of blowholes. Translated from Russian.

**Combined Iron and.** Notes on Combined Iron and Steel, H. H. Shephard. Metal Industry (London), vol. 24, no. 24, June 13, 1924, pp. 577-578 and 588, 3 figs. Uses; composition; testing. Author's experience with "combined iron and steel" and "composite steel" is that failures of these materials are due chiefly to faults in manufacture of ingots or billets.

**Electric, Testing of.** B. D. Enlund. Process of Electric Testing of Steel (Elektrische Stahlprüfungsverfahren von B. D. Enlund), B. Jkerman. Zeit. des Vereines Deutscher Ingenieure, vol. 68, no. 24, June 14, 1924, pp. 629-631, 7 figs. Shows that by measuring resistance in test bars, carbon content and total of other ingredients can be determined during decarburization in simplest way.

**High Pressures and Temperatures.** Steel for Higher Pressures and Elevated Temperatures, V. T. Malcolm. Power, vol. 59, no. 26, June 24, 1924, pp. 1020-1021, 3 figs. Physical properties resulting from fine, dense structure.

**High-Speed.** See HIGH-SPEED STEEL.

**Manganese.** See MANGANESE STEEL.

**Mechanical Properties.** The Dependence of the Mechanical Properties of Sub-Pearlitic Carbon Steels on Their Carbon Content, Forging Temperature and Heat Treatment (Die Abhängigkeit der mechanischen Eigenschaften unterperlitischer Kohlenstoffstähle von ihrem Kohlenstoffgehalte, der Schmiedetemperatur und der Wärmebehandlung), F. Schmitz. Berichte der Fachausschüsse des Vereines deutscher Eisenhüttenleute, Werkstoffausschuss, report no. 29, 1924, 8 pp., 7 figs. Recrystallization phenomena of austenite, ferrite and pearlite and their influence on notch action; practical application of results obtained.

**Silicon.** See SILICON STEEL.

**Special, Developments in Metallurgy of.** Modern Developments in the Metallurgy of Special Steels, W. H. Hatfield. Iron & Coal Trades Rev., vol. 108, no. 2938, June 20, 1924, pp. 1055-1057. Discusses improvement in process of manufacture and manipulation resulting in increased reliability, modified and new compositions resulting in improved or new properties, and more intimate knowledge of properties of steel from designer's viewpoint. From paper read before Iron & Steel Sec., Empire Min. & Met. Congress.

#### STEEL, HEAT TREATMENT OF

**Definitions.** Comparison of Heat-Treatment Definitions. Mech. Eng., vol. 46, no. 7, July 1924, p. 435.

**Manufactured by Advertisers CLASSIFIED LIST OF MECHANICAL EQUIPMENT**

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

Varying views held by committees of Am. Soc. Steel Treating, Soc. Automotive Engrs., and Am. Soc. Testing Mats.

**Hardening, Cyanide Process.** Development of a Novel Cyanide Hardening Process, C. Ringstrom. Gas Age-Rec., vol. 53, no. 25, June 21, 1924, pp. 871-873, 3 figs. Describes new and economical process where use of proper fuel has proven necessary for complete success.

**Tempering, Oil.** Modification of Oil Tempering Bath Makes It a Success, E. Ogur. Fuels & Furnaces, vol. 2, no. 7, July 1924, pp. 647-649, 3 figs. Electric heaters at bottom of bath did not heat oil uniformly. Oil is now pumped through cylinder where it is brought to temperature by electrically heated grids.

**Theory and Practice.** The Heat Treatment of Steel. Eng. Production, vol. 7, no. 142, July 1924, pp. 205-207, 5 figs. Discusses thermal critical points of steel, annealing, hardening and tempering, alloy steels, and some practical considerations.

#### STEEL, HIGH-SPEED

**Properties and Treatment.** High Speed Steel, A. R. Page. Birmingham Met. Soc.—Jl., vol. 8, no. 10, pp. 447-463 and (discussion) 463-468, 14 figs. partly on supp. plate. Composition; theory of high-speed steel; microstructure; heat treatment; testing.

#### STEEL INDUSTRY

**Sheet Steel.** Sheet Steel Industry, W. S. Horner. Blast Furnace & Steel Plant, vol. 12, no. 7, July 1924, pp. 319-325. Address of president of Nat. Assn. Sheet and Tin Plate Mfrs. before second annual meeting of sheet steel executives at White Sulphur Springs, W. Va., May 13, 1924.

#### STEEL WORKS

**Electric Power Stations for, Automatic.** Automatic Electric Stations for Steel Mills, C. Lichtenberg. Iron & Steel Engr., vol. 1, no. 5, May 1924, pp. 252-255, 6 figs. Review indicating briefly operation of a typical automatic station and application of some of the equipments. Mentions several unique designs which are especially adapted for steel-mill service.

**Open-Hearth, Car Upkeep.** Reducing Open Hearth Car Upkeep, C. L. Newby. Blast Furnace & Steel Plant, vol. 12, no. 7, July 1924, pp. 331-333, 7 figs. Anti-friction bearings now an important factor in production.

**Power Organization.** Power Organization in the Steel Industry, B. Bannister and F. M. van Deventer. Mech. Eng., vol. 46, no. 5, May 1924, pp. 248-250. Authors show by comparison that value of fuels used and complexity of problems incident to operation of power system of representative steel works are of greater magnitude than for representative central station; these facts warrant existence of highly qualified organization for steel company in nature of power department; description of such organization and enumeration of benefits which should result.

#### STOKERS

**Electric Drive for.** Motors and Control for Stoker Drive, R. Kelly. Elec. Jl., vol. 21, no. 5, May 1924, pp. 221-224, 7 figs. Discusses factors in selection of motors and control equipment.

**Underfeed.** Solving Clinker Problems with Underfeed Stokers, Jos. G. Worker. Steam Coal Buyer, vol. 1, no. 3, Mar. 1924, pp. 20-26, 4 figs. Shows progress made in securing better combustion and reducing clinkers in burning low-grade high-ash Mid-West coals.

#### STREET RAILWAYS

**Car Maintenance.** 217,728 Car-Miles per Pull-In, Robert M. O'Brien. Elec. Ry. Jl., vol. 63, no. 25, June 21, 1924, pp. 969-971, 5 figs. Well-organized system of inspection and repair has enabled New Orleans Public Service, Inc., in 3 1/2 years to eliminate 95 per cent of pull-ins and cut maintenance costs to half.

**Cars.** Double-Truck Cars Weigh 564 lb. per Seat. Elec. Ry. Jl., vol. 64, no. 2, July 12, 1924, pp. 49-50, 3 figs. Unique arrangement is made for separation of cars on new side-entrance cars of Birmingham Elec. Co., Birmingham, Ala.; are of light-weight steel construction and seat 62 passengers.

#### SUPERHEATED STEAM

**Advantages.** Convenient Analysis of Modern Plant and Application to Ship Propulsion. Power, vol. 60, no. 1, July 1, 1924, pp. 18-20, 7 figs. Net plant efficiencies with stage bleeding or reheating which may be quickly obtained from simple diagrams with appropriate corrections.

#### SUPERHEATERS

**Detachable-Tube.** A New Detachable Tube Superheater. Engineer, vol. 137, no. 3572, June 13, 1924, pp. 667-668, 4 figs. Improved form evolved by Thos. Sugden.

**Developments.** Superheaters and their Latest Developments, B. N. Broido. Combustion, vol. 11, no. 1, July 1924, pp. 42-45, 4 figs. Developments in design of superheaters to meet demands of modern power plants.

## T

#### TAPS

**Manufacture.** Taps and Tapping, H. Appleyard. Mech. Wld., vol. 75, no. 1954, June 13, 1924, pp. 366-367, 11 figs. Description of how taps are made.

#### TERMINALS, LOCOMOTIVE

**Turntables.** A Remarkable Record in a Turntable

Renewal. Ry. Age, vol. 76, no. 37, June 21, 1924, pp. 1759-1761, 5 figs. Southern Pacific bridge crews replace 70-ft. structure with 100-ft. in 1 hr. 46 min.

#### TERMINALS, RAILWAY

**Efficiency.** Improvement of Efficiency on Terminals, Chas. Burlingame. St. Louis Ry. Club—Proc., vol. 29, no. 2, June 1924, pp. 31-42. Gives general discussion on topic.

**Ferry Terminal.** New Ferry Terminal Includes Advanced Designs, F. Jasperson. Ry. Age, vol. 76, no. 25, May 24, 1924, pp. 1249-1252, 8 figs. Reading Co. completes installation at Camden, N. J., to handle heavy seashore traffic. See also Ry. Rev., vol. 74, no. 20, May 17, 1924, pp. 871-876, 11 figs.

#### TEXTILE MACHINERY

**Parts Manufacture.** Making Textile Machine Parts, H. R. Simonds. Foundry, vol. 52, no. 14, July 15, 1924, pp. 537-541, 14 figs. Complicated parts are made of gray-iron and malleable castings and offer interesting problems to foundrymen; find application for roll flat and special stripping machines.

#### TEXTILES

**Mule Yarns.** The Effect of Roller Delivery Motion on the Regularity of Mule Yarns, F. Charnley. Textile Inst.—Jl., vol. 15, no. 5, May 1924, pp. T273-T280, 3 figs. Results of investigation; twist, breaking-load and photographic tests.

#### TIME STUDY

**Compiled Form of.** Making and Using Time Studies, H. K. Reed. Indus. Mgt. (N. Y.), vol. 68, no. 1, July 1924, pp. 29-34, 5 figs. Deals with compiled form of time study.

**Function of.** Making and Using Time Studies, H. K. Reed. Indus. Mgt. (N. Y.), vol. 67, nos. 3, 4, 5 and 6, Mar., Apr., May and June, 1924, pp. 145-149, 231-234, 272-278 and 375-382, 12 figs. Mar.; Formulation of policy. Apr. and May; Planning time-study installation. June: Production time-study installation.

#### TIN PLATE

**Machinery for.** Tin-Plate Machinery (Ueber Verzinnschneidmaschinen), W. Krämer. Stahl u. Eisen, vol. 44, no. 25, June 19, 1924, pp. 713-715, 4 figs. Discusses Abercarn and Thomas & Davies types of tin-plate machinery and their advantages.

#### TOLERANCES

**Limits.** Requirements of a System of Limits, M. E. Steczynski. Sibley Jl. Eng., vol. 38, no. 6, June 1924, pp. 139-146 and 155-156, 5 figs. Fundamental principles involved in logical development of satisfactory system.

#### TRACTORS

**Farm.** The General Purpose Farm Tractor, F. A. Wirt. Agricultural Eng., vol. 5, no. 5, May 1924, pp. 102-104, 1 fig. An efficient source of mechanical power that can be used not only for customary tractor drawbar and belt operations, but also, when properly equipped and adjusted, for efficient cultivating and other light drawbar work now more commonly done with horses. Why next big development in tractor industry is expected to be a general-purpose tractor.

#### TRAFFIC

**Congestion Relief.** Projects for Relief of Traffic Congestion in New York and Its Environs, E. P. Goodrich and H. M. Lewis. Am. City Mag., vol. 31, no. 1, July 1924, pp. 29-31, 2 figs. Summary of causes of congestion and of important specific suggestions for relief.

#### TRANSPORTATION

**Metropolitan Planning for Future Requirements.** Metropolitan Planning for Future Transportation Requirements, J. R. Bibbins. Engrs. & Eng., vol. 41, no. 5, May 1924, pp. 119-135, 22 figs. General survey of growth, trends and conditions; what some cities have done and have not done; the transportation plan.

**Street Railways vs. Trolley- and Motor Buses.** Operation of Tramways, Trolley Omnibuses and Motor Omnibuses. Surveyor & Mun. & County Engr., vol. 65, no. 1689, May 30, 1924, pp. 509-510. Advantages and disadvantages of the three systems. Report of Lond. County Council Highways Committee.

## V

#### VALVES

**Materials, Tests of.** Tests on Valve Materials Made Under Working Conditions. Automotive Industries, vol. 51, no. 2, July 10, 1924, pp. 110-112, 1 fig. Results of tests of poppet-type valves for aircraft engines, made of different materials, described in paper presented to Am. Soc. for Testing Mats. at Atlantic City by J. B. Johnson and S. A. Christianson.

#### VARNISHES

**Photomicroscopic Record of Exposures.** Photomicroscopic Record of Varnish Exposures, H. A. Gardner. Paint Mfrs.' Assn. of U. S.—Sci. Section, no. 204, June 1924, 11 pp., 17 figs. Presents photomicrographs that illustrate permanent records made from month to month as deterioration proceeds may be made.

#### VENTILATION

**Air-Duct Calculations.** Duct Work in Connection with Ventilation, C. W. Kimball. Architectural Forum, vol. 41, no. 1, July 1924, pp. 33-35. Describes duct system and different materials used.

## W

#### WAGES

**Minimum-Wage Laws.** Minimum Wage Legislation in Canada and its Economic Effects, J. W. MacMillan. Int. Labour Rev., vol. 9, no. 4, Apr. 1924, pp. 507-537. Applies almost exclusively to women and girls and is administered by independent boards or commissions; its main effect on wages has been to reduce inequalities previously existing within single industry; while it has not tended to reduce higher wages; it has had marked effect in reducing hours of work and making them more uniform, and no deleterious effect on employment has been noted; relations between employers and workers have been improved.

#### WATER-LEVEL INDICATORS

**Types.** Water Level Indicators (Über Wasserstandsfernmelder), H. Goetsch. Zeit. für Fernmelde-technik Werk- u. Gerätebau, vol. 5, no. 3, Mar. 17, 1924, pp. 17-19, 14 figs. Discusses indicators, both full and empty, for water levels of water towers, reservoirs, etc.; continuous level recorders; automatic pump connection and disconnection; addition of telephone to indicator lines.

#### WATER POWER

**Canada.** Utilization of Water Power in Canada. Can. Engr., vol. 46, no. 24, June 10, 1924, pp. 601-604, 1 fig. Review of water-power development in relation to coal production, importation and consumption in Canada. Water-power development has relieved situation, particularly in acute fuel area by saving in coal consumption. See also Eng. Wld., vol. 24, no. 5, May 1924, pp. 287-289.

**Water Powers of Canada.** J. B. Challies. Eng. Jl., vol. 7, no. 7, July 1924, pp. 323-358, 44 figs. partly on supp. plate. Their nature, extent and administration, a national review. Paper read at World Power Conference.

**Flathead River.** Power Possibilities of the South Fork, Flathead River, B. E. Jones and E. E. Jones. Eng. News-Rec., vol. 93, no. 3, July 17, 1924, pp. 96-98, 4 figs. Large reservoir site makes economic development of power possible. Increased height of Flathead Lake objectionable.

#### WELDING

**Aluminum Castings.** Hints for Welding an Aluminum Casting, E. E. Thum. Am. Welding Soc.—Jl., vol. 3, no. 5, May 1924, pp. 26-30, 3 figs. Details of actual practice.

**Car and Locomotive Parts.** Autogenous and Electric Welding. Ry. Age (Daily Edition), vol. 76, no. 36, June 19, 1924, pp. 1718-1723 and (discussion) 1723-1728, 17 figs. Notes on rolled steel wheels; low-carbon-steel; wrought iron; cast iron; torch cutting; recommendations; regulations for welding. Report of committee presented before Am. Ry. Assn.

**Cast Iron.** Describes Welding Process, A. H. Jansson. Foundry, vol. 52, no. 11, June 1, 1924, pp. 442-443, 5 figs. Methods used for welding gray or malleable iron castings at comparatively low temperature said to eliminate excessive oxidation of metal; use of welding compound, discovered by M. A. Abele, Berlin, Germany, in form of dark gray powder, possessing oxidizing properties, but also having property of absorbing oxygen.

**Electric.** See ELECTRIC WELDING.

**Manganese Steel.** See MANGANESE STEEL.

**Pipe.** See CAST-IRON PIPE, Welding with Bronze.

#### WINDING ENGINES

**Mines.** Electric Winding-Engines, D. Weir. Instrn. Min. Engrs.—Trans., vol. 67, Pt. 2, May 1924, pp. 129-143 and (discussion) 143-148, 11 figs. Advantages of electric drive for winders; description of different types of winders; controllers; etc. Winding diagrams.

#### WIRE ROPE

**Manufacture.** How Wire Rope Is Manufactured and Used and How Its Life May Be Prolonged in Mine Service, L. W. Bevan. Coal Age, vol. 25, no. 24, June 12, 1924, pp. 872-875, 5 figs. Physical and chemical tests constantly check wire-drawing process; saturated core acts as cushion and lubricant; care of ropes and their application to mine-hoist problems.

#### WOODWORKING MACHINES

**British Empire Exhibition.** Wood-Working Machinery. Engineer, vol. 137, no. 3569, May 23, 1924, pp. 560-563, 10 figs. Describes automatic hand-hole boring machine, automatic two-color box printing machine, hand-feed planer, saws and saw benches, etc.

**British Show, Olympia.** Wood-working Machinery at Olympia, S. Ransome. Engineer, vol. 137, no. 3564, Apr. 18, 1924, p. 412. Brief review of exhibits and exhibitors.

#### WORKMEN'S COMPENSATION

**Length of Service.** Compensating Employees for Length of Service. Soc. Indus. Engrs.—Bul., vol. 6, no. 3, Mar. 1924, pp. 6-8. Experience of a number of firms in dealing with the question of what is best method of compensating employees for length of service, especially when they are on piece rates and are engaged in work at which their speed and consequent earning power decreases with age.

**Social Insurance and.** Workmen's Compensation and Social Insurance. Monthly Labor Rev., vol. 18, no. 4, Apr. 1924, pp. 152-184. Steadying worker's income—establishing unemployment insurance plans; recent workmen's compensation reports; old-age and invalidity pensions of French miners; English unemployment insurance and profit-sharing plan; recommendations of Brit. Imperial Economic Conference respecting workmen's compensation.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

# THE ENGINEERING INDEX

(Registered United States, Great Britain and Canada)

THE ENGINEERING INDEX presents each month, in conveniently classified form, items descriptive of the articles appearing in the current issues of the world's engineering and scientific press of particular interest to mechanical engineers. At the end of the year the monthly installments are combined along with items dealing with civil, electrical, mining and other branches of engineering, and published in book form, this annual volume having regularly appeared since 1906. In the preparation of the Index by the engineering staff of The American Society of Mechanical Engineers some 1200 technical publications received by the Engineering Societies Library (New York) are regularly reviewed, thus bringing the great resources of that library to the entire engineering profession.

Photoprint copies (white printing on a black background) of any of the articles listed in the Index may be obtained at a price of 25 cents a page. When ordering photoprints identify the article by quoting from the Index item: (1) Title of article; (2) Name of periodical in which it appeared; (3) Volume, number, and date of publication of periodical; (4) Page numbers. A remittance of 25 cents a page should accompany the order. Orders should be sent to the Engineering Societies Library, 29 West 39th Street, New York.

(See also page 652 of this issue for supplementary items.)

## AIR COMPRESSORS

**Lubrication of.** Air Compressor Lubrication. So. Engr., vol. 41, no. 5, July 1924, pp. 44-46, 3 figs. Gives factors of correct lubrication, correct oils for common practice, and methods of application.

## AIRPLANE ENGINES

**Valves, Characteristics of Steels for.** Characteristics of Material for Valves Operating at High Temperatures. J. B. Johnson and S. A. Christiansen. Am. Soc. for Testing Matls., Preprint of paper to be presented at meeting June 24-27, 1924, No. 19k, 19 pp., 12 figs. Requirements demanded of steels for service in valves of aircraft engines. Results of laboratory tests and single-cylinder and multiple-cylinder engine tests of steels proposed for valve use.

**Scorpion.** The A. B. C. "Scorpion." Flight, vol. 16, no. 28, July 10, 1924, pp. 441-443, 6 figs. Gives brief description of its main features and points out that with very small changes, apart from reduction in bore, "Scorpion" was converted from car engine into light-plane power plant; is two-cylinder opposed air-cooled engine with bore of 3.435 in. and stroke of 3.6 in.

## AIRPLANES

**De Havilland.** The De Havilland Type D. H. 51. Flight, vol. 16, no. 28, July 10, 1924, pp. 437-440, 8 figs. Describes two-three-seater biplane of low cost and economical in running; power plant provided with either 90-hp. R. A. F. 1A or 80-hp. Renault, both 8-cylinder air-cooled engines.

**Flying Boats.** See FLYING BOATS.

**Hangers.** See HANGARS.

**Metal.** The Brunet-Descamps A2 Airplane (L'Avion Brunet-Descamps A2) l'Aérophile, vol. 32, no. 9-10, May 1-15, 1924, pp. 157-159, 5 figs. A reconnoitering biplane; Lorraine motor of 400 hp.; surface, 44 sq. m.; total weight 1900 kg.; highest speed, 240 km. per hr.; constructed by Descamps.

**Monoplanes.** Monoplane Theory, N. K. Bose. Lond., Edinburgh & Dublin Philosophical Mag. & J. of Sci., vol. 48, no. 283, July 1924, pp. 113-125, 1 fig. Discusses theory of circulation of liquid around airplane equal and opposite to that of vortex formed, and reduces it to mathematical basis.

**Nieuport-Delage Type 42.** The Nieuport-Delage Type 42. Flight, vol. 16, no. 30, July 24, 1924, pp. 461-462, 4 figs. Hispano-Suiza engine of twelve-cylinder V-type with bore of 140 mm. and stroke of 150 mm.; power developed, 600 hp. at 2000 r.p.m.

**Pressure Distribution on Wings.** Pressure Distribution Over the Wings of an MB-3 Airplane in Flight, F. H. Norton. Nat. Advisory Committee for Aeronautics, report no. 193, 1924, 17 pp., 15 figs. Investigation carried out to determine distribution of load over wings of high-speed airplane under all conditions of flight and pressure distribution, during level flight, over portions of wings in slipstream and, during violent maneuvers, over entire wing surface; results obtained.

**Pursuit.** The Curtiss PW8 Pursuit Plane Described. Aviation, vol. 17, no. 2, July 14, 1924, pp. 746-748, 5 figs. Type in which R. L. Maughan flew from New York to San Francisco between dawn and dusk.

**Seaplanes.** See SEAPLANES.

**Slipstream Velocity.** Investigation of Slipstream Velocity, J. W. Crowley, Jr. Nat. Advisory Committee for Aeronautics, report no. 194, 1924, 7 pp., 9 figs. Re-

sults of experiments to investigate velocity of air in slipstream in horizontal and climbing flight to determine form of expression giving slipstream in terms of air speed of airplane.

**Wings.** Elements of the Wing Section Theory and of the Wing Theory, M. M. Munk. Nat. Advisory Committee for Aeronautics, report no. 191, 1924, 25 pp., 4 figs. Results of theory of wings and of wing sections which are of immediate practical value; results proven and demonstrated by use of simple conceptions of "kinetic energy" and "momentum."

**Wood Members, Stresses in.** Stresses in Wood Members Subjected to Combined Column and Beam Action, J. A. Newlin and G. W. Trayer. Nat. Advisory Committee for Aeronautics, report no. 188, 1924, 13 pp., 9 figs. Results of tests to determine properties of wing beams of standard and proposed sections, conducted by Forest Products Laboratory and financed by Army and Navy.

## AIRSHIPS

**Navigation.** The Airship's Position (Le Point en Aéronautique), L. Garin. Arts et Métiers, vol. 77, no. 44, May 1924, pp. 161-170, 5 figs. Discusses navigation charts, gives a number of curves, and develops formulas for determining position.

**Rigid.** The Strength of Rigid Airships, C. P. Burgess, J. C. Hunsaker and S. Truscott Roy. Aeronautical Soc.—Jl., vol. 28, no. 162, June 1924, pp. 327-448, 26 figs. Presents present state of our knowledge with regard to general strength of rigid airships. Strength of girders, static forces affecting longitudinal strength, aerodynamic forces, longitudinal strength, secondary stresses resulting from primary shearing forces, effect of gas pressure, effect of tension in outer cover, transverse strength, and factors of safety and comparative strength. Bibliography.

## ALLOYS

**Aluminum.** See ALUMINUM ALLOYS.

**Brass.** See BRASS.

**Corroded, Coatings Formed on.** Coatings Formed on Corroded Metals and Alloys, G. M. Enos and R. J. Anderson. Am. Inst. Min. & Met. Engrs.—Trans., Advance paper No. 1358-N, July 1924, 9 pp., 16 figs. As coating formed affects corrosion rate, duplicate samples of eight non-ferrous alloys were placed in flowing mine water. Alloys tested were as cast or as rolled, and machined or polished. Describes tests and gives corrosion losses and appearance of samples at end of test.

**Corrosion-Resistant.** Corrosion-Resistant Alloys—Past, Present and Future—With Suggestions as to Future Trend, P. A. E. Armstrong. Am. Soc. for Testing Matls., Preprint of Paper presented at meeting June 24-27, 1924, No. 19b, 15 pp.

**Symposium on Corrosion-Resistant, Heat-Resistant and Electrical-Resistance Alloys.** Am. Soc. for Testing Matls., Preprint of paper presented at meeting June 24-27, 1924, No. 19a, 4 pp. Contains tabulation on supplementary pages of manufacturers' data on composition and properties of the alloys.

**Fusible.** Properties of Fusible Alloys, N. F. Budgen. Chem. & Industry, vol. 43, no. 27, July 4, 1924, pp. 2007-2037, 2 figs. Discusses properties of lead, bismuth, tin, cadmium, and mercury, used for fusible plugs in automatic fire-extinguisher systems, also manufacture of small statuary, etc.

**Iron.** See IRON ALLOYS.

**Light.** Light Metals in Alloys (Die Leichtmetalle in Legierungen), F. Regelsberger. Zeit. für angewandte Chemie, vol. 37, no. 17, Apr. 24, 1924, pp. 235-239. Discusses alloys of light with other metals and how properties of both classes are affected by alloying, especially alkali metals, magnesium, beryllium, aluminum, etc.

## ALUMINUM

**Welding.** Gas Welding of Aluminum, S. W. Miller. Can. Machy., vol. 32, no. 6, Aug. 7, 1924, pp. 33-34 and 50. Discusses porosity in weld, character of flame, preheating casting, manipulation of welding rod, and welding sheet aluminum. Abstract of paper read before N. Y. sec. Am. Welding Soc.

## ALUMINUM ALLOYS

**Aluminum-Copper-Magnesium, Casting and Heat Treatment.** Casting and Heat Treatment of Some Aluminum-Copper-Magnesium Alloys, S. Daniels and J. B. Johnson. Am. Inst. Min. & Met. Engrs.—Trans., Advance paper No. 1350-N, July 1924, 22 pp., 6 figs. Deals with portion of work of Material Section, Engineering Division, Air Service, U. S. A., on casting and extended heat treatment of alloys of duralumin type (copper 2.5-5.0 per cent, magnesium 0.0-1.0 per cent, silicon 0.2-1.0 per cent, iron 0.3-1.5 per cent, manganese 0.0 to 1.0 per cent, chromium, etc.). This range of compositions includes an alloy recently placed on market in cast form and designated as Lynite 195.

**Properties.** Light Alloys of Aluminum, W. Rosenhain and S. L. Archbutt. Metal Industry (Lond.), vol. 25, nos. 1 and 2, July 4 and 11, 1924, pp. 3-7, and 27-30 and 44, 14 figs. Specific tenacity; age hardening; casting alloys and wrought alloys in general use; properties of chief alloys; heat treatment; application. Paper read before Empire Min. & Met. Congress.

## AUTOMOBILE ENGINES

**Fuel Heat-Loss Elimination.** How to Get the Most Out of the Gasoline You Pay for, G. W. Jones and A. A. Straub. Automotive Industries, vol. 51, no. 4, July 24, 1924, pp. 212-213, 1 fig. Average motor vehicle wastes 30 per cent of heat value of fuel used. Changing from low- to higher-grade fuel and use of air preheater requires readjustment of carburetor.

**Heavy-Oil.** Heavy-Oil Engines for Vehicles with Special Reference to Economy (Schweröl-Motoren für Fahrzeuge unter besonderer Berücksichtigung ihrer Wirtschaftlichkeit), F. E. Bielefeld. Wirtschafts-motor, vol. 6, no. 5, May 25, 1924, pp. 3-15, 34 figs. Discusses low-pressure carburetors, hot-bulb engines, Diesel engines, atomizing and injection of fuel; compares various types of engines, their advantages and disadvantages.

**White-Wall.** The White-Wall Engine. Autocar, vol. 53, no. 1500, July 18, 1924, p. 116, 2 figs. Interesting air-cooled, four-cylinder two-cycle motor, with special features of scavenging, fuel charging, and exhaust extraction.

## AUTOMOBILE FUELS

**Consumption and Dilution.** Consumption and Dilution of Automobile Engine Oils. Lubrication, vol. 10, no. 6, June 1924, pp. 66-72, 13 figs. Description of dynamometer apparatus and test routine; discusses dilution, lubricating system, oil viscosity requirements, value of road tests, and oil consumption.

**Producer Gas.** Producer Gas for Road Transport. Motor Transport (Lond.), vol. 38, no. 1002, May 12,

# Classified List of Mechanical Equipment

## Manufactured by Firms Represented in MECHANICAL ENGINEERING

FOR ALPHABETICAL LIST OF ADVERTISERS, SEE PAGE 156

**Accumulators, Hydraulic**  
 Farrel Foundry & Machine Co.  
 Mackintosh-Hemphill Co.  
 \* Worthington Pump & Machinery Corp'n

**Aftercoolers, Air**  
 \* Ingersoll-Rand Co.

**Agitators**  
 Hill Clutch Machine & Foundry Co.

**Air Compressors, Receivers, etc.**  
 (See Compressors, Receivers, etc., Air)

**Air Conditioning Apparatus**  
 \* American Blower Co.  
 \* Carrier Engineering Corp'n  
 \* Clamage Fan Co.  
 \* Sturtevant, B. F. Co.

**Air-Jet Lifts**  
 \* Schutte & Koerting Co.

**Air Washers**  
 \* American Blower Co.  
 \* Carrier Engineering Corp'n  
 \* Clamage Fan Co.  
 \* Cooling Tower Co. (Inc.)  
 \* Sturtevant, B. F. Co.

**Alloys**  
 Driver-Harris Co.

**Ammeters**  
 \* Bristol Co.  
 \* General Electric Co.  
 \* Westinghouse Electric & Mfg. Co.

**Anemometers**  
 Weber, F. Co. (Inc.)

**Annealing**  
 \* American Metal Treatment Co.  
 Nuttall, R. D. Co.

**Arc Welding Equipment**  
 \* Westinghouse Elec. & Mfg. Co.

**Arches, Boiler Furnace**  
 \* McLeod & Henry Co.  
 \* Titusville Iron Works Co.

**Arches, Fire Door**  
 \* McLeod & Henry Co.

**Arches, Ignition (Flat Suspended)**  
 \* Combustion Engineering Corp'n  
 \* McLeod & Henry Co.

**Asbestos Products**  
 Carey, Philip Co.  
 Garlock Packing Co.  
 Johns-Manville (Inc.)

**Ash Lifts, Telescopic**  
 Palmer-Bee Co.

**Autoclaves**  
 Farrel Foundry & Machine Co.

**Babbitt Metal**  
 \* Medart Co.  
 \* Westinghouse Elec. & Mfg. Co.

**Ball Bearings, Gages, etc.**  
 (See Bearings, Gages, Ball)

**Balls, Brass and Bronze**  
 \* Atlas Ball Co.  
 \* Gwilliam Co.

**Balls, Steel**  
 \* Atlas Ball Co.  
 \* Gwilliam Co.  
 \* New Departure Mfg. Co.  
 \* S K F Industries (Inc.)

**Barometers**  
 \* American Schaeffer & Budenberg Corp'n

**Barometers, Mercurial**  
 \* Tagliabue, C. J. Mfg. Co.

**Bearings, Ball**  
 \* Fafnir Bearing Co.  
 \* Gwilliam Co.  
 \* Marlin-Rockwell Corp'n  
 \* New Departure Mfg. Co.  
 \* Norma-Hoffmann Bearings Corp'n  
 \* S K F Industries (Inc.)  
 \* Strom Ball Bearing Mfg. Co.

**Bearings, Collar Oiling**  
 Hill Clutch Machine & Foundry Co.

**Bearings, Radial Thrust**  
 \* New Departure Mfg. Co.

**Bearings, Roller**  
 \* Gwilliam Co.  
 \* Hyatt Roller Bearing Co.  
 \* Norma-Hoffmann Bearings Corp'n  
 \* Royersford Fdry. & Mach. Co.  
 \* Timken Roller Bearing Co.

**Bearings, Self-Oiling**  
 \* Brown, A. & F. Co.  
 \* Doehler Die-Casting Co.  
 \* Falls Clutch & Machinery Co.  
 \* Hill Clutch Machine & Foundry Co.  
 \* Jones, W. A. Fdry. & Mach. Co.  
 \* Link-Belt Co.  
 \* Royersford Fdry. & Mach. Co.  
 \* Wood's, T. B. Sons Co.

**Bearings, Tapered**  
 \* Timken Roller Bearing Co.

**Bearings, Thrust**  
 \* Fafnir Bearing Co.  
 \* General Electric Co.  
 \* Gwilliam Co.  
 \* Hill Clutch Machine & Foundry Co.  
 \* Norma-Hoffmann Bearings Corp'n  
 \* S K F Industries (Inc.)  
 \* Strom Ball Bearing Mfg. Co.  
 \* Timken Roller Bearing Co.

**Belt Dressing**  
 \* Dixon, Joseph Crucible Co.  
 \* Gandy Belting Co.

**Belt Lacing, Steel**  
 \* Bristol Co.

**Belt Tighteners**  
 \* Brown, A. & F. Co.  
 \* Hill Clutch Machine & Foundry Co.  
 \* Jones, W. A. Fdry. & Mach. Co.  
 \* Link-Belt Co.  
 \* Medart Co.  
 \* Smith, F. L. & Co.  
 \* Wood's, T. B. Sons Co.

**Belt Tighteners, Automatic**  
 Hill Clutch Machine & Foundry Co.

**Belting, Canvas (Stitched)**  
 \* Gandy Belting Co.  
 \* U. S. Rubber Company

**Belting, Conveyor**  
 \* Gandy Belting Co.  
 \* Goodrich, B. F. Rubber Co.  
 \* United States Rubber Co.

**Belting, Elevator**  
 \* Gandy Belting Co.  
 \* Goodrich, B. F. Rubber Co.  
 \* United States Rubber Co.

**Belting, Endless**  
 \* Gandy Belting Co.

**Belting, Fabric**  
 \* Gandy Belting Co.

**Belting, Rubber**  
 \* Goodrich, B. F. Rubber Co.  
 \* United States Rubber Co.

**Belting, Waterproof**  
 \* Gandy Belting Co.

**Bending & Straightening Machines**  
 \* Long & Allstatter Co.

**Bends, Pipe**  
 \* Frick Co. (Inc.)  
 \* Vogt, Henry Machine Co.

**Billets, Steel**  
 \* Timken Roller Bearing Co.

**Blocks, Tackle**  
 \* Clyde Iron Work Sales Co.  
 \* Roebbing's, John A. Sons Co.

**Blowers, Centrifugal**  
 \* American Blower Co.  
 \* Clamage Fan Co.  
 \* Coppus Engineering Corp'n  
 \* De Laval Steam Turbine Co.  
 \* General Electric Co.  
 \* Ingersoll-Rand Co.  
 \* Kerr Turbine Co.  
 \* Sturtevant, B. F. Co.  
 \* Westinghouse Electric & Mfg. Co.

**Blowers, Fan**  
 \* American Blower Co.  
 \* Clamage Fan Co.  
 \* Coppus Engineering Corp'n  
 \* Green Fuel Economizer Co.  
 \* Sturtevant, B. F. Co.

**Blowers, Forge**  
 \* American Blower Co.  
 \* Sturtevant, B. F. Co.

**Blowers, Pressure**  
 \* American Blower Co.  
 \* Clamage Fan Co.  
 \* Lammert & Mann Co.  
 \* Sturtevant, B. F. Co.

**Blowers, Rotary**  
 \* Lammert & Mann Co.  
 \* Schutte & Koerting Co.  
 \* Sturtevant, B. F. Co.

**Blowers, Soot**  
 \* Diamond Power Specialty Corp'n  
 \* Sturtevant, B. F. Co.

**Blowers, Steam Jet**  
 \* Schutte & Koerting Co.

**Blowers, Turbine**  
 \* Coppus Engineering Corp'n  
 \* Sturtevant, B. F. Co.

**Bluing (Metal)**  
 \* American Metal Treatment Co.

**Boards, Drawing**  
 \* Dietzgen, Eugene Co.  
 \* Keuffel & Esser Co.  
 \* New York Blue Print Paper Co.  
 \* Parvell Laboratories  
 \* U. S. Blue Co.  
 \* Weber, F. Co. (Inc.)

**Boiler Baffles**  
 \* King Refractories Co. (Inc.)  
 \* McLeod & Henry Co.

**Boiler Compounds**  
 \* Dixon, Joseph Crucible Co.  
 \* Unisol Mfg. Co.

**Boiler Coverings, Furnaces, Tube Cleaners, etc.**  
 (See Coverings, Furnaces, Tube Cleaners, etc., Boiler)

**Boiler Fronts**  
 \* O'Brien, John Boiler Works Co.  
 \* Titusville Iron Works Co.

**Boiler Settings, Steel Cased**  
 \* Casey-Hedges Co.  
 \* McLeod & Henry Co.  
 \* O'Brien, John Boiler Works Co.  
 \* Vogt, Henry Machine Co.  
 \* Walsh & Weidner Boiler Co.

**Boilers, Heating**  
 \* Casey-Hedges Co.  
 \* Erie City Iron Works  
 \* Keeler, E. Co.  
 \* Leffel, James & Co.  
 \* Lidgerwood Mfg. Co.  
 \* O'Brien, John Boiler Works Co.  
 \* Titusville Iron Works Co.  
 \* Union Iron Works  
 \* Walsh & Weidner Boiler Co.

**Boilers, Locomotive**  
 \* Casey-Hedges Co.  
 \* Keeler, E. Co.  
 \* Leffel, James & Co.  
 \* Titusville Iron Works Co.  
 \* Union Iron Works  
 \* Walsh & Weidner Boiler Co.

**Boilers, Marine (Scotch)**  
 \* Bethlehem Shipbldg. Corp'n (Ltd.)  
 \* Casey-Hedges Co.  
 \* Leffel, James & Co.  
 \* Titusville Iron Works Co.  
 \* Walsh & Weidner Boiler Co.

**Boilers, Marine (Water Tube)**  
 \* Babcock & Wilcox Co.  
 \* Bethlehem Shipbldg. Corp'n (Ltd.)  
 \* Casey-Hedges Co.  
 \* Connelly, D. Boiler Co.  
 \* O'Brien, John Boiler Works Co.  
 \* Springfield Boiler Co.  
 \* Titusville Iron Works Co.  
 \* Walsh & Weidner Boiler Co.

**Boilers, Portable**  
 \* Casey-Hedges Co.  
 \* Erie City Iron Works  
 \* Frick Co. (Inc.)  
 \* Keeler, E. Co.  
 \* Leffel, James & Co.  
 \* Lidgerwood Mfg. Co.  
 \* O'Brien, John Boiler Works Co.  
 \* Titusville Iron Works Co.  
 \* Union Iron Works  
 \* Walsh & Weidner Boiler Co.

**Boilers, Tubular (Horizontal Return)**  
 \* Bigelow Co.  
 \* Casey-Hedges Co.  
 \* Cole, R. D. Mfg. Co.  
 \* Connelly, D. Boiler Co.  
 \* Erie City Iron Works  
 \* Keeler, E. Co.  
 \* Leffel, James & Co.

**Boilers, Tubular (Horizontal Return)**  
 \* Lidgerwood Mfg. Co.  
 \* Morrison Boiler Co.  
 \* O'Brien, John Boiler Works Co.  
 \* Titusville Iron Works Co.  
 \* Union Iron Works  
 \* Vogt, Henry Machine Co.  
 \* Walsh & Weidner Boiler Co.  
 \* Webster, Howard J.  
 \* Wickes Boiler Co.

**Boilers, Tubular (Vertical Fire)**  
 \* Bigelow Co.  
 \* Casey-Hedges Co.  
 \* Clyde Iron Works Sales Co.  
 \* Keeler, E. Co.  
 \* Leffel, James & Co.  
 \* Lidgerwood Mfg. Co.  
 \* Morrison Boiler Co.  
 \* O'Brien, John Boiler Works Co.  
 \* Titusville Iron Works Co.  
 \* Union Iron Works  
 \* Walsh & Weidner Boiler Co.

**Boilers, Water Tube (Horizontal)**  
 \* Babcock & Wilcox Co.  
 \* Bethlehem Shipbldg. Corp'n (Ltd.)  
 \* Casey-Hedges Co.  
 \* Cole, R. D. Mfg. Co.  
 \* Connelly, D. Boiler Co.  
 \* Edge Moor Iron Co.  
 \* Erie City Iron Works  
 \* Keeler, E. Co.  
 \* Ladd, George T. Co.  
 \* Morrison Boiler Co.  
 \* O'Brien, John Boiler Works Co.  
 \* Springfield Boiler Co.  
 \* Union Iron Works  
 \* Vogt, Henry Machine Co.  
 \* Walsh & Weidner Boiler Co.  
 \* Wickes Boiler Co.

**Boilers, Water Tube (Inclined)**  
 \* Babcock & Wilcox Co.  
 \* Bethlehem Shipbldg. Corp'n (Ltd.)  
 \* Bigelow Co.  
 \* Casey-Hedges Co.  
 \* Keeler, E. Co.  
 \* Ladd, George T. Co.  
 \* Morrison Boiler Co.  
 \* O'Brien, John Boiler Works Co.  
 \* Vogt, Henry Machine Co.  
 \* Walsh & Weidner Boiler Co.

**Boilers, Water Tube (Vertical)**  
 \* Babcock & Wilcox Co.  
 \* Bigelow Co.  
 \* Casey-Hedges Co.  
 \* Erie City Iron Works  
 \* Keeler, E. Co.  
 \* Ladd, George T. Co.  
 \* Morrison Boiler Co.  
 \* O'Brien, John Boiler Works Co.  
 \* Walsh & Weidner Boiler Co.  
 \* Wickes Boiler Co.

**Boring and Drilling Machines**  
 Universal Boring Machine Co.

**Boring, Drilling and Milling Machines (Horizontally Combined)**  
 Universal Boring Machine Co.

**Boxes, Carbonizing**  
 Driver-Harris Co.

**Boxes, Case Hardening**  
 Driver-Harris Co.

**Brake Blocks**  
 Johns-Manville (Inc.)

**Brakes, Air**  
 \* Allis-Chalmers Mfg. Co.  
 \* General Electric Co.

**Brass Goods**  
 \* Scovill Mfg. Co.

**Brass Mill Machinery**  
 Farrel Foundry & Machine Co.

**Breechings, Smoke**  
 \* Morrison Boiler Co.  
 \* Titusville Iron Works Co.  
 \* Vogt, Henry Machine Co.

**Brick, Fire**  
 \* Bernitz Furnace Appliance Co.  
 \* Celite Products Co.  
 \* Drake Non-Clinkering Furnace Block Co.  
 \* Keystone Refractories Co.  
 \* King Refractories Co. (Inc.)  
 \* McLeod & Henry Co.  
 \* Maphite Co. of Amer.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

1924, p. 580, 1 fig. Details of gas-producer plant; question of cost; results of recent French trials with charcoal as fuel.

#### AUTOMOBILE MANUFACTURING PLANTS

**England.** Intensive Production. Automobile Engr., vol. 14, no. 191, July 1924, pp. 203-210, 21 figs. Describes modern works located at Aylesbury, Bucks, planned and equipped for large outputs.

**Materials Handling in.** Lumber Handling in an Automobile-Body Plant, B. Nagelvoort and T. D. Perry. Mech. Eng., vol. 46, no. 8, Aug. 1924, pp. 472-477 (includes discussion), 11 figs. Yard layouts for efficient and economical handling, storing, drying, and cutting of lumber; Steam consumption of dry kilns. Equipment for handling lumber, including dry-kiln trucks and transfer cars, power transfer cars, lumber lifts, stackers, etc.

**Wide Use of Material Handling Equipment in Auto Plants.** Automotive Mfr., vol. 65, nos. 10, 11, 12, and vol. 66, nos. 1, 2, Jan., Feb., Mar., Apr., May 1924, pp. 21-23 and 30, 11-13, 5-9, 19-20, 6-8, 21 figs. The various kinds of conveyors used and the widely differing work which they are doing successfully and at a saving. Symposium presenting advantages of all forms.

#### AUTOMOBILES

**A. C. Racing.** Maximum Power for Minimum Weight. Autocar, vol. 53, no. 1499, July 11, 1924, pp. 63-64, 3 figs. New A. C. racing car with "crab" track, which has been specially built for rapid acceleration.

**Bean.** The 14 H. P. Bean Chassis. Automobile Engr., vol. 14, no. 191, July 1924, pp. 188-195, 16 figs. on supp. plate. 14-hp. chassis manufactured by A. Harper, Sons & Bean, Ltd., of Dudley and Tipton has four-cylinder engine built in one unit with four-speed gear box; 75 mm. bore by 135 mm. stroke.

**Bugatti.** The Four-Cylindered Bugatti. Auto-Motor J., vol. 29, no. 28, July 10, 1924, pp. 581-583, 11 figs. 11.5-hp. monobloc, four-cylinder engine, 1452 and 1496 cc.; road speed, 60 m.p.h.; touring, 20 to 25 m.p.h.; 1 gal. gasoline required for 40 miles.

**Chassis Dimensions.** Table of Chassis Dimensions for Body Building. Motor Transport (Phila.), vol. 30, no. 8, July 10, 1924, pp. 303-310. Table giving dimensions of different models of various makes.

**Daimler.** His Majesty's New Cars. Autocar, vol. 53, no. 1500, July 18, 1924, pp. 105-107, 9 figs. Details of 57-hp. 6-cylinder special Daimler model, of which four have been built to order of King George.

**Duesenberg.** Duesenberg Race Car Resembles Stock Product in Many Particulars, B. M. Ikert. Automotive Industries, vol. 51, no. 3, July 17, 1924, pp. 156-160, 7 figs. Car much smaller and lighter and has entirely different frame construction, but engine, clutch, gear set, and axles are very similar in design. Supercharger not needed in larger machine.

**Fiat.** Fiat Automobile Production Methods, J. A. Lucas and F. E. Bardrof. Am. Machinist, vol. 61, no. 6, Aug. 7, 1924, pp. 223-225, 10 figs. Methods used in machining top section of crankcase; all crankcase parts are aluminum castings; various milling, drilling and reaming operations.

**Frazer Nash.** The New Frazer Nash. Autocar, vol. 53, no. 1500, July 18, 1924, pp. 121-122, 4 figs. Light car of 1500 cc., four-cylinder with 3-bearing crank and overhead valves, vertical dynamo and starting motor, built by Frazer Nash, Ltd.

**German.** German Small Auto Industry (Die deutsche Kleinauto-Industrie. Allgemeine Automobil-Zeitung, vol. 25, no. 23, June 7, 1924, pp. 24-27, 10 figs. Details of design and construction of number of small motor-car types, including Helios, Dixie, Faum, Adler, and Baer.

**Nash.** Nash Adds Smaller Six and Drops Four Cylinder Models, D. Blanchard. Automotive Industries, vol. 51, no. 5, July 31, 1924, pp. 231-236, 10 figs. Four-wheel brakes and balloon tires on disk wheels, steering gear redesigned with larger ratio.

**Pierce-Arrow.** Pierce Arrow Announces Lighter Six with L-Head Engine, D. Blanchard. Automotive Industries, vol. 51, no. 5, July 31, 1924, pp. 237-240, 4 figs. Piston displacement and weight are 30 per cent less than that of larger model which is continued. Four-wheel brakes, balloon tires, and torque bar are features.

**Rover.** The Rover Eight. Auto-Motor J., vol. 29, no. 29, July 17, 1924, pp. 599-601, 9 figs. Latest model of light car, horizontal opposed cylinder, twin engine, 1300 cc.; gearing: three forward and one reverse made by Rover Co., Ltd., Coventry.

**Shafts, Stiffness of.** Calculating the Stiffness of Shafts, F. A. W. Livermore. Automobile Engr., vol. 14, no. 191, July 1924, p. 197. Gives simplified formula.

**Talbot.** The 16-50 H. P. Six-Cylindered Talbot. Auto-Motor J., vol. 29, no. 30, July 24, 1924, pp. 619-621, 10 figs. New monobloc design with detachable head and overhead valves; cylinders have bore of 70 mm. and piston stroke of 110 mm.

**Tires.** See TIRES, RUBBER.

**Varnishes.** See VARNISHES, Automobile.

**Wembley Exposition.** At the British Empire Exhibition. Motor Transport (Lond.), vol. 38, no. 1002, May 12, 1924, pp. 581-585, 9 figs. Reviews features of transport vehicle exhibits and gives details of tires, accessories, and component parts.

**Windshield Design.** Many Faults Are Found in Present Day Windshield Design, K. Feilcke. Automotive Industries, vol. 51, no. 4, July 24, 1924, pp. 202-205, 17 figs. Convenient and quickly operated adjusting device is one most important need today. Location and angular position of panels must be correct to insure clear vision.

## B

#### BALANCING MACHINES

**Odén-Keen.** An Automatic and Continuous Recording Balance (The Odén-Keen Balance), J. R. H. Coutts, E. M. Crowther, B. A. Keen and S. Odén. Roy. Soc.—Proc., vol. 106, no. A735, July 1, 1924, pp. 33-51, 11 figs. Describes improved form of automatic self-recording balance in which control is effected electromagnetically with no loss of sensitivity up to maximum load balance is designed to carry.

#### BEARINGS, BALL

**Stainless-Steel.** Carrying Capacity of Ball Bearings Made of Stainless Steel, A. Hultgren. Am. Soc. for Testing Mts., Preprint of paper presented at meeting June 24-27, 1924, No. 19g, 7 pp. Brief summary of series of tests of stainless steel as a ball-bearing material conducted during past six years in Gothenburg Laboratory of Aktiebolaget Svenska Kullagerfabriken; stainless steels from an American, a British and a Swedish source were used.

#### BEARINGS, ROLLER

**Taper.** Taper Roller Bearings. Automobile Engr., vol. 14, no. 191, July 1924, pp. 196-197, 10 figs. New type with rollers guided from race.

#### BLAST FURNACES

**Electric.** Gas Economics in Operation of Electric Blast Furnaces (Betrachtungen über die Gaswirtschaft im Elektrohochofenbetriebe), R. Durrer. Stahl u. Eisen, vol. 44, no. 26, June 26, 1924, pp. 748-750. Calculation of gas conditions in electric blast furnace; proposes to conduct operations in such way that whole of gas is used in electric blast furnace itself.

#### BOILER FEEDWATER

**Treatment.** Feed Water Treatment. Eng. & Boiler House Rev., vols. 37, and 38, nos. 8, 9 and 1, Mar., Apr. and July 1924, pp. 281-282, 323-324, 5-7, 1 fig. Notes on recent papers read before Instn. Mech. Engrs. Boiler feedwater and scaling; present-day practice with lime-soda process; zeolite process.

**The Prevention of Scale Formation by Boiler Water Conditioning.** R. E. Hall, C. Fischer and G. W. Smith. Iron & Steel Engr., vol. 1, no. 6, June 1924, pp. 312-327, 18 figs. Discusses conditioning of boiler water based on sulphate concentration and pressure of boiler water, removal of precipitated sludge and suspended insoluble matter, prevention of droplets (moisture) entrained in steam.

#### BOILER FIRING

**Pulverized Fuel.** Pulverized Fuel for Boilers, W. M. Selvey. Colliery Guardian, vol. 128, no. 3316, July 18, 1924, pp. 157-158. Discusses fuel preparation, burners, absorption of heat, and application to British conditions. Abstract of paper read before World Power Conference.

#### BOILER FURNACES

**Air Preheaters.** Experiments on a Cylindrical Steam Boiler with and without Preheated Air, W. H. Owen. Inst. Mar. Engrs.—Trans., vol. 36, June 1924, pp. 1-37, 12 figs. Discusses preheating air of combustion; describes new form of preheater extracting 65 to 70 per cent of heat in waste gases, and tests made.

**The Ljungström Air Preheater.** B. G. Brolinson. Iron & Steel Engr., vol. 1, no. 6, June 1924, pp. 351-358 and (discussion) 358-360, 22 figs. Discusses application of this preheater based on principle of carrying heat continually in mechanical way from flue gases to incoming air, apparatus being self-contained, compact in design, simple in operation and permitting of ready application. Paper read before Assn. Iron & Steel Elec. Engrs., Fuel Saving Conference.

**The Preheating of Combustion Air.** J. B. Bullock. So. African Inst. Elec. Engrs.—Trans., vol. 15, part 5, May 1924, pp. 388-396, 4 figs. Describes latest system of recovering and putting to beneficial use maximum amount of heat available in coal as fired to boiler or furnace, and gives some account of results obtainable with system and of their bearing on present boiler practice.

#### BOILER ROOMS

**Control.** Measurement of Input and Output in Boiler Rooms, J. M. Spitzglass. Iron & Steel Engr., vol. 1, no. 6, June 1924, pp. 299-309 and (discussion) 309-311, 11 figs. Shows how material quantities can be measured accurately and conveniently in steel-plant boiler rooms, including practical application of measuring flow of fluids and of coal; determination of constants.

#### BOILERS

**Baffles.** Designing Boiler Baffles, A. W. Patterson, Jr. Combustion, vol. 11, no. 2, Aug. 1924, pp. 122-124, 7 figs. Some problems brought about by incorrect baffle design, and methods by which conditions in particular plants were remedied.

**Corrosion.** Corrosion in Steam Boiler Plant, G. E. Swett. Pac. Mar. Rev., vol. 21, no. 7, July 1924, p. 383, 1 fig. Describes apparatus known as Hickman air separator, an automatic method of eliminating chief cause of depreciation in steam-generating equipment.

**Electrically Heated.** Electric Boilers (Les chaudières électriques), P. Bergeon. Revue Universelle des Mines, vol. 67, no. 4, Feb. 15, 1924, pp. 241-248. Discusses resistance boilers, induction boilers, and electrode boilers; comparison of cost of steam in electric and other boilers; application of electric boilers.

**Field, Inefficient Handling of.** Inefficient Handling of Field Boilers Source of Waste and Expense, F. C. D. Muller. Nat. Petroleum News, vol. 16, no. 29, July 16, 1924, pp. 77-79, 4 figs. Discusses improving efficiency of boilers, preheating feedwater, driller's

ear attuned to exhaust, water filter for field boilers, and uses for old boilers.

**Locomotives.** See LOCOMOTIVE BOILERS.

**Seams, Brittleness and Cracks in.** Brittleness and Cracks in Seams of Steam Boilers, H. Kriegsheim. Power Plant Eng., vol. 28, no. 15, Aug. 1, 1924, pp. 792-795, 6 figs. Causes and prevention of so-called caustic embrittlement.

**Standardization.** Sixteen Years of Boiler Standardization, J. A. Stevens. Power, vol. 60, no. 6, Aug. 5, 1924, pp. 217-218. Details of work of Boiler Code Committee.

**Vertical.** Temperature Distribution and Water Circulation in Möller Vertical-Tube Boilers (Temperaturverteilung und Wasserrumlauf beim Möller-Steilrohrkessel), O. Berner. Wärme, vol. 47, no. 10, Mar. 7, 1924, pp. 937-97, 6 figs. Discusses temperature distribution in starting and in operating, water circulation in state of inertia. Effect of feeding and suddenly increased drawing off of steam on water circulation.

**Waste-Heat.** Utilizing Waste Heat, K. W. Heinrich. Pac. Mar. Rev., vol. 21, no. 7, July 1924, pp. 376-377, 3 figs. Describes fire-tube steam or hot-water generator especially adapted for reclaiming heat from exhaust gases of Diesel engines, developed by Davis Eng. Corp. Possibilities of application.

**Waste-Heat Boilers and Vertical Retort Installations.** Gas J., vol. 167, no. 3190, July 2, 1924, pp. 10-22, 20 figs. Twelfth report of Research Sub-Committee of Gas Investigation Committee. Investigation conducted on water-tube waste-heat boilers attached to installations of Woodall-Duckham continuous vertical retorts at Windsor Street works of Birmingham Gas Dept. See also Gas Wld., vol. 80, no. 2084, June 28, 1924, pp. 633-647, 5 figs.

#### BONUS SYSTEMS

**Maintenance of.** Maintenance of a Standard Time and Bonus System, C. W. Setter. Soc. Indus. Engrs.—Bul., vol. 6, no. 7-8, July-Aug. 1924, pp. 10-14. Details as practiced at works of Republic Metalware Co., Buffalo, N. Y.

#### BRAKES

**Passenger-Train.** Passenger Train Handling. Ry. & Locomotive Eng., vol. 37, no. 7, July 1924, pp. 219-222, 4 figs. Discusses brake effect from brake pipe reduction, graduated release and mountain grade braking. Paper presented at Air Brake Assn. Convention.

**Power.** The Commission's Report on Power Brakes. Ry. Rev., vol. 75, no. 7, Aug. 16, 1924, pp. 251-257. Mandatory conclusions enunciated by Interstate Commerce Commission as result of its extended investigation of power brakes and appliances.

#### BRASS

**Alpha-Beta.** Heat Treatment of. Experiments on the Heat Treatment of Alpha-Beta Brass, O. W. Ellis and D. A. Schemnitz. Am. Inst. Min. & Met. Engrs.—Trans., Advance paper No. 1348-N, July 1924, 11 pp., 2 figs. Details of experiments carried out mainly with view of determining whether precipitation of soft particles within a supersaturated solid solution would not enhance its hardness. Effect of reheating quenched alpha-beta brass on its microstructure; results of reheating quenched alpha-beta brass at 100 deg., 200 deg. and 300 deg. cent.; aging at room temperature.

**Foundry Mixtures, Nickel Additions to.** The Advantage of Nickel Additions to Brass Foundry Mixtures, W. M. Corse. Metal Industry (Lond.), vol. 25, no. 3, July 18, 1924, pp. 79-80. Discusses advantages of nickel additions and gives typical examples of benefit derived. Lecture before Metropolitan Brassfounders' Assn., New York.

#### BUILDING CONSTRUCTION

**Fireproof.** Analysis of Cost of Types of Fireproof Construction, A. F. Klein. West. Soc. of Engrs.—Jl., vol. 29, no. 7, July 1924, pp. 290-300, 10 figs. Gives unit costs of different methods of fireproof construction of 3 types of buildings; analyzes 4 types of construction for 16-story hotel, 3 for light manufacturing building, and 3 for heavy warehouse.

**Comparison of Types of Fireproof Construction.** C. L. Post. West. Soc. of Engrs.—Jl., vol. 29, no. 7, July 1924, pp. 278-289, 11 figs. Compares types of fireproof construction covering foundations, columns and floor construction, hollow clay tile arches, reinforced-concrete joist construction, flat-slab construction, etc., recognizing fact that no universal rules can be laid down.

**Machinery for.** Machinery for Building Construction (Baumaschinen). Zeit. des Vereines deutscher Ingenieure, vol. 68, nos. 27, and 28, July 5 and 12, 1924, pp. 689-720 and 735-739, 74 figs. Series of articles describing types of dredges and excavators, automatic unloaders, cranes, locomobiles; compressed air and electricity as power; foundations, etc.

#### BUSES

**Trolley.** The Scope of the Trolley 'Bus, C. O. Silvers. Motor Transport (Lond.), vol. 39, no. 1010, July 7, 1924, pp. 13-14, 2 figs. Its advantages and disadvantages; traffic and mechanical requirements.

See also MOTOR BUSES.

## C

#### CABLEWAYS

**Portable.** "Artex" Portable Ropeway. Indus. Mgt. (Lond.), vol. 11 (new series) no. 12, June 1924, pp. 325-326, 2 figs. Discusses Artex system built on monocableway system of transportation, including rope coupling by means of which endless-rope track can be

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volumes

shortened or lengthened for altering scope and position of conveyor.

#### CAR HOUSES

**Design.** Fort Wayne Builds Modern Carhouse. Elec. Ry. J., vol. 64, no. 8, Aug. 9, 1924, pp. 191-194, 7 figs. Details of design and construction of car house of Indiana Service Corp., giving facilities for inspection repairs and storage.

#### CAR LIGHTING

**Maintenance Methods.** Light, Not Lamps, Determines Economy of Car Lighting, E. E. Dorting. Elec. Ry. J., vol. 64, no. 3, July 19, 1924, pp. 80-82, 2 figs. Analysis shows light to be thing purchased in car lighting; old lamps should be discarded; lamps and power for lighting cars cost Interborough Rapid Transit Co. \$125,964 per yr.

#### CARS

**Air-Compressor.** Mobile, Self-Contained Compressor Car for Railroad Service, C. S. Kulp. Compressed Air Mag., vol. 29, no. 8, Aug. 1924, p. 955, 3 figs. Details of compressor car outfit consisting of two type POV-2 compressors directly connected to 50 hp. engine, single-cylinder horizontal type operating on 4-stroke cycle.

**Dynamometer.** Dynamometer Cars of the Swiss Federal Railways (Le wagon-dynamomètre des Chemins de fer fédéraux suisses). Génie Civil, vol. 84, no. 24, June 14, 1924, pp. 571-573, 3 figs. Design and construction of cars; measuring devices and arrangement, including dynamometer, tachometer, anemometer, ergometer, apparatus for measuring draw-bar pull, braking force, spreading of rails, etc.

#### CARS, FREIGHT

**Logging.** Interesting Design of Logging Car. Ry. Rev., vol. 75, no. 3, July 19, 1924, pp. 92-94, 2 figs. Chicago, Milwaukee & St. Paul Ry. builds in its own shops skeleton flat cars for logging service.

**Repairing.** Unit System for Freight Car Repairs, J. McClellan. Ry. Mech. Engr., vol. 98, no. 7, July 1924, pp. 419-420. Gives proposed form for reporting freight-car repair output for comparison by piece-work-labor cost system; fixed applied piece-work labor costs per car used as basis of output.

#### CARS, PASSENGER

**Design.** Improvements in Passenger Car Construction, C. E. Barba. Ry. Mech. Engr., vol. 98, no. 8, Aug. 1924, pp. 479-481. Work of building and maintenance may be facilitated by adopting uniform equipment designs.

**Interurban.** Luxurious Cars for Interurban Service. Elec. Ry. J., vol. 64, no. 6, Aug. 9, 1924, pp. 199-201, 5 figs. Describes parlor car and coach built by Milwaukee Electric Ry. & Light Co.; semi-observation front and inclosed observation platform at rear.

**Parlor.** Parlor Car Service. Elec. Traction, vol. 20, no. 7, July 1924, pp. 301-302, 4 figs. Cars were designed and constructed at Highland Park shops of Detroit United Ry.; old trailer cars formerly operating on Pontiac division were converted into parlor cars.

**Sleepers.** The Oriental Limited—Great Northern Railway. Ry. J., vol. 30, no. 7, July 1924, pp. 18-20, 4 figs. Describes new all-steel trains of most modern type built by Pullman Co., embodying latest designs and improvements in sleeping car improvement, in transcontinental service between Chicago and Pacific Northwest cities.

**Toronto, Hamilton & Buffalo Ry.** New Passenger Equipment for the T. H. & B. Ry. Mech. Engr., vol. 98, no. 7, July 1924, pp. 422-424, 8 figs. Also Can. Ry. & Mar. Wld., no. 317, July 1924, pp. 343-344, 2 figs. 26 all-steel cars to be used in passenger service between Toronto, Ont., and Buffalo, N. Y. were built by Can. Car & Foundry Co., Ltd., Montreal, Que. for Toronto, Hamilton & Buffalo Ry. Equipment consists of 10 first-class coaches, 10 smoking coaches and 6 baggage cars, steel construction and equipped with clasp brakes.

#### CARS, REFRIGERATOR

**French.** Refrigerator Cars on the French System (Les wagons frigorifiques), M. A. Sigmant. Revue Générale des Chemins de Fer, vol. 43, no. 6, June 1924, pp. 399-417, 9 figs. Development of refrigerator cars; design and construction of isothermic cars of Orleans Railway; transportation of fruit, meat, milk, etc.

#### CAST IRON

**Formulas.** Cast Iron Formulas. Metal Industry (Lond.), vol. 25, no. 2, July 11, 1924, pp. 35-37, 3 figs. Use of formulas which purport to give relative proportions of the various constituents, particularly silicon-carbon relations. Criticizes specific formulas which have been proposed. Tenor of author's conclusions seems to be that all such formulas are more dangerous than useful.

**Porosity.** Porosity in Cast Iron, A. Marks. Foundry Trade J., vol. 30, no. 412, July 10, 1924, pp. 25-27, 8 figs. Also Metal Industry (Lond.), vol. 25, no. 3, July 18, 1924, pp. 61-62. Discusses graphite, shrinkage, gas, and dirt porosity and concludes that there is no single cause or cure of porosity in castings. Each case has to be dealt with on first principles and molding, feeding, chilling and metal all attended to.

**Shrinkage.** Shrinkage. Metal Industry (Lond.), vol. 25, no. 3, July 18, 1924, pp. 83-86, 3 figs. Discusses chief phenomena and causes of shrinkage in cast iron. Deals at some length with classic work of Kepp.

**The Influence of Various Elements on the Shrinkage of Cast Iron and Steel.** I. Jaederstroem. Testing, vol. 1, no. 4, Apr. 1924, pp. 290-307, 16 figs. Shows influence on shrinkage exerted by carbon, silicon, manganese, phosphorus, sulphur, nickel and chromium, determined by varying percentage of one element at a time.

**Solidification and Cooling, Chemical Equilibria During.** Chemical Equilibria During Solidification and Cooling of White Cast Iron, H. A. Schwartz and Anna N. Hird. Am. Inst. Min. & Met. Engrs.—Trans., Advance paper No. 1356-S, July 1924, 4 pp. By analyzing cementite separated electrolytically from white cast iron of known composition and history, distribution of silicon between austenite and cementite during and after freezing has been followed. Results constitute a contribution to our knowledge of equilibria in ternary system iron-carbon-silicon. Information also obtained regarding distribution of manganese, silicon, and phosphorus, when only relatively small amounts of each are present.

#### CASTINGS

**Structure of.** Surface Structure Versus Inner Structure of Metals, V. N. Krivobok and O. E. Romig. Am. Soc. for Steel Treating—Trans., vol. 6, no. 1, July 1924, pp. 66-76, 11 figs. Discusses structures which appear on surface of cast metals and their relation to inner crystalline organization of metal; variety of surface structures and danger of erroneous conclusions based on them solely.

#### CENTRAL STATIONS

**Chicago, Ill.** Calumet and Crawford Ave. Stations of the Commonwealth Edison Co., Chicago, Ill., W. F. Sims. Iron & Steel Engr., vol. 1, no. 7, July 1924, pp. 382-386, 5 figs. General layout, coal-handling equipment, boiler plant, feedwater system, switchhouse, connection with other stations.

**Great Britain.** The North Tees Power Station. Elec. Rev., vol. 95, no. 2432, July 4, 1924, pp. 18-22, 8 figs. Describes equipment of North Tees Station, unit of Northeastern Power Co.; boiler arrangement; 20,000-kw. turbo-generators, by Metropolitan-Vickers.

**Operating-Costs Analysis.** How to Analyze the Operating Costs in a Municipal Electric System, G. F. Drewry. Elec. News, vol. 33, nos. 13 and 14, July 1 and 15, 1924, pp. 54-55 and 55-56. Advantages of cost analysis; cost of power can be definitely distributed; power factor must be taken into account.

**Parsons Line.** Some Opinions on the "Parsons Line." Power Engr., vol. 19, no. 220, July 1924, p. 251-253, 4 figs. Number of expressions by station engineers regarding value of this method of checking operating results.

**Practice.** General Review of Current Practice, P. Junkersfeld and G. A. Orrok. Combustion, vol. 11, no. 2, Aug. 1924, pp. 125-129, 3 figs. Current practice in power-plant field reviewed with particular reference to central stations. Compact chart indicating equipment in 22 of the most modern plants in United States. Paper presented at World Power Conference in London, July 1924.

**Pulverized-Coal Burning.** Thiers Central Station Fired with Pulverized Coal (Station centrale de Thiers chauffée au charbon pulvérisé), M. L. Champy. Annales des Mines, vol. 5, no. 5, May 1924, pp. 291-317, 3 figs. Storing, drying, and conveying of pulverized coal; combustion chamber, boilers, turbo-alternators, switching facilities and tests made; plant was particularly constructed to use a fuel which was otherwise useless because it was too fine.

**Remodeling.** Modern Equipment Reduces Cost of Power. Power, vol. 60, no. 6, Aug. 5, 1924, pp. 210-211, 2 figs. Steam equipment of Abbeville, La., municipal light plant replaced by Diesels, cost of generating current reduced; water works served by motor-driven centrifugal pumps and air lift.

**Southampton, England.** Developments at Southampton, W. G. Turner. Electrician, vol. 93, no. 2411, Aug. 1, 1924, pp. 130-131, 1 fig. Details of extension of power station and area of supply, new 5000- and 6000-kw. turbo-generators.

#### CENTRIFUGAL MACHINES

**British Empire Exhibition.** Centrifugal Machines at the British Empire Exhibition. Engineering, vol. 117, no. 3052, June 27, 1924, pp. 817-820, 12 figs. partly on supp. plate. Describes different machines exhibited.

#### CHAINS

**Silent, Manufacture of.** The Story of Morse Chain, C. G. Priebe. Am. Mach., vol. 60, nos. 20, 22, 24 and 26, and vol. 61, nos. 2 and 4, May 15, 29, June 12, 26, July 10 and 24, 1924, pp. 737-740, 811-814, 887-889, 959-962, 69-71 and 145-148, 50 figs. May 15: Development of chain and its manufacture; growth of Morse Chain Co.; layout of units of plant. May 29: How sprocket wheels are made. June 12: Drawing operations; forming pin stock; carbonizing; presswork in pins. June 26: How links are stamped out and hardened. July 10: How chain is assembled, riveted, inspected and packed for shipment. July 24: Typical applications of silent chain for power transmission.

#### CHIMNEYS

**Draft Calculations.** Theory of Draft (Théorie du tirage), N. Peters. l'Association des Ingénieurs Sortis des Ecoles Spéciales de Gand—Annales, vol. 14 (Series 5), 1924, pp. 129-140. Formulas for calculating dimensions of stacks, heat losses, etc.

**Size Determination.** How to Determine the Proper Size of Chimney, T. S. Clark. Power, vol. 60, no. 5, July 29, 1924, pp. 175-179, 1 fig. Explains in a practical manner necessary elements for determining proper size of chimney for a given installation. Includes typical examples.

#### CHROME STEEL

**Properties.** Chromium—Its Uses and Its Alloys, W. M. Mitchell. Forging—Stamping—Heat Treating, vol. 10, no. 8, Aug. 1924, pp. 303-306, 13 figs. Chromium in steel lessens thermal conductivity; property is of importance when heat treating large forgings.

#### CHROME-NICKEL STEEL

**Carbides.** The Carbides in Nickel Chromium

Steels, J. H. Andrew and H. Hyman. West of Scotland Iron & Steel Inst.—Jl., vol. 31, parts 6 & 7, Mar.-Apr. 1923-1924, pp. 116-123, 10 figs. Discusses analysis of carbides in samples water-quenched from 770 deg. cent. and tempered at 650 deg. cent. for 3 hr., and water quenched from 1200 deg. cent. and tempered at 650 deg. cent. for 3 hr.

**Non-Rusting.** Non-Rusting Chromium-Nickel Steels, B. Strauss. Am. Soc. for Testing Matls., Preprint of paper presented at meeting June 24-27, 1924, No. 19c, 10 pp., 5 figs. Valuable properties of chromium as an alloy with iron and steel, and experiments which led to development of two chromium-nickel steels in Physical Research Laboratory of Messrs. Krupp, Germany; results of corrosion tests, physical and metallographic properties, properties under elevated temperatures, and applications of these steels.

#### CLUTCHES

**Design.** Considerations in Clutch Design, A. Clegg. Machy. (Lond.), vol. 24, no. 614, July 3, 1924, pp. 436-438, 5 figs. Conical clutches.

**Plate and Coil Clutches.** A. Clegg. Machy. (N. Y.) vol. 30, no. 12, Aug. 1924, pp. 953-955, 6 figs. Notes on design. Describes different types.

#### COAL HANDLING

**Plants.** Coal-Handling System, J. A. Beck. Combustion, vol. 11, no. 2, Aug. 1924, pp. 120-121, 3 figs. Description of apparatus installed at plant of Kansas Gas & Elec. Co. at Strauss, Kan., and of method of operation.

#### COMPRESSED AIR

**Applications.** Utilization of Compressed Air (Utilisation de l'air comprimé), P. E. Leroux. Arts et Métiers, vol. 77, nos. 42, 43 and 44, Mar., Apr. and May 1924, pp. 105-119, 135-157 and 174-185, 90 figs. Design, construction and operation of compressed-air shovels, tipples, conveyors, mine locomotives, etc.

**Cotton Mills.** Compressed Air Has Many Uses in the Cotton Mill, B. R. Burnham. Compressed Air Mag., vol. 29, no. 8, Aug. 1924, pp. 943-946, 10 figs. Illustrates some of varied ways in which engineering cunning has cheapened and increased production.

**Foundry Equipment.** Pneumatic Apparatus Speed Up Performance in the Foundry, S. G. Roberts. Compressed Air Mag., vol. 29, no. 7, July 1924, pp. 933-936, 13 figs. Discusses pneumatic equipment of Malleable Iron Fittings Co., Branford, Conn., including air operated riddles, knock-out vibrators, jet cleaners and sprayers, etc.

#### CONDENSERS, STEAM

**Surface.** Surface Condensers and Auxiliaries, J. P. Likiak. So. Engr., vol. 41, no. 5, July 1924, pp. 51-55, 11 figs. Size limit, arrangement of passes, method of tube packing and methods of cleaning tubes.

#### CONVEYORS

**Factory.** Increasing Production by Power Conveyors. Machy. (Lond.), vol. 24, no. 618, July 31, 1924, pp. 558-561, 5 figs. Conveyor installations that have proved their economy in plant manufacturing small parts.

**Overhead.** Monorails and Their Application (Les monorails et leurs applications). Usine, vol. 33, no. 25, June 21, 1924, pp. 25-29, 8 figs. Describes various telepher systems executed by Etablissements Tourtelier, Mulhouse. See also Génie Civil, vol. 85, no. 1, July 5, 1924, pp. 16-18, 3 figs.

**Pneumatic.** Economies of Pneumatic Conveyors for Factories (Wirtschaftlichkeit von Hausrohrpostanlagen), J. Fritz. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 26, June 28, 1924, pp. 681-683, 7 figs. Discusses principal types of conveyor systems for handling papers and small articles within building; operation of suction and pressure air plants.

**Skip.** Main Shaft Extraction by Means of Skips (Hauptschacht-Gefässförderungen), L. Schütt. Zeit. des Vereines deutscher Ingenieure, vol. 68, nos. 26 and 28, June 28 and July 12, 1924, pp. 665-671 and 729-731, 21 figs. Discusses advantages of skip conveying with automatic emptying at upper end for main shaft operation, and describes plants at Caen (France), Diedenhofen, etc., with capacity of 250-300 tons per hr.

#### CORROSION

**Electrolytic.** The Electrolytic Theory of Corrosion, W. D. Bancroft. Physical Chem.—Jl., vol. 28, no. 8, Aug. 1924, pp. 785-871. Reviews electrolytic theory and criticizes some conclusions based on it.

#### COST ACCOUNTING

**Function of.** Measuring. Evaluating the Cost Department. Mech. Eng., vol. 46, no. 8, Aug. 1924, pp. 477-479. Varying views of cost accountants, engineers, and others on possibility of measuring cost-accounting function.

#### COSTS

**Machine Shop, Estimating.** How to Estimate Machine Shop Costs, A. A. Dowd. Am. Machinist, vol. 61, no. 6, Aug. 7, 1924, pp. 227-230, 3 figs. Estimates of machining time on spline-milling operations; practical examples of keyway and slot cutting; gear milling and hobbing estimates.

#### COUNTERBORES

**Manufacture of.** Manufacturing Interchangeable Counterbores. Machy. (N. Y.), vol. 30, no. 12, Aug. 1924, pp. 943-947, 15 figs. Unusual operations and fixtures employed by Gairing Tool Co., Inc., Detroit, Mich., in making counterbores and holders.

#### CRANES

**Crawler.** Crawler Crane Built for First Time in Canada, H. P. Armson. Can. Machy., vol. 32, no. 3, July 17, 1924, pp. 19-21 and 42, 3 figs. Designed and

- \* Mackintosh-Hemphill Co.
- \* Nordberg Mfg. Co.
- \* Vilter Mfg. Co.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volumes

built by J. T. Hepburn, Ltd., Toronto, for service in civic yards.

**Traveling.** A Special Running Shed Crane Equipment on the Pennsylvania Railway. Ry. Gaz., vol. 41, no. 2, July 11, 1924, p. 43, 3 figs. Particulars of ten-ton electric overhead traveling crane, operating on circular track and having all wheels of same diameter, at Columbus, O., engine-house of Penna. Ry.

#### CRANKSHAFTS

**Explosion-Engine, Resonance of.** Experimental Demonstration and Exact Measurement of Resonance of Crankshafts of Explosion Engines; Role of Flywheel; Favorable Effects of Elastic Coupling (Démonstration expérimentale et mesure précise des phénomènes de résonance propre des arbresmanivelles des moteurs à explosion; rôle du volant; influence favorable d'un accouplement élastique), A. Blondel and H. Harle. Académie des Sciences—Comptes Rendus des Séances, vol. 178, no. 18, Apr. 28, 1924, pp. 1442-1452, 4 figs. Results of experiments to measure resonance in crankshafts at various speeds and comparison of results with theory.

#### CURVES

**Hyperbolic.** Plotting Hyperbolic Transformation Curves (Note sur le tracé des courbes hyperboliques de transformation, dans le diagramme). Arts et Métiers, vol. 77, no. 44, May 1924, pp. 170-173, 3 figs. Discusses Brauer's curve showing volume and absolute pressure of gas varying in geometric progression; plotting of hyperbolic curves by means of logarithmic auxiliary curve.

#### CYLINDERS

**Motorcycle.** Making Motorcycle Cylinders. Foundry, vol. 52, no. 15, Aug. 1, 1924, pp. 589-590, 5 figs. Work is cast in two or three part molds; pouring effected in many different ways; special device used for stripping fins into pattern of cylinder barrel.

## D

#### DIRECTION FINDING

**Unilateral.** A New Unilateral Radiogoniometer (Un nouveau radiogoniometre avec levée du dute), E. Bellini. L'onde Electrique, vol. 3, no. 29, May 1924, pp. 233-253, 19 figs. Describes a new device for direction finding.

#### DIES

**Drawing.** Designing Drawing Dies. Machy. (Lond.), vol. 24, nos. 611 and 614, June 12 and July 3, 1924, pp. 341-344 and 422-426, 14 figs. Radii over which metal can be drawn, type of equipment used, operation of drawing die, design of first-operation die, die for final drawing operation, design of blank holders, computing blank diameter of shells of unusual shapes, determining number of operations required, combination die for blanking and drawing, troubles encountered in drawing light-gage metal, etc.

#### DIESEL ENGINES

**Central-Station.** Diesel Engines Turn Tables on Central Station. Oil Engine Power, vol. 2, no. 7, July 1924, pp. 366-370, 6 figs. Atlantic Wire Co., Branford, Conn. changed power source from steam plant to diesel-engine drive; costs chargeable are considerably less per kw-hr. than purchased current cost; two six-cylinder Lombard Diesel engines rated to develop 180 h. hp. each and direct-connected to two Westinghouse 3-phase 200 kva. alternators and 10-kw. direct-connected exciters.

**Double-Acting.** A New Type of Double-Acting Diesel Engine for Marine Purposes, G. J. Lugt and H. Hunter. Engineering, vol. 118, no. 3053, July 4, 1924, pp. 26-30, 8 figs. Also Engineer, vol. 138, no. 3575, July 4, 1924, pp. 23-24, 6 figs; and Shipbldg. & Shipping Rec., vol. 24, no. 1, July 3, 1924, pp. 7-11, 5 figs. Details of design and construction of new type of four-cycle double-acting engines, developing about 80 per cent more power than single-acting engines of same size, using Archaoulouff's system of solid injection. Piston diam., 31 1/2 in.; stroke, 55 in.; hp. in single cyl. at 95 r.p.m., 600. Paper read at joint meeting of Instn. Naval Architects, Instn. Engrs. and Shipbldrs. in Scotland and N. E. Coast Instn. Engrs. & Shipbldrs. in London, June 27, 1924.

**North-Eastern Werkspoor Diesel Engine.** Steamship, vol. 36, no. 421, July 1924, pp. 18-21, 4 figs. Describes direct-coupled, double-acting, heavy-oil engine for marine purposes built by North-Eastern Marine Eng. Co.'s works at Wallsend-on-Tyne; four-cycle, single-cylinder unit of 1000 i.h.p.

**Tests of New Double-Acting Development Cylinder.** Motorship, vol. 9, no. 8, Aug. 1924, pp. 578-579, 5 figs. As result of shop tests of first single-cylinder, double-acting type of four-cycle Diesel engine built at Wallsend-on-Tyne, Eng., by North-Eastern Marine Eng. Co., in collaboration with Werkspoor of Amsterdam, Alfred Holt & Co., Liverpool, have ordered a 4000-s.h.p. engine for single-screw motorship.

**Great Britain.** Diesel Engine Progress in Great Britain. Pac. Mar. Rev., vol. 21, no. 8, Aug. 1924, pp. 411-414, and 417, 11 figs. Discusses increased application of Diesel engines for all types of ships, types of Diesel, pros and cons.

**Heavy-Oil Burning.** Burning Heavy Fuel Oil in Diesel Engines, R. Hildebrand. Power House, vol. 17, no. 14, July 20, 1924, pp. 26 and 39, 1 fig. Satisfactory results were obtained with small three-cylinder, single-acting, four-stroke vertical engine developing 200 h.p. at 257 r.p.m.

**Replaces Water Power.** Municipality Replaces Water-Power with Oil Engines. Oil Engine Power,

vol. 2, no. 7, July 1924, pp. 379-380 and 385, 3 figs. When city of Marshall, Mich., began to grow so fast that all available water flow was used up in attempt to keep pace with increasing power demands, electric current was purchased outside at moderate rates. Subsequent steep rises in cost of purchased power made city turn to oil-engine power, and Diesels since installed have netted big operating gains.

**Scavenging Blowers for.** Centrifugal Scavenging Blowers for Two-Cycle Marine Diesel Engines, E. Klingelfuss. Brown Boveri Rev., vol. 11, no. 4, Apr. 1924, pp. 67-80, 28 figs. Details of design and construction of centrifugal scavenging blowers, their advantages, and prime-movers for them; arrangement on board ship; operation in conjunction with Diesel engines.

**Street-Car Power.** Two 3600 B.h.p. and Two 1500 B.h.p. Diesels for Street-Car Power. Oil Engine Power, vol. 2, no. 7, July 1924, pp. 371-373, 2 figs. Consistent and economical service of two 1500-b.h.p. Diesel engines over lengthy period, caused Shanghai Street-Car Co. to order two additional engines of 3600 b.h.p. each to meet their greater power needs.

#### DRILLING MACHINES

**Heavy-Duty, Possibilities of.** Possibilities of Heavy-duty Drilling, H. L. Tigges. Machy. (N. Y.), vol. 30, no. 12, Aug. 1924, pp. 950-952, 5 figs. Points out possibilities of vertical heavy-duty drilling machine by presenting examples of work done in automobile plants. By term "heavy-duty drilling machine" is meant a machine with a box column.

## E

#### EDUCATION, ENGINEERING

**Power-Plant Engineering.** Training Engineers for Alberta's Power Plants, R. M. Dingwall. Power House, vol. 17, no. 14, July 20, 1924, pp. 19-20 and 40-41, 3 figs. Provincial Inst. of Technology & Art, Calgary, Alberta gives complete course in mechanical engineering consisting of two terms of 8 mos. each; students devote 50 per cent of their time to practical work.

#### EDUCATION, INDUSTRIAL

**Character and Extent.** Education and Training for the Industries. Mech. Eng., vol. 46, no. 8, Aug. 1924, pp. 482-483. Investigation into character and extent of such training. Making industry attractive to high-school and college students. Labor as a means of social salvation.

#### ELECTRIC FURNACES

**Induction.** A Six-Ton Induction Furnace Installation, M. Unger. Gen. Elec. Rev., vol. 27, no. 8, Aug. 1924, pp. 498-503, 12 figs. Details of new General Electric Co. three-ton furnace and its auxiliaries, yielding high-grade melt of extreme uniformity.

**Melting with.** Melts in Twin Electric Furnaces, A. W. Bryant. Iron Trade Rev., vol. 75, no. 4, July 24, 1924, pp. 226-228, 4 figs. At plant of Kelley & Jones Co., Greensburg, Pa., who manufacture a line of plumbing and valve fittings in gray iron, steel, and malleable iron, two acid-lined units, 1 1/2 tons capacity each, mounted on turntable 180 deg. apart and having single set of electrodes, provide small batches of hot metal at short, even intervals.

**Pig-Iron.** The New Norwegian Electric Pig Iron Furnace, F. Hodson and M. Sem. Jl. of Electricity, vol. 53, no. 3, Aug. 1, 1924, pp. 92-93, 4 figs. Results of tests made on new type of electric furnace; furnace was in operation continuously for period of year and a half during test.

#### ELECTRIC LOCOMOTIVES

**Development.** The Development of the Electric Locomotive, F. H. Shepard. Ry. Elec. Engr., vol. 15, no. 7, July 1924, pp. 225-236, 1 fig. World-wide summary of present-day practice as regards heavy electric traction.

**Side Rods.** Oblique Articulated Side Rods for Electric Locomotives, G. Darrieus. Brown Boveri Rev., vol. 11, no. 3, Mar. 1924, pp. 43-51, 9 figs. Describes statically determinate transmission system and its characteristics; successful experiments with oblique articulated rods up to highest speeds.

**South African Railways.** Electric Locomotives for South African Government Railways. Tramway & Ry. Wld., vol. 55, no. 30, June 19, 1924, pp. 285-290, 10 figs. Describes locomotives on main-line railway of Glencoe and Pietermaritzburg section of So. African Rys. which deal chiefly with hauling of heavy mineral traffic down to coast; A. A. + A. A. type; gage, 3 ft. 6 in.; equipped with four 300-hp. motors; weight, 66 tons 12 cwt.; overall length, 48 ft. 8 1/2 in.; tractive effort, maximum, 40,000 lb.

**2-8-2.** The Pennsylvania 2-8-2 Type Electric Locomotive, W. H. Ennison. Railroad Herald, vol. 28, no. 8, July 1924, pp. 34a-34c, 3 figs. New single-phase electric locomotives for use in either freight or passenger service on 11,000-volt, 25-cycle alternating current, built and designed by Penna. Ry.

#### ELECTRIC WELDING, ARC

**Safety Precautions.** Using the Arc with Safety, D. H. Devoe. Welding Engr., vol. 9, no. 7, July 1924, pp. 28-29. Methods of protecting eyes and bodies of electric arc welding operators; safeguarding apparatus.

**Systems.** Electrical System of Welding, C. N. O. Dutton. So. African Inst. Elec. Engrs.—Trans., vol. 15, part 4, Apr. 1924, pp. 364-374, 18 figs. Gives short description illustrating their advantages for metals to be welded or treated by Bernados system, metallic-arc system, spot and butt welding, and metallic tipping or depositing by electric arc.

#### EMPLOYEES, TRAINING OF

**Foremen.** A Successful Experiment in Industrial Education, D. J. Roach. Chem. & Met. Eng., vol. 31, no. 7, Aug. 18, 1924, pp. 272-273. How one large company is training its foremen and operating bosses in economics, mathematics, and technology of its industry.

#### ENGINEERING

**Human Factor in.** The Human Factor in Engineering, S. C. Godfrey. Military Engr., vol. 16, no. 87, May-June 1924, pp. 180-183, 1 fig. Discusses "human engineering" or treatment of human tools with as much consideration as materials; including workers' councils, etc.

#### EVAPORATORS

**Chemical Plants.** Heating an Evaporator with the Exhaust from Condensing Engines, F. H. Nickle. Chem. & Met. Eng., vol. 31, no. 6, Aug. 11, 1924, pp. 226-228, 3 figs. Device designed to act as condenser for multi-expansion engines and evaporator for chemical plant service at same time.

**Steam-Jacketed, Heat Transfer in.** Heat Transfer in Steam-Jacketed Evaporators, H. L. Olin, M. H. Dowell and C. M. Toynbee. Chem. & Met. Eng., vol. 31, no. 3, July 21, 1924, pp. 116-119, 3 figs. Determining overall transmission and film coefficients as well as operating efficiencies on plant equipment over a wide range of industrial conditions. Paper read before Am. Inst. Chem. Engrs.

#### EXHAUST STEAM

**Cost Calculation.** How Shall We Calculate the Cost of Exhaust Steam? T. Fuwa. Chem. & Met. Eng., vol. 31, no. 4, July 28, 1924, p. 150. Comparison of four possible bases of evaluating exhaust steam and a discussion of advantages of each.

## F

#### FANS

**Installation.** Auxiliary Equipment for Blast and Ventilating Fans, D. L. Hubbard. Mech. Wld., vol. 76, no. 1961, Aug. 1, 1924, pp. 70-72, 6 figs. Discusses proper foundations and supports, absorption of vibrations, preferably by means of cork slab; fan and motor noises; fan drives by steam engine and turbine; push-button control.

**Mine.** Principles of the Design of Mine Fans. Colliery Engr., vol. 1, nos. 4 and 5, June and July 1924, pp. 163-166 and 231-233, 11 figs. Study of fans suited to British colliery conditions. Principal features and functions of exhaustive ventilator, the typical kind of ventilator employed in British mines.

#### FEEDWATER HEATERS

**Locomotive.** Analysis of Feed Water Heating Devices, E. P. Gangwere. Ry. Mech. Engr., vol. 98, no. 7, July 1924, p. 409. Feedwater heaters with pumps take more heat from exhaust than exhaust-steam injector type.

#### FILES

**Manufacture.** Machinery and Methods in Modern File Making, H. P. Armon. Can. Machy., vol. 31, no. 27, July 3, 1924, pp. 19-23 and 44-45, 4 figs. Describes machinery and methods employed in plant of Nicholson File Co., at Port Hope, Ont.; 1200 doz. per day produced; 500 different sizes made. Forging, annealing, cutting, hardening and tempering all essential features.

#### FIRE EXTINGUISHERS

**U. S. Specifications.** United States Government Master Specification for Fire-Extinguishing Liquid (Carbon Tetrachloride Base). U. S. Dept. Commerce, Bur. Standards, circular no. 134, June 1, 1924, 6 pp. Specifications adopted July 3, 1922 for fire extinguishing liquid (carbon tetrachloride base), covering material and workmanship, inspection and testing, packing and marking, etc.

#### FIRE PROTECTION

**Sprinklers.** How the Fire Chief Regards Automatic Sprinklers, I. G. Hoagland. Fire & Water Eng., vol. 76, no. 6, Aug. 6, 1924, pp. 253-254 and 278-279. Replies to questionnaire asking for facts as to use chiefs make of this device; opinion as to its usefulness.

#### FLOORS

**Loads.** Strain of Swaying Crowds on Balcony Measured at Iowa. Eng. News-Rec., vol. 93, no. 6, Aug. 7, 1924, p. 231. Stress measurements in floor show effect more than doubled by jumping of excited, cheering students.

#### FLUE-GAS ANALYSIS

**Scientific Methods.** Scientific Flue Gas Analysis, D. Brownlie. Eng. & Boiler House Rev., vol. 38, no. 1, July 1924, pp. 3-5, 2 figs. Gives essential facts regarding true scientific methods necessary for flue-gas analysis.

#### FLYING BOATS

**Aeromarine.** The Aeromarine Model EO Sport Flying Boat, B. V. Korvin-Kroukovsky. Aviation, vol. 17, no. 6, Aug. 11, 1924, pp. 858-860, 3 figs. Details of design and construction of three-seater fitted with six-cylinder 70- to 80-hp. Anzani type 6A3 engine and tractor-type propeller.

**All-Metal.** All-Metal Flying Boats for Britain. Flight, vol. 16, no. 29, July 17, 1924, pp. 449-451, 5 figs. Describes Rohrbach No. 11, twin-engined flying boat of cantilever-monoplane type; maximum speed, 120 m.p.h.

# Manufactured by **CLASSIFIED LIST OF MECHANICAL EQUIPMENT** Alphabetical List Advertisers on page 156

- Engines, Steam, High Speed**  
 \* American Blower Co.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

**FORGING**

**Safety Code.** Tentative Safety Code of Forging. Forging—Stamping—Heat Treating, vol. 10, no. 8, Aug. 1924, pp. 282-285. Tentative draft formulated under joint sponsorship of Nat. Safety Council and Am. Drop Forging Inst. Reprinted from Nat. Safety News, June 1924.

**FOUNDRIES**

**Economy in.** Economy in Foundry Practice, E. H. Browne. Foundry Trade J., vol. 30, no. 412, July 10, 1924, pp. 38-40. Discusses monotony in foundry practice, case of patternmaker, management, layout of foundry, equipment, care of plant, provision of molding tools, design, patterns, molding and melting.

**Exposition.** The International Foundry Trades Exhibition at Birmingham. Engineering, vol. 117, no. 3052, June 27, 1924, pp. 824-825, 3 figs. At Birmingham, England, covering entire range of foundry work, especially molding machines, several of which are illustrated and described.

**German Practice.** German Foundry Practice, Werner. Metal Industry (Lond.), vol. 25, no. 117, July 11, 1924, pp. 38 and 43. Shurmann cupola; comparison of Shurmann with standard cupola; pearlitic cast iron; annealing cast iron; utilizing bad metal. Abridged report of paper and discussion at Int. Foundry Trades Exhibition, Eng.

**Power-Gas Consumption Measurement.** The Measurement of Power Gas, F. J. Taylor. Foundry Trade J., vol. 29, no. 390, Feb. 7, 1924, pp. 105-109, 9 figs. Measurement of amount of gas used for motive power in foundries. Discusses determination of volume passing through gas main by: (1) Estimation in case of engines, (2) pitot tubes, (3) orifices, (4) venturi tubes, and (5) electroflow meters.

**Ship.** Foundries on Our Men of War, A. M. Charlton. Foundry, vol. 52, no. 15, Aug. 1, 1924, pp. 584-588, 5 figs. Severe demands placed on battleships in time of war together with long periods ships remain away from home ports necessitate complete foundry and machine-shop equipment aboard.

**FREIGHT HANDLING**

**Transshipment.** Handling Tranships at Crewe, L. M. S. Ry. Gaz., vol. 41, no. 2, July 11, 1924, pp. 44-48, 11 figs. About 24,000 packages are unloaded, sorted, and reloaded every 18 hr. at Crewe tranship shed, enabling approximately 85 per cent of traffic to be reloaded direct to destination, and effecting considerable saving in car use. Describes layout and arrangement of tranship shed.

**FUELS**

See OIL FUEL; PEAT; PULVERIZED COAL.

**FURNACES**

**Heat Transfer Caused by Radiation of Gases.** Heat Transfer in Furnaces as Caused by Radiation of Gases. Fuels & Furnaces, vol. 2, no. 7, July 1924, pp. 675-678, 2 figs. Equations presented which more or less upset modern theory of heat transfer and reestablish truth of older theories.

**Radiation of Gases in.** Radiation of Flue Gases and Its Practical Calculation (Ueber die Bestimmung der wahren Temperatur undurchsichtiger diffus reflektierender Körper), M. Pirani. Zeit. für Technische Physik, vol. 5, no. 6, 1924, pp. 266-267. Shows that radiation increases with temperature approximately according to Planck's law of radiation and gives method for its calculation.

**Recuperator.** The Chapman-Stein Recuperator, W. C. Buell, Jr. Iron & Steel Engr., vol. 1, no. 6, June 1924, pp. 327-332 and (discussion) 333-339, 12 figs. Describes number of installations in use of this type which is said to have best succeeded in eliminating two main troubles, leakage and breakage.

**G****GALVANIZING**

**Wire.** Galvanizing (Étude sur la Galvanisation), A. Knepper. Usine, vol. 33, no. 24, June 14, 1924, pp. 19-23, 2 figs. Discusses thickness of zinc coat for hot galvanizing and exposure to weather; hot galvanizing and interior use; electrolytic galvanizing and exposure to weather; and electrolytic galvanizing for interior use; Develops formulas for calculation.

**GAS ENGINES**

**Germany.** Large Gas Engines in German Power Economy, P. R. Meyer. Engineering, vol. 118, no. 3055, July 18, 1924, pp. 105-106, 2 figs. Types of two- and four-cycle gas engines used; total output and capacity; waste-heat recuperation; pressure hot cooling and evaporation cooling; financial economy of gas engines; fields of application. Paper, abridged, contributed to World Power Conference.

**Steel Works.** The Gas Engine in the Steel Industry, A. C. Danks. Mech. Eng., vol. 46, no. 8, Aug. 1924, pp. 450-460 and (discussion) 460-462 and 501, 22 figs. First 4-cycle installation; methods of governing; effect of entering temperatures of gas and air; piston troubles and design; operating costs; engine tests, etc.

**GAS PRODUCERS**

**Large-Scale Power Generation.** Application to the Gas Producer as Applied to Large-Scale Power Generation, A. H. Lynn. Iron & Coal Trades Rev., vol. 109, no. 2941, July 11, 1924, pp. 58-59. Describes various methods of applying gas-producer plants to generation of power on large scale and shows economies of different systems as compared with each other and

with most modern direct-fired steam practice. Abstract of paper read before World Power Conference.

**Pressure.** Control of Pressure Gas Producers, W. P. Chandler, Jr. Iron & Steel Engr., vol. 1, no. 6, June 1924, pp. 289-293 and (discussion) 293-299, 4 figs. For metallurgical furnaces in steel mills; discusses main factors influencing producer operation and means for obtaining greatest return for given sizes of gas producer and from coal charged.

**GEARS**

**Friction.** Fieux System of Friction Gearing and Its Application to Railway Motor Cars as Automatic Gearing (Le conjointeur-disjoncteur à friction (Système Fieux), son application aux véhicules automoteurs comme embrayage automatique), J. Fieux. Société d'Encouragement pour l'Industrie Nationale—Bul., vol. 136, no. 3, Mar. 1924, pp. 279-287, 8 figs. Properties and action of Fieux make-and-break friction gear, and examples of application to railway motor cars.

**Transmission by Means of Friction Wheels.** (Les transmissions par galets de friction). Génie Civil, vol. 84, no. 23, June 7, 1924, pp. 549-551, 6 figs. Use of friction wheels and disks; transmission efficiency; coefficient of friction; etc.

**GRINDING**

**Automobile Parts.** Reo Parts Ground Accurately, F. B. Jacobs. Abrasive Industry, vol. 5, nos. 7 and 8, July and Aug. 1924, pp. 163-167 and 193-197, 19 figs. Grinding methods at plant of Reo Motor Co., Lansing, Mich. Each manufacturing department has its own grinding equipment. Automatic machines used extensively for finishing various units.

**Machine-Tool Parts.** Grinding Operations Expedite Manufacture of Machine Tools, W. E. Groene. Abrasive Industry, vol. 5, no. 8, Aug. 1924, pp. 189-192, 6 figs. Describes grinding operations carried on at plant of R. K. LeBlond Machine Tool Co., Cincinnati.

**GRINDING MACHINES**

**Internal and External.** Internal and External Grinding Machines. Machy. (Lond.), vol. 24, no. 617, July 24, 1924, pp. 521-526, 8 figs. Designed by Holroyd & Co., Ltd., Milnrow, for grinding large steel tubes.

**GUNS**

**Erosion of.** Improvements in Gun-Construction and Allied Problems, T. Tanimura. Faculty of Eng., Tokyo Imperial Univ.—Jl., vol. 13, no. 4, Mar. 1923, pp. 103-175, 10 figs. Concludes that as gun erosion cannot be remedied at present, gun construction rendering relining easy should be studied; inner surface of bore of relined guns is always subjected to stress beyond elastic limit; proposes improved construction on these lines.

**GYROSCOPES**

**Theory.** Some Properties of Spherical Curves, with Applications to the Gyroscope, O. D. Kellogg. Am. Mathematical Soc.—Trans., vol. 25, no. 4, Oct. 1923, pp. 501-524, 2 figs. Discusses certain intrinsic properties of spherical curves and applies results to theory of gyroscope; gives further results and formulas in connection with gyroscope problems.

**H****HANGARS**

**Omaha, Neb., Collapse.** Omaha Aerial Mail Hangar Wrecked by Gale, R. M. Brown. Eng. News Rec., vol. 93, no. 5, July 31, 1924, pp. 180-182, 3 figs. Violent gale crushed in end wall and twisted out of position roof trusses of a large steel-framed airplane hangar. Circumstances of wreck and design of structure.

**HARDNESS**

**Aluminum Bronze, Heat-Treated.** Notes on the Hardness of Heat-treated Aluminum Bronze, G. F. Comstock. Am. Inst. Min. & Met. Engrs.—Trans., Advance paper No. 1357-N, July 1924, 9 pp., 4 figs. Results of scleroscope and Brinell tests on specimens of cast 10 per cent aluminum bronze, quenched and reheated at various low temperatures.

**Gray Iron, Brinell Test.** The Value of the Brinell Hardness Test to the Gray-Iron Foundry, I. Jaederstroem. Testing, vol. 1, no. 4, Apr. 1924, pp. 286-289, 2 figs. Results of researches. Main reason for great popularity of Brinell test in investigation of steel is fact that it not only indicates resistance of material to penetration of another, harder body, but that hardness values thus obtained permit also definite conclusions on tensile strength of steel under investigation.

**HEATING**

**Buildings.** The Calculation of Thermal Requirements in Buildings by Means of a Graphic Chart, J. N. Victor. Am. Architect, vol. 126, no. 2450, July 16, 1924, pp. 69-71. Chart is adapted to designing of steam, vapor, vacuum and hot-water systems which employ direct, indirect or coil radiation and for all temperature differences.

**HEATING, HOT-WATER**

**Pipe Calculation.** Calculation of Pipes for Hot-Water Heating (Rohrbemessung für Warmwasserheizungen. Vergleichende Betrachtungen der verschiedenen Rechenweisen), H. Behrens. Gesundheits-Ingenieur, vol. 47, nos. 27 and 28, July 5 and 12, 1924, pp. 285-290 and 297-303, 13 figs. Compares various methods of calculation and finds Brabbee's best; applies Brabbee's figures in construction of tables for rapid calculation of sizes.

**HYDRAULIC PRESSES**

**Ram Speed.** Ram Speed of Hydraulic Presses, H. S. Cattermole. Mech. Wld., vol. 76, no. 1959, July 18, 1924, p. 37. Discusses required ram speed for given operation, shows relation between press and pump and press and accumulator, and makes calculations.

**HYDRAULIC TURBINES**

**Acceptance Test.** Proposal for Uniform Rules for Testing Water-Power Plants, G. Sundby. Engineering, vol. 118, no. 3056, July 25, 1924, pp. 145-147. Discusses diversity in specifications and guarantee tests, and various factors to be considered in formulation of standard tests. Abstract of paper read before World Power Conference.

**Calculation.** Blade Wheels Operating in a Free Stream (Im offenen Flüssigkeitsstrom arbeitende Flügelräder), E. Moeller. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 26, June 28, 1924, pp. 675-680, 6 figs. Analytical treatment of helical-turbine theory for finite number of blades and its application.

**Pelton Wheels.** Pelton Wheels Working at Variable Heads (Au sujet des turbines Pelton travaillant sous une hauteur de chute variable), M. deSparre. Académie des Sciences-Comptes rendus des Séances, vol. 178, no. 24, June 10, 1924, pp. 1942-1948. Mathematical determination of head  $H_0$  serving as basis for calculation, so as to make variation of efficiency minimum when head varies between minimum  $H_1$  and maximum  $H_2$ .

**Reaction.** The Hydraulic Reaction Turbine, H. B. Taylor. Engineering, vol. 118, no. 3054, July 11, 1924, pp. 71-73. Discusses recent improvements including, (1) incorporation of turbine as integral part in power-house construction, (2) division of casing into number of radial sections separated by planes containing turbine axis, (3) adoption of propeller-type turbine of extremely high specific speed, (4) transformation of draft tube, etc. Abstract of paper read before World Power Conference.

**HYDROELECTRIC DEVELOPMENTS**

**Canada.** Queenston-Chippawa Power Development, F. A. Gaby. Can. Engr., vol. 47, no. 6, Aug. 5, 1924, pp. 209-215, 6 figs. Outstanding features of Ontario Hydroelectric Power Commission's development reviewed in paper presented at World Power Conference; will ultimately have capacity of over 550,000 hp.

**France.** Putting Through a Great Hydro-Electric Project in France. Compressed Air Mag., vol. 29, no. 7, July 1924, pp. 919-922, 13 figs. Details of work carried out in Ossau Valley, Pyrenees, for supplying power for electrification of Midi Ry., including reservoir and tunnel work, power-house construction, and equipment.

**India.** Sutlej River Hydro-Electric Scheme, A. C. del. Joly de Lotbinière. Roy. Engrs. Jl., vol. 38, no. 2, June 1924, pp. 267-270. Summary of preliminary survey report; available head, 328 ft.; 10-ft. pressure piping, 1.8 miles in length for turbines.

**Newfoundland.** Hydro-Electric Power Development in Newfoundland. Engineering, vol. 118, no. 3056, July 25, 1924, pp. 125-127, 15 figs. partly on supp. plates. Particulars of hydroelectric scheme being carried out in Humber River district of Newfoundland, where continuous output of 100,000 b.h.p. will be utilized in paper mills of Newfoundland Paper & Paper Co., Ltd., and for lighting and heating new township of Corner Brook. Work is being carried out by W. G. Armstrong, Whitworth & Co., Ltd., Lond., who are also manufacturing turbines which will be installed at the site.

**Skagit River, Washington.** Skagit River Hydro-Electric Development, S. G. Roberts. Compressed Air Mag., vol. 29, no. 8, Aug. 1924, pp. 949-954, 18 figs. Project now delivers 55,000 hp. to Seattle and may ultimately produce more than half million hp. for whole of western Washington.

**Tasmania.** A Few Notes on the Hydro-Electric Power of Tasmania, C. C. Halkyard. Australasian Inst. Min. & Met.—Proc., vol. 52, Dec. 31, 1923, pp. 241-258, 9 figs. Water-power potentialities, application of power commercially, details of Waddaman power plant and main works, canals, pipe lines, transmission lines, substation, etc.

**HYDROELECTRIC PLANTS**

**Alabama.** Hydroelectric Practices and Equipment of the South, O. G. Thurlow and J. A. Sirnit. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 8, Aug. 1924, pp. 719-723, 8 figs. Discusses hydraulic power resources of South, design of Alabama Power Co.'s plants, Southern superpower system and advantages of linking up systems.

**Canada.** Building Canada's Hydro Electric Power Units, H. P. Armon. Can. Machy., vol. 32, no. 31, July 31, 1924, pp. 19-22, 5 figs. Outline of water-power development in Dominion with details of the constructions features of plant on Isle Maligne and shop methods which are used in building some units at Canadian Allis-Chalmers Co's. Davenport plant in Toronto.

**France.** The Chanzy-Poungny Hydroelectric Plant on the Upper Rhône (L'usine hydro-électrique de Chanzy-Poungny sur le Haut-Rhône), C. Dantin. Génie Civil, vol. 85, no. 1, July 5, 1924, pp. 1-10, 13 figs. on supp. plate. Describes new hydroelectric plant about to be put in operation at Swiss frontier, general layout, barrage arrangement, concrete work; two of the five turbo-alternators to be running in November.

**Ice Troubles.** Ice Troubles in Norwegian Water-Power Plants, A. Ruths. Engineering, vol. 118, no. 3054, July 11, 1924, pp. 73-74. Details of power-house troubles due to frazil ice and drift ice and their elimination. Abstract of paper read before World Power Conference.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

## I

## ICE PLANTS

**Freezing Tanks.** Ice Freezing Tank Design, C. Wilkie. Ice & Refrigeration, vol. 67, no. 1, July 1924, pp. 50-55, 13 figs. Points out ways whereby installation of freezing tanks can be safeguarded against errors; influence of harvesting equipment. Paper read before meeting of Chicago subordinate N. A. P. R. E. and Chicago Sec. A. S. R. E.

**Oil-Engine-Driven.** Economy from Oil Engine Power at the Coal Pit's Mouth. Oil Engine Power, vol. 2, no. 7, July 1924, pp. 363-365, 5 figs. Operating at mouth of coal mine and driving Marion County Coal Co.'s, Centralia, Ill., own machinery, three oil engines have been able to produce substantial savings over and above cost of coal-generated power in production of ice and refrigeration.

## IMPACT TESTING

**Rounded Bars.** Experiments on the Duration of Impacts, Mainly of Bars with Rounded Ends, in Elucidation of the Elastic Theory, J. E. P. Wagstaff. Lond., Edinburgh & Dublin Philosophical Mag. & J. of Sci., vol. 48, no. 283, July 1924, pp. 147-158, 2 figs. Discusses duration of collision of two perfectly elastic bars and its form of mathematical relation.

## INDUSTRIAL MANAGEMENT

**Bonus Systems.** See BONUS SYSTEMS.

**Budgeting.** Elements of Budget Control, D. J. Hutchinson. Pit & Quarry, vol. 8, no. 10, July 1924, pp. 75-78. Procedure in establishing budget system.

**Order System.** Central Office and Branch Yard Millwork Order System, T. C. Herrington. Wood-Worker, vol. 43, no. 5, July 1924, pp. 42-44, 4 figs. Describes effective but simple millwork order, billing, and scheduling system, which has been developed and is being used by large lumber and millwork concern operating one main plant and four branch yards in Detroit, Mich.

**Rate Setting.** Rate Fixing in Engineering Works. Machy. (Lond.), vol. 24, no. 617, July 24, 1924, pp. 516-518, 2 figs. Payment by results and rate-fixing methods; share of production responsibilities by management and labor.

## INDUSTRIAL RELATIONS

**Labor Management.** What We Think of Industrial Democracy After 7 Years, W. P. Hapgood. Factory, vol. 33, no. 2, Aug. 1924, pp. 187-189 and 286-290, 2 figs. Experiences of factory council in working its way up through usual worries about wages and hours of work into constructive effort toward bringing business to higher level of efficiency.

## INTERNAL-COMBUSTION ENGINES

**Air Supply.** A Note on the Air Supply for Large Motor Ships, P. T. Brown. Inst. Mar. Engrs.—Trans., vol. 36, July 1924, pp. 101-140, 11 figs. Discusses air requirements of Diesel machinery for injecting and pulverizing fuel, and for maneuvering engines and other purposes; Lloyd's rules; air compressors and their size.

**British Empire Exhibition.** Internal-Combustion Engines at the British Empire Exposition, J. B. C. Kershaw. Power, vol. 60, no. 5, July 29, 1924, pp. 168-170, 6 figs. Describes different types exhibited.

[See also AIRPLANE ENGINES; AUTOMOBILE ENGINES; DIESEL ENGINES; GAS ENGINES; OIL ENGINES.]

## IRON ALLOYS

**Casting.** Casting Properties of Iron and Metal Alloys (Gießereieigenschaften der Eisen- und Metall-Legierungen), E. Toussaint. Praktische Maschinen-Konstrukteur, vol. 57, no. 21, June 10, 1924, pp. 295-298, 13 figs. Discusses changes in volume during cooling, increase due to separation of graphite, etc.

**Chromium-Iron.** Some Engineering Applications of High-Chromium-Iron Alloys, C. E. MacQuigg. Am. Soc. for Testing Matls., Preprint of paper presented at meeting June 24-27, 1924, No. 191, 10 pp., 6 figs. Uses and limitations of an alloy with about 25 to 30 per cent of chromium and fractions of one per cent of silicon and manganese, remainder largely iron; carbon varies from about 0.1 to 3 per cent, depending on properties desired.

**Iron-Carbon.** A Laboratory Method for the Preparation of Small Steel Bars Differing Only in Carbon Content and the Effect of Changes in Carbide Concentration on the Specific Resistance, E. D. Campbell and G. W. Whitney. Am. Soc. for Steel Treating—Trans., vol. 6, no. 1, July 1924, pp. 33-50. Results of laboratory tests by means of which small steel bars varying only in carbon content may be prepared; also specific resistance measurements on these bars when annealed and when hardened by quenching in oil or in water.

**Iron-Nickel.** Hardness of Iron-Nickel Alloys (Die Härte von Eisen-Nickel-Legierungen), H. Schottky. Zeit. für anorganische u. allgemeine Chemie, vol. 133, no. 1, Feb. 11, 1924, pp. 26-28. Maximum hardness of iron-nickel alloys depends on co-existence of two solid solutions, viz.,  $\alpha$ -iron in  $\alpha$ -nickel and  $\gamma$ -iron in  $\alpha$ -nickel.

## IRON CASTINGS

**Cleaning.** Cleaning Iron Castings Hydraulically. Mech. Wld., vol. 75, no. 1955, June 20, 1924, pp. 389-390. Describes new method of cleaning castings, successfully experimented with at Erie, Pa., foundry of Gen. Elec. Co.; results in considerable saving of labor and time and eliminates dust. Abstract of paper read by C. B. Lockhart before Pittsburgh Foundrymen's Assn.

**Titanium Additions.** Effect of. Some Experiments as to the Effect of Titanium in Iron Castings

(Einige Versuche über den Einfluss eines Titanzusatzes zum Rohguss auf den metallurgischen Verlauf des Temperprozesses), E. Piwowarsky. Stahl u. Eisen, vol. 44, no. 26, June 26, 1924, pp. 745-748, 7 figs. Results show that titanium favors formation of fine structure; effects more rapid decomposition of carbide and gasification of carbon.

## IRON AND STEEL

**Corrosion.** The Submerged Corrosion of Iron, W. G. Whitman and R. P. Russell. Chem. & Industry, vol. 43, nos. 26 and 27, June 27, July 4, 1924, pp. 193T-196T and 197T-199T, 4 figs. Discusses corrosion under natural water and solutions of alkali and non-oxidizing acids and its explanation along electrochemical lines.

**Effect of Temperature on.** Effect of Temperature on Metals. Power Plant Eng., vol. 28, no. 15, Aug. 1, 1924, pp. 801-803, 3 figs. Review of data on irons and steels. Presented before joint meeting of A.S.M.E. and A.S.T.M.

## LABOR

**Hours of Work.** Effect of Changes in Hours of Work on Output. Monthly Labor Rev., vol. 19, no. 1, July 1924, pp. 120-124. Discusses 8-hr. day entirely from economic standpoint and analyzes existing data on relation between hours of work and production, showing complexity of problem.

**Railway, Germany.** Labor Problem of the German State Railroads. Monthly Labor Rev., vol. 19, no. 1, July 1924, pp. 47-54. Discusses reasons for change from large surplus to huge deficit of railways, including increase in payroll and cost of materials, deteriorated railway conditions, diminished labor efficiency, faulty employment policy, etc. Abstract taken from J.I. Political Economy.

## L

## LABORATORIES

**National Physical Laboratory, England.** The National Physical Laboratory. Engineering, vol. 117, no. 3052, and vol. 118, nos. 3053 and 3055, June 27, July 4 and 18, 1924, pp. 823-824, 5-6 and 100-101, 1 fig. Review of work done by the Laboratory during 1923, including work of engineering and aerodynamics departments, work on metallurgy, physics, electrical standards and measurements, wireless, electrotechnics, cables, and photometry.

## LATHES

**Inspection of Parts.** The Inspection System in a Lathe Building Plant, H. S. Riggs. Machy. (Lond.), vol. 24, no. 616, July 17, 1924, pp. 481-486, 12 figs. Checking accuracy of lathe parts, assembled units and completed machines of Lodge & Shipley Machine Tool Co.

## LIGHTING

**Roundhouse.** Roundhouse Lighting on the Elgin, Joliet & Eastern, A. W. Ryan. Ry. Elec. Engr., vol. 15, no. 7, July 1924, pp. 222-224, 6 figs. All conduits for lighting placed in concrete pillars or floor; single lead-covered conductor for welding distribution.

## LIQUIDS

**Evaporation.** The Rate of Evaporation of Liquids in a Current of Air, T. B. Hine. Physical Rev., vol. 24, no. 1, July 1924, pp. 79-91, 1 fig. Results of experiments show that rate of evaporation is linear function of wind velocity.

**Heat of Evaporation.** Apparatus for the Determination of the Heat of Evaporation of Liquids of High Boiling Points, J. H. Awbery and E. Griffiths. Physical Soc. of Lond.—Proc., vol. 36, part 4, June 15, 1924, pp. 303-312, 2 figs. Discusses two new forms of apparatus and their relative merits; tested by determining with them heats of evaporation of alcohol, water, and aniline.

## LOCOMOTIVE BOILERS

**Fireboxes.** Four-Sheet Fireboxes for Mallet Locomotives. Ry. Rev., vol. 75, no. 5, Aug. 2, 1924, pp. 161-165, 9 figs. Describes firebox construction on Norfolk & Western Ry.; seven-sheet firebox construction reduced to four by use of unusually large boiler plates.

**Saving Time in Laying Out Locomotive Boilers.** C. A. Chinchell. Boiler Maker, vol. 24, no. 7, July 1924, pp. 196-197, 4 figs. Simplified methods of developing wrapper sheets and heads for narrow- and wide-type locomotive fireboxes.

**Repairing.** Repairing Locomotive Boilers at Bischheim, France. Boiler Maker, vol. 24, nos. 6 and 7, June and July 1924, pp. 157-160 and 198-200 and 219, 10 figs. Special equipment developed at new Alsace and Lorraine "Railways" boiler shop to speed up production, including equipment for erecting and testing locomotive boilers and for flue reclaiming. Translated from Revue Générale des Chemins de Fer et des Tramways.

**Side Lights on Boiler Work at Glenwood Shops.** Boiler Maker, vol. 24, no. 7, July 1924, pp. 191-194, 10 figs. Special shop made equipment aids in repairing many different classes of locomotives coming to Glenwood shops, Baltimore & Ohio Ry.

## LOCOMOTIVES

**Algerian State Railways.** New Locomotives for the Algerian State Railways. Ry. Gaz., vol. 41, no. 1, July 4, 1924, pp. 13-15, 6 figs. 4-8-2 "Mountain" type locomotives designed and built by Schneider & Co., designed to haul trains of 300 tons on gradients of 1 in 70 and 1 in 80 at 31 m.p.h.; for heavy service in passenger and freight traffic.

**Boilers.** See LOCOMOTIVE BOILERS.

**Consolidation.** Reading Company Consolidation Locomotives. Ry. Rev., vol. 75, no. 2, July 12, 1924, pp. 43-46, 3 figs. Particulars of new 2-8-0 locomotives placed in service by Phila. & Reading Ry. for handling coal trains. Tractive effort 71,000 lb.

**Development.** The Steam Locomotive; Engineering and Business Considerations, W. H. Winterrowd. Can. Ry. & Mar. Wld., no. 317, July 1924, pp. 322-325, 3 figs. Discusses development steam locomotive has undergone during past 20 years and lines along which future development may be expected.

**Electric.** See ELECTRIC LOCOMOTIVES.

**4-8-0.** 4-8-0 Type Locomotive for the Buenos Ayres Great Southern Railway. Ry. Engr., vol. 45, no. 535, Aug. 1924, p. 291, 1 fig. Also Ry. Gaz., vol. 41, no. 4, July 25, 1924, p. 119. Engine built by W. G. Armstrong, Whitworth & Co., Ltd. for Buenos Ayres Gt. Southern Ry. is oil-burning type having three single-expansion cylinders and 4-8-0 wheel arrangement.

**4-6-0.** New 4-6-0 Mixed-Traffic Locomotive, Great Southern & Western Railway, Ireland. Ry. Gaz., vol. 41, no. 5, Aug. 1, 1924, pp. 148-150, 4 figs. Tests made with first of these engines show that, although primarily built for handling goods traffic, class will also be useful for working fast passenger trains, thus ranking them as mixed-traffic locomotives.

**French Railways.** New Locomotives for French Railways. Ry. Gaz., vol. 40, no. 26, June 27, 1924, pp. 923-925, 5 figs. Describes new 4-6-2 type four-cylinder engine for Calais-Paris express passenger service of Northern Ry. and 2-8-2 type tank engine equipped with condensing apparatus for Paris-Orleans Ry.

**Long Runs.** Extension of Locomotive Runs, F. E. Russell. Ry. Mech. Engr., vol. 98, no. 8, Aug. 1924, pp. 464-467. Discusses advantages of long runs and mechanical difficulties encountered. Abstract of paper read before Pac. Ry. Club.

**Mallet.** Baldwin Mallet Locomotive for India. Ry. Gaz., vol. 41, no. 5, Aug. 1, 1924, pp. 154-155, 2 figs. Baldwin Locomotive Works recently delivered to North-Western Ry., India, powerful Mallet locomotive developing tractive force of 52,600 lb. at 85 per cent boiler pressure.

**Oil-Electric.** Oil-Electric Locomotive Comes to New York. Compressed Air Mag., vol. 29, no. 7, July 1924, pp. 923-925, 6 figs. Details of new locomotive with 200-kw. generator directly connected to 300-hp. oil engine for switching service of N. Y. Central; uses low-cost fuel oil.

**Passenger.** Chicago & Eastern Illinois Ry. 4-6-2 Type Locomotives. Ry. Rev., vol. 75, no. 6, Aug. 9, 1924, pp. 197-200, 3 figs. Modern heavy Pacific type locomotives handling through passenger runs; tractive effort, 43,900 lb.; steam pressure, 200 lb.

**Power and Efficiency Improvements.** Power and Efficiency Improvements in Steam Locomotives, G. M. Basford. Engrs. & Eng., vol. 41, nos. 3 and 6, Mar. and June 1924, pp. 61-64 and (discussion) 64-69 and 159-162, 4 figs. Paper read at Conference on Economy in the Use of Fuel, held at Engrs. Club of Phila., Jan. 15, 1924.

**Rack.** A New Rack Locomotive. Engineer, vol. 136, no. 3576, July 11, 1924, p. 55, 3 figs. Details of locomotive developed by Railgrip Syndicate, Ltd., Lond., Eng. A steam locomotive with an auxiliary pair of cylinders for driving a pair of wheels, having a positive grip on rails, through a set of speed-reducing gearing; auxiliary engine brought into operation only when gradient of line becomes so steep that usual driving wheels will not provide sufficient adhesion to move load.

**Rod Repairs.** Handling Rod Work at Battle Creek Shops, M. H. Westbrook. Ry. Mech. Engr., vol. 98, no. 7, July 1924, pp. 437-442, 18 figs. Rod repair department at Grand Trunk shops, Battle Creek, Mich., is equipped and laid out to take care of 22-pit repair shop, handling all classified repairs to 334 locomotives, including U. S. R. A. Mikado type; each man handles special work.

**Steam and Electric Comparison.** Steam and Electric Locomotives Compared. Ry. Gaz., vol. 41, no. 3, July 18, 1924, p. 90. Electric-locomotive traction enables large horsepower to be obtained from locomotives of reasonable length and with low axle loads.

**Tank.** Four-Cylinder "Baltic" Tank Engine—London Midland & Scottish Railway. Ry. Gaz., vol. 41, no. 3, July 18, 1924, pp. 82-83, 3 figs. 4-6-4 type four-cylinder tank engine built at Horwich works of London Midland & Scottish Ry. for use in dealing with heavy suburban traffic over severely graded lines, also for hauling express residential trains within radius of about 50 miles.

**2-8-2.** New 2-8-2 Type Heavy Goods Engine, Imperial Japanese Railways. Ry. Gaz., vol. 41, no. 4, July 25, 1924, p. 120, 2 figs. Engine for working heavy freight trains built by Kawasaki Dockyard & Eng. Co. at their Hiogo Works, Kobe; piston stroke, 26 in.; total engine wheelbase, 31 ft. 6 in.; steam pressure, 180 lb. per sq. in.

**Valve Gears.** Development of the Lentz Poppet Valve Gear, A. Niklitchek. Ry. Mech. Engr., vol. 98, no. 7, July 1924, pp. 407-409, 4 figs. Discusses reduction of valve-gear maintenance costs, and lubricant and water consumption on Austrian locomotives.

## LUBRICATING OILS

**Cylinder.** Oils for Valve and Cylinder Lubrication, A. J. Dixon. So. Engr., vol. 41, no. 5, July 1924, pp. 60-61. Why some cylinders take polish and others do not. Selection of cylinder oils.

**Purification.** Purification of Marine Turbine and Diesel Engine Lubricating Oils. Am. Mar. Engr., vol. 19, no. 7, July 1924, pp. 11-13, 4 figs. In marine turbines and Diesel engines it is almost universal practice

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volumes

to reuse lubricating oil by means of circulation system; discusses batch and continuous system of purification.

**Storage and Handling.** Oil Storage and Handling Practice. Elec. Ry. J., vol. 64, no. 3, July 19, 1924, pp. 77-79, 6 figs. Information obtained from 57 electric railways shows that careful storage of lubricants eliminates waste, prevents contamination, minimizes fire hazard, and facilitates keeping of records; increased use of buses by railways makes necessary storage of gasoline in quantity.

**Turbines.** Characteristics of Efficient Turbine Oil, A. P. Brewer. Elec. Light & Power, vol. 2, no. 8, Aug. 1924, pp. 16-18 and 38, 2 figs. Discusses properties of oil, including viscosity, cooling ability, tendency to evaporate, fluid friction developed, demulsibility, water content, tendency to decompose, foaming and content, carbon content, sulphur and acids.

**Viscosity.** Viscosity and Surface Tension of Oils (Viskosität und Oberflächenspannung von Ölen), J. Doe. Kolloid-Zeit., vol. 34, no. 5, May 1924, pp. 312-313, 1 fig. Experiments with mobile oil, rape, olive and other oils; lubricating properties.

#### LUBRICATION

**Theory of.** Some Notes on the Theory of Lubrication with Particular Application to the Michell Thrust and Journal Bearings, J. Ward. Inst. Mar. Engrs.—Trans., vol. 36, July 1924, pp. 141-185, 24 figs. Discusses dry, rolling, greasy and viscous friction, perfect lubrication, Michell viscometer; lubrication of parallel surfaces, inclined surfaces; flow of oil; pressure distribution; bearings, etc.

## M

#### MACHINE SHOPS

**Fire-Department.** Efficiency in the Fire Department Machine Shop, J. C. Moran. Fire & Water Eng., vol. 76, no. 3, July 16, 1924, pp. 107-108, 112, 135-136, 7 figs. Methods which make Hartford shop a model; personnel and equipment; importance of good location for building. Abstract of paper read before New England Assn. Fire Chiefs.

**Repairs Handling.** A Simple and Economical Method of Handling Repairs, F. H. Colvin. Am. Mach., vol. 61, no. 5, July 31, 1924, pp. 189-190, 3 figs. Plan, worked out by Gould & Eberhardt, Newark, N. J., which cuts out much of the paper work and overhead expense in repair work.

#### MACHINE TOOLS

**British Empire Exhibition.** Machine Tools at the British Empire Exhibition, I. W. Chubb. Am. Mach., vol. 61, no. 5, July 31, 1924, pp. 177-179, 4 figs. Types and performances of British machine tools at Wembley.

**Machine Tools at Wembley.** Mech. Wld., vol. 76, nos. 1957 and 1959, July 4 and 18, 1924, pp. 2-4 and 34-36, 14 figs. Details of wheel and axle lathes, electric drives, tool equipment; broaching machines, gear-shaping machines by Vickers, Ltd., stamping presses, including single-action press with adjustable cam brake by Taylor & Challen Ltd.

**Universal Metal-Cutting Machine.** A Combination Type of Metal-Cutting Machine. Machy. (Lond.), vol. 24, no. 617, July 24, 1924, pp. 513-515, 7 figs. Universal machine especially adapted for reproducing various designs from enlarged patterns or drawings, either by punching, profiling, routing, milling, or engraving.

#### MACHINERY

**Altitude, Influence of.** Influence Exerted by Altitude on Apparatus, K. Lubowsky. Elec. Wld., vol. 84, no. 3, July 19, 1924, pp. 109-110. Influence of altitude on calculations connected with all apparatus which generates, distributes, or consumes energy. Correction factors for various types of apparatus; influence on heating, outputs and ratings; table for any height.

#### MACHINING METHODS

**Eccentrics, Turning of.** Tools and Fixtures for Turning Eccentrics, F. H. Mayoh. Machy. (N. Y.), vol. 30, no. 12, Aug. 1924, pp. 976-979, 11 figs. Points out methods to be used in machining eccentric parts under different conditions.

#### MARINE STEAM TURBINES

**Reversing-Clutch.** The Reversing-Clutch Marine Turbine, O. A. Wiberg. Engineering, vol. 118, no. 3056, July 25, 1924, pp. 144-145, 5 figs. Describes oil-operated reversing clutch in connection with mechanical reduction gear and its successful application to number of ships. Abstract of paper read before World Power Conference.

#### MATERIALS

**Heat Conductivity of.** Determination of Heat Conductivity of Engineering Materials (Ueber die Bestimmung der Wärmeleitfähigkeit technischer Materialien), Zeit. für Technische Physik, vol. 5, no. 6, 1924, pp. 233-236, 4 figs. Results of tests with materials used in building construction and machine construction.

#### MATERIALS HANDLING

**Automobiles.** Material-Handling Problems in Automobile Assembly, M. R. Dennison. Automotive Manufacturer, vol. 66, nos. 3 and 4, June and July 1924, pp. 24-26 and 10-12, 1 fig. June: Time and labor-saving methods used in large modern Studebaker plant at South Bend, with special reference to stores and incoming parts; July: Tractor and trailer inter-plant transportation; instruction of storeroom men; labor-saving arrangements and devices.

**Concrete Building Units, Manufacture.** Eco-

nomical Handling of Raw Materials in Building Unit Manufacture. Concrete, vol. 25, no. 1, July 1924, pp. 13-18, 6 figs. Summary of methods in common use in excavating and handling sand and gravel, according to conditions to be met.

**Zinc Works.** The Handling of Materials at the Risdon Works of the Electrolytic Zinc Co. of Australasia, Ltd., A. W. Cook. Australasian Inst. Min. & Met.—Proc., no. 52, Dec. 31, 1923, pp. 167-184, 9 figs. Details of handling at 100-ton zinc plant at Risdon covering area of 149 acres with elevation from 6 ft. to 163 ft. above high-water mark.

#### MEASUREMENTS

**Length.** Industrial Length Measurement, Standards of Measurement and Systems of Tolerances (La mesure industrielle des longueurs, Etalons de mesures et systèmes à tolérances), H. Stroh. Génie Civil, vol. 84, nos. 25 and 26, June 21 and 28, 1924, pp. 594-597, 615-617, 12 figs. Discusses length measurement in connection with production of good quantities and of interchangeable parts, establishing standards; mechanical precision and systems of tolerances; discusses symmetrical and asymmetrical tolerances, admissible wear of tolerances; standards for length measurement.

#### METALLOGRAPHY

**Lehigh University.** Metallography at Lehigh University, H. B. Pulsifer. Forging—Stamping—Heat Treating, vol. 10, no. 7, July 1924, pp. 276-278, 7 figs. Leading engineering colleges are coming to recognize metallography as most important of the aspects commonly assembled under metallurgy.

**Polarized Light.** Metallography in Polarized Light (Metallographie im polarisierten Licht), L. C. Glaser. Zeit. für Technische Physik, vol. 5, no. 6, 1924, pp. 253-260, 12 figs. Describes instruments and methods which by using polarized light enable one to recognize optical properties of structural elements and to measure them.

#### METALS

**Deformation.** Torsional Tests of Metals, Elastic and Permanent Deformation (Les essais de torsion des métaux, déformations élastiques et déformations permanentes), J. Seigle and F. Cretin. Génie Civil, vol. 84, nos. 23 and 24, June 7 and 14, 1924, pp. 545-549 and 565-568, 19 figs. Describes apparatus used; studies angles of torsion, torsion curves for elastic and permanent deformation, elastic limit of torsion, etc.

**Diffusion in Solid State and Plasticity.** The Trend in the Science of Metals, Z. Jeffries. Am. Inst. Min. & Met. Engrs.—Trans., Advance paper No. 1337-N, May 1924, 23 pp., 23 figs. Discusses diffusion in solid state and plasticity of metals.

**Machining Qualities.** A Method for Determining the Resistance of Metals to Drilling and Its Application to the Investigation of the Machinability of Metals, A. Kessner. Testing, vol. 1, no. 4, Apr. 1924, pp. 270-285, 11 figs. Describes drilling testing machine; some investigations carried out by means of Kessner machinability testing machine; standard comparison metals for drilling tests.

**Melting.** Fluxes and Slags in Metal Melting. Metal Industry (Lond.), vol. 25, no. 5, Aug. 1, 1924, pp. 101-102. Report of chief points in joint discussion of following contributions to recent symposium on slags and fluxes held by Faraday Soc. and Inst. Metals; General Introduction, Oxidizing Fluxes in Milling Non-Ferrous Metals; Slags from Lead, Copper and other Blast Furnaces, Use of Slags in Brass Melting; Slags in Melting Silver Alloys; and Sulphurizing and Desulphurizing by Basic Slags and Fluxes.

**Non-Metallic Inclusions in.** A Note on Non-Metallic Inclusions in Metals, with Special Reference to Aluminium, A. G. Lobley. Foundry Trade J., vol. 30, no. 412, July 10, 1924, p. 34. Discusses cryolite present in aluminum, nitrogen, carbon and aluminum; states that electric remelting is not harmful. Abstract of paper read at symposium on Slags and Fluxes, arranged by Faraday Soc., Inst. of Metals, Inst. of British Foundrymen and Non-Ferrous Research Assn.

**Properties.** Strength and Density of Synthetic Metal Bodies and Force of Adhesion between Metal Surfaces (Ueber Festigkeit und Dichte synthetischer Metallkörper und die Adhäsionskräfte zwischen metallischen Oberflächen), E. Jaenichen. Zeit. für Elektrochemie, vol. 30, no. 4, Apr. 1924, pp. 175-180, 6 figs. Examines strength, density and elasticity of synthetic metal bodies of copper and iron.

**Testing.** Bending Tests with Rotating Bars (Essais de flexion avec rotation du barreau pour de fortes valeurs de la flèche de flexion), M. Cretin and M. Seigle. Revue de Métallurgie, vol. 21, no. 6, June 1924, pp. 358-367, 24 figs. Discusses principle of fatigue test by rotary bending; bending tests beyond elastic deformation.

**The Jannin Method for Testing Metals as to Wear, and Its Application to Testing Antifriction Metals** (Etude de la méthode de M. L. Jannin pour l'essai des métaux à l'usure et de son application à l'essai des métaux antifriction), M. P. Nicolau. Revue de Métallurgie, vol. 21, no. 6, June 1924, pp. 347-355, 1 fig. Shows that by this method resistance to wear of anti-friction metals cannot be determined, and that application of this method is limited to rapid determination of friction conditions.

#### MICROSCOPES

**Illuminators for.** Vertical Illuminator for Microscopes. Engineering, vol. 118, no. 3053, July 4, 1924, p. 30, 3 figs. Describes vertical illuminator recently introduced by R. & J. Beck, Ltd., London, in which reflector can be moved along two lines at right angles and can also be tilted about both these axes. It is thus possible to adjust position and angle of reflector as required.

**Metallurgical.** The Microscope as an Aid in Metallurgy, F. E. Lee. Can. Inst. Min. & Metallurgy—

Bul., no. 147, July 1924, pp. 505-510, 8 figs. Application of microscope in problems arising from various operations of Tadanac Reduction Works.

#### MOTOR BUSES

**Great Britain.** British Bus Conditions. Motor Transport (Lond.), vol. 38, no. 1002, May 12, 1924, pp. 577-579, 9 figs. Outline of present motor-bus conditions in London and provinces, types of buses, single and double deckers, etc.

**Municipal 'Bus Working in Detail.** Motor Transport (Lond.), vol. 39, no. 1012, July 21, 1924, pp. 73-77, 3 figs. How organization and record keeping of Reading omnibuses insure efficiency.

**New York City.** Coach and Bus Operation in New York, J. A. Beeler. Elec. Ry. J., vol. 64, no. 6, Aug. 9, 1924, pp. 195-198, 4 figs. Details of Fifth Ave. and municipal lines; difference in service and buses; bus situation in Manhattan and Bronx.

**Reading, England.** Municipal Motor 'Bus Services and Building Development. Motor Transport (Lond.), vol. 39, no. 1010, July 7, 1924, pp. 15-16, 3 figs. When first introduced into Reading buses were regarded only as temporary system, but they promise to become permanent.

**Six-Wheel.** Unit Accessibility Features Six-Wheel Bus. Motor Transport (Phila.), vol. 30, no. 8, July 10, 1924, pp. 298-300, 4 figs. Particulars of first motor-bus model of Six-Wheel Co., Phila.; easy riding qualities, durability and easy servicing outstanding features in design; units quickly detached; steel body construction simplifies repair work.

#### MOTOR-TRUCK TRANSPORTATION

**Development.** The Position of the Motor Truck in Transportation, T. R. Dahl. Power Wagon, vol. 33, no. 236, July 1924, pp. 15-19, 2 figs. Discusses economics of trucking, savings in marketing, handling local freight, etc. Abstract of paper read before World Motor Transport Congress.

**Milk.** Transportation of Milk by Motor Truck, H. R. Trumbower. Public Roads, vol. 5, no. 5, July 1924, pp. 1-18, 11 figs. Results of survey of milk transportation for eight large cities.

#### MOTOR TRUCKS

**Brakes.** Air Brakes for Motor-Truck Trains (Die Druckluftbremse für Lastkraftzüge), T. Kollinek. Motorwagen, vol. 27, no. 18, June 30, 1924, pp. 316-318, 3 figs. Design and construction of Knorr air brake for heavily loaded trucks and trailers, acting on every wheel of train.

**Gas Producers for.** Most Recent Application of Transportable Gas Producers (Les dernières applications des gazogènes transportables), C. Mathieu. Industrie des Tramways Chemins de Fer et Transports Publics Automobiles, vol. 18, no. 210, June 1924, pp. 197-209, 18 figs. Review of latest types of gas producers for traction by road or rail.

**Steam.** Another Shaft-Driven Steam Waggon. Motor Transport (Lond.), vol. 39, no. 1010, July 7, 1924, pp. 47-49, 6 figs. Details of 6-ton truck combining best features of steam and gasoline practice, made by Mann's Patent Steam Cart and Waggon Co., Ltd.

**Trailers.** Something New in Tipping Trailers. Indian East. Engr., vol. 54, no. 5, May 1924, pp. 216-217, 5 figs. Describes "Eagle" patent two-wheeler, designed to obtain best results from Fordson and similar types of light tractors built by Eagle Eng. Co., Ltd., Warwick, Eng.

## O

#### OIL

**Cracking.** The Dubbs Process for Cracking Oil. Petroleum Times, vol. 12, no. 287, July 5, 1924, pp. 5-8, 2 figs. Principles of Dubbs process, equipment and operation, commercial results, results with heavy oils and cracking products.

**Cut Oil, Electrical Dehydration of.** The Electrical Dehydration of Cut Oil, F. D. Mahone. Am. Inst. Min. & Met. Engrs.—Trans., Advance paper No. 1354-P, July 1924, 5 pp. Much crude oil, as produced from well, carries varying amounts of water, which may be present as free water in globules sufficiently large to settle out, in time, if fluid is allowed to stand, or as an emulsion formed by myriads of minute water particles each surrounded and entrapped by a film of oil through which it cannot break under action of gravity alone. Such an emulsified mixture of oil and water is termed "cut oil." Describes apparatus for breaking up emulsion.

**Recovery.** Tube Section Treating Plant Cuts Oil Recovery Costs 6 Cents a Barrel, P. Wagner. Nat. Petroleum News, vol. 16, no. 30, July 23, 1924, pp. 71-72, 3 figs. Tube section treating installation of Humble Oil & Refg. Co. consists of four tube sections, 3 ft. long, and three plain sections, 5 ft. long; gives records of results.

**Refining.** The Use of Bauxite in Petroleum Refining. Petroleum Times, vol. 12, no. 287, July 5, 1924, pp. 17-18. Bauxite is colloidal adsorptive of first order for organic sulphur derivatives; freshly ignited bauxite gives best results; bauxite per se is complete and sufficient refining agent for kerosene; other sulphurous distillates are also capable of purification by bauxite.

**Production from Coal.** The Director of Fuel Research on Oil and Coke Production from Coal, C. H. Lander. Gas Wld., vol. 81, no. 2086, July 12, 1924, pp. 8-10 (annual coal supp.). Discusses yield and quality of oil, market for coke, and ammonia yield.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

Extract of paper read before World Power Conference.  
[See also PETROLEUM.]

## OIL ENGINES

**Solid-Injection.** Types of Modern Power-Plant Oil Engines. *Oil Engine Power*, vol. 2, no. 7, July 1924, pp. 386-388, 2 figs. Bessemer Gas Engine Co., Grove City, have joined with Atlas-Imperial Engine Co., Oakland, Cal., in manufacture of airless-injection oil engines by acquiring Eastern manufacturing rights. Gives table showing how oil engine effects savings in comparison with every other type of heat prime mover.

**Fuels, Specifications for.** Standard Specifications for Oil Engine Fuels. *Motorship*, vol. 9, no. 7, July 1924, pp. 506-508, 3 figs. Compilation of replies to communication addressed by "Motorship" to representatives of marine and stationary oil-engine industry to users of engines and oil companies on possibility of recommending uniform specifications for oil-engine fuels.

**Stationary.** Stationary Oil Engines at the British Empire Exhibition. *Oil Engine Power*, vol. 2, no. 7, July 1924, pp. 374-377, 5 figs. Discusses oil engines exhibited at British Empire Exhibition at Wembley, including airless-injection engines, both of surface-ignition and high compression kind.

## OIL FUEL

**Burners.** The Fuel Oil Burner from Fire Chief's Standpoint. A. J. Caulfield. *Fire & Water Eng.*, vol. 76, no. 4, July 23, 1924, pp. 157-158 and 180. Discusses hazards of chimney defects; accepted and unaccepted types of burners; some suggestions for better maintenance of burners. Abstract of paper read before New England Assn. Fire Chiefs.

## OIL WELLS

**Effects of Extraneous Gas on.** Effects of Extraneous Gas on Oil Wells. M. J. Kirwan. *Oil & Gas J.*, vol. 23, no. 8-A, July 17, 1924, pp. 32, 96-100, 138-139 and 142-143, 1 fig. Exhaustive study of migrating gas on oil production from Lyons sand shows output was greatly increased.

**Pechelbronn.** Mining and Refining at Pechelbronn. E. C. Isom. *Oil & Gas J.*, vol. 23, no. 10-A, July 31, 1924, pp. 124 and 140, 2 figs. Drilling wells, sinking shafts and treating sand employed to extract oil; refinery adopting many American methods.

The Oil Mines of Pechelbronn. J. F. Carter. *Petroleum Wld.*, vol. 21, no. 286, July 1924, pp. 268-270. Impressions of T. E. Swigart, superintendent of experimental station, Bur. Mines, received from inspection of this district where there are extensive oil mines as well as producing wells, to obtain information on properties of oil sands.

**Pumping.** Long Stroke Pumping and Meiers-Reesky Drive. R. E. D. Foster. *Oil Trade J.*, vol. 15, no. 7, July 1924, pp. 33-36, 86-87, 3 figs. Present day equipment; crank extension pumping. Describes H. M. A. (Meiers) geared long-stroke pump.

**Plugging.** Plugging Wells With Lead Wool; Method and Material Described. *Oil & Gas J.*, vol. 23, no. 8-A, July 17, 1924, pp. 72 and 80, 1 fig. Discusses "top" and "bottom" water, pumping water, lead wool, plugging methods, physical properties, etc.

**Rotary-Drilled.** Use of Mud-Fluid in Rotary Drilled Wells. M. J. Kirwan. *Petroleum Wld.*, vol. 21, no. 286, July 1924, pp. 265-267, 2 figs. Results of study and experiments by government engineers in Tonkawa and other fields on use of mud fluid for protecting upper oil and gas deposits cased off in wells drilled by rotary method; preparation of fluid impervious. Paper read before meeting of Tulsa Geological Soc.

## ORDNANCE

**Stores Control.** Ordnance Stores Control. L. D. Booth. *Army Ordnance*, vol. 5, no. 25, July-Aug. 1924, pp. 431-435 and 470, 5 figs. Discusses control of supplies by commanding generals of troops; shows review sheet, consolidated review records, abstract of reviews, transfer order and report of stores.

## OXY-ACETYLENE WELDING

**Boilers.** Rules of the French Associations of Steam Boiler Users for Repairing Boilers by Means of Autogenous and Electric Welding (Recommandations relatives aux réparations de chaudières à vapeur par soudure au chalumeau ou à l'arc électrique). Associations Françaises de Propriétaires d'Appareils à Vapeur-Bul., vol. 5, no. 16, Apr. 1924, pp. 91-97. Rules covering repairs permissible, choice of material and kind of welding, carrying out welds, tests.

**Industry.** Welding and Its Applications (La soudure et ses applications). *Revue de l'Ingenieur*, Feb. 1924, 128 pp., 186 figs. Series of articles by different authors dealing with production of oxygen and acetylene; apparatus used in oxy-acetylene and electric welding; micrographic study of seams; electric resistance welding; examining autogenous seams by means of x-rays; welding of aluminum; autogenous welding in naval construction, copper-smith's work, automobiles, gas holders, railroad shops, underground conduits, etc.

**Manganese Steel.** Welding of Manganese Steel. S. W. Miller. *Acetylene J.*, vol. 26, no. 2, Aug. 1924, pp. 65-71, 14 figs. Preliminary report of Gas Welding Committee of Am. Bur. Welding. Discusses what happens during welding of manganese steel, how actual operation may be best conducted and what structural results of welding are in both base metal and weld.

**Medium High-Carbon Steel.** Autogenous Welding. Ry. & Locomotive Eng., vol. 37, no. 7, July 1924, pp. 202-204, 4 figs. Investigation on steel of axles and wheels that fall under classification of medium high-carbon steel; rolled steel wheels, couplers, low-carbon steel, wrought iron, cast iron, cast-iron wheels non-ferrous metal and torch cutting.

**Monel Metal.** The Autogenous Welding of Monel

Metal by the Oxy-Acetylene Process. Machy. (Lond.), vol. 24, no. 617, July 24, 1924, pp. 528-530, 12 figs. Discusses properties of monel metal, pressure of blow-pipe, oxy-acetylene welding of rods, bars, sheets, plates and castings, and gives examples.

**Non-Ferrous Metals.** Oxy-Acetylene Welding of Non-Ferrous Metals. A. S. Kinsey. *Am. Welding Soc. J.*, vol. 3, no. 6, June 1924, pp. 27-51, 8 figs. Describes oxy-acetylene welding of copper, brass, bronze, aluminum, monel metal, nickel and lead. Bibliography.

**Pressure Vessels.** An Investigation of Welded Pressure Vessels. *Am. Welding Soc.*, bul. no. 5, June 1924, 152 pp., 120 figs. Report of Pressure Vessel Committee of Am. Bur. of Welding covering recommendations to A.S.M.E. Boiler Code Committee, comments on construction, design, hydrostatic hammer test, welding wire, tests of welded specimens, marking and stamping, etc.

**Railway Shops.** Report on Autogenous and Electric Welding. *Ry. Rev.*, vol. 75, no. 4, July 26, 1924, pp. 125-133, 23 figs. Gives results of investigations with reference to building up flat spots on steel and steel-tired wheels, building up of worn collars at journal ends of axles, and welding of fractures in couplers; recommendations affecting gas and electric welding limits and regulations of report for 1919. Paper presented before annual convention of Am. Ry. Assn., Div. V, Mechanical.

**Welding Equipment in a Railroad Shop.** J. S. Heaton. *Ry. Mech. Engr.*, vol. 98, no. 7, July 1924, pp. 430-433, 6 figs. Modern tools should be provided so that operator may perform more accurate and efficient work.

**Torch Uses.** Variety of Torch Uses. C. W. Geiger. *Welding Engr.*, vol. 9, no. 7, July 1924, pp. 22-25, 11 figs. Largest industrial firms on Pacific Coast use torch in many different and profitable ways.

**Welders, Training.** Training Course for Oxy-Acetylene Welders. *Am. Welding Soc.*, Bul. no. 4, Apr. 1924, 29 pp. Report of Committee on Training of Welding Operators of Am. Bur. of Welding.

# P

## PAINTS

**Red Lead.** Some Observations on Red Lead as a Paint Pigment. E. F. Hickson and H. R. Snoke. *Paint Manufacturers' Assn. of U. S., Sci. Sec.*, circular no. 207, July 1924, pp. 47-60, 6 figs. Discusses flow test used in conjunction with brush test for determining painting qualities of red lead. Paper read before Sec. of Paint & Varnish Chemistry at meeting of Am. Chem. Soc.

## PAPER MANUFACTURE

**Liming of Blowpits.** What Causes Liming of Blowpits? Paper, vol. 34, no. 14, July 24, 1924, pp. 605-610. Investigation of liming of blowpits in sulphite mills reveals various causes, but cold air is chief factor.

**Rag-Cooking Methods.** European Rag Cooking Methods. R. Sansone. Paper, vol. 34, no. 13, July 17, 1924, pp. 557-559, 2 figs. Account of various forms and types of boilers used in European paper mills where rags and reeds are cooked for pulp. Translated from *Papeterie*, pp. 246-253, 1924.

**Sizing.** Colloid Studies in Rosin Sizing. R. Lorenz. *Paper Trade J.*, vol. 78, nos. 23, 24, 25 and 26, and vol. 79, no. 1, June 5, 12, 19, 26 and July 3, 1924, pp. 61-66, 47-52, 43-45, 52-54 and 51-55, 13 figs. Colophony and its use; preparation of pure raw material; dispersed analysis; surface tension and internal friction; chemical equilibrium in sizing beater; flocculation phenomena of rosin sizing; action of aluminum hydrates in sizing and electrostatic sizing theory. Translated from *Papier-Fabrikant*, 1923.

**Vacuum Drying.** Drying Paper in a Vacuum. T. J. Keenan. Paper, vol. 34, no. 16, Aug. 7, 1924, pp. 699-701, 2 figs. Describes operation of Minton vacuum paper machine drier at So. Norwalk, Conn. (Norwalk Co.), paper being dried in 28 in. vacuum.

## PAPER MILLS

**Cutless Bearings for.** Cutless Bearings for Paper Mills. C. F. Sherwood. Paper, vol. 34, no. 13, July 17, 1924, pp. 565-567. Application of rubber cutless bearings as substitute for ordinary bearings on wet end of Fourdrinier machine.

**Electric Boilers and Digesters.** Electric Boilers and Digesters. R. Sansone. Paper, vol. 34, no. 13, July 17, 1924, pp. 561-562, 2 figs. Electrically operated apparatus urged for use in pulp and paper mills for steam generation and direct heating of liquors.

**Oil-Fuel Burning.** Fuel Oil Burning at Paper Mill. A. Fette. *So. Engr.*, vol. 41, no. 5, July 1924, pp. 35-41, 22 figs. Details of installation of plant of Charles Boldt Paper Mills Co., New Iberia, La., which was designed for burning coal or fuel oil.

## PATENTS

**Law.** Inventors and Patentees. J. R. Langley. *Elec. J.*, vol. 21, no. 7, July 1924, pp. 326-330. Discusses U. S. law and patent office practice, covering issue of patents, conception of inventions and reduction to practice, preservation of evidence, interferences, etc.

## PATTERNS

**Foundry.** Rapping and Drawing Patterns. B. Shaw and J. Edgar. *Mech. Wld.*, vol. 76, no. 1960, July 25, 1924, pp. 54-55, 5 figs. Discusses difference for repetition work and for jobbing work, lifting straps and how to fit them.

## PEAT

**Production.** The Utilization of Peat for Power Production. G. K. Fletcher. *World Power*, vol. 2, no. 7, July 1924, pp. 19-22. Discusses difficulties arising from moisture content, cost, and advantages of peat production.

## PETROLEUM

**Colorado.** Survey of Petroleum Progress. C. M. Rath, F. H. Lahee, H. T. Morley and J. R. Jones. *Min. & Metallurgy*, vol. 5, no. 212, Aug. 1924, pp. 378-383, 1 fig. Series of articles covering present status of petroleum industry in Colorado; New Richmond field, Navarro County, Texas; evaporation losses in field storage tanks; extensions of prospecting permits.

**Oklahoma.** The Tonkawa Field, Oklahoma. G. C. Clark and F. L. Aurin. *Am. Assn. Petroleum Geologists—Bul.*, vol. 8, no. 3, May-June 1924, pp. 269-283, 7 figs. Discusses location of Tonkawa field, history and development, surface and subsurface stratigraphy, possibilities for deeper production.

The Tonkawa Oil and Gas Field, Oklahoma. J. F. Hosterman. *Am. Assn. Petroleum Geologists—Bul.*, vol. 8, no. 3, May-June 1924, pp. 284-300, 3 figs. Discusses location, stratigraphy, structure, drilling systems, casing problems, pipe lines, development of deeper sand.

**Oregon.** Petroleum Possibilities of Western Oregon. W. DuPre Smith. *Economic Geology*, vol. 19, no. 5, Aug. 1924, pp. 455-465, 1 fig. Discusses history of drilling operations, gives tentative table of stratigraphy of western Oregon; details of prospective fields; concludes that western Oregon is territory of possible but not probable petroleum reserve.

**Evaporation Loss.** Evaporation Loss of Petroleum Theories and Their Application. J. H. Wiggins. *Am. Inst. Min. & Met. Engrs.—Trans.*, Advance paper No. 1353-P, July 1924, 8 pp. Pictures economic phase of evaporation losses and actual evaporative conditions in handling and storing crude and gasoline in United States; discusses some of the theories of physics involved in evaporation loss; and describes application of these theories to handling oil and gas on producing properties.

**New Mexico.** The Petroleum Situation in New Mexico. C. T. Kirk and E. G. Woodruff. *Oil Trade J.*, vol. 15, no. 8, Aug. 1924, pp. 30-34, 52 and 54, 1 fig. Gives general information on geology and petroleum possibilities of New Mexico; generalized tabulation of geological formations.

## PIPE

**Threading.** Pipe Threading in Oil Field Service. F. D. Bostaph. *Oil Trade J.*, vol. 15, no. 7, July 1924, pp. 40-44. Investigation shows that greater percentage of trouble develops when long threaded pieces and couplings are being screwed together in field than when shorter couplings and threads were used. Concludes that threading chasers as in use in all threading machines at present time do not reproduce pitch of their own threads on pipe in all cases.

## PIPE, CAST-IRON

**Bronze Welding in.** Bronze Welding Cast Iron Pipe in Chicago. *Acetylene J.*, vol. 26, no. 2, Aug. 1924, pp. 78-80, 9 figs. Peoples Gas Light & Coke Co. are laying 6-in. cast-iron bronze-welded gas line in Nordica Ave.; welding is accomplished by fusing tobac bronze to cast-iron pipe in band completely around joint.

**Spun.** "Spun" Iron Pipes. *Roy. Engrs. J.*, vol. 38, no. 2, June 1924, pp. 249-251, 1 fig. Details of preparing chromium-steel mold revolvable at high speed, pouring from sector-shape ladle containing exact quantity of metal for one pipe, etc.

## PIPE LINES

**Friction of.** Pipe Friction. *Mech. Wld.*, vol. 76, no. 1958, July 11, 1924, pp. 21-22, 2 figs. Discusses available formulas for calculating frictional resistance in pipe lines for water, applicable mainly to power-plant work.

**Welding.** Report on Welding of Pipe. G. O. Carter. *Am. Welding Soc.—J.*, vol. 3, no. 7, July 1924, pp. 13-19. Discusses welding applied to very extensive pipe lines, large and small plants and installations, including long oil and gas pipe, etc., organization of welding screws, cost of welding, etc.

## POWER

**Earth's Internal Heat.** Utilization of. Power from the Earth's Heat. T. T. Read. *Mech. Eng.*, vol. 46, no. 8, Aug. 1924, pp. 446-449, 8 figs. Discusses increase of earth's temperature toward its center. Gives résumé of published material about actual installations at favorable places on earth's surface, and plans proposed by well-known engineers for further development.

**New England Requirements.** Power Requirements and Source of Supply of New England. C. T. Main, H. I. Harriman and D. C. Jackson. *Boston Soc. Civil Engrs.—J.*, vol. 11, no. 5, May 1924, pp. 193-227. Report of Committee of Associated Industries of Mass., covering kinds and amount of present power, cost, available new sources, probable demand for power from new sources, probable cost of supplying it, coal prices, fuel oil for power, Diesel engine; with summary and general conclusions.

**World Power Conference.** The First World Power Conference. *World Power*, vol. 2, no. 7, July 1924, pp. 7-18. Detailed program and list of papers, June 30 to July 12, 1924.

The Significance of the First World Power Conference. *World Power*, vol. 2, no. 7, July 1924, pp. 1-6. Discusses object, focusing information on policy of main countries in development of power resources, evolution of international power policy; natural power resources.

\* Central Steel Co.
- Steel, Chromium Alloy**  
\* Central Steel Co.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

**POWER PLANTS**

**British Empire Exhibition.** Power Plants at Wembley. Power Engr., vol. 19, no. 220, July 1924, pp. 256-268, 20 figs. Survey of prime movers employed at British Empire Exhibition to furnish power and lighting to exhibitors and for other necessary services.

**The First World Power Conference** at Wembley. Power House, vol. 17, no. 15, Aug. 5, 1924, pp. 21-33, 3 figs. Complete report of deliberations of engineers from every part of globe at British Empire Exhibition and description of power plant in operation at Wembley.

**Cigar Factory.** The Power Plant of the World's Largest Cigar Factory. T. G. Thurston. Nat. Engr., vol. 28, no. 8, Aug. 1924, pp. 360-364, 8 figs. Description of H. Fendrich Inc., power plant at Evansville, Ind., largest single unit cigar factory in world, high efficiency, ease of operation and smokeless combustion; lighting, ventilation, and large number of instruments of special interest.

**Equipment Purchasing.** Purchasing Power Plant Equipment. Power Plant Engr., vol. 28, no. 15, Aug. 1, 1924, pp. 795-796. Specifications must be complete and definite. Bids must be brought to a comparative basis analysis.

**POWER TRANSMISSION**

**Electric, Norway-Denmark.** Transmission of Electric Power From Norway to Denmark. A. R. Angelo. Engineering, vol. 118, no. 3055, July 18, 1924, p. 114. In 1921 three commissions were appointed, one by Danish, one by Norwegian, and one by Swedish State, with object of investigating question of transmission of electric power from Norway to Denmark. Main points of report submitted in 1923 by a joint committee elected by these commissions for investigation of technical and financial aspects of the matter. Paper, abridged, contributed to World Power Conference.

**Wave.** Wave-Power Transmission. E. A. Barclay-Smith. Lond., Edinburgh & Dublin. Philosophica Mag. & J. of Sci., vol. 48, no. 283, July 1924, pp. 97-109, 9 figs. Discusses phenomena occurring in wave-power transmission through liquids in Constantinesco system.

**PRESSES**

**Power.** Automatic Power Presses. Machy. (Lond.), vol. 24, no. 618, July 31, 1924, pp. 545-550, 11 figs. Details of exhibit at Wembley of stagger presses for blanking and drawing from sheet stock at one stroke of press ram, incorporating Berry patent single-action deep-draw mechanism, automatic hinge press, etc.

**PROFIT SHARING**

**France.** Profit-Sharing and Recent French Legislation. P. Pic. Int. Labour Rev., vol. 10, no. 1, July 1924, pp. 1-29. Discusses act passed by French Parliament in 1922 for joint stock companies with profit-sharing schemes, and reluctance in its application.

**PULLEYS**

**Cone.** The Calculation of Cone-Pulley Diameters. H. E. Merritt. Mech. Wld., vol. 76, no. 1961, Aug. 1, 1924, pp. 66-67. Details of calculation for crossed belts and its application to open belts by means of correction determined to high degree of accuracy by simple slide-rule calculation.

**PULVERIZED COAL**

**Firing.** Experience with Coal Dust and Combustion of Pulverized Coal (Les expériences sur les poudres de houille et la combustion du charbon pulvérisé). J. A. deGrey. Revue Universelle des Mines, vol. 2 (series 7), no. 5, June 1, 1924, pp. 276-283, 2 figs. Discusses principles of burner construction, combustion chamber, use of low-grade fuels and mixtures.

**Pulverized-Coal Firing in a Billet Reheating Furnace** (Le chauffage au charbon pulvérisé d'un four poussant à billettes). Génie Civil, vol. 84, no. 26, June 28, 1924, pp. 621-623, 3 figs. Details of reconstructing furnace for reheating billets before rolling which were formerly fired with half-gas, difficulties met with, and advantages of new system.

**Plants.** Self Contained Pulverized Coal Unit. C. H. Tupholme. Power Plant Engr., vol. 28, no. 15, Aug. 1, 1924, pp. 800-801, 2 figs. Describes British development which crushes, separates, dries and delivers pulverized coal to furnace. Requires no auxiliary plant except means for rotating its spindle and provision of a supply of raw coal to hopper; low first cost and compactness; permits low-grade fuels to be burned economically.

**PUMPING STATIONS**

**Diesel-Driven.** Large Paris Pumping Plants are Diesel-Driven. Oil Engine Power, vol. 2, no. 7, July 1924, pp. 388-390, 3 figs. Gives illustrations and account of one of large oil-engined pumping plants of Paris, fitted with two 4-cylinder, 4-cycle engines belt-connected to Rateau double-suction centrifugal pumps.

**PUMPS**

**Air-Lift.** Experimental Study of Air Lift Pumps and Application of Results to Design. C. N. Ward and L. H. Kessler. Univ. of Wis.—Bul., vol. 9, no. 4, serial no. 1265, 1924, 166 pp., 60 figs. Results of experiments as to footpieces show that conditions of eduction pipe, where energy of air is expended in producing motion of water, are factors determining success or failure.

**British Empire Exhibition.** British Empire Exhibition: Pumps and Pumping Machinery. Engineering, vol. 118, no. 3053, July 4, 1924, pp. 2-5, 20 figs. partly on supp. plates. Describes high-lift turbine pumps, emergency bilge pump, and low-lift turbine pump for submerged working exhibited by Gwynnes Eng. Co., Ltd., Hammersmith; duplex pump with Twells valve gear, vertical piston cooling pump,

and duplex steam pump, of Hayward-Tyler & Co., Ltd.; and opposed-impeller extraction pump, low-lift condensate pump, and multi-stage high-lift pump, of Mirreless Watson Co., Ltd.

**Humphrey Gas Pump.** The Humphrey Gas Pump. Can. Engr., vol. 47, no. 7, Aug. 12, 1924, pp. 243-244, 2 figs. Internal-combustion engine used for pumping water; explosion of gas forces water through pipe.

**Testing.** The Comparison of Pump Tests with Special Reference to Low Head Pumps. E. F. Delery. Louisiana Eng. Soc.—Proc., vol. 10, no. 2, Apr. 1924, pp. 98-107. Lays stress on capacity and spouting velocity as related to lift in selecting or designing pumps; gives practical examples of determining efficiency.

**Vacuum.** Determining the Type of Vacuum Pump for Given Air Removal Conditions. C. M. Reed. Power, vol. 60, no. 2, July 8, 1924, pp. 52-54, 4 figs. Discusses rotative dry-vacuum pump and steam-jet pumps, and gives charts for simplified calculation of relative volumes and weights of dry air in air-steam mixtures.

**PUMPS, CENTRIFUGAL**

**Lubrication.** Oil System Specially Designed for Municipal Pumping Plant. H. R. Cady. Power, vol. 60, no. 6, Aug. 5, 1924, pp. 203-205, 3 figs. Tells why continuity of service is highly important and how low renewal cost is obtained. Gravity tank provides 15-min. supply without pump, and indicating devices check operation.

**PUNCHES**

**Dies and, Standard Sets.** Standard Punch and Die Sets, S. Diamant. Am. Mach., vol. 61, no. 5, July 31, 1924, pp. 199-201, 3 figs. Various types and advantages. Time and original cost saved by standard equipment. Abstract of paper for Metropolitan Sec. A.S.M.E., Apr. 15, 1924.

**PYROMETRY**

**Thermoelectric.** The Principles of Applications of Thermoelectric Pyrometry. L. B. Haney. Australasian Inst. Min. & Met.—Proc., no. 52, Dec. 31, 1923, pp. 185-206, 7 figs. Discusses developments, thermocouples, cold end of couples, protection and repairs of couples; methods of standardization of couples and instruments, etc.

**R****RADIATORS**

**Ammonia, Cast-Iron, Heat Transfer in.** Heat Transfer in Cast-Iron Radiator Sections for Ammonia. H. J. Macintyre. Ice & Refrigeration, vol. 67, no. 1, July 1924, pp. 42-43, 4 figs. Results of tests showing that cast iron may be made suitable for use on low-pressure side of ammonia cycle. Paper presented at west. meeting, Am. Soc. Refrig. Engrs.

**Sizes, Calculation of.** A Speedy and Accurate Method of Figuring Radiator Sizes. P. R. Babcock. Heat & Vent. Mag., vol. 21, no. 7, July 1924, pp. 53-54, 2 figs. Gives formulas and methods.

**RAILS**

**Corrugation.** How Rail Corrugation Has Been Eliminated in Pittsburgh. I. E. Church. Elec. Ry. J., vol. 64, no. 3, July 19, 1924, pp. 83-85. Results of investigations made of circumstances under which in past corrugation developed and track structure was designed to prevent its recurrence.

**Life of.** Securing the Maximum Life of Rail in Track. B. M. Cheney. Eng. & Contracting (Railways), vol. 62, no. 1, July 16, 1924, pp. 129-133. Average age of rail varied from 5.6 to 13.6 yr.; gives factors that determine length of service.

**Treated and Untreated.** Mill Treatment Doubles the Life of Rail. Elec. Ry. J., vol. 64, no. 4, July 26, 1924, pp. 123-125, 1 fig. Service tests made by Boston Elevated Ry. show wear on Sandberg sorbitoric rail to be only about one-half that on untreated rail in same track; cost of treated rail is slightly higher.

**RAILWAY ELECTRIFICATION**

**British Empire Exhibition.** First World Power Conference. Ry. Gaz., vol. 41, no. 4, July 25, 1924, pp. 121-124, 2 figs. Abstracts of papers on electrification of railways read at British Empire Exhibition. Electric Traction in Italy, F. Tajani; Electrification of Railways in Norway, H. J. Schreiner; Power problems of Sweden Railways, I. Ofverholm.

**France.** Electrification of Suburban Lines to the West of Paris (L'électrification des lignes de la banlieue Ouest de Paris). Industrie des Tramways, Chemins de Fer, et Transports Publics Automobiles, vol. 18, no. 210, June 1924, pp. 184-190, 12 figs. Details of electrification of state railways; permanent way, rolling stock, electric equipment.

**Switzerland.** Present Status of Railway Electrification of the Federal Swiss Railroad (L'état actuel de l'électrification des chemins de fer fédéraux suisses). Génie Civil, vol. 84, no. 26, June 28, 1924, pp. 609-614, 7 figs. Also Elec. Ry. & Tramway J., vol. 50, no. 1242, June 13, 1924, pp. 273-277, 6 figs. Progress in electrification; working current, single-phase 15,000-volt, 16 $\frac{2}{3}$  periods, generated in hydroelectric power stations; 525 out of 2900 km. are now electrified.

**RAILWAY MANAGEMENT**

**Accounting.** The New Problems of the Accounting Officer. A. J. County. Ry. Age, vol. 77, no. 3, July 19, 1924, pp. 109-112. Reduction in statistical requirements and simplification offer greatest opportunity for study. Abstract before Ry. Accounting Officers' Assn. annual mtg.

**RAILWAY MOTOR CARS**

**Diesel-Electric.** Modern Railway Motor Car (Moderne Triebwagen). M. Rintelen. Fördertechnik u. Frachtverkehr, vol. 17, no. 12, June 18, 1924, pp. 161-162. Discusses Diesel-electric cars and new speed gears of A. E. G.

**France.** Traction on Rail Tracks by Means of Liquid-Fuel Engines (La Traction sur voi ferrée par moteurs à combustibles liquides). E. Brillié. Société d'Encouragement pour l'Industrie Nationale—Bul., vol. 136, no. 3, Mar. 1924, pp. 217-278, 145 figs. Describes construction of Diesel engines, etc., types of transmission and their efficiency; gives illustrations and details of large number of engines for locomotives, railway motor cars, locotractors, etc.

**Gasoline.** Petrol Rail Car Development. Tramway & Ry. Wld., vol. 55, no. 30, June 19, 1924, pp. 290-293, 8 figs. Describes Brill model no. 55 gasoline rail car; overall length 43 ft. 5 in., width over posts 8 ft. 4 in., height from rail to top of roof 10 ft. 5 in., passenger compartment seats 46; engine is four-cylinder, four-cycle, heavy-duty type, developing 41.8 hp. at 800 r.p.m.

**Two Unit Gasoline Motor Train.** Ry. & Locomotive Eng., vol. 37, no. 7, July 1924, pp. 195-196, 2 figs. Maryland and Delaware Coast Ry. equipping entire system with gasoline motor coaches and freight trucks. First to be put in operation between Queens-town, Md. and Lewes, Del. is two-car all-steel train consisting of motor trailer built by Four Wheel Drive Auto Co.

**Improvements.** Improvements in Motor Car Design. H. Dubath. Elec. Ry. J., vol. 64, no. 7, Aug. 16, 1924, pp. 251-253. Trends in design of electric-railway rolling stock considered from standpoints of first cost and maintenance; bodies, running gear, ball and roller bearings, brakes and other parts discussed. Abstract of paper read before Union Internationale de Tramways, de Chemins de fer d'Intérêt local et de Transports Publics Automobiles.

**RAILWAY OPERATION**

**Cost Control.** Cost Control for the Mechanical Department. G. W. Armstrong. Ry. Mech. Engr., vol. 98, no. 8, Aug. 1924, pp. 459-463, 2 figs. Cost knowledge and production control bring about improvement in railroad operating costs.

**Hot-Box Prevention.** Maintenance the Key to Hot Box Prevention. M. S. Roberts. Ry. Mech. Engr., vol. 98, no. 8, Aug. 1924, pp. 474-476, 4 figs. Discusses hot-box prevention, regular inspection of journals, bearings, boxes, wedges, etc.

**Train Control.** I. C. C. Modifies Train Control Order. Ry. Signaling, vol. 17, no. 8, Aug. 1924, pp. 304-308. New roads in second order exempted, permissive feature of train stop re-inserted in specifications.

**New Design of Brookins Train Control.** Ry. Elec. Engr., vol. 15, no. 8, Aug. 1924, pp. 257-260, 7 figs. Featuring normally raised descending-type shoe and flexible brush contact, Brookins Ry. Corp.

**Train Despatching.** Modern Methods in Train Despatching. J. C. Latham. Elec. Communication, vol. 3, no. 1, July 1924, pp. 57-68, 13 figs. Describes Western Electric selector, consisting of a simple electromagnetically operated stepping mechanism which permits calling of any station without affecting others; portable telephones supplied to crews of passenger and freight trains; describes selector train-despatching system on railroads in different parts of world.

**Train Loads, Maximum.** Maximum Train Loads. Ry. Rev., vol. 75, no. 6, Aug. 9, 1924, pp. 205-209. Report of committee for purpose of establishing quick and practicable method of adjusting tonnage ratings for various locomotives under different conditions of grade and alignment.

**RAILWAY REPAIR SHOPS**

**Driving-Rod Repairs.** Modern Practice in Driving Rod Repairs. Ry. Rev., vol. 75, no. 7, Aug. 16, 1924, pp. 236-244, 23 figs. Describes methods employed in various shops for manufacturing new rods, using some of the more modern machines, in connection with other practices followed in repairing driving rods; installations of modern shop equipment tend to simplify maintenance operations.

**Turbo-Generator Repairs.** Headlight Maintenance on the Nickel Plate. H. A. Leatherman. Ry. Elec. Engr., vol. 15, no. 7, July 1924, pp. 217-218, 5 figs. Describes methods of repairing all turbo-generator work for two divisions of average length done at Stony Island shops of New York, Chicago & St. Louis, Ry.

**RAILWAY SHOPS**

**Delivery of Material.** Store Delivery of Material to Users at Shops. J. E. Peery. Ry. Rev., vol. 75, no. 5, Aug. 2, 1924, pp. 155-159, 5 figs. Results obtained on Southern Pacific system indicate possibilities of substantial savings through this service.

**Design.** Design of Shops and Locomotive Terminals Committee's Report. Can. Ry. & Mar. Wld., no. 317, July 1924, pp. 326-327. Report of Am. Ry. Assn. committee recommended practice.

**Layout.** Some Questions in Modern Shop Design. E. Wanamaker. Ry. Mech. Engr., vol. 98, no. 8, Aug. 1924, pp. 486-488. Flexibility of arrangement with view to probable future expansion is important consideration.

**Locomotive.** Locomotive Shops Reconstructed on D. & R. G. W. Ry. Mech. Engr., vol. 98, no. 8, Aug. 1924, pp. 491-496, 9 figs. Program includes additions to general repair plants at Denver and Salt Lake City.

**Scrap Reclamation.** The Disposition of Discarded Material. H. C. Stevens. Ry. Rev., vol. 75, no. 3, July 19, 1924, pp. 87-91, 17 figs. Discusses possibilities in reclamation of various items of scrap by installation of modern labor-saving devices, together with possible savings, if importance of conserva-

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

tion and reclamation is recognized and conceded by placing work under supervision of aggressive, studious, mechanical man with proper material knowledge. Gives some methods employed by Wabash Ry.

#### RAILWAY SIGNALING

**Double-Wire.** The Double-Wire Working of Points and Signals. Ry. Engr., vol. 45, no. 535, Aug. 1924, pp. 283-285, 6 figs. Shows how first cost of signaling and of its subsequent maintenance may be reduced; points and signals are easier to move; signals are compensated when "on" and when "off," and they are definitely restored instead of going "on" by gravity; insures that signals do not stick "off."

**Flagging.** Why Continue Flagging in Automatic Territory? J. L. White. Ry. Age, vol. 77, no. 4, July 26, 1924, pp. 149-151. Shows that in automatic signal territory continued use of flagging rule creates a divided responsibility that causes collisions; suggests that placing of responsibility squarely on engine man will to a large extent diminish rear-end collisions.

**Great Britain.** Railway Signalling and Its Development. A. F. Bound. Inst. of Transport—Jl., vol. 5, no. 4, Feb. 1924, pp. 168-176. Discusses block and interlocking systems; low-pressure pneumatic, electro-pneumatic, all-electric, and electromechanical and other systems.

**Interlocking.** N. P. Interlocking at Minneapolis, C. A. Christofferson. Ry. Signaling, vol. 17, no. 8, Aug. 1924, pp. 301-302, 7 figs. Floating charge reduces required battery capacity; locking and electric lighting circuits simplified.

**New York, New Haven & Hartford.** Signal Development in Connection with Single Phase Propulsion, W. P. Follett. Ry. Signaling, vol. 17, no. 8, Aug. 1924, pp. 315-319, 4 figs. Discusses alternating-current signaling to meet special characteristics caused by electric operation.

#### RAILWAY TIES

**Forecasting Requirements for.** How a Road Can Forecast Its Tie Requirements, E. Stimson. Wood Preserving News, vol. 2, no. 7, July 1924, pp. 109-112. Average life for untreated ties is 9 1/2 yr. and 16 yr. for treated ties. Tables estimating cross-tie requirements of B. & O. for 1922 and 1923 and cross-tie renewal experience and projection for B. & O.

**Treatment.** Comparative Tests with Wooden Railway Ties Impregnated with Tar Oil or Basilit (Vergleichsversuche an Holzwischeln, die mit Teeröl oder Basilit getränkt sind), H. F. Maas-Gesteranus. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, no. 4, Apr. 15, 1924, pp. 74-78. Results of tests with tar-oil ties and basilit ties after 10 years service show basilit to be more economical as impregnating material. It consists of 89 sodium fluoride and 11 parts dinitrophenol-aniline.

**The Dhillan Creosoting Plant,** H. L. Woodhouse. Roy. Engrs. Jl., vol. 38, no. 2, June 1924, pp. 205-210. Discusses creosoting and creosoting plant of Northwestern Ry. of India, methods, costs, fire protection, etc.

#### RAILWAY TRACK

**Stresses in.** Track Stresses, C. T. Ripley. Ry. & Locomotive Eng., vol. 37, no. 7, July 1924, pp. 208-210, 2 figs. Series of stremmatograph tests made on large electric locomotives. First series of tests made on and near horseshoe curve in New Mexico on tangent track and 6-deg. and 10-deg. curves, showed that some high stresses were obtained under these locomotives, especially on 10-deg. curves.

**Transfer Tables.** 35-Ton Electric "Surface" Transfer. Engineer, vol. 138, no. 3577, July 18, 1924, pp. 84-85, 2 figs. Describes transfer table constructed by S. H. Heywood & Co., Ltd., Reddish, Eng., for Bengal-Nagpur Ry. Co's workshops at Khargpur, for transferring rolling stock on parallel tracks.

**Turntables.** Turntable Renewal is Accomplished Under Difficulty, R. C. Henderson. Ry. Eng. & Maintenance, vol. 20, no. 8, Aug. 1924, pp. 300-302, 7 figs. Baltimore & Ohio Ry., Lima, Ohio, replaced 90-ft. turntable by one having length of 100 ft.

#### REAMERS

**Taper Machine.** Taper Machine Reamers, F. Cooke. Machy. (Lond.), vol. 24, no. 615, July 10, 1924, pp. 449-452, 5 figs. Motion of a reamer; positive value; natural and negative value teeth; stability from spiral teeth.

#### REFRACATORIES

**Research Committee Report.** Report of Refractory Materials Joint Research Committee. Gas. Jl., vol. 167, no. 3191, July 9, 1924, pp. 17-36 and (discussion) 36-38 (supp.), contains abstracts of following papers: Storage of Silica Refractories, W. J. Rees; Relation between Ordinary Refractoriness, Under-Load Refractoriness, and Composition, Physical and Chemical, of Refractory Material, A. J. Dale, 11 figs.; Refractoriness Under Load, J. W. Mellor, 2 figs.; Sedimentation as a Means of Purifying Clay, S. R. Hind; Effect of Repeated Burning on Structure and Properties of Lime-Bonded Silica Bricks, W. Hugill and W. J. Rees, 10 figs.; Some Causes of Variation in Sizes of Refractories—Bricks and Block, J. W. Mellor, 3 figs.; Thermal Conductivity and Some Other Properties of Two Commercial, Heat-Insulating Bricks Used in Kiln Construction, A. T. Green, 5 figs.; Influence of Texture on Transmission of Heat Through Firebricks, A. T. Green, 12 figs.

#### REFRIGERANTS

**Methyl Chloride.** A Heat Chart for Methyl Chloride, T. M. Gunn. Refrig. Wld., vol. 59, no. 7, July 1924, pp. 15-18. Advantages and properties of methyl chloride and explanation of chart; with diagram more common problems of refrigeration may be worked out almost without calculation.

**Thermodynamics.** Comparison of Thermody-

namic Characteristics of Various Refrigerating Fluids, W. H. Carrier and R. W. Waterfall. Refrig. Eng., vol. 10, no. 12, June 1924, pp. 415-424, 12 figs. Comparison and analysis of refrigerating cycles of various fluids using ideal Carnot cycle as standard, also their adaptability for positive or centrifugal compression. Paper read before Am. Soc. Refrigerating Engrs.

#### REFRIGERATING MACHINES

**Compression.** Recent Improvements in Refrigerating Apparatus, F. Ophuls and G. A. Horne. Refrig. Eng., vol. 2, no. 1, July 1924, pp. 1-13, 8 figs. Deals with that part of ammonia-compression refrigerating system in which ammonia is transferred to compressor, from there to condenser, then to receiver and finally liquid is returned to expansion, pressure-reducing or liquid-regulating valves of system. Paper read before Fourth Int. Congress of Refrigeration.

**Evaporated-Water.** Refrigeration with Evaporated Water. Nautical Gaz., vol. 107, no. 3, July 19, 1924, p. 76 (tech. sec.), 3 figs. Details of new Westinghouse-Leblanc apparatus which does not require chemicals.

#### REFRIGERATING PLANTS

**Ammonia Tables, Use of.** Using the Ammonia Tables, J. E. Starr. Power, vol. 60, no. 3, July 15, 1924, pp. 91-92. Gives tables showing properties of saturated and superheated ammonia—saturated-ammonia table containing also gas pressure—and explains their use.

**Ice-Cream.** World's Largest Ice Cream Plant, T. Mitchell. Refrig. Wld., vol. 59, no. 7, July 1924, pp. 11-14 and 36, 15 figs. Illustrated description of Breyer Ice Cream Co.'s new plant in West Phila., Pa., equipped to make 14,000,000 gal. a year.

**Research Plants.** Refrigeration for Research Work, S. R. Winters. Ice & Refrigeration, vol. 67, no. 1, July 1924, pp. 14-15, 2 figs. Describes experimental refrigerating plant at Bur. Animal Industry of U. S. Dept. Agriculture, Washington, D. C.; considerations of temperatures required; description of equipment; improvement of foods due to research work.

#### REFRIGERATION

**Fish.** A Modern Fish Freezing Plant, P. W. Petersen. Refrig. Eng., vol. 10, no. 12, June 1924, pp. 425-431, 10 figs. Describes Petersen methods using brine tanks, the brine not coming in contact with the fish, however; gives results obtained.

#### RIFLES

**Bolt Manufacture.** Manufacture of the Bolt of the Springfield Rifle, E. McFarland. Mech. Eng., vol. 46, no. 8, Aug. 1924, pp. 463-470 and (discussion) 470-471, 19 figs. Methods employed in manufacture of bolt of Springfield rifle form an example of highly specialized use of tools, jigs, fixtures, and gages which is typical of gun-making industry. Describes a number of machining operations which are particularly adapted to gun manufacture, but which at same time may find some application in other lines of production. Particulars of system of gaging used.

#### ROLLING MILLS

**Blooming Mill.** Mechanical and Electrical Analyses of 40 Inch Blooming Mill Screwdown, F. D. Egan. Iron & Steel Engr., vol. 1, no. 7, July 1924, pp. 371-379, 42 figs. Electrification of 40-in. blooming mill of Lackawanna plant of Bethlehem Steel Co., replacing all steam and hydraulic drives.

**Cooling Beds.** Automatic Cooling Beds (Automatische Kühltbetten), H. Hiltnerhaus. Stahl u. Eisen, vol. 44, no. 27, July 3, 1924, pp. 777-786, 8 figs. Discusses arrangement of cooling beds and describes various types, including the Morgan, Edwards and Teba.

**Hot-Strip.** A New 20-16 in. Hot Strip Mill, N. Jones and G. P. Wilson. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 8, Aug. 1924, pp. 710-715, 9 figs. Details of new plant of West Lechburg Steel Co., Pa. designed for thin strips, including outdoor substation equipment, with motors, speed regulations, etc.

#### ROLLS

**Alloy-Steel.** Producing Hardened and Ground Rolls, J. R. Adams. Abrasive Industry, vol. 5, no. 7, July 1924, pp. 168-170, 6 figs. Discusses rolls of composition C 0.70 to 1.25, Mn 0.20 to 0.40, Si 0.15 to 0.30, Cr. 1.50 to 2.50 per cent, their production in electric furnace, hardening of surfaces, grinding, and microscopic and scleroscopic and other tests.

**Casting.** Vertical Pouring of Rolling-Mill Rolls (La coulée en chute appliquée aux cylindres de laminaires). Fonderie Moderne, vol. 18, June 1924, pp. 143-146, 5 figs. Used in place of bottom casting, in metal mold, with hottest part at top.

#### ROOFS

**Sawtooth Construction.** A Modern Type of Saw-Tooth Roof Construction. Am. Architect, vol. 126, no. 2449, July 2, 1924, pp. 25-29, 12 figs. Two sets of trusses are used, transverse and longitudinal. Illustrated by examples designed by Ballinger Co., Phila., Pa.

## S

#### SCREWS

**Whitworth.** Whitworth Screws, M. H. Sabine. Machy. (Lond.), vol. 24, no. 618, July 31, 1924, pp. 562-565, 1 fig. Details of dimensions, efficiency and other data in tabular form.

**Wood.** Production Data in Manufacturing Wood Screws, W. Richards. Can. Machy., vol. 31, no. 27, July 3, 1924, pp. 25 and 43, 3 figs. Description of

manufacture of steel wood screws and production data for every operation. All operations performed automatically. Machines of each class arranged in batteries to facilitate work.

#### SEAPLANES

**Development.** Airmanship At Sea. Roy. Aeronautical Soc.—Jl., vol. 28, no. 163, July 1924, pp. 450-474. Discusses early development of seaplanes, their accomplishments and shortcomings, mooring-out seaplanes, etc.

#### SHAPERS

**New Type.** New 10-inch Stroke Shaping Machine. Machy. (Lond.), vol. 24, no. 615, July 10, 1924, p. 463, 3 figs. Describes machine recently constructed by Ormerods' Tool Co., Ltd., Hebden Bridge, for use in Doncaster Technical College workshop, embodying some rather unusual features introduced with specific object of increasing educational value of machine, and including in a traversing-head machine certain features usually associated with pillar type.

#### SPRINGS

**Annular.** Annular Springs (Die Ringfeder, ein neues Maschinenelement), C. Wetzel. Schweizerische Bauzeitung, vol. 84, no. 3, July 19, 1924, pp. 33-35, 3 figs. Describes new machine element, giving examples of its application and table for calculating number of springs for given load.

**Coil.** Coil Spring Calculations. Machy. (Lond.), vol. 24, no. 618, July 31, 1924, pp. 566-567, 3 figs. Discusses calculation of springs for measuring instruments for valves used in internal-combustion engines; gives chart for design of coil springs of circular-section wire.

**Failures.** Causes of Spring Failures, J. W. Rockefeller. Machy. (N. Y.), vol. 30, no. 12, Aug. 1924, pp. 965-966, 3 figs. Fatigue as a cause of failure; designing a spring to lift a dead weight; failure due to faulty material.

#### STANDARDIZATION

**Germany.** Standardisation in Germany, F. Neuhäus. Engineering, vol. 118, no. 3056, July 25, 1924, pp. 149-151. Describes in detail inauguration and work of Standards Committee of the German Industry (N. D. I.) of establishing fundamental standards, and refers briefly to several cases of special and international standardization. Paper, abridged, contributed to World Power Conference.

#### STEAM

**High-Pressure.** Extra-High Pressure Steam. Power Engr., vol. 19, no. 220, July 1924, pp. 247-250, 4 figs. Study of technology and economics of new development in power plant practice, abstracted from Münzinger's recent book.

**High Pressure Steam (Hochdruckdampf),** O. Günther. Kraftmaschine, vol. 21, no. 12, June 25, 1924, pp. 123-124, 1 fig. Discusses direction of development, question of safety in operation, advantages of high pressure, construction of maximum-pressure boilers and turbines.

**Research.** Steam Research Promises Much for Power-Plant Engineers, P. W. Swain. Power, vol. 60, no. 6, Aug. 5, 1924, pp. 200-203. By Bur. of Standards, M. I. T., and Harvard for constructing and extending steam tables.

#### STEAM POWER PLANTS

**Crossett, Ark.** One New Industrial Power Plant Replaces Seven, C. B. Gorton and F. R. Innes. Power Plant Eng., vol. 28, no. 15, Aug. 1, 1924, pp. 784-791, 16 figs. Electrification of lumber mill of Crossett Lumber Co., of Crossett, Ark., necessitated scrapping 24 old boilers and an old generator. Details of equipment and materials used.

**High Pressures and Superheats.** High Pressures and High Superheats, W. G. Noack. Brown Boveri Rev., vol. 11, nos. 2 and 3, Feb. and Mar. 1924, pp. 23-30 and 54-63, 22 figs. Their evolution and application in steam power plants. Possible improvement of efficiency of ideal steam engine by increasing initial pressure and temperature; regenerative feedwater heating with steam bled from intermediate stages of turbine; turbines for high pressures and superheats; governing; steam generators and accessories for high pressures.

#### STEAM TURBINES

**Auxiliaries, Motor Drives for.** Motor Drives for Turbine Auxiliaries, H. W. Smith. Power Plant Eng., vol. 28, no. 15, Aug. 1, 1924, pp. 807-810, 5 figs. Modern practice in application and control of motors for auxiliary drives.

**Characteristic Curves.** Characteristic Curves of Steam Turbines, J. Y. Dahlstrand. Power Plant Eng., vol. 28, no. 15, Aug. 1, 1924, pp. 797-799, 7 figs. Understanding of fundamentals and factory test curves will enable one to figure effects of changed operating conditions.

**Disks, Axial-Vibration Prevention.** The Protection of Steam-Turbine Disks from Axial Vibration. Power, vol. 60, no. 3, July 15, 1924, pp. 94-99, 13 figs. Abstract of paper by W. Campbell presented at spring meeting of A.S.M.E., Cleveland, O., May 26-29, 1924, giving details of investigation made by Gen. Elec. Co. to account for turbine-wheel failures of a peculiar and erratic nature, which could not be explained on basis of stress alone. Essential cause was found to be fatigue resulting from disk vibration whose period corresponded closely to turbine operating speed.

**High-Pressure.** New High Pressure Turbine. Pac. Mar. Rev., vol. 21, no. 7, July 1924, pp. 384-385, 5 figs. Describes new velocity stage turbine developed by DeLaval Steam Turbine Co., Trenton, N. J., especially adapted to modern practice in high-pressure, high-temperature steam.

**Marine.** See MARINE STEAM TURBINES.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1923-24 Volume

**STEEL**

**Automobile.** Stainless Steel for Automobiles. Automobile Engrs., vol. 14, no. 191, July 1924, pp. 201-202, 1 fig. Discusses properties, heat treatment, advantages and disadvantages of stainless steel.

**Chrome.** See CHROME STEEL.

**Chrome-Nickel.** See CHROME-NICKEL STEEL.

**Cold-Rolled Strip.** Production of Cold Rolled Strip Steel, M. Farmer. Forging—Stamping—Heat Treating, vol. 10, no. 8, Aug. 1924, pp. 295-297. Discusses casting temperatures, segregation of elements, rolling of ingots and billets, high-speed rolling of billets and cold-rolling operations. Paper presented at Am. Soc. for Steel Treating.

**Cold-Worked, Crystal Deformation in.** Crystal Deformation in Cold-Worked Steel, H. H. Lester. Army Ordnance, vol. 5, no. 25, July-Aug. 1924, pp. 455-458, 44 figs. Preliminary study of behavior of atoms within iron crystal as it occurs in steel when metal is stressed up to and beyond elastic limit and up to and beyond yield point.

**Plates, Corrosion-Resistance Tests.** Tests Steel Plates of Leviathan, G. B. Waterhouse. Iron Trade Rev., vol. 75, no. 4, July 24, 1924, pp. 29-230, 8 figs. Chemical and physical tests made by author on samples of original German plates and English plates which had been installed in 1919 fail to show clearly why German steel resisted corrosion more successfully during 10 years of service than other steel in 5 years. Copper present and banded structure may explain resistance.

**Iron Alloys.** See IRON ALLOYS.

**Pressed.** Redevelopment in Pressed Steel Practice, M. R. Innes. Forging—Stamping—Heat Treating, vol. 10, no. 7, July 1924, pp. 262-264, 6 figs. Pressed metal has many advantages over other methods of production, but common sense must prevent detrimental effect caused by making wild claims.

**Tests.** What is Steel? A. Sauvour. Am. Inst. Min. & Met. Engrs.—Trans., Advance paper No. 1338-S, May 1924, 22 pp., 15 figs. Results of experiments conducted in Metallurgical Laboratory of Harvard University, in which twisting and tensile stresses were applied to iron and steel bars heated at middle to predetermined temperatures, temperature falling gradually toward both ends of bars.

**STEEL CASTINGS**

**Cleaning.** Cleaning Steel Castings Economically. Abrasive Industry, vol. 5, no. 8, Aug. 1924, pp. 198-200, 6 figs. Describes cleaning-room operations, consisting of sandblasting, tumbling, removing gates and risers, grinding, chipping, polishing, and inspecting, of Ohio Steel Foundry Co., Springfield, O.

**Design.** Designing Steel Castings, E. R. Young. Machy. (Lond.), vol. 24, nos. 616 and 617, July 17 and 24, 1924, pp. 501-503 and 538-540, 8 figs. Discusses pattern design, shrinkage, rib design, size and shape of castings, finish allowances, problems encountered.

**Valves.** Valve Castings Made in Steel, P. Dwyer. Foundry, vol. 52, no. 15, Aug. 1, 1924, pp. 579-583 and 605, 8 figs. Various component parts of valves for most every purpose beyond capacity of cast iron are poured from steel melted in electric furnace.

**STEEL, HEAT TREATMENT OF**

**Cast Steel.** Heat-Treatment of Steel with Special Reference to Production, J. W. Urquhart. Machy. (Lond.), vol. 24, no. 616, July 17, 1924, pp. 497-499. Discusses steel castings, their heat treatment, annealing and its effects, correct furnace design, cracked castings.

**Motor-Truck Parts.** System as Applied to the Control of Furnace Temperatures and Heat Treatment of Automobile Truck Parts, J. Sorenson. Am. Soc. for Steel Treating—Trans., vol. 6, no. 1, July 1924, pp. 77-83, 1 fig. Discusses adequate control system in inspecting raw materials and subsequent heat treatment of parts; accurate heat treatment, laboratory control in receiving of material and inspection of final product.

**Problems in.** Problems of the Heat Treater as Influenced by the Pre-Natal History of the Material, P. E. McKinney. Am. Soc. for Steel Treating—Trans., vol. 6, no. 1, July 1924, pp. 51-65, 14 figs. Discusses melting and refining processes and suggests (1) classification of material based on character of service for which intended, without regard to composition, (2) establishment of recommended practices for production of ingot material, similar to heat treatment, (3) development of methods for testing which will detect inherent defects.

**STEEL WORKS**

**Calcutta, India.** Blast Furnace Plant at Asansol, India. Iron Age, vol. 114, no. 5, July 31, 1924, pp. 254-256, 5 figs. Also Iron Trade Rev., vol. 75, no. 5, July 31, 1924, pp. 294-296, 4 figs. Two stacks with coke plant and auxiliaries of development of Indian Iron & Steel, Co. near Calcutta.

**STREET RAILWAYS**

**Cars, One-Man.** A New Idea in One-Man Operation. Elec. Traction, vol. 20, no. 7, July 1924, pp. 293-295, 3 figs. Washington Ry. & Elec. Co. develops automatic step treadle for rear exit operation to gain stamp of public approval for one-man car.

**London, England.** Latest Developments on London's Street Car System. Elec. Traction, vol. 20, no. 7, July 1924, pp. 297-301, 5 figs. Cars are of double-deck type with covered roof, seating 78 passengers; describes Charlton car shops, blacksmith shop, wheel shop, magnetic brake shoes, machine and truck shop and Greenwich power station.

**Trolley Bus, Motor Bus, and.** The Operation of Tramways, Trolley Omnibuses and Motor Omnibuses. Tramway & Ry. Wld., vol. 55, no. 30, June 19, 1924,

pp. 307-308. Gives experience, and advantages and disadvantages of each system in Birmingham.

**Trolley Derailments.** Trolley Derail Prevents Accidents, O. S. Lamb. Elec. Traction, vol. 20, no. 7, July 1924, p. 323, 2 figs. Kansas City, Kaw Valley & West. Ry. have constructed device which works in conjunction with order board, making it impossible for trainmen to proceed in disregard of orders.

**STRUCTURES**

**Effect of Wind on.** Modern Ideas on Wind Force and Roof Truss Design, A. Tomlinson. Commonwealth Engr., vol. 11, no. 10, May 1, 1924, pp. 398-401, 1 fig. Discusses ordinary theory of wind pressure on roof, modern theory of wind pressure and result of investigations. Abstract of paper read before Instn. Engrs., Australia.

**SUPERPOWER**

**Fuel Economy through.** Fuel Economy through Interconnection, N. G. Reinicker. Engrs. & Engr., vol. 41, no. 4, Apr. 1924, pp. 97-99. Paper read at conference on Economy in the Use of Fuel, held at Engrs. Club of Phila., Jan. 15, 1924.

**SUPERPOWER**

**Northeast United States, Survey of.** Northeast Superpower Studies Completed. Power, vol. 60, no. 5, July 29, 1924, pp. 179-182, 6 figs. Also Eng. Wld., vol. 25, no. 2, Aug. 1924, pp. 77-79, 1 fig. Abstract of report covering present and future power requirements of the ten northeastern states and part of Ohio, Virginia and West Virginia, with special reference to cost of delivering hydroelectric power. Report indicates growth in use of electrical power for industrial and other purposes; recommends extension of interconnection between different systems, construction of large steam plants strategically located, and development of large hydroelectric projects. See also Engineers' Committee Report on Northeastern Super-Power, Eng. News-Rec., vol. 93, no. 5, July 31, 1924, pp. 186-188, 3 figs., giving comparative costs of power through combination of different sources.

**T****TEMPERATURE CONTROL**

**Methods.** Accurate Temperature Control System, S. R. Winters. Ice & Refrigeration, vol. 67, no. 1, July 1924, pp. 10-13, 4 figs. Methods employed at Bur. of Animal Industry, U. S. Dept. Agriculture, for maintaining temperatures with accuracy of 0.1 deg. cent.; refrigerating equipment and control system.

**TESTING MACHINES**

**Tensile-Strength.** Calibration of Tensile Strength Testing Machines by Means of Test Bars (Tarage des machines de traction au moyen d'éprouvettes), M. P. Nicolau. Revue de Métallurgie, vol. 21, no. 6, June 1924, pp. 342-346. Describes new method and shows its advantages compared with older methods.

**TEXTILES**

**Water Absorption.** The Thermodynamics of Water Absorption by Textile Materials, S. A. Shorter. Textile Inst.—Jl., vol. 15, no. 6, June 1924, pp. T328-T336, 3 figs. Discusses evolution of heat by absorption of water in liquid form by textile materials and criticizes some papers on subject.

**TIRES, RUBBER**

**Molds, Manufacture of.** Machine Shops Problems in Making Tire Molds, H. P. Armonson. Can. Machy., vol. 32, no. 2, July 10, 1924, pp. 19-21 and 39, 5 figs. Also Can. Foundryman, vol. 15, No. 7, July 1924, pp. 22-24 and 34, 4 figs. Turning molds to shape; engraving tread designs. Features of production at Toronto plant of Potts Pattern and Machine Co.

**TOOLS**

**Storage.** A Practical System of Tool Storage and Control, F. A. Pope. Factory, vol. 33, no. 2, Aug. 1924, pp. 208-211, 8 figs. Shows how centralized storage, flexible shelving, mechanical handling equipment and systematic grouping of tools have in one shop given clean-cut but economical control over tools.

**TRACTORS**

**Corps.** The New Corps Tractor. Army Ordnance, vol. 5, no. 25, July-Aug. 1924, pp. 443-445, 5 figs. Experimental corps tractor delivered to Aberdene Proving Ground for test was designed and built to meet requirements of Caliber Board; tracklaying vehicle, using conventional type of track; gives general specifications.

**Roadless Transport.** Roadless Traction Progress. Motor Transport (Lond.), vol. 38, no. 1002, May 12, 1924, pp. 591-592, 3 figs. Details of new half-track creeper machine adapted to 1-ton chassis made by Roadless Traction, Ltd., Hounslow.

**Roadless Transport.** Motor Transport (Lond.), vol. 38, no. 1002, May 12, 1924, pp. 586-589, 9 figs. Details of Pavasi, Holt, Keggess, and other tractors capable of traveling over very rough ground.

**TRAFFIC**

**Congestion Relief.** City Planning and Traffic Congestion. Elec. Traction, vol. 20, no. 7, July 1924, pp. 303-307. Discusses relation which building construction and street layout bear to problem of traffic congestion; economic causes of and cures for modern bedlam in city streets.

**TUBES**

**Seamless Steel.** Manufacture of Seamless Steel Tubing, W. C. Chancellor. Engrs. Soc. West. Pa.—

Proc., vol. 40, no. 6, July 1924, pp. 217-248, 36 figs. Details of rotary piercing process as distinct from cupping process and hydraulic piercing of solid slugs, and equipment used at Ellwood City Works of Nat. Tube Co.

**V****VARNISHES**

**Automobile.** Some Attempts to Obtain More Durable Automobile Finishes, H. C. Mougey. Paint Manufacturers' Assn. of U. S., Sci. Sec., Circular no. 207, July 1924, pp. 178-182, 11 figs. Discusses black baking-enamel system and color-rubbing and finishing varnish system, cellulose nitrate materials, and tests carried out.

**The New Pyroxylin Automobile Finish.** S. D. Kirkpatrick. Chem. & Met. Eng., vol. 31, no. 5, Aug. 4, 1924, pp. 178-182, 11 figs. Describes air-drying finish as durable as enamel and of sufficiently low viscosity to be applied with pneumatic spray; a hard, glass-like surface applied at minimum cost of labor, time and equipment.

**Properties.** Varnish Studies, W. T. Pearce. Indus. & Eng. Chem., vol. 16, no. 7, July 1924, pp. 681-684, 2 figs. Studies tabular data obtained from tests to ascertain value of laboratory tests and chemical analyses in determining durability of varnishes.

**Tung-Oil.** The Alkali Increase Test for Tung Oil Varnishes, H. A. Gradner and C. P. Holdt. Paint Manufacturers' Assn. of U. S., Sci. Sec., Circular no. 206, June 1924, pp. 25-34. Discusses application of alkali increase test to commercial varnishes, and accuracy of these tests.

**VENTILATION**

**Buildings.** Ventilating Buildings on the Economizer Plan, T. N. Thomson. Plumbers Trade Jl., vol. 77, no. 2, July 15, 1924, pp. 140-144, 3 figs. Study of new method of ventilating buildings both winter and summer, using heat economies to cut down cost of ventilation.

**W****WASTE HEAT**

**Recovery.** On the Recovery of Waste Heat from Open-Hearth Furnaces by the Use of Waste Heat Boilers, T. B. Mackenzie. West of Scotland Iron & Steel Inst.—Jl., vol. 31, parts 6 & 7, Mar.-Apr. 1923-1924, pp. 90-109. Discusses heat losses in open-hearth furnaces, application of waste-heat boilers, experience in operating, savings from waste-heat boilers; discussion; bibliography.

**Utilization.** The Reciprocal Utilisation of Waste Energy, B. M. Gerbel. Engineering, vol. 118, no. 3054, July 11, 1924, pp. 75-76. Discusses cooperation of different plants for purpose of utmost joint utilization or their fuel, besides combination between works of different power and steam requirements. Abstract of paper read before World Power Conference.

**WATER POWER**

**Norway.** The White Coal of Norway. Electrician, vol. 93, no. 2407, July 4, 1924, pp. 8-11, 6 figs. Surveys Norway's water power, relation of state to its utilization, and gives details of power stations.

**Sweden.** Sweden's Water Power. Electrician, vol. 93, no. 2408, July 11, 1924, pp. 39-42, 4 figs. Deals with general electricity supply in Sweden and steps which have been taken by State to control and employ large amount of power that is available; describes various hydroelectric stations owned and operated by state and gives general power situation.

**WIRE ROPE**

**Care of.** The Wear and the Care of Wire Rope, W. Constable. Am. Contractor, vol. 45, no. 25, June 21, 1924, pp. 25-27, 9 figs. Explains right and wrong uses of wire rope and practices conducive to longevity are suggested. Paper read before meeting of Lake Superior Min. Inst.

**Economical Application of.** Wire Ropes, T. A. Taylor. Can. Min. Jl., vol. 45, no. 27, July 4, 1924, pp. 643-647, 8 figs. Principles governing economical application of steel-wire mining ropes both for winding and haulage purposes. Various types of ropes available and state of development to which each of these have been brought; reason for choice of most suitable rope under given circumstances; safety factor obtainable.

**WOOD PRESERVATION**

**Treatment.** Wood Preservation. Am. Ry. Eng. Assn.—Bul., vol. 25, no. 265, Mar. 1924, pp. 845-1066, 67 figs. Report of committee giving creosote specifications, service test records, marine piling research, preservative treatment for signal trunks and capping, creosote mixture with other oils, zinc-petroleum mixture; also report of sub-committee on marine piling investigations.

**WORLD POWER CONFERENCE**

**Proceedings.** Proceedings of the First World Power Conference. Engineering, vol. 118, nos. 3053, 3054, 3055 and 3056, July 4, 11, 18 and 25, 1924, pp. 18-20, 35-47, 77-87 and 115-124, 3 figs. Abstracts of papers presented and discussions which took place at Conference, held June 30 to July 12, 1924.

# THE ENGINEERING INDEX

(Registered United States, Great Britain and Canada)

**THE ENGINEERING INDEX** presents each month, in conveniently classified form, items descriptive of the articles appearing in the current issues of the world's engineering and scientific press of particular interest to mechanical engineers. At the end of the year the monthly installments are combined along with items dealing with civil, electrical, mining and other branches of engineering, and published in book form, this annual volume having regularly appeared since 1906. In the preparation of the Index by the engineering staff of The American Society of Mechanical Engineers some 1200 technical publications received by the Engineering Societies Library (New York) are regularly reviewed, thus bringing the great resources of that library to the entire engineering profession.

Photoprint copies (white printing on a black background) of any of the articles listed in the Index may be obtained at a price of 25 cents a page. When ordering photoprints identify the article by quoting from the Index item: (1) Title of article; (2) Name of periodical in which it appeared; (3) Volume, number, and date of publication of periodical; (4) Page numbers. A remittance of 25 cents a page should accompany the order. Orders should be sent to the Engineering Societies Library, 29 West 39th Street, New York.

(See also page 630 of this issue for supplementary items.)

## ACCIDENT PREVENTION

**Industrial.** Prevention of Accidents. Maschinenbau, vol. 3, no. 22, Aug. 28, 1924. Contains following articles: Accident Prevention on Presses, W. leVrang, pp. 795-799; Accident Prevention on Eccentric Presses, R. Wittlinger, pp. 799-801, 7 figs.; Safety of Protective Screens, G. Weber, pp. 801-802; Accident Prevention in Wood Industry, W. Wiedemann, pp. 802-804, 5 figs.; Welding of Iron Containers of Flammable Liquids, M. Fischer, pp. 804-806, 1 fig.; Organization Work of Machinery Industry for Accident Prevention, J. Free, pp. 819-821, 3 figs.; Progress in Accident Prevention in Machine Shops, J. Bleick, pp. 822-823; Activity of Technical Committee in Breslau, M. Schindler, pp. 823-826; and Accident Prevention and Labor, H. Gottschalk, pp. 826-829. (In German.)

## AIR COMPRESSORS

**Centrifugal.** Centrifugal Compressors with Steam and Electric Drive (Kreiselverdichter mit Dampf- und elektrischem Antrieb), E. Blau. Technische Blätter, vol. 14, no. 29, July 19, 1924, pp. 217-218. Discusses construction of compressors and parts; pressure-volume curves of performance; steam driving by turbines and electric driving, and their advantages.

**Development for Track Work.** Development of the Air Compressor for Track Work and the Uses to Which It Can Be Put, W. F. Nichols. Compressed Air Mag., vol. 29, no. 9, Sept. 1924, pp. 993-994, 6 figs. Describes 4-tool, 8-tool and 12-tool machines for tamping ties, drilling holes for bond wires, running up track nuts on new rail, etc. Abstract of paper read before Int. Track Supervisors' Club, Buffalo, N. Y.

**Heating, Prevention of.** Prevention of Air Compressor Heating, R. A. Cultra. Power Plant Eng., vol. 28, no. 18, Sept. 15, 1924, pp. 965-967, 4 figs. Dust drawn in with air mixes with oil and causes valves to stick, resulting in heating and loss of efficiency.

**Portable.** The "Broomaster" Portable Air Compressor. Engineering, vol. 118, no. 3057, Aug. 1, 1924, p. 179, 1 fig. Shown at Wembley exposition by Broom and Wade, Ltd.; engine and compressor, having two cylinders each, combined in a single unit.

## AIR CONDITIONING

**Drying.** Adjustment of Air to Certain Degrees of Dryness or Moisture by Means of Salts, etc., and the "Relative Drying Capacity" of the Substances as a Measure of Their Hygroscopicity (Die Einstellung von Luft auf bestimmte Trocknungs- oder Feuchtheitsgrade mit Hilfe von Salzen und ähnlichen Stoffen, und das "relative Trocknungsvermögen" der Stoffe als Mass ihrer Hygroscopicity), J. Obermiller. Zeit. für Physikalische Chemie, vol. 109, no. 3-4, May 5, 1924, pp. 145-164.

## AIRPLANE ENGINES

**Compression in.** Results of Experiments on the Increase of Compression in Airplane Engines (Résultats d'expérience sur l'augmentation de la compression dans les moteurs d'aviation), P. Dumaouis. Académie des Sciences—Comptes rendus des séances, vol. 178, no. 27, June 30, 1924, pp. 2236-2238. Confirmation of theory as to advisability of very high compression by using non-detonating fuel, like benzol, which does not detonate with oil.

**Farman.** The Farman F. 62. Flight, vol. 16, no. 34, Aug. 21, 1924, pp. 523-524, 2 figs. Describes Farman aero engine, type 12 WD, which was fitted in F. 62; engine is of "broad arrow" type with 12 cylinders in three banks of four each; cylinder bore 130 mm.; stroke, 160 mm.

**Fuel-Air Ratio, Relation to Performance.** Relation of Fuel-Air Ratio to Engine Performance, S. W. Sparrow. Nat. Advisory Committee for Aeronautics, report no. 189, 1924, 16 pp., 18 figs. Concludes that (1) with gasoline as fuel, maximum power is obtained with fuel-air mixtures of from 0.07 to 0.08 lb. of fuel per lb. of air; (2) maximum power is obtained with approximately same ratio over range of air pressures and temperatures encountered in flight; (3) nearly minimum specific fuel consumption is secured by decreasing fuel content of charge until power is 95 per cent of its maximum value.

**High-Speed.** Comparison of Three Types of Airplane Engines (Comparaison de trois types de moteurs d'aviation), M. Martinot-Lagarde. Technique Moderne, vol. 16, no. 15, Aug. 1, 1924, pp. 519-522, 4 figs. Details of design and construction of Renault, Lorraine-Dietrich and Farman engines of 400 to 600 hp., their equipment and efficiency; gives tables of principal characteristics.

**Valves and Guides.** Exhaust-Valves and Guides for Aircraft Engines, S. D. Heron. Soc. Automotive Engrs.—Jl., vol. 15, no. 2, Aug. 1924, pp. 122-132, 9 figs. Discusses valve cooling and valve and guide wear in connection with type-J air-cooled cylinder developing 48 b.h.p. at 1650 r.p.m., including internal valve cooling and methods of application, valve steels, valve guides, valve sizes, etc.

## AIRPLANE PROPELLERS

**Models, Turbine Drive for.** Turbine Drive for Propeller Models, L. H. Crook. Franklin Inst.—Jl., vol. 199, no. 1, July 1924, pp. 85-91, 6 figs. Details of construction of air turbine for U. S. Navy aerodynamic laboratory to drive propeller in 8- by 8-ft. wind tunnel with air pressure of 90 lb. per sq. in. and its successful application.

## AIRPLANES

**Albatros.** New Albatros Airplanes (Neue Albatros Flugzeuge), G. Krupp. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 13-14, July 26, 1924, pp. 126-127, 3 figs. Details of L58 for seven passengers; 260-hp. Maybach engine; speed, 150 km. per hr.; L59 for sport, 55-hp. SH engine; L66 for two, with 30-hp. engine.

**Biplanes.** Pressure Distribution Over the Wings of, and Force Measurements on, a Batson and H. L. Nixon. Aeronautical Research Committee, no. 891, May 1923, 31 pp., 21 figs. partly on supp. plate. Results of experiments show that in upper wing center sections reach critical angle before outer sections, causing relatively heavy loading near wing tips, etc.

**Blackburn-Napier "Cubaroo."** The Blackburn-Napier "Cubaroo." Flight, vol. 16, no. 35, Aug. 28, 1924, pp. 537-539, 7 figs. Describes long-distance torpedo-plane with 1000 hp. Napier "Cub" engine; span of biplane wings, 88 ft.; overall length, 54 ft.; height, 20 ft.

**Daimler.** The German Light Airplane Daimler L15 (Das deutsche Daimler-Leichtflugzeug L15), W. v. Langsdorff. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 11-12, June 26, 1924, pp. 121-122, 4 figs. Discusses development of light airplanes with low motive power based on successes of glider planes, and describes L15 glider with 7-9 hp. motor.

**Flying Boats.** See FLYING BOATS.

**Glders.** Dimensions of Gliders at the Rhön Competition 1924 (Ueber die Vermessung der Segel-

flüge im Rhönwettbewerb 1924). Luftfahrt, vol. 28, no. 3, Mar. 15, 1924, pp. 33-47, 16 figs. Series of articles on gliders and gliding questions, dynamic gliding, gliding at sea and over plains, construction of gliders, etc.

**The New Gliding Plane of the Hanover Technical High School (Das neue Segelflugzeug der Technischen Hochschule Hannover), W. Günter. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 11-12, June 26, 1924, pp. 122-124, 7 figs. Details of design; gliding angle, 1: 28.8; soaring speed 0.448 m. per sec.; weight, 75 kg.; width, 15 m.; bearing surface, 15 sq. m.**

**Helicopters.** See HELICOPTERS.

**Performance Estimation.** Charts for Graphical Estimation of Airplane Performance, W. S. Diehl. Nat. Advisory Committee for Aeronautics, report no. 192, 1924, 12 pp., 19 figs. Gives charts for estimating propeller diameter and efficiency, maximum speed, initial rate of climb, absolute ceiling, climb in 10 min., time to climb to any altitude, maximum speed at any altitude, and endurance.

## AIRSHIPS

**Man-Driven.** A Man-Driven Dirigible, U. Novile. Aviation, vol. 12, no. 9, Sept. 1, 1924, pp. 934-936. Conclusions reached by author in regard to new machine he has in mind, which he calls "cycle-airship," in which, by means of transmission devices analogous to those of bicycles, muscular force of passengers themselves would be utilized for propulsion.

**Motors for.** See GAS TURBINES, Automobiles.

**Semi-Rigid.** The Italian Semi-Rigid Airship "MR." Flight, vol. 16, no. 36, Sept. 4, 1924, pp. 550-551, 2 figs. Also Aviation, vol. 17, no. 8, Aug. 25, 1924, p. 913, 1 fig. Particulars of smallest airship in world: overall length 105 ft.; diameter 25 ft. 6 in.; capacity 33,900 cu. ft.; useful load 992 lb.; speed 40 m.p.h. May be usefully employed for short-radius scouting, experimental work, etc.

## ALLOYS

**Aluminum.** See ALUMINUM ALLOYS.

**Bearing Metals.** See BEARING METALS.

**Bronzes.** See BRONZES.

**Gun Metal.** See GUN METAL.

**Preparation.** The Preparation of Pure Alloys, R. F. Mehl. Am. Electrochem. Soc., Advance Paper No. 2, for meeting Oct. 2-4, 1924, pp. 9-36, 6 figs. Discusses metallographic data, with particular reference to effect of impurities upon electrical measurements; contamination; preparation of pure basic oxide crucibles; new method of making pure magnesia crucibles of high strength and density, for use up to 1200 deg. cent.; describes combined furnace and casting apparatus for preparation of very pure alloys in a form suitable for measurement of electrical properties; methods for measurement of thermoelectromotive force and temperature coefficient of resistance of aluminum-magnesium alloys; results of preliminary measurements of temperature coefficient of resistance and of thermoelectromotive force and its temperature coefficient, upon certain compositions of system Al-Mg.

## ALUMINUM

**Annealing.** Soft Annealing of Aluminum (Das Weichgluhen von Aluminium), H. Röhrig. Zeit. für Metallkunde, vol. 16, no. 7, July 1924, pp. 265-270, 10 figs. Discusses aluminum sheets, determination of relation between degree and velocity of becoming soft, and duration, temperature and strength of heat

# Classified List of Mechanical Equipment

## Manufactured by Firms Represented in MECHANICAL ENGINEERING

FOR ALPHABETICAL LIST OF ADVERTISERS, SEE PAGE 154

**Accumulators, Hydraulic**  
\* Farrel Foundry & Machine Co.  
Mackintosh-Hemphill Co.  
\* Worthington Pump & Machinery Corp'n.

**Aftercoolers, Air**  
\* Ingersoll-Rand Co.

**Agitators**  
Hill Clutch Machine & Foundry Co.

**Air Compressors, Receivers, etc.**  
(See Compressors, Receivers, etc., Air)

**Air Conditioning Apparatus**  
\* American Blower Co.  
\* Carrier Engineering Corp'n  
\* Clamage Fan Co.  
Sturtevant, B. F. Co.

**Air-Jet Lifts**  
\* Schutte & Koerting Co.

**Air Washers**  
\* American Blower Co.  
\* Carrier Engineering Corp'n  
\* Clamage Fan Co.  
\* Cooling Tower Co. (Inc.)  
Sturtevant, B. F. Co.

**Alloys**  
Driver-Harris Co.

**Ammeters**  
\* Bristol Co.  
\* General Electric Co.  
\* Westinghouse Electric & Mfg. Co.

**Anemometers**  
Weber, F. Co. (Inc.)

**Annealing**  
\* American Metal Treatment Co.  
\* Nuttall, R. D. Co.

**Arc Welding Equipment**  
\* Westinghouse Electric & Mfg. Co.

**Arches, Boiler Furnace**  
\* McLeod & Henry Co.  
\* Titusville Iron Works Co.

**Arches, Fire Door**  
\* McLeod & Henry Co.

**Arches, Ignition (Flat Suspended)**  
\* Combustion Engineering Corp'n  
\* McLeod & Henry Co.

**Asbestos Products**  
\* Carey, Philip Co.  
\* Garlock Packing Co.  
\* Johns-Manville (Inc.)

**Ash Lifts, Telescopic**  
\* Palmer-Bee Co.

**Autoclaves**  
\* Farrel Foundry & Machine Co.

**Babbitt Metal**  
\* Medart Co.  
\* Westinghouse Electric & Mfg. Co.

**Ball Bearings, Gages, etc.**  
(See Bearings, Gages, Ball)

**Balls, Brass and Bronze**  
\* Atlas Ball Co.  
\* Gwilliam Co.

**Balls, Steel**  
\* Atlas Ball Co.  
\* Gwilliam Co.  
\* New Departure Mfg. Co.  
\* S K F Industries (Inc.)

**Barometers**  
\* American Schaeffer & Budenberg Corp'n

**Barometers, Mercurial**  
\* Tagliabue, C. J. Mfg. Co.

**Bearings, Ball**  
\* Fafnir Bearing Co.  
\* Gwilliam Co.  
\* Marlin-Rockwell Corp'n  
\* New Departure Mfg. Co.  
\* Norma - Hoffmann Bearings Corp'n  
\* S K F Industries (Inc.)  
\* Strom Ball Bearing Mfg. Co.

**Bearings, Collar Oiling**  
Hill Clutch Machine & Foundry Co.

**Bearings, Radial Thrust**  
\* New Departure Mfg. Co.

**Bearings, Roller**  
\* Gwilliam Co.  
\* Hyatt Roller Bearing Co.

\* Norma - Hoffmann Bearings Corp'n  
\* Royersford Foundry & Machine Co.  
\* Timken Roller Bearing Co.

**Bearings, Self-Oiling**  
\* Brown, A. & F. Co.  
\* Doehler Die-Casting Co.  
\* Falls Clutch & Machinery Co.  
\* Hill Clutch Machine & Foundry Co.  
\* Jones, W. A. Foundry & Machine Co.  
\* Link-Belt Co.  
\* Royersford Foundry & Machine Co.  
\* Wood's, T. B. Sons Co.

**Bearings, Tapered**  
\* Timken Roller Bearing Co.

**Bearings, Thrust**  
\* Fafnir Bearing Co.  
\* General Electric Co.  
\* Gwilliam Co.  
\* Hill Clutch Machine & Foundry Co.  
\* Norma - Hoffmann Bearings Corp'n  
\* S K F Industries (Inc.)  
\* Strom Ball Bearing Mfg. Co.  
\* Timken Roller Bearing Co.

**Belt Dressing**  
\* Dixon, Joseph Crucible Co.  
\* Gandy Belting Co.

**Belt Lacing, Steel**  
\* Bristol Co.

**Belt Tighteners**  
\* Brown, A. & F. Co.  
\* Hill Clutch Machine & Foundry Co.  
\* Jones, W. A. Foundry & Machine Co.  
\* Link-Belt Co.  
\* Medart Co.  
\* Smith, F. L. & Co.  
\* Wood's, T. B. Sons Co.

**Belt Tighteners, Automatic**  
Hill Clutch Machine & Foundry Co.

**Belting, Canvas (Stitched)**  
\* Gandy Belting Co.  
\* United States Rubber Co.

**Belting, Conveyor**  
\* Gandy Belting Co.  
\* Goodrich, B. F. Rubber Co.  
\* United States Rubber Co.

**Belting, Elevator**  
\* Gandy Belting Co.  
\* Goodrich, B. F. Rubber Co.  
\* United States Rubber Co.

**Belting, Endless**  
\* Gandy Belting Co.

**Belting, Fabric**  
\* Gandy Belting Co.

**Belting, Rubber**  
\* Goodrich, B. F. Rubber Co.  
\* United States Rubber Co.

**Belting, Waterproof**  
\* Gandy Belting Co.

**Bending & Straightening Machines**  
\* Long & Allstatter Co.

**Bends, Pipe**  
\* Frick Co. (Inc.)  
\* Vogt, Henry Machine Co.

**Billets, Steel**  
\* Timken Roller Bearing Co.

**Blocks, Tackle**  
\* Clyde Iron Works Sales Co.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1924-25 Volume

transmission; also tensile strength, elasticity, and size of grain.

**Castings.** Casting Aluminum Cycle Parts, H. R. Simonds. Foundry, vol. 52, no. 17, Sept. 1, 1924, pp. 661-664, 8 figs. Congested condition of streets in business sections of cities has opened new fields for motorcycle. Many parts being made of aluminum to secure lightness. Notes on methods employed by Springfield Malleable Iron Co., Springfield, Mass., in modern aluminum and brass foundry recently started to care for increased demands for aluminum alloy castings and other non-ferrous foundry business.

**Properties, Effect of Cadmium on.** The Influence of Cadmium upon the Mechanical Properties of Aluminum, N. F. Budgen. Metal Industry (Lond.), vol. 25, nos. 7 and 8, Aug. 15 and 22, 1924, pp. 145-147 and 172-174, 8 figs. From results of investigations it appears that cadmium has no beneficial influence on aluminum and is not comparable with zinc in this respect. Moreover, addition of cadmium to "burnt" aluminum has no recuperative effect.

**Silicon and Iron in.** Effect of Silicon and Iron on the Properties of Aluminum (Der Einfluss von Silizium und Eisen auf die Eigenschaften des Aluminiums), J. Czochralski. Zeit. für Metallkunde, vol. 16, no. 5, May 1924, pp. 162-173, 36 figs. Research work by committee of German Soc. of Metallography; discusses metallographic and mechanical examination of aluminum samples of different contents of iron silicide and silicon eutectic; irregular distribution, capacity for rolling, etc.

**Soldering.** Processes for Combining Aluminum with Aluminum and Other Metals (Verfahren zur Verbindung von Aluminium mit Aluminium und anderen Metallen). Zeit. für die Gesamte Gieserei-praxis, vol. 45, no. 21, May 24, 1924, pp. 57-58 (Metall). Discusses soft-soldering, autogenous welding, and hard-soldering processes, their advantages and drawbacks.

**Substitute for.** Magnesium Alloy a Substitute for Aluminum. Can. Foundryman, vol. 15, no. 6, June 1924, pp. 22-23. Castings are stronger and lighter; easily machined and polished; proof against alkalis but not acids, reverse of aluminum; manganese deoxidizer of copper.

#### ALUMINUM ALLOYS

**Aluminum-Zinc.** Behavior of Aluminum-Zinc Alloys (Das Verhalten der Aluminium-Zinklegierungen), O. Bauer and W. Heidenhain. Zeit. für Metallkunde, vol. 16, no. 6, June 1924, pp. 221-228, 9 figs. Critical review of latest work on solidification and transformation of total shrinkage, resistance to shock and behavior in attack by acids, etc.; limits of range of instability of aluminum-zinc alloys, etc.

**Studies in the Aluminum-Zinc System.** T. Tanabe. Inst. of Metals, Advance paper no. 13, for Mtg. Sept. 8-11, 1924, 38 pp., 32 figs. partly on supp. plate. Describes investigation made to confirm new diagram of Hanson and Gayler, and to make clear nature of age-hardening. Mechanical properties also studied.

**The Mechanical Properties of Aluminum-Zinc Alloys Containing Cadmium.** N. F. Budgen. Chemistry & Industry, vol. 43, no. 33, Aug. 15, 1924, pp. 2737-2767. Range of alloys examined includes mixtures containing from 0 to 24 per cent Zn, 0 to 10 per cent Cd and 66 to 100 per cent Al; from certain alloys containing 10 per cent Cd, small beads of more fusible constituent exude from surface after chill casting; under hammer all specimens cracked badly above 250 deg., but those containing less than total of 18 per cent Zn + Cd forged well below this temperature.

**Castings.** Aluminum Alloy Castings from Sheet Scrap, H. C. Knerr. Am. Foundrymen's Assn., Preprint No. 417, for Mtg. Oct. 11-16, 1924, 12 pp., 7 figs. Outlines methods by which a very small foundry, started on an experimental basis, succeeded in meeting requirements for sound and dependable aluminum alloy sand castings, only scrap aluminum sheet and copper available at factory being used. Castings made were required to meet government specifications corresponding approximately to S.A.E. specifications No. 30.

**Duralumin.** See DURALUMIN.

**Properties.** Comparative Tensile Properties of Copper-Silicon-Aluminum and Other Aluminum Alloys as Obtained on Separately Cast Specimens and Specimens Cut from a Crank-Case Casting, E. H. Dix and A. J. Lyon. Inst. of Metals, Advance paper no. 4, for Mtg. Sept. 8-11, 1924, 14 pp., 21 figs on supp. plates. Particulars of investigation undertaken by Metallurgical Sec., Eng. Division U. S. Air Service, to furnish information on comparative physical properties to be expected in large castings to aircraft designers.

**Aluminum and Some of Its Physical Characteristics.** Metal Industry (N. Y.), vol. 22, no. 9, Sept. 1924, pp. 349-351. Discusses properties of alloys made by Aluminum Co. of America; aluminum die castings, and wrought aluminum.

#### APPRENTICES, TRAINING OF

**Foundry.** Apprentice Course Is Established, E. C. Kreutzberg. Iron Trade Rev., vol. 75, no. 7, Aug. 14, 1924, pp. 413-414, 2 figs. Foundrymen's Assn. of New Jersey inaugurates plan of instruction in practical foundry work to recruit ranks of iron molders in that district. Outline of course.

**Repair-Shop Mechanics.** Training Men for Automobile Repair Work, J. Younger. Am. Mach., vol. 61, no. 11, Sept. 11, 1924, pp. 423-425, 3 figs. Outline of plan used for training men for Buick service stations and showing how flat rates are set for automobile repairs.

#### AUTOMOBILE ENGINES

**Air Cleaners for.** California Air-Cleaner Tests, 1924, Series, A. H. Hoffman. Soc. Automotive Engrs.—Jl., vol. 15, no. 2, Aug. 1924, pp. 140-148, 8 figs.

Details of work of Univ. of Cal., Agricultural Experiment Station in continuation of 1922 tests, method of testing cleaners that cannot be tested by 1922 method, determining how much dust an auto or truck encounters in service, how air cleaners affect rate of engine wear, and gives tabular summary of results.

**Carburetors.** See CARBURETORS.

**Crankcase-Oil Dilution.** The Danger Point of Dilution. Soc. Automotive Engrs.—Jl., vol. 15, no. 2, Aug. 1924, pp. 117-121. Twenty-six makers report views on dilution factors and propose remedies.

**Supercharging.** Superchargers. Autocar, vol. 53, no. 1505, Aug. 22, 1924, p. 322, 2 figs. Explains type of blower used for most modern racing engines.

**Two-Stroke, Rattle.** Two-Stroke Engine Rattle, G. Funk. Automobile Engr., vol. 14, no. 192, Aug. 1924, pp. 235-236, 5 figs. Examination of its cause and remedy.

**Willys-Knight.** Willys-Knight Adds Lanchester Balancer and Increases Engine Torque, D. Blanchard. Automotive Industries, vol. 51, no. 10, Sept. 4, 1924, pp. 435-436, 2 figs. Unbalanced rotating weights located in bottom of crankcase compensate for secondary unbalanced forces on reciprocating masses. Valve timing changed and compression increased.

#### AUTOMOBILE FUELS

**France.** Economic Considerations as to the Future of Artificial Liquid Fuels in France (Considerations économiques sur l'avenir des combustibles liquides artificiels en France), M. DeCominck. Chaleur et Industrie, vol. 5, no. 50, June 1924, pp. 269-276. Discusses gasoline problem, especially in connection with coke; manufacture of liquid hydrocarbons by fixation of hydrogen on organic fossil materials; hydrogenation of solid fuel, etc.

(See also INTERNAL-COMBUSTION ENGINES, Fuels.)

#### AUTOMOBILES

**Brakes.** Four-Wheel Brakes and Low Pressure Tires Prove Worth in Grand Prix, W. F. Bradley. Automotive Industries, vol. 51, no. 8, Aug. 21, 1924, pp. 364-365, 1 fig. Discusses 14-mile course requiring twenty gear changes per lap; superchargers give considerably more power.

**Recent Patents Reveal Tendencies in Brake Design.** Automotive Industries, vol. 51, no. 12, Sept. 18, 1924, pp. 520-522, 8 figs. Outlines some recently issued foreign brake patents. Among features covered are equalization without loss of all brakes should linkage break, simultaneous operation of transmission and rear-wheel brakes and servo mechanism.

**Buick.** The New 20 H.P. Buick. Auto-Motor Jl., vol. 29, no. 34, Aug. 21, 1924, p. 708, 2 figs. Design and construction of two models of six-cylindered engines.

**Burford-Kegresse.** The Burford-Kegresse Chassis. Motor Transport (Lond.), vol. 39, no. 1018, Sept. 1, 1924, pp. 257-259, 7 figs. Constructional details and particulars of performance in strenuous drawbar tests; engine with all four cylinders in single casting has bore and stroke of 100 and 140 mm., respectively.

**Calcott.** A Completely New Calcott. Autocar, vol. 53, no. 1507, Sept. 5, 1924, pp. 421-424, 10 figs. Specifications: 12.8 hp., four-cylinder, 72-by-120-mm. detachable-head engine; single dry-plate clutch, separate four-speed gear-box transmission; detachable steel wheels with low-pressure tires.

**Chrysler.** The Chrysler Six. Auto-Motor Jl., vol. 29, no. 33, Aug. 14, 1924, pp. 685-687, 9 figs. Describes automobile having six-cylindered 68-hp. engine designed monobloc construction with bore of 3 in. and stroke of 4 1/4 in.

**Crouch.** The 12-30 H.P. Crouch. Auto-Motor Jl., vol. 29, no. 36, Sept. 4, 1924, pp. 745-747, 10 figs. Features of design of small car; engine is 20-30 hp. British Anzani, having four cylinders of 69 mm. bore and piston stroke of 100 mm.; cylinders are cast en bloc and have detachable head.

**Electric.** Electric Storage-Battery Automobiles (Les automobiles électriques à accumulateurs), A. Billaz. Vie Technique et Industrielle, vol. 5, no. 58, July 1924, pp. 232-239, 11 figs. Discusses lead and iron-nickel batteries, construction and prices, battery motors, batter trucks and their construction, operation and control.

**Test of Electric Storage-Battery Vehicles** (Essais de véhicules à traction électrique par accumulateurs), M. Rossignol. Arts et Métiers, vol. 77, no. 48, July 1924, pp. 260-265. Gives details of French competition and tables of data on principal French makes.

**Inspection.** Inspection Methods Symposium, C. S. Stark, A. H. Frauenthal and C. J. Jones. Soc. Automotive Engrs.—Jl., vol. 15, no. 2, Aug. 1924, pp. 156-162, 4 figs. Series of papers on inspection of processed materials, influence of numerous handlings on inspection cost, and maintenance of high-quality production.

**Jordan Eight.** Jordan Eight, Added to Lines of Sixes, Now in Production, D. Blanchard. Automotive Industries, vol. 51, no. 8, Aug. 21, 1924, pp. 352-354, 3 figs. L-head design is used in new engine, which has piston displacement of 268.6 cu. in. and N.A.C.C. rating of 28.8 hp.; actual hp. 74 at 3000 r.p.m.; crankshaft is carried in five bearings.

**Locomobile.** Locomobile Makes Many Detailed Changes to Lengthen Life of Car, P. M. Heldt. Automotive Industries, vol. 51, no. 9, Aug. 28, 1924, pp. 393-396, 8 figs. Six-cylinder engine now develops as high as 107 hp. on brake at 2150 r.p.m. and four-passenger stock car said to be capable of speed of 76 m.p.h.; frame stiffened and potential sources of noise eliminated; aluminum pistons, full pressure lubrication, and self-adjusting spring shackles adopted.

**Lubrication.** Saving Lubricant. Motor Transport (Lond.), vol. 39, no. 1017, Aug. 25, 1924, pp.

245-247, 8 figs. Details of system that eliminates need for lubricating many parts of chassis.

**Maybach.** The 22/70 Hp. Gearless Passenger Automobile by Maybach Motorenbau Co. (Der 22/70 PS-Personenkraftwagen ohne Schaltung der Firma Maybach-Motorenbau G.m.b.H., Friedrichshafen a.B.). Zeit. des Vereines Deutscher Ingenieure, vol. 68, no. 33, Aug. 16, 1924, pp. 841-848, 22 figs. New design for high average speed, with four-wheel brakes; speed-change gear is replaced by coupling with planetary gears, four-stroke six-cylinder gasoline engine used; details of chassis and engine.

**Minerva.** The 30 H.P. Minerva. Auto-Motor Jl., vol. 29, no. 34, Aug. 21, 1924, pp. 705-707, 9 figs. Design and construction of six-cylindered 30-hp. Minerva automobile with silent sleeve-valve engine and four-wheel braking.

**Moon.** The Latest 20 H.P. Moon. Auto-Motor Jl., vol. 29, no. 33, Aug. 14, 1924, p. 688, 2 figs. Describes latest model of Moon car, including four-wheel brakes operated on Lockheed hydraulic system, six-cylindered Continental motor, bore 3 1/4 in. and stroke 4 1/4 in., of 54 hp. at 2500 r.p.m.; power transmitted through Borg & Beck 10-in. dry-plate clutch and three-speed Warner gear box.

**Painting.** Automatic Equipment Cuts Painting Cost. Iron Age, vol. 114, no. 10, Sept. 4, 1924, pp. 555-557, 4 figs. How frames for Ford cars are cleaned, painted, dried, and delivered to freight-car door at rate of 10 a minute by means of a new painting and conveying unit recently placed in operation.

**Panhard.** A New 10 h.p. Panhard. Autocar, vol. 53, no. 1508, Sept. 12, 1924, pp. 460-461, 3 figs. Specifications: 10-hp. engine of four cylinders, 65 by 105 mm.; four-speed gear box in unit with engine; brakes on all four wheels.

**Racing.** Straight Eight, Supercharged Car Wins Grand Prix, 503 Mile Race, W. F. Bradley. Automotive Industries, vol. 51, no. 6, Aug. 7, 1924, pp. 276-279, 4 figs. Details of Sunbeam, Fiat, Alfa, Bugatti, Delage, Schmid, and Miller cars and their behavior.

**Riding Quality.** Air-Springs and the Measurement of Automobile Riding-Quality, J. J. McElroy. Soc. Automotive Engrs.—Jl., vol. 15, no. 3, Sept. 1924, pp. 211-226 and (discussion) 227-228, 29 figs. Discusses load curves, and friction characteristics; describes field tests made of front-axle movements, and apparatus for these and other tests; factors that are important in measuring riding comfort; air-spring design and construction; manufacture of air springs; installation and service.

**Steering Gears.** New Lavine Steering Gear Moves Wheels Faster Near End of Range of Motion, B. M. Ikert. Automotive Industries, vol. 51, no. 10, Sept. 4, 1924, pp. 440-441, 2 figs. Features of new series Lavine steering gears recently brought out by Lavine Gear Co., Milwaukee. Provision made for taking up lost circumference and axial lost motion. Variable reduction ratio takes care of new conditions arising from adoption of low-pressure tires.

**Studebaker.** New Studebaker Models Have Pressure Lubrication and More Power, D. Blanchard. Automotive Industries, vol. 51, no. 12, Sept. 18, 1924, pp. 512-518, 10 figs. Balloon tires, transmissions integral with engines and automatic spark timing are regular features, while four-wheel brakes with servo mechanism come as an extra. Bodies and radiators changed.

**The Studebaker Light Six.** Auto-Motor Jl., vol. 29, no. 35, Aug. 28, 1924, pp. 725-727, 11 figs. Describes latest models of Canadian-built car; wheelbase is 9 ft. 4 in.; engine and clutch are one unit, and gear box separately mounted with universally jointed shaft transmitting power to semi-floating live axle; engine has its six cylinders cast en bloc with detachable head; bore, 70 mm.; stroke, 114 mm.

#### AVIATION

**Aerial Navigation.** Accuracy in Aerial Navigation (Ueber die Genauigkeit der Luftnavigation), J. Van der Hoop. Luftfahrt, vol. 28, no. 7, July 5, 1924, pp. 117-120, 8 figs. Discusses advantages of flying below and above clouds, navigation by compass, by astronomic data and by radio, and advocates radio navigation combined with flying above clouds. Translated from Het Vliegfeld.

**Air-Mail Service.** The Air Mail and the Banker. Aviation, vol. 17, no. 7, Aug. 18, 1924, pp. 886-887, 1 fig. Details of airplane arrangements for transcontinental mail service, lighting system of powerful beacons.

**Commercial.** What Is the World Flight Going to Mean to Commercial Aviation? A. Klemin. Automotive Industries, vol. 51, no. 9, Aug. 28, 1924, pp. 397-400, 1 fig. Fire hazard has largely been eliminated, heavy loads have been carried, variegated climates with abrupt changes can be negotiated and speed and endurance are proved.

## B

#### BALANCING MACHINES

**Dynamic.** A New Balancing Apparatus (Ein neuer Auswuchtapparat), F. Punga. Elektrotechnische Zeit., vol. 45, no. 27, July 3, 1924, pp. 713-714, 5 figs. Describes new apparatus for balancing rapidly rotating bodies in which weight wanting is determined without stopping.

#### BEARING METALS

**Anti-Friction.** Anti-Friction Bearing Metals, P. W. Priestley. Automobile Engr., vol. 14, no. 192,

# Manufactured by Advertisers **CLASSIFIED LIST OF MECHANICAL EQUIPMENT** Alphabetical List on page 154

\* Grindle Fuel Equipment Co.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1924-25 Volume

Aug. 1924, pp. 225-230, 2 figs. Considers chemical, thermal, and physical characteristics of tin-base alloys.

#### BEARINGS, BALL

**Crankshaft.** How and Why Ball Bearings are Used on Car and Truck Crankshafts, P. M. Heldt. Automotive Industries, vol. 51, no. 6, Aug. 7, 1924, pp. 282-285, 9 figs. Discusses application and advantages of ball bearing and describes number of cars and trucks using them for crankshafts.

#### BEARINGS, ROLLER

**Rolling-Mill.** New Types of Bearings for Rolling Mills, D. C. Holzweiler. Iron Age, vol. 114, no. 8, Aug. 21, 1924, pp. 442-443, 5 figs. Results from application to German mill practice; staggering of special bearings; automatic lubrication. Abstracted from Stahl u. Eisen, Apr. 17, 1924.

#### BEARINGS, THRUST

**Michell.** The Pad System Applied to Large Journal Bearings, Johnstone-Taylor. Mar. Eng. & Shipp. Age, vol. 29, no. 8, Aug. 1924, pp. 476-478, 5 figs. Discusses practical application of principle; journal bearing and other applications.

#### BELT DRIVE

**Short-Center.** Short-center Belt Drives, G. A. Frenkel. Machy. (N. Y.), vol. 30, nos. 10, 11 and 12, June, July and Aug. 1924, pp. 747-753, 876-882 and 956-958, 23 figs. Deals with efficient transmission of power by belting, as determined by numerous experiments and extensive research. June: General characteristics, advantages, and methods of arrangement to meet different requirements. July: Determining coefficient of friction and procedure in designing drive for transmitting given amount of power. Aug.: Tension rollers and their bearings; arms, equalizing weights, fulcrum stands and shock absorbers. See also Machy. (Lond.), vol. 24, nos. 612, 615 and 620, June 19, July 10 and Aug. 21, 1924, pp. 353-358, 457-462 and 645-647, 23 figs.

#### BLAST-FURNACE GAS

**Cleaning.** Experiments with Electric Cleaning of Gas at Lübeck Blast Furnaces (Versuche an einer elektrischen Gasreinigung beim Hochofenwerk Lübeck), J. Dreher. Stahl u. Eisen, vol. 44, no. 30, July 24, 1924, pp. 873-879, 6 figs. Discusses experimental plant of Lurgi type and gives results of tests showing that cleaning of blast-furnace gas by means of electricity is possible technically even under unfavorable circumstances. Difficulty of dust question, general conclusions as to advantages of electric cleaning over previous systems.

#### BLAST FURNACES

**Charging.** Automatic Charging Devices for Blast Furnaces (Aufgabe-Vorrichtungen für Hochofen), D. H. Dresler. Stahl u. Eisen, vol. 44, no. 33, Aug. 14, 1924, pp. 973-976, 8 figs. Discusses importance of uniform distribution of gases; favorable operating results with charcoal furnaces in Stearnark and Sweden; details of new devices for any desired distribution of charge; results obtained.

#### BLOWERS

**Blast-Furnace, Reconstruction of.** Reconstruction of Blast-Furnace Blowing Engines, W. Benedict. Power, vol. 60, no. 8, Aug. 19, 1924, pp. 290-291, 4 figs. By substitution of plate spring valves for heavy rotary valves and gearing, speed was increased from 75 to 95 r.p.m. and capacity correspondingly increased on six 3200-hp. twin blowing engines.

#### BOILER FEEDWATER

**Treatment.** Electrolytic Boiler Protection (Der Elektrolytesschutz), H. Manz. Wärme, vol. 47, nos. 28 and 29, July 11 and 18, 1924, pp. 325-327 and 338-340. Discusses results of experiments with Renger-Fuhrmann process on number of boiler plants showing that out of twenty cases only four were satisfactory. Suggests combination of electrolytic with chemical process.

**Investigation of Boiler-Water Treatment.** R. E. Hall. Power Plant Eng., vol. 28, no. 16, Aug. 15, 1924, pp. 843-845, 2 figs. Boiler-water conditioning viewed from standpoint of chemical equilibria of inorganic salts; details of tests, 42 days with permanently hard water and 76 days of temporary hard water.

**Use of Linseed as Water Softener** (Emploi de la graine de lin comme anti-tartre), M. Courdrier. Chaleur et Industrie, vol. 5, no. 51, July 1924, pp. 325-329, 3 figs. Test carried out by French Navy; linseed is boiled in steam and used for reducing salt content of sea water; details of process and apparatus used.

**Water Purification at the Gennevilliers Central Station** (L'épuration de l'eau d'appoint à la Centrale de Gennevilliers), Chaleur et Industrie, vol. 5, no. 50, June 1924, pp. 277-279, 4 figs. Details of feedwater treatment and apparatus used, based on two years' practical working and giving entire satisfaction.

#### BOILER FURNACES

**Air Preheaters.** Ljungström's Preheater (Ljungströms luftförvarmer), J. F. Johansen. Ingeniören, vol. 33, no. 28, July 12, 1924, pp. 329-333, 9 figs. Device for continuous transmission of heat of combustion product to fresh air on its way to combustion chamber. Superiority of this device as compared to economizer is emphasized.

**Combustion Control.** Controlling Combustion by Temperature, G. Simmons. Power Plant Eng., vol. 28, no. 17, Sept. 1, 1924, pp. 906-908, 4 figs. Furnace and exit gas temperatures control dampers and fuel feed through thermocouples.

**German.** Recent Developments in German Furnace Construction for Steam Boilers (Die neuere Entwicklung des deutschen Feuerungsbaues für Dampfkessel), H. Franke. Archiv für Wärmewirtschaft,

vol. 5, no. 7, July 1924, pp. 121-126. Discusses developments before, during, and after war, lignite firing, pulverized-coal firing, etc.

**Low-Grade Fuel.** Investigation of Chain Grates and Ignition Arches for Low-Grade Fuels (Untersuchungen an Wanderrosten und Zündgewölben für minderwertige Brennstoffe), F. Ebel. Glückauf, vol. 60, nos. 25, 26 and 27, June 21, 28 and July 5, 1924, pp. 507-510, 541-544 and 561-566, 27 figs. Gives results of 3 series of experiments for evaporation tests, analysis of fuel, heat balance, flue-gas analysis; tables of observed and calculated data; conclusions as to requirements of boiler plant firing low-grade fuel.

#### BOILER OPERATION

**High Ratings.** Boiler Operation at High Ratings, H. A. Reichenbach. Blast Furnace & Steel Plant, vol. 12, no. 8, Aug. 1924, pp. 354-359, 10 figs. Trumbull Steel Co. combines pulverized coal methods in power and heating furnace; discusses pulverized-coal preparation plant; crushing and raw-coal storage; drying; pulverizing; conveying; remote control for distribution system, etc.

#### BOILERS

**Evaporative Capacity.** Evaporative Capacity of Boilers, A. A. Arnold. Mech. Wld., vols. 75 and 76, nos. 1958, 1961, 1963 and 1966, June 27, Aug. 1, 15 and Sept. 5, pp. 405, 69-70, 104-105 and 151. Considers normal evaporative capacity of boilers which may be obtained under usual conditions of working and when circumstances may be regarded as moderately favorable. Gives table showing average evaporation from Lancashire and Cornish boilers according to their heating surface. Stationary locomotive-type boilers, vertical cross-tube boilers, vertical Cochran boilers and their performances.

**Inspection.** Cooperation of Inspectors and Power-Plant Engineers in Associations for Steam-Boiler Inspection (Die Zusammenarbeit der Revisions- und Wärmeingenieure bei den Dampfkessel-Überwachungs-Vereinen), M. Berner. Wärme, vol. 47, no. 26, June 27, 1924, pp. 301-302. Proposes inspection and thermotechnical work by engineers; points out increased efficiency obtained by employing heat engineers; discusses cooperation between groups of associations, etc.

**Locomotive.** See LOCOMOTIVE BOILERS.

**Waste-Heat.** Generating Steam from Waste Heat, C. H. S. Tupholme. Power Plant Eng., vol. 28, no. 18, Sept. 15, 1924, pp. 943-945, 2 figs. Discussion of design of and results of tests on waste-heat boilers, which must be designed to evaporate water almost wholly from heat of convection.

**Yarrow.** Yarrow Boilers at Londonderry Power Station. Engineering, vol. 118, no. 3057, Aug. 1, 1924, pp. 177-178, 3 figs. Details of Yarrow boilers (large combustion space and straight tubes) and test data; heating surface, 3255 sq. ft.; superheating surface, 410 sq. ft.; economizer surface, 1550 sq. ft.; total grate area, 88.7 sq. ft.

#### BOILERS, WATER-TUBE

**Power-Station.** Notes on the Origin and Development of Water-Tube-Boilers for Power Stations, E. Kidwell. Combustion, vol. 11, nos. 2 and 3, Aug. and Sept. 1924, pp. 146-152 and 214-216, 15 figs. Shows origin of a few leading types of boilers used today in American plants and principal influences which shaped their development.

#### BOMBING

**Aerial.** Aerial Bombing. Mech. Eng., vol. 46, no. 9, Sept. 1924, pp. 542-545, 1 fig. Further information on subject, dealing with damaging distances for various sizes of bombs, yawing and sight stabilization, tactical requirements for service bomb sights, etc.

#### BRAKES

**Air.** Air Brake Investigation by I. C. C. Completed. Ry. Mech. Eng., vol. 98, no. 9, Sept. 1924, pp. 521-523. See also Ry. Age, vol. 77, no. 7, Aug. 16, 1924, pp. 296-297. Report of Interstate Commerce Commission investigation on power brakes for both passenger and freight trains. Adoption of more complete specifications for maintenance and operation are recommended.

#### BRONZES

**High-Tin.** Some Experiments on the Effect of Casting Temperature and Heat-Treatment on the Physical Properties of a High-Tin Bronze, F. W. Rowe. Inst. of Metals, Advance paper no. 11, for Mtg. Sept. 8-11, 1924, 7 pp., 12 figs. partly on supp. plates. Describes experiments carried out to gain some idea of mechanical properties of a high-tin bronze under various methods of handling. Alloy used had following nominal percentage composition: copper, 84.00; tin, 15.95; phosphorus, 0.05.

**Japanese.** Japanese Bronzes (Japanische Bronzen). Zeit. für die Gesamte Giessereipraxis, vol. 45, no. 33, Aug. 17, 1924, pp. 105-106 (Metall). Discusses their characteristics, furnaces used, coloring of alloys, analyses of some old and new bronzes.

#### CALORIMETERS

**Steam, Bureau of Standards.** Calorimeter for Steam Investigations Developed by Bureau of Standards, P. W. Swain. Power, vol. 60, no. 7, Aug. 12, 1924, pp. 246-248, 7 figs. Developed for A.S.M.E. steam research program, insuring utmost reliability.

#### CAR HEATING

**Steam.** Tests with Steam Heating of Passenger

Cars (Versuche mit Dampfheizung in Personenzügen), M. Mertz. Glaser's Annalen, vol. 94, no. 8, Apr. 15, 1924, pp. 93-109, 30 figs. Details of tests carried out by German Testing Bureau with high-pressure and low-pressure systems and various types of cars in special runs of trains, including a train consisting of 22 cars.

#### CARBURETORS

**Adjustment.** Saving Gasoline and Increasing Mileage by Proper Carburetor Adjustment, G. W. Jones and A. A. Straub. U. S. Bur. Mines, Reports of Investigations, serial no. 2616, June 1924, 9 pp., 1 fig. Discusses heat losses due to improper carburetor adjustment.

#### CARS, FREIGHT

**Timber Preservation.** Treating Freight Car Timber Will Cut Repairs, H. S. Sackett. Ry. Age, vol. 77, no. 8, Aug. 23, 1924, pp. 337-339, 1 fig. States that preservation of lumber will add equivalent of 100,000 cars through reduced delays.

**Trucks.** Improved Co-ordinating Six-Wheel Truck. Ry. Age, vol. 77, no. 12, Sept. 20, 1924, pp. 487-489, 5 figs. Describes new truck designed by Boyden Steel Corp., Baltimore, Md., known as type C-2-S, purpose of which is to reduce curve resistance and permit greater vertical flexibility.

#### CASE-HARDENING

**Gases Evolved During.** Gases Evolved During Carburization, V. E. Hillman. Iron Age, vol. 114, no. 11, Sept. 11, 1924, pp. 611-614, 8 figs. Chemical study of behavior of five solid commercial compounds. Theory of process.

#### CAST IRON

**Gray, Structure of.** Study Structure of Gray Iron, J. W. Bolton. Foundry, vol. 52, no. 16, Aug. 15, 1924, pp. 628-634, 24 figs. Also Iron Trade Rev., vol. 75, no. 9, Aug. 28, 1924, pp. 544-550, 25 figs. Discusses macroscopic and low-power magnification methods which reveal general structure of gray iron and semi-steel; microphotography is considered.

**Structural Segregation in Gray Iron.** J. A. Bolton. Iron Age, vol. 114, no. 12, Sept. 18, 1924, pp. 685-689, 23 figs. Normal occurrence and practical significance of non-homogeneous structures. Relation to composition and physical properties.

**Improvement by Nickel Introduction.** Improving Cast Iron by Introduction of Nickel, P. D'Merica. Can. Foundryman, vol. 15, no. 8, Aug. 1924, pp. 14-15 and 21, 3 figs. Nickel improves machinability of castings, particularly of this section; increases hardness, produces finer grain and increases resistance to oxidation and corrosion. Bibliography.

**Pearlitic, Production of.** Is the Lanz Method Essential to the Production of Pearlitic Cast Iron? Foundry Trade J., vol. 30, no. 417, Aug. 14, 1924, pp. 140-144. Discussion of an article by K. Emmel in Stahl u. Eisen, in which writer asks whether it is indispensable that this particular method should be used in order to get a pearlitic structure in cast iron.

**Sulphur in.** Sulphur in Cast Iron (Der Schwefel im Gusseisen). Zeit. für die Gesamte Giessereipraxis, vol. 45, no. 33, Aug. 17, 1924, pp. 241-242. Discusses drawbacks of presence of sulphur, recent increase in sulphur content and its causes, and means of reducing it.

**Synthetic, Electric-Furnace Manufacture of.** Manufacture of Synthetic Foundry Iron in the Electric Furnace, C. E. Sims, C. W. Williams and B. M. Larsen. Foundry Trade J., vol. 30, no. 419, Aug. 28, 1924, pp. 183-185. Carburization difficulties; factors governing carburization; type of furnace and method of operation; costs; etc. Paper read before Am. Foundrymen's Assn.

#### CENTRAL STATIONS

**Anthracite-Burning.** Burning Anthracite in a Modern Steam Plant, E. E. Rowe. Power, vol. 60, no. 8, Aug. 19, 1924, pp. 292-294, 4 figs. Shows special design of furnace at Amsterdam plant of Adirondack Power & Light Corp. and gives results of series of boiler tests with anthracite.

**Diesel-Engined, Operation of.** Operating a Diesel Power Plant, R. G. Melrose. Power, vol. 60, no. 9, Aug. 26, 1924, pp. 324-325. Outline of principal sources of operating difficulties experienced with oil engines, together with remedies.

**Germany.** Electricity Supply of Schleswig-Holstein and West-Mecklenburg (Die Elektrizitätsversorgung Schleswig-Holsteins und West-Mecklenburgs), G. Schechl. Elektrotechnische Zeit., vol. 45, no. 29, July 17, 1924, pp. 771-774, 1 fig. Details of power stations at Flensburg, Rendsburg, Kiel, Altona, Hamburg, Lübeck, their equipment, connections, etc.

**Indiana.** Rehabilitation of Two Indiana Plants Increases Efficiency. Power Plant Eng., vol. 28, no. 16, Aug. 15, 1924, pp. 834-842, 12 figs. Central stations at Kokomo and Logansport have been made part of Northern Indiana Power Co. system, permitting them to exchange power back and forth with other plants in this system.

**Interconnection.** Interconnection of Electrical Systems. Power Plant Eng., vol. 28, no. 18, Sept. 15, 1924, pp. 949-952, 2 figs. Discusses possible distances of transmissions in future, high-tension distribution networks, present-day transmission problems, and one-million-volt line. States that scheme of interconnection which will fully utilize hydraulic resources will undoubtedly show greatest economy.

**Pulverized-Fuel Burning.** Pulverized Fuel at the Cleveland Electric Illuminating Company's Lake Shore Plant, W. H. Aldrich. Mech. Eng., vol. 46, no. 9, Sept. 1924, pp. 519-520 and (discussion) 520-522 and 545. Data on pulverized-fuel equipment at this plant and experience gained in operation; description of coal-handling and burning apparatus.

**Manufactured by Advertisers** **CLASSIFIED LIST OF MECHANICAL EQUIPMENT** **Alphabetical List on page 154**

- Conveyor Systems, Pneumatic**  
\* Allington & Curtis Mfg. Co.  
Sturtevant, B. F. Co.
- Conveyors, Belt**  
\* Brown Hoisting Machinery Co.  
\* Chain Belt Co.  
\* Gandy Belting Co.  
\* Gifford-Wood Co.  
Link-Belt Co.
- Conveyors, Bucket, Pan or Apron**  
\* Brown Hoisting Machinery Co.  
\* Chain Belt Co.  
\* Gifford-Wood Co.  
\* Jones, W. A. Fdry. & Mach. Co.  
Link-Belt Co.
- Conveyors, Chain**  
\* Brown Hoisting Machinery Co.  
\* Chain Belt Co.  
Link-Belt Co.
- Conveyors, Ice**  
\* Chain Belt Co.  
\* Gifford-Wood Co.  
Link-Belt Co.
- Conveyors, Portable**  
\* Gifford-Wood Co.  
Link-Belt Co.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1924-25 Volume

**Rural, France.** Using Heavy Oil-Engines for Rural Electrification (L'utilisation des moteurs à huile lourde pour l'électrification des campagnes), Y. LeGallou. *Revue Générale de l'Electricité*, vol. 16, no. 4, July 26, 1924, pp. 147-158, 7 figs. Recommends construction of small and medium centrals with heavy-oil engines for driving generating groups, as is done in Denmark.

## CHIMNEYS

**Reinforced-Concrete.** Monnoyer System of Construction of Reinforced Concrete Stacks (Kominý a nádrze ze železového betonu systému Monnoyerova), J. Polivka. *Zprávy Verejné Služby Technické*, vol. 6, no. 3, July 1, 1924, pp. 88-95, 10 figs. General discussion including complication of static forces acting on chimney.

**Suction Draft for.** On Artificial Draft in Steam Boiler Plants (Ueber den künstlichen Zug bei Dampfkesselanlagen), C. Rühl. *Wärme- u. Kälte-Technik*, vol. 26, no. 15, Aug. 1, 1924, pp. 123-126, 9 figs. Discusses types of drafts and describes evaporator-suction draft plant with Rhomboid regulator (German patent) and its advantages.

## COAL

**Carbonization.** Carbonizing Coal With Regenerated Heat, C. H. S. Topholme. *Chem. & Met. Eng.*, vol. 31, no. 10, Sept. 8, 1924, pp. 388-389, 1 fig. Description of new type of plant for complete gasification of coal, in which fuel is converted into gas in a single operation, leaving ash, liquor, and tar as residuals, in such a way that a large proportion of potential energy of coal is available as city gas.

**Low-Temperature Carbonization of Coal.** C. M. Garland. *Power*, vol. 60, no. 13, Sept. 23, 1924, pp. 490-493, 2 figs. Coal coked evenly and continuously by superheated steam at one pound pressure generated from volatile and residue of coking process. Including fixed charges on investment, cost of treating coal containing 5 per cent moisture is estimated at 80 cents per ton.

**Practical Coal Carbonization.** F. W. Sperr, Jr. *Chem. Age (N. Y.)*, vol. 32, nos. 6 and 7, June and July 1924, pp. 277-279 and 297-299, 4 figs. Discusses high- and low-temperature carbonization with special reference to American conditions, value of by-products, coke as boiler fuel.

**Pulverized.** See PULVERIZED COAL.

**Relative Plant Values.** Relative Plant Values of Coal, K. M. Holaday. *Elec. Wld.*, vol. 84, no. 8, Aug. 23, 1924, pp. 363-365, 1 fig. Shows how heating values, moisture content, ash content, and fusing temperature as determined by laboratory test, in conjunction with a grading table, can assist in comparing fuels of different quality.

## COKE

**Combustibility of.** The Combustibility of Coke, H. Bähr. *Colliery Guardian*, vol. 128, no. 3320, Aug. 15, 1924, pp. 413-414, 2 figs. Details of design of Bähr's apparatus for determining reactive capacity of coke and combustion apparatus and operations. Translated from *Stahl u. Eisen*.

**Foundry.** What Constitutes Good Foundry Coke, H. W. Anderson. *Foundry*, vol. 52, no. 18, Sept. 15, 1924, p. 717. Results of investigation, giving comparative analyses of different cokes, losses sustained by excessive moisture, etc.

## CONDENSERS, STEAM

**Design.** The Principles of Condenser Design, D. G. McNair. *Power Engng.*, vol. 19, no. 221, Aug. 1924, pp. 304-307, 2 figs. General survey of three main types, showing how their leading dimensions may be roughly determined.

**Single- vs. Double-Pass.** Single-Pass Condensers Require Less Pumping Power Than Double-Pass, F. Bancel. *Power*, vol. 60, no. 10, Sept. 2, 1924, pp. 371-372, 2 figs. Neglecting external head, a single-pass condenser requires about one-eighth pumping power for same amount of cooling water as with a double-pass unit. Discusses resistance of external piping and rearrangement of condenser design, so as to utilize single flow to best advantage.

**Tubes.** Condenser-Tube Packing. *Steamship*, vol. 36, no. 423, Sept. 1924, pp. 88-91, 10 figs. Shows underlying causes and points out way to satisfactory and economical solution of problem; discusses condenser-tube disintegration, deformation, damage, life of condenser packing and condenser ferrules.

## CONVEYORS

**Automobile Factory.** The Modern Plant as a Production Machine, E. H. Nanning. *Am. Mach.*, vol. 61, no. 7, Aug. 14, 1924, pp. 273-276, 12 figs. Use of conveyors in production of Oldsmobiles; relation of plant layout to production; construction of conveyors equipped with speed reducers and transmissions.

**Continuous.** Modern Large-Scale Conveying by Means of Continuous Conveyors (Neuzeitlicher Massentransport mit Dauerförderern), M. Buhle. *Zeit. des Vereines deutscher Ingenieure*, vol. 68, no. 30, July 26, 1924, pp. 777-781, 15 figs. Describes lignite-conveying plants at Kulkwitz mine, briquet-conveyor plant at Voss mine, and coking-coal conveyor plant at Werne mine, built by Bleichert & Co.

**Pneumatic.** Experimental Investigation of the Process of Pneumatic Conveying (Die experimentelle untersuchung des pneumatischen Fördervorganges), J. Gasterstadt. *Forschungsarbeiten auf dem Gebiete des Ingenieurwesens*, no. 265, 1924, 76 pp., 10 figs. Results of experiments show that specific conveying pressure is linear function of specific quantity conveyed; examines effect of speed of conveying on this function.

## COPPER

**Corrosion of.** Seventh Report to the Corrosion Research Committee of the Institute of Metals, G. D. Bengough and R. May. *Inst. of Metals, Advance*

paper no. 3, for Mtg. Sept. 8-11, 1924, 176 pp., 35 figs. partly on supp. plates. Deals with corrosion of copper, zinc, 70:30 brass, and condenser tubes. Mainly concerned with mode of formation and behavior of "scales" which form on copper and brass in presence of sea-water.

**Hardness Due to Cold Working.** Note on the Effect of Progressive Cold-Rolling on the Brinell Hardness of Copper, H. Moore. *Inst. of Metals, Advance* paper no. 9, for Mtg. Sept. 8-11, 1924, 3 pp., 1 fig. Details of experiments made to confirm conclusion that by severe cold-working a metal could be brought into a state in which its hardness would be little or no higher than that of annealed metal and that in this state metal could not be hardened by further cold-work.

**Castings.** Making Copper Castings From Cupola Melted Metal, T. F. Jennings. *Am. Foundrymen's Assn.*, Preprint No. 421, for Mtg. Oct. 11-16, 1924, 7 pp. Describes methods used in making sound copper castings by melting metal in a cupola. Preparation of cupola and liberal use of charcoal in charges emphasized.

## CORES

**Binders.** Core Oils—Their Composition and Advantages, W. G. Smith. *Can. Foundryman*, vol. 15, no. 6, June 1924, pp. 13-16, 5 figs. Discusses binders, not only those in oil group, but those of all classes, putting special emphasis on advantages of properly mixed oils over pure linseed oil; linseed is good base but far from perfect; Chinese oils, corn oil, mineral oil, rosin, and fossil gums when properly blended make ideal core binder. Abstract of paper read before Detroit Foundrymen's Assn.

## CORROSION

**Prevention.** Corrosion Prevention. *Machy. Market*, no. 1239, Aug. 1, 1924, pp. 17-18, 4 figs. Special reference is made to "bitumastic" specialties which are now made in various shades; black solution is quick drying and has great durability forming impervious film over metal, effectively keeping out causes of corrosion, while cracking and peeling from movement of metal due to change of temperature is entirely prevented by elastic nature of solution.

**Tarnishing and.** The Relation Between Tarnishing and Corrosion, U. R. Evans. *Am. Electrochem. Soc.*, Advance paper no. 6, for Mtg. Oct. 2-4, 1924, pp. 75-100, 7 figs. partly on supp. plate. Describes investigations into attack of gaseous sulphur dioxide on iron and zinc, and that of hydrogen sulphide on copper, with special reference to part played by water in each case, and also to essential difference between tarnishing and corrosion proper.

## COSTS

**Production.** Calculating Cost of Production (Selbstkostenberechnung), E. Schubert. *Sparwirtschaft*, nos. 9-10 and 11-12, May and June 1924, pp. 49-51 and 57-60. Series of articles based on reports of Cost of Production Committee and giving examples of calculation from new viewpoints.

## COUNTERBORES

**Manufacture.** Manufacturing Interchangeable Counterbores. *Machy. (Lond.)*, vol. 24, no. 619, Aug. 7, 1924, pp. 592-596, 15 figs. Unusual operations and fixtures employed in making counterbores and holders.

## COUPLINGS

**Shaft.** Cast-iron Shrouded Shaft Couplings. *Machy. (Lond.)*, vol. 24, no. 619, Aug. 7, 1924, pp. 582-583, 1 fig. Table giving modern proportions of shaft couplings and additional information that is required when designing a coupling.

## CRANES

**Cantilever.** Cantilever Crane with Combined Counterbalance for Lifting Work and Weight of Load (Auslegerkran mit vereinigttem Hub-Arbeits- und Lasthöhenausgleich), V. Hirschhauf. *Fördertechnik u. Frachtverkehr*, vol. 17, no. 13, July 8, 1924, pp. 180-181, 1 fig. Details of design of new patent in which load jib is provided with rigid counterweight jib, with chain from drive to load and counterweight, etc.

**Harbor.** Modern Crane Plants for Waterways, River and Sea Ports and Docks (Neuzeitliche Krananlagen für Wasserstrassen, Binnenund Seehäfen sowie für Werften), K. Zapf. *Schiffbau*, vol. 25, nos. 19 and 20, July 9 and 23, 1924, pp. 521-525 and 547-550, 18 figs. Details of design and operation of various types of cranes built by the Ardetwerke.

**Locomotive.** Locomotive Cranes (Grues per sollevamento locomotive), F. Scheuermann. *Ingegneria*, vol. 3, no. 8, Aug. 1, 1924, pp. 283-285, 8 figs. Details of design and construction of cranes of capacities of up to 80 tons.

**Power-Plant.** Types of Cranes for the Power Plant. *Power Plant Eng.*, vol. 28, no. 16, Aug. 15, 1924, pp. 846-848, 4 figs. Crane capacity may be determined by weight of equipment to be installed in future.

**Traveling.** 11½-Ton Electric Overhead Travelling Crane with Underslung Bridge. *Engineering*, vol. 118, no. 3057, Aug. 1, 1924, pp. 164-166, 2 figs. Details of crane built by J. Adamson & Co., Hyde, Eng., with underslung bridge for transferring goods from barges on one side of workshop into store sheds on other without traveling longitudinally.

## CRANKSHAFTS

**Forging.** The Forging of Automobile Crankshafts, J. H. Nelson. *Forging—Stamping—Heat Treating*, vol. 10, no. 9, Sept. 1924, pp. 312-317, 7 figs. Automobile manufacturers are demanding crankshaft forgings that require least amount of machining and which will give nearly perfect dynamic balance. Description of inspection methods necessary to secure

best of material and produce desired results. Discusses forging and heat treatment.

**Motorcycle.** Manufacturing a Motor Cycle Crankshaft. *Eng. Production*, vol. 7, no. 143, Aug. 1924, pp. 244-247, 22 figs. Detailed consideration of operation, layout and tooling equipment.

# D

## DIES

**Automobile-Fender.** Interesting Tools for Drawing Fenders, S. E. Walke. *Forging—Stamping—Heat Treating*, vol. 10, no. 9, Sept. 1924, pp. 355-356, 8 figs. Describes method used in designing dies for forming crowned automobile fenders having a reversed curve at junction of running board and front fender.

## DIESEL ENGINES

**Central Stations.** Diesel Engine for Stand-By Service, H. L. Conklin. *Power Plant Eng.*, vol. 28, no. 16, Aug. 15, 1924, pp. 851-852, 2 figs. Diesel engine shows lower fuel cost than steam equipment for peak-load service in water-power plant.

**Costs.** Bids Show Range in Diesel Costs. *Mar. Rev.*, vol. 54, no. 9, Sept. 1924, pp. 347-348, 2 figs. Analysis of bids and of reasons for difference; compares different types of Diesel engines, two- and four-cycle, single- and double-acting, air- and solid-injection.

**Design.** Calculation of Principal Dimensions of Stationary Diesel Engines (Berechnung der Hauptabmessungen von ortsfesten Dieselmotoren), A. Balogh. *Praktische Maschinen-Konstrukturen*, vol. 57, no. 9, Mar. 15, 1924, pp. 101-104, 4 figs. Calculations for 60-hp. stationary Diesel; working of Diesel engines; table of principal dimensions.

**Double-Acting.** An American Double Acting Diesel. *Mar. Eng. & Shipp. Age*, vol. 29, no. 9, Sept. 1924, pp. 528-530, 2 figs. See also *Pac. Mar. Rev.*, vol. 21, no. 9, Sept. 1924, pp. 454-455, 2 figs. Details of design and construction of four-cylinder, double-acting, two-cycle Worthington Diesel engine designed to develop 2400 s.h.p.

**Heavy-Oil-Burning.** Burning Boiler Oil in Diesel Engines, C. L. Ruegg. *Power*, vol. 60, no. 13, Sept. 23, 1924, pp. 488-489, 3 figs. Discusses use in Diesel engines of heavy oil now being burned under boilers. Since price is below that of refined oils, owners of Diesel engines should make necessary rearrangement of fuel system to permit them to take advantage of the situation. Deals with changes necessary.

**Marine.** Recent Marine Diesel Engines (Neuere Schiffsdieselmotoren), O. P. Kühnle. *Schiffbau*, vol. 25, no. 19, July 9, 1924, pp. 517-520, 5 figs. Discusses advantages of hot-bulb two-stroke and four-stroke engines, and describes engine built by Motorenwerke, Mannheim, of 1600 hp. and 120 r.p.m., using only 174 g. fuel per hp-hr.

**Worthington.** Worthington Builds Double-Acting Two-Stroke-Cycle Diesel Engine. *Power*, vol. 60, no. 12, Sept. 16, 1924, pp. 457-459, 9 figs. Engine combines a fuel economy comparable with that of best existing types of Diesel engine, with dimensions, weight, and construction cost per horsepower approaching those of reciprocating steam machinery. First unit, a single-cylinder engine, is rated at 600 to 800 hp. at speeds of 90 to 120 r.p.m., cylinders being 27 in. in diameter by 40 in. stroke.

## DRILLING MACHINES

**Slot.** A New Duplex Slot Drilling Machine. *Machy. (Lond.)*, vol. 24, no. 620, Aug. 14, 1924, pp. 627-628, 3 figs. Describes latest duplex slot-drilling and keyseating machine built by Smith & Coventry, Ltd., Salford, Eng.; convenience of operation and compactness of design, combined with accessibility of all adjustments, are prominent features. Has single belt drive.

**Vertical.** Possibilities of Heavy-duty Drilling. *Machy. (Lond.)*, vol. 24, no. 624, Sept. 11, 1924, pp. 737-739, 5 figs. Points out possibilities of vertical heavy-duty box-column drilling machine by presenting examples of work done in automobile plants.

## DURALUMIN

**Production and Uses.** Duralumin, Its Composition and Treatment, S. H. Phillips. *Am. Mach.*, vol. 61, no. 10, Sept. 4, 1924, pp. 371-374, 5 figs. Data concerning production and uses.

## DYNAMOMETERS

**Torsion.** Torsion Dynamometer (Torsionsdynamometer), L. Klein. *Zeit. des Vereines deutscher Ingenieure*, vol. 68, no. 32, Aug. 9, 1924, pp. 830-831, 4 figs. Describes automatically recording torsion dynamometer for examining rotating machines.

# E

## ELECTRIC LOCOMOTIVES

**Austria.** Electric Passenger- and Express-Train Locomotives, Type ICI, Series 1029, of the Austrian Federated Railways (Elektrische Personen- und Schnellzuglokomotiven Bauart ICI, Reihe 1029 der österr. Bundesbahnen), R. Meixner. *Elektrotechnik u. Maschinenbau*, vol. 42, no. 36, Sept. 7, 1924, pp. 541-549, 5 figs. Details of design, electric and mechanical equipment.

**Developments.** Recent Developments in Electric

**Gear Hobbing Machines**

- \* Jones, W. A. Fdry. & Mach. Co.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1924-25 Volume

**Locomotives.** N. W. Storer. *Mech. Eng.*, vol. 46, no. 9, Sept. 1924, pp. 523-528, 9 figs. Describes some of the recent designs of electric locomotives and discusses some of the tendencies in design, especially of mechanical parts.

**Dimensions.** Connection between Dimensioning of Motors, Gear Arrangement and Maximum Efficiency in Single-Phase Locomotives (Untersuchung der Zusammenhänge über Motordimensionierung, Getriebeanordnung und Grenzleistung bei Einphasenvollbahnlokomotiven), E. Wist. *Elektrotechnik, u. Maschinenbau*, vol. 42, no. 30, July 27, 1924, pp. 465-468, 1 fig. Abstract of dissertation.

**South African Railway.** 3,000-Volt Locomotives for South African Railway. *Elec. Ry. J.*, vol. 64, no. 11, Sept. 13, 1924, pp. 390-391, 3 figs. Describes locomotives designed for use on narrow-gauge line, three 75-ton units being coupled together to haul a 1430-ton freight train.

**Switzerland.** Electric Locomotives of the Swiss Federal Railways (Die elektrischen Lokomotiven der S. B. B.), M. Weiss. *Schweizerische Bauzeitung*, vol. 84, no. 2, July 12, 1924, pp. 21-24. Discusses results of locomotive operation, advantages of electric traction so far shown; interruptions and damages to locomotives; cost of maintenance.

## ELEVATORS

**Electric.** Operation of. Operation of Electric Elevator Machines—General Principles, F. A. Annett. *Power*, vol. 60, no. 11, Sept. 9, 1924, pp. 414-416, 6 figs. Explains operation of semi-magnetic controlled elevators, describes the different automatic stopping devices and tells how to adjust terminal landing limits.

## EMPLOYEE REPRESENTATION

**Examples of.** Discussion on Employee Representation, A. H. Young. *Iron Age*, vol. 114, no. 12, Sept. 18, 1924, pp. 689-691. Some facts and factors which measure its success. Examples taken from periods of strife.

## EMPLOYMENT MANAGEMENT

**Apprentices, Placing of.** Connection between Suitability Tests and Observation of Capability in Apprentices in the Metal Industry (Zusammenhänge zwischen Eignungsprüfung und Leistungsbeobachtung in der Praxis bei Lehrlingen der Metallindustrie), R. Bolt. *Maschinenbau*, vol. 3, no. 13, Apr. 10, 1924, pp. 450-454, 5 figs. Discusses practice at Siemens-Schuckert Works for placing apprentices according to ability.

**Employee Specifications.** Employee Specifications, P. M. Atkins. *Indus. Mgt. (N. Y.)*, vol. 68, no. 2, Aug. 1924, pp. 115-118. Establishing standards similar to those used in purchase of materials.

## ESCALATORS

**Italy.** Escalators for the Urban Station in Naples of the Direct Rome-Naples Line (Scale mobili per il tratto urbano in Napoli della linea direttissima Roma-Napoli), E. D'Andrea. *Rivista Tecnica delle Ferrovie Italiane*, vol. 25, nos. 5 and 6, May 15 and June 15, 1924, pp. 159-170 and 208-212, 8 figs. Details of design of escalators at stations of Montesanto and Piazza Cavour, also escalators in London stations.

## EXTRUSION OF METALS

**Brass Rods.** The Extrusion of Brass Rod By the Inverted Process, R. Genders. *Inst. of Metals, Advance paper* no. 6, for Mtg. Sept. 8-11, 1924, 11 pp., 6 figs. partly on supp. plate. Method of overcoming formation of coring defect favored by author consists in completely altering direction of flow in receiver by inverting process, so that die is pressed into billet, rod being extruded through a hollow plunger. Describes experiments carried out on a manufacturing scale with a press designed to extrude by new method.

# F

## FACTORIES

**Location of.** How Would You Pick a Factory Location? M. G. Farrell. *Factory*, vol. 33, no. 3, Sept. 1924, pp. 336-338, 438 and 440-445, 1 fig. Discusses importance of studying thoroughly the various districts when searching for a manufacturing location, when it is profitable to locate in a segregated district, why it is necessary to study labor conditions in district surrounding proposed location, etc.

## FANS

**Centrifugal.** Application and Operation of Centrifugal Fans, R. E. Cramer. *Combustion*, vol. 11, no. 3, Sept. 1924, pp. 199-201, 3 figs. Analysis of conditions surrounding application and operation of centrifugal fans in boiler plants from viewpoint of influence of fan and its method of control upon capacity and overall economy of plant.

## FLAME PROPAGATION

**Spark Intensity.** Flame Speed and Spark Intensity, D. W. Randolph and F. B. Silsbee. *Nat. Advisory Committee for Aeronautics*, report no. 187, 1924, 14 pp., 7 figs. Describes series of experiments undertaken to determine whether or not electrical characteristics of igniting spark have any effect on rapidity of flame spread in explosive gas mixture which it ignites. Results show that no such effect exists. Flame velocity in carbon-monoxide-oxygen, acetylene-oxygen, and gasoline-air mixtures was found to be unaffected by changes in spark intensity from sparks which were barely able to ignite mixture up to intense condenser discharge sparks having 50 times this energy.

## FLOW OF GASES

**Pipes.** Pressure Reduction in Smooth Pipes and

Coefficient of Flow for Standard Nozzles (Der druckabfall in glatten rohren und die durchflusszahl von normaldüsen), M. Jakob and S. Erk. *Forschungsarbeiten auf dem Gebiete des Ingenieurwesens*, no. 267, 1924, 28 pp., 17 figs. Discusses determination of large quantities of flowing gases or liquids by measuring pressure drop in constriction (venturi tube, etc.) and gives results of experiments.

## FLYING BOATS

**Tests.** Experiments with Model Flying Boat Hulls. 24th Series Report; Comparison of Longitudinal With Transverse Steps, G. S. Baker and E. M. Keary. *Aeronautical Research Committee*, no. 893, Aug. 1923, 13 pp., 5 figs. Object of experiments was to test merits or demerits of form having longitudinal in stead of transverse steps.

## FOUNDRIES

**Automobile Castings.** Keeping Pace with Auto Output. *Foundry*, vol. 52, no. 18, Sept. 15, 1924, pp. 718-725, 13 figs. Principal changes that have taken place in plant of Wilson Foundry & Machine Co., Pontiac, Mich., one of the largest foundry plants in world devoted exclusively to production of castings for automobile engines, indicating rapidity of its growth.

**Car-Wheel.** Make Wheels and Brakeshoes, P. Dwyer. *Foundry*, vol. 52, no. 18, Sept. 15, 1924, pp. 707-712, 12 figs. Describes plant of Canada Iron Foundries, Ltd., manufacturing cast-iron chilled wheels for railway cars, brakeshoes, and miscellaneous castings, principally municipal work and pipe fittings. Two foundries draw supplies from same stockyard and are served by metal from a battery of four cupolas charged from a common platform.

**Cost Accounting.** A Foundry Cost System. *Foundry Trade J.*, vol. 30, no. 417, Aug. 14, 1924, pp. 157-160. Outlines foundry cost accounting system arranged primarily for iron foundries producing castings of varied designs and of wide range in weight, but underlying principles upon which it is based can be rendered applicable to brass, malleable and steel foundries by changing terminology and altering arrangement of cost details to suit conditions prevailing therein.

**Cost Finding in a Foundry.** W. J. Corbett. *Am. Foundrymen's Assn.*, Preprint No. 410, for Mtg. Oct. 11-16, 1924, 36 pp., 6 figs. Discusses factors justifying a manufacturer in operating a foundry and uses of an effective cost system. Explains necessity for foundry industry to adopt uniform cost finding methods, and shows the great variations in ascertaining casting costs by comparing figures based on methods used in some 80 steel foundries. Outlines a general cost-accounting system for a foundry with reference in a general way to main elements of foundry costs, and describes in detail a job cost system which furnishes necessary data that should be supplied by a good foundry cost system.

**Departmental Costs in the Foundry.** H. B. May. *Am. Foundrymen's Assn.*, Preprint No. 415, for Mtg. Oct. 11-16, 1924, 13 pp. Engineering or departmental costs show profit or loss of each unit, whether unit be job, contract, line of product or operating department. Advocates careful analysis of each department to determine correct basis on which to distribute burden. Discusses departments of a foundry to clarify this idea and to show divisions of foundry costs.

**Electrified.** A Completely Electrified Foundry, E. J. Cipperly. *Elec. Wld.*, vol. 84, no. 11, Sept. 13, 1924, pp. 515-517, 5 figs. Describes plant of Alloy Steel & Metals Co., Los Angeles, Cal., which has been in successful operation for more than a year. Melting, core baking, heat treating and welding all performed electrically.

**London, England.** A New London Foundry. *Foundry Trade J.*, vol. 30, no. 415, July 31, 1924, pp. 92-97, 9 figs. Describes foundry which has recently been started up at North Woolwich Works of Harland & Wolff, Ltd., laid down expressly to meet requirements of extensive ship-repairing and engineering shops which have recently been erected and equipment of which is now complete.

**Metallurgical Control in.** Metallurgical Control in the Iron Foundry, J. A. Holden. *Foundry Trade J.*, vol. 30, no. 420, Sept. 4, 1924, pp. 207-208. Deals separately with controlling light and heavy castings.

**Ventilation.** Ventilation of Foundries (L'Aération des Fonderies), A. Chanard. *Fonderie Moderne*, vol. 18, July 1924, pp. 178-184, 17 figs. Details of Chanard-Etoile skylight ventilator system, its construction and application.

## FUEL ECONOMY

**Temperature Measurement, Importance of.** Fuel Economy and the Measurement of High Temperatures, R. Hadfield. *Foundry Trade J.*, vol. 30, no. 419, Aug. 28, 1924, pp. 179-181. Survey of fields where pyrometry has enabled accurate heat balances to be obtained, including steam boilers, forge furnaces, furnaces for heat treatment of steel, and open-hearth furnaces. Temperature measurement in France; flame temperature and furnace efficiency; regenerators and recuperators. Abstract of paper read before First World Power Conference.

## FUELS

**Chemical Composition.** Chemical Bases of Fuel Utilization (Die chemischen Grundlagen der Brennstoffverwertung), W. Frankenstein. *Zeit. für Technische Physik*, vol. 5, no. 7, 1924, pp. 293-299. Discusses fuel analysis, determination of calorific value, volatiles, tar, etc.; distillation of coal and lignite, production of tar, liquid and gaseous fuel.

**Relative Value.** Relative Value of Fuels, R. O. Wynne-Roberts. *Am. Gas J.*, vol. 121, no. 9, Aug. 30, 1924, pp. 791-792 and 806. Discusses heat service, waste incurred in use of all fuels, relative value of gas and other fuels, efficiency of gas of different qualities, etc.

**Solid, Test Code for.** Test Code for Solid Fuels, *Mech. Eng.*, vol. 46, no. 9, Sept. 1924, pp. 558-562, 5 figs. Preliminary draft of a code in series of nineteen being formulated by A.S.M.E. Committee on Power Test Codes.

(See also COAL; OIL FUEL; PULVERIZED COAL.)

# G

## GARAGES

**Germany.** Large-Scale Garage Buildings (Das Gross-Garagenhaus). *Automobil-Rundschau*, vol. 23, no. 7, July 1, 1924, pp. 91-93, 3 figs. Combination of garage, workshops, and hotel, with capacity of over 1000 automobiles, using individual driveway for each floor as more expeditious than elevators.

## GAS PRODUCERS

**Developments.** Modern Developments in Gas-Producing Plant, F. H. Beebe. *Gas Engr.*, vol. 40, no. 580, Aug. 1924, pp. 172-174, 5 figs. Discusses reduction of back pressure, shorter cycle operation, automatic chargers, fuel feed to generators, waste-heat boilers, and purification process.

## GAS TURBINES

**Automobiles.** The Gas Turbine, Its Use for Automobiles and Airships (La turbine à gaz son utilisation en automobilisme et en aéronautique). *Technique Automobile et Aérienne*, vol. 15, no. 125, 1924, pp. 33-37, 2 figs. Discusses their efficiency, variation of power, weight per hp.; cycles of constant-volume combustion and constant-pressure combustion; comparison with steam turbines.

## GEARS

**Calculation, Charts for.** Charts for Gear Calculation, F. H. Towler. *Machy. (Lond.)*, vol. 24, no. 622, Aug. 28, 1924, pp. 678-679, 3 charts on supp. plate. Gives charts relating to machine-cut straight-toothed spur and double helical gearing, also pitch-line-velocity chart. Constructed on logarithmic principle.

**Cases.** Molds Large Iron Gear Cases, P. Dwyer. *Foundry*, vol. 52, no. 16, Aug. 15, 1924, pp. 623-627, and 652, 10 figs. Detailed description of molding practice involved in production of these large shells in which bulk is out of all proportion to weight.

**Involute.** Involute Gear Teeth. *Automobile Engr.*, vol. 14, no. 192, Aug. 1924, pp. 237-242, 8 figs. Notes on interference, undercutting, and conditions of contact in spur gears.

**Testing.** Gear Testing. *British Machine Tool Eng.*, vol. 3, no. 28, July-Aug. 1924, pp. 81-83, 12 figs. Gives methods of testing teeth of gear wheels, illustrating and describing a number of gear-testing jigs.

## GRINDING

**Chatter Marks.** Chatter Marks on Ground Surfaces, D. K. Cole. *Machy. (Lond.)*, vol. 24, no. 620, Aug. 14, 1924, pp. 621-622. Their causes and remedies.

## GUN METAL

**Admiralty.** Some Experiments on the Influence of Casting Temperature and Mass on the Physical Properties of Admiralty Gun-Metal, F. W. Rowe. *Inst. of Metals, Advance paper* no. 12, for Mtg. Sept. 8-11, 1924, 5 pp., 6 figs. Describes experiments selected from a large number as being typical results obtained in everyday works practice, and made under ordinary works conditions, without any special precautions to insure exceptional purity of metal or abnormal test results.

# H

## HARDNESS

**Brinell Test.** Improvements in the Brinell Test on Hardened Steel, Including a New Method of Producing Hard Steel Balls, A. Hultgren. *Iron & Steel Inst.*, *Advance paper* no. 7, for Mtg. Sept. 1924, 30 pp., 12 figs. partly on supp. plate. Describes a method of producing steel balls considerably harder than those heretofore available, and therefore especially suitable for Brinell tests on hardened steel. Results of Brinell tests on hardened, as well as hardened and tempered steel specimens to determine magnitude of error in hardness number due to permanent flattening of ball. Results of study by different tests of surface hardness and strength of cold-worked balls, as compared with those of other balls of different make and treatment. Use of etched balls suggested as means of increasing accuracy of measuring Brinell impression on hardened steel. Gives conversion table for Brinell numbers and describes a magnetic ball holder.

**Pendulum Hardness Tester.** Investigations on the Herbert Pendulum Hardness Tester, C. Benedicks and V. Christiansen. *Iron & Steel Inst.*, *Advance paper* no. 2, for Mtg. Sept. 1924, 20 pp., 7 figs. Construction and working of this new instrument which permits of use of even very small specimens, and comparison of results with those of Brinell method.

**Testing.** Measuring the Hammer Hardness of Metals by Means of a Herbert Pendulum (Mesure de l'échouissage des métaux au moyen du pendule Herbert). *Bulletin Technique de la Suisse Romande*, vol. 50, no. 17, Aug. 16, 1924, pp. 217 and 219, 5 figs. Details of apparatus by means of which hardness is de-

terminated as function of permanent and elastic deformation produced by ball.

#### HEATING, HOT-AIR

**Waste-Heat Utilization.** Air Heating by Means of Steam, Exhaust Steam or Other Waste Steam with Blower Operation (Luftheizung mit Dampf, Abdampf oder sonstiger Abwärme und mit Ventilatorbetrieb), K. Redzich. Gesundheits-Ingenieur, vol. 47, no. 30, July 26, 1924, pp. 329-330. Discusses air heaters, low-pressure turbo blowers, operation of heating plant by using any kind of waste steam, air-humidifying plant, etc.

#### HEATING, STEAM

**Central.** Applying Centralized Control to Steam Heating Systems. Power, vol. 60, no. 11, Sept. 9, 1924, pp. 417-419, 5 figs. How central-station steam was supplied to an office building and what arrangements were made for heating a factory where public-utility power had supplanted that from a private plant.

**Vacuum.** Calculation of Vacuum-Steam Pipe Lines by Using Brabbe's Tables (Die Berechnung von Vakuum-Dampfrohrleitungen bei Verwendung der Brabbe'schen Tafeln), A. Weindorfer. Gesundheits-Ingenieur, vol. 47, no. 30, July 26, 1924, pp. 324-325, 2 figs. Gives simple method of calculating steam pipe lines for vacuum heating.

**Vacuum Steam Heating Plants** [Unterdruckheizungen (Vakuum-Dampfheizungen)], J. Schmitz. Gesundheits-Ingenieur, vol. 47, no. 33, Aug. 16, 1924, pp. 358-362, 2 figs. Describes low-pressure steam-heating plants, comparing them with conventional steam-heating plants; gives table of pipe diameters.

#### HELICOPTERS

**Oehmichen.** First Helicopter to Fly a Circular Kilometer. Aviation, vol. 17, no. 7, Aug. 18, 1924, pp. 888-889, 1 fig. Details of apparatus and flight which met test imposed by French Air Service. Translated from Aeronautique.

#### HOBBIING MACHINES

**Bevel-Gear.** A New Bevel-Gear Hobbing Machine for Producing Theoretically and Practically Exact Helical Teeth (Eine neue Kegelhobmaschine zur Erzeugung theoretisch und praktisch genauer Schraubenverzahnung), F. Theimer. Maschinenbau, vol. 3, no. 18, June 26, 1924, pp. 651-653, 5 figs. Describes Brandenberger patent which combines rectilinear movement to and fro of plane with simultaneous rotation of wheel round its axis.

**Lees-Bradner.** Gear Hobbing Machine, Specially Designed for Producing Transmission Gears. Automotive Industries, vol. 51, no. 9, Aug. 28, 1924, pp. 402-404, 5 figs. Describes gear generator specially designed for production of automobile transmission gears, developed by Lees-Bradner Co., Cleveland, O. Straddle housing eliminates overhang of work and hob spindle, and adds rigidity of support, which is claimed to increase speed of production, life of hob and number of gears cut for each sharpening.

#### HYDRAULIC TURBINES

**Draft Tubes.** A Rational Form of Draft Tube for Water-Turbines. A. Melovich. Engineering, vol. 118, no. 3057, Aug. 1, 1924, p. 153, 2 figs. Discusses two different kinds of draft tubes at Queenston Power Station, Ont. used for comparison of efficiency, and shows that one draft tube does not fulfill conditions for full bore flow, rendering comparison invalid.

**Kaplan.** Historical Note on the Kaplan Turbine, J. Kacidi. Engineering, vol. 118, no. 3057, Aug. 1, 1924, p. 183, 1 fig. World Power Conference paper describing new type of water turbine suitable for medium and low heads.

**Switzerland.** Some Notable Modern Turbine Installations (Quelques installations remarquables de turbines modernes), R. Hoffmann. Bulletin Technique de la Suisse Romande, vol. 50, no. 17, Aug. 16, 1924, pp. 209-214, 7 figs. Details of propeller turbines of Wynau hydroelectric plant, and tests carried out showing their advantages.

#### HYDROELECTRIC DEVELOPMENTS

**N. Y. State Barge Canal.** Power Developments in the Barge Canal. Power Plant Eng., vol. 28, no. 17, Sept. 1, 1924, pp. 882-886, 8 figs. Two 8000-hp. water power plants now under construction. Power for lock operations supplied by 32 small plants.

**St. Lawrence River.** The Development of the St. Lawrence River for Power and Navigation. Engineering, vol. 118, nos. 3059 and 3060, Aug. 15 and 22, 1924, pp. 239-241 and 271-273, 9 figs. See also Can. Engr., vol. 47, nos. 8 and 9, Aug. 19 and 26, 1924, pp. 253-256 and 265, and 277-283, 11 figs. Considers characteristics of Upper St. Lawrence which have an important bearing on design, construction, and operation of development works. Methods of development. Estimates of cost. Paper read before Sec. G of British Assn. at Toronto.

#### HYDROELECTRIC PLANTS

**Design.** Great Works Hydro-Electric Plant Has Original Design, R. J. Andrus. Elec. Wld., vol. 84, no. 7, Aug. 16, 1924, pp. 305-307, 7 figs. New automatic station constructed by combining dam, bridge, and building parts for triple use; development cost per kilowatt about \$284.

**France.** Hydroelectric Generating Plant, at Chanay-Pougny (L'usine génératrice hydroélectrique de Chanay-Pougny), A. Tumerelle. Revue Générale de l'Electricité, vol. 16, no. 2, July 12, 1924, pp. 63-71, 12 figs. Details of design, construction, and equipment of plant of capacity of 35,000 kva. from five 7000-kva. alternators. Voltage of 11,000 raised to 120,000 for transmission to Reuisses by double three-phase line.

**Ice Control.** Combating Ice in European Hydro-Electric Plant. Eng. News-Rec., vol. 93, no. 7, Aug.

14, 1924, pp. 265-266. Abstract of papers read by A. Frey and Arvid Ruths at First World Power Conference, Lond., dealing with methods employed in Norway and Sweden, chief sources of trouble, ice pressure, and effects of regulation.

**Ice Control Methods** at Shelburne Falls, J. H. Kennedy. Power Plant Eng., vol. 28, no. 17, Sept. 1, 1924, pp. 895-896, 5 figs. Constant work is required to keep channels open and units running up to capacity on Deerfield River in Massachusetts at plants of New England Power Co. Abstract of article in Contact, May 1924.

## I

#### ICE PLANTS

**Charleston, W. Va.** Performance of a Modern Ice Plant. South. Engr., vol. 41, no. 7, Sept. 1924, pp. 35-39, 5 figs. Gives operating results of 100-ton ice-making plant of Diamond Ice & Coal Co., Charleston, W. Va.

**Oil-Engine-Driven.** Ice Plant Changes to Oil Engine Drive. Power Plant Eng., vol. 28, no. 17, Sept. 1, 1924, pp. 910-912, 5 figs. How Pure Water Ice Co. at Waukegan, Ill., reduced operating costs so it readily competes with natural-ice producers.

#### INDUSTRIAL MANAGEMENT

**Budgetary Control.** Budgetary Control, W. Carswell. Paper Trade J., vol. 79, no. 7, Aug. 14, 1924, pp. 51-54 and 60. Outlines general principles of budgetary control in relation to all principal activities of an enterprise which apply with equal value to any business whether manufacturing, trading or merchandising, treating subject in its application to all activities of the business. Discussed under following heads: Advantages to be gained by operating under a budget; Preparation of budget; Control. Address before Can. Soc. Cost Accountants.

**Control Method.** Efficiency Cards, a Means of Operating Control and Precalculation (Die Leistungskarte, ein Mittel der Betriebskontrolle und der Vorrechnung), M. Krage. Maschinenbau, vol. 3, no. 21, Aug. 14, 1924, pp. 786-790. Efficiency card collects data on material and time consumed in course of production from store cards and time cards; compares operations and actual expenditure in time and materials with estimates given.

**Drafting Department.** Putting the Drafting Room on a Production Basis, W. E. Irish. Indus. Mgt. (N. Y.), vol. 68, no. 2, Aug. 1924, pp. 121-126, 2 figs. A system which, being based on fundamentals, is flexible enough for wide application.

**Inspectors' Card Systems.** A Card System to Help the Inspector, K. H. Crumrine. Am. Mach., vol. 61, no. 9, Aug. 28, 1924, pp. 349-350, 4 figs. How inspector can be aided by engineering department.

**Planning.** The Problem of Planning and Its Solution (Das Problem der Vorkalkulation und seine Lösung), K. Hegner. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 32, Aug. 9, 1924, p. 821-824. Object of modern planning system to fix time of production and to improve methods of production; standardizing bases of methods of calculation, etc.

**Planning Department.** The Planning Department (Das Konstruktionsbüro), H. Menze, A. Eckers, O. Hoffman and L. Voigt. Maschinenbau, vol. 3, no. 19, July 10, 1924, pp. 679-703, 14 figs. Series of articles covering object and importance of planning department; index to drawings; systematic grouping of machine parts on basis of function, etc.; drawing machines, etc.

**Psychology in Industry.** Industrial Psychology, H. S. Person. Taylor Soc.—Bul., vol. 9, no. 4, Aug. 1924, pp. 163-171. Discusses psychology as science of nature and causes of conduct and of its control, and problems of psychology in industry.

**Quality Measurement.** Measurement of the Quality of Product, G. S. Radford. Mech. Eng., vol. 46, no. 9, Sept. 1924, pp. 546-547 (includes discussion). Considers possibility of reducing control of quality and inspection function to a mathematical basis, and concludes that this is neither feasible nor desirable. Sets up standards by which performance of inspection division can be judged.

**Statistical Investigation.** Mass-Number Investigation, Reliability of Technical Measurements, and Dispersion (Grosszahlforschung, Zuverlässigkeit technischer Messungen und Streuungsmasse), G. Sachs. Stahl u. Eisen, vol. 44, no. 32, Aug. 7, 1924, pp. 941-946, 6 figs. Discusses statistical treatment of investigations and their results; frequency curves of numbers of tests.

**Steel Foundry.** Organization and Practice in a Steel Foundry Finishing Department, C. W. Heywood. Am. Foundrymen's Assn., Preprint No. 422, for Mtg. Oct. 11-16, 1924, 11 pp. Believes gang system produces most satisfactory results from standpoint of both output and costs. Where gang system is not feasible, another successful plan is to employ a peacemaker. Layout of equipment has a great deal to do with best routing and these two features are discussed in detail.

**Stores Management.** Stores Management in Machine Shops and Costs, (Materialverwaltung in Maschinenfabriken unter entsprechender Berücksichtigung der Selbstkostenerfassung), F. Strauch. Maschinenbau, vol. 3, no. 20, July 24, 1924, pp. W151-W153. Discusses management with view to cost reduction and economic use of materials, and to keep track of costs of materials.

**Textile Mills.** Significant Savings in Textile Mill Operations, N. T. Thomas. Taylor Soc.—Bul., vol.

9, no. 4, Aug. 1924, pp. 172-176. Results of substitution of scientific management for tradition in Jackson Mills.

**Time Recording.** Control of Work Time (Kontrolle der Arbeitszeit), F. Schleif. Maschinenbau, vol. 3, no. 13, Apr. 10, 1924, pp. 440-441, 7 figs. Details of system and apparatus for accurate time recording.

**Time Study.** See TIME STUDY.

#### INDUSTRIAL ORGANIZATION

**Machine Shops.** Working Organization of a Machine Shop and Iron Foundry (Betriebsorganisation einer Maschinenfabrik und Eisengiesserei), W. Bischoff. Maschinenbau, vol. 3, no. 13, Apr. 10, 1924, pp. 445-450, 11 figs. Explains inner organization of machine works by means of card system used.

#### INSULATORS, HEAT

**Steam Pipe.** Removable Insulating Covers (Manchons calorifuges amovibles), H. and L. Faron. Revue Industrielle, vol. 54, no. 2181, Aug. 1924, pp. 233-235, 8 figs. Details of patented removable sectional insulation or insulating jackets, their composition, making of joints and advantages.

#### INTERNAL-COMBUSTION ENGINES

**Applications.** Present Applications of Internal-Combustion Engines (Les applications actuelles des moteurs à combustion interne), A. Witz. Technique Moderne, vol. 16, no. 15, Aug. 1, 1924, pp. 501-509, 5 figs. Discusses use of engines up to 100 hp. in small industries, and up to 2300 hp. in medium- and large-scale industries; fuels; types of engines; engines for central stations, for metallurgy, for traction and driving airplanes.

**Fuels.** Contribution to the Theory of Fuels for Engines (Contribution à la théorie des combustibles pour les moteurs), M. Brutzkus. Société d'Encouragement pour l'Industrie Nationale—Bul., vol. 136, no. 5, May 1924, pp. 397-425, 1 fig. Discusses combustion-engine fuels, including mineral oils, tar oils, gaseous fuel; fuel increasing and decreasing in volume; efficiency of combustion.

**Decomposition of Lead Tetraethyl and Its Use in Explosion Engines** (Sur la décomposition du plomb tétraéthyle et son application aux moteurs à explosion), P. Jolibois and G. Normand. Académie des Sciences—Comptes rendus des séances, vol. 179, no. 1, July 7, 1924, pp. 27-28. This fuel allows increase of compression and reduces chances of spontaneous explosion of gaseous mixture.

**Lignite Distillate,** Chas. E. Kerchner. Mech. Eng., vol. 46, no. 9, Sept. 1924, pp. 516-518, 4 figs. Its possibilities as an internal-combustion-engine fuel. Data on tests made with a small Hvid engine operating on lignite oil, as compared with gas oil and kerosene. Shown to be an efficient and likely fuel.

**Residues, Formation of.** Formation of Residues in Superheated-Steam Engines and Internal-Combustion Engines and Their Prevention (Die Rückstandsbildung in Heissdampfmaschinen und Verbrennungskraftmaschinen und ihre Verhütung), G. Spettmann. Praktische Maschinen-Konstrukteur, vol. 57, no. 22, June 17, 1924, pp. 309-310. Discusses producer-gas and Diesel engines, gas residues and their combination with lubricating oil, complete combustion of fuel, etc.

**Supercharging.** Supercharger Pros and Cons, W. G. Aston. Autocar, vol. 53, no. 1507, Sept. 5, 1924, pp. 413-416, 3 figs. Considers advantages and disadvantages of latest development in internal-combustion engine design; shows supercharger has far wider potentialities and discusses advantages that may accrue from its general adoption.

**Temperature-Entropy Diagram.** A Modified Temperature-Entropy Diagram for a Gaseous Working Substance, G. E. Scholes. Engineering, vol. 118, no. 3059, Aug. 15, 1924, pp. 215-216, 1 fig. Construction of chart. Transference of indicator diagram to T-φ chart.

(See also AIRPLANE ENGINES; AUTOMOBILE ENGINES; DIESEL ENGINES; OIL ENGINES.)

#### IRON

**Electrolytic.** Electrolytic Iron. Iron & Coal Trades Rev., vol. 109, no. 2942, July 18, 1924, pp. 117-118. Discusses processes for commercial production of electrolytic iron in tubes, sheets, etc., i.e., with anodes formed and soluble anodes shaped but insoluble, anodes soluble but unformed. Abstract of paper read before World Power Conference.

#### IRON AND STEEL

**Canadian Industry.** The Iron and Steel Industry in Canada, C. S. Cameron. Engineer, vol. 138, nos. 3578 and 3579, July 25 and Aug. 1, 1924, pp. 112-113 and 128-129. History of industry and account of resources and present condition. Paper presented to Empire Min. & Met. Congress.

**Corrosion Prevention.** Prevention of Corrosion of Iron and Steel, C. P. Perin. Engrs. & Eng., vol. 41, no. 8, Aug. 1924, pp. 223-225. Gives diagram showing causes external and those inherent in metal, general theory and prevention of corrosion.

#### IRON CASTINGS

**Green-Sand.** New Ways of Producing Castings in Green Sand (Neue Wege in der Herstellung von Gussstücken mit grünen Kernen), M. Freytag. Gieserei-Zeitung, vol. 21, no. 14, July 15, 1924, pp. 302-306, 13 figs. Detailed description and illustrations of new method for producing small castings in quantities.

**Production Cost Finding.** Finding Actual Cost of Castings, G. B. Cocker. Iron Trade Rev., vol. 75, no. 7, Aug. 14, 1924, pp. 421-422. System devised by southern foundry for determining selling price. Two factors used, namely, actual time required to

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1924-25 Volume

produce castings and amount of metal needed to pour them. From paper presented at meeting of Carolina members of Southern Metal Trades Assn. See also Foundry, vol. 52, no. 17, pp. 665-666.

**Production Increase.** A Shop Laboratory that Improves the Product, C. O. Herb. Machy. (N. Y.), vol. 31, no. 1, Sept. 1924, pp. 1-3, 6 figs. How metallurgical laboratory at Niles Tool Works, Hamilton, O., has helped to produce better castings.

**Run-Outs.** Run-Outs and Their Remedies, F. C. Edwards. Metal Industry (Lond.), vol. 25, no. 9, Aug. 29, 1924, pp. 203-204, 1 fig. Causes of run-outs, safeguards, and remedies.

## L

### LIGHTING

**Foundries.** How to Illuminate Foundries, W. H. Rademacher. Iron Trade Rev., vol. 75, no. 12, Sept. 18, 1924, pp. 741-745, 3 figs. Explains essential differences between hit-or-miss methods and scientific use of modern electric lamps. Benefits derived through better production, with safety.

**Machine Shops.** Good Lighting Equipment Pays, J. J. McLaughlin. Am. Mach., vol. 61, no. 7, Aug. 14, 1924, pp. 253-256, 9 figs. Advantages of good lighting system; proper position and spacing of units for machine shops; saving through periodical cleaning of equipment.

**Textile Mills.** Some Problems in the Daylight Lighting of Textile Factories, P. J. Waldram. Illuminating Engr., vol. 17, no. 5, May 1924, pp. 79-87, 12 figs. Deals with lighting needs of cotton industry, and only so far as relates to spinning of raw cotton into yarn and weaving of latter into cloths and sheetings.

### LIQUIDS

**Density—Temperature Relation.** Density of Liquids and Their Temperature (Die Dichte der Flüssigkeit und deren Temperatur), J. J. Saslawsky. Zeit. für Physikalische Chemie, vol. 109, no. 1-2, Apr. 12, 1924, pp. 111-135. Results of investigation to show connection between density (volume) of liquids and their temperature.

### LOCOMOTIVE BOILERS

**Design.** Calculation and Construction of a Locomotive Boiler (Berechnung und Konstruktion eines Lokomotivkessels), E. Herms. Praktische Maschinen-Konstruktion, vol. 57, nos. 21, 22 and 23, June 10, 17, and 24, 1924, pp. 285-290, 301-305 and 324-326, 26 figs. Complete calculation of locomotive boiler with heating surface of 68.4 sq. m.

**Developments.** Locomotive Boilers (Notes sur la Chaudière Locomotive), M. Demoulin. Génie Civil, vol. 85, nos. 2 and 3, July 12 and 19, 1924, pp. 34-36, and 59-62, 5 figs. Discusses continued improvements in locomotive operation, boiler developments, variation of power, induced draft, long-distance running, increase in boiler tubes, etc. Process of combustion, feeding fuel, Penn. Ry. tests, conclusions.

### LOCOMOTIVES

**Diesel-Electric.** An Italian Diesel-Electric Locomotive (Una locomotiva italiana Diesel-elettrica), G. Sona. Rivista Tecnica delle Ferrovie Italiane, vol. 25, no. 5, May 15, 1924, pp. 145-158, 9 figs. Details of experiments on Calabro-Lucania line with 440-hp. units constructed by Italian Brown-Boveri and Fiat companies.

**Oil-Engined Locomotive Proves Its Worth.** Oil Engine Power, vol. 2, no. 8, Aug. 1924, pp. 417-419, 3 figs. 24-hr. operation in Manhattan's busy railroad yards proves satisfactory. Characteristics of engine, which has striking method of fuel distribution, supplement uncanny flexibility of electrical transmission.

**Diesel-Engined.** Tests of a 60-H.P. Liesel Locomotive on the London & North Eastern Railway. Ry. Gaz., vol. 41, no. 6, Aug. 8, 1924, pp. 178-180 and 193, 6 figs. Describes locomotive which is of Austrian manufacture, 0-4-0 type, and equipped with 60-hp. six-cylinder Diesel engine, which transmits its power through Lentz hydraulic transmission mechanism.

**Driving-Box Replacement.** Replacement Driving Boxes on the New York Central, L. C. Morrow. Am. Mach., vol. 61, no. 8, Aug. 21, 1924, pp. 309-312, 12 figs. Practice of West Albany shops. Operations on driving boxes, crown brasses, shoes, and wedges.

**Electric.** See ELECTRIC LOCOMOTIVES.

**Mallet.** Hungarian Mallet with Brotan Type Boiler. Ry. Age, vol. 77, no. 10, Sept. 6, 1924, pp. 407-410, 4 figs. Describes locomotive built at Budapest by Hungarian State Rys. for heavy freight service between Fiume and Moravia; steam pressure, 220 lb.; total evaporative heating surface, 2918 sq. ft.

**Mikado.** Mikado Type Locomotive, Elgin Joliet & Eastern Ry. Ry. Rev., vol. 75, no. 9, Aug. 30, 1924, pp. 317-320, 3 figs. Gives weights and dimensions of Elgin, Joliet & Eastern Ry. 2-8-2 type locomotives. Engines are similar in design and construction to U.S.R.A. heavy mikado locomotives.

**Repairing.** Repairing Locomotives in a Manufacturing Plant, H. Campbell. Am. Mach., vol. 61, no. 9, Aug. 28, 1924, pp. 329-332, 10 figs. Details of some of the tools and methods used in section of plant of Minneapolis Steel & Machinery Co., Minneapolis, Minn.

**Repairing Locomotives Under Contract.** Boiler Maker, vol. 24, no. 8, Aug. 1924, pp. 221-225, 13 figs. Beech Grove shop operating system developed by Railway Service & Supply Corp. performs valuable service for Big Four.

**Resistance of.** Locomotive Resistance and Tractive Force, K. Asakura. Ry. Mech. Engr., vol. 98, no. 9, Sept. 1924, pp. 523-527, 9 figs. States that locomotive resistance should be partly represented as so many pounds per ton weight and partly as a function of mechanical efficiency. Formula for mechanical efficiency is developed and method of calculating tractive effort by applying mechanical efficiency explained. Results of calculation according to this method are nearly equal to those calculated by speed-factor method; can be applied to a locomotive whose boiler capacity is less than 100 per cent.

**Stacks.** Experimental Investigation of Locomotive Stacks (Experimentelle Untersuchung von Lokomotivschornsteinen), F. C. Huygen. Zeit. des Österr. Ingenieur- u. Architekten-Vereines, vol. 76, no. 27/28, July 11, 1924, pp. 248-251, 3 figs. Discusses course of temperature, pressure, and velocity of flow from smokebox to mouth of stack. Translated from Dutch.

**Steam-Turbine.** Turbine Locomotives (Locomotives à turbines), M. Lamy. Revue Industrielle, vol. 54, no. 2181, Aug. 1924, pp. 217-221, 7 figs. Describes Escher Wyss type of Swiss Ry., Ljungström type in Sweden, and their design, construction and operation.

**Superheater.** Recent Steam Collecting Boxes for Superheater Locomotives (Neuere Dampfsammelkästen für Heissdampflokotiven), M. Igel. Wärme, vol. 47, no. 26, June 27, 1924, pp. 306-307, 8 figs. Details of boxes of ingot iron in place of cast iron or steel to avoid welding; 70 boxes used by German railways as test.

**Superheaters for.** Locomotive Superheaters. Ry. Gaz., vol. 41, no. 7, Aug. 15, 1924, p. 224, 2 figs. Describes return bend evolved by Northeastern Mar. Eng. Co., Ltd., to meet most exacting conditions of service.

**Switching.** Oil-Electric Locomotive Built for Switching Service. Eng. News-Rec., vol. 93, no. 10, Sept. 4, 1924, pp. 390-391, 3 figs. Particulars of locomotive designed and built by Ingersoll-Rand Co. and Gen. Elec. Co. for N. Y. Central R. R. Co., for use in city streets; 300-hp. oil engine directly connected to a 200-kw. generator; four motors of a nominal rating of 95 hp. each, one of which is geared to each of four axles.

**Oil-Engine Locomotive for Switching Service (Oel-motor-Lokomotiven für Rangierdienst).** Schweizerische Bauzeitung, vol. 84, no. 7, Aug. 16, 1924, pp. 86-87, 7 figs. Details of design of 90-hp. 500-r.p.m. locomotive burning crude oil, developing 4000 kg. at drawbar.

**Tank.** New Goods Tank Locomotives, London Midland & Scottish Railway. Ry. Gaz., vol. 41, no. 7, Aug. 15, 1924, p. 215, 2 figs. Construction of inside-cylinder-type 0-6-0 engines for Lond., Midland & Scottish Ry.; cylinders; diameter, 18 1/2 in.; piston stroke, 26 in.; wheelbase, 16 ft. 6 in.

**Testing.** Testing Locomotives on the Great Western Railway. Ry. Gaz., vol. 41, no. 7, Aug. 15, 1924, pp. 216-221, 8 figs. Abstract of paper read before First World Power Conference.

**Tracking Qualities, Testing.** Orthograph Records Locomotive Characteristics, P. M. Gillilan. Ry. Age, vol. 77, no. 7, Aug. 16, 1924, pp. 283-286, 9 figs. Use of device properly calibrated gives accurate determination of tracking qualities of equipment.

### LUBRICATING OILS

**Classification.** Practical Hints on Oils and Machinery Lubrication, W. E. Biggs and W. R. Woolrich. Nat. Engr., vol. 28, no. 9, Sept. 1924, pp. 129-131. Discusses qualities of good oil; some engine-room tests for oils; classification of oils; what oils to use for different services; grease and solid lubricants.

**Friction of.** Determination of Friction of Lubricating Oils (Zur Bestimmung der Schmiermittelreibung), R. Vieweg. Petroleum, vol. 20, no. 19, July 1, 1924, pp. 899-903, 6 figs. Discusses method which enables determination of friction losses in any bearings with any lubricant on basis of measurement of operating temperature and efficiency.

**Purification.** Conservation, Upkeep, and Purification of Lubricating Oils (Conservation, manutention et purification des huiles de graissage principes généraux et méthodes modernes), J. Lévy. Technique Moderne, vol. 16, no. 13, July 1, 1924, pp. 453-460, 14 figs. Discusses storage, purification of used oils, nature and origin of impurities, filters, centrifugal separation, etc.

**Testing.** Tests for Lubricating Oils. Power Plant Eng., vol. 28, no. 16, Aug. 15, 1924, pp. 853-854. Details of number of tests and their comparative value.

## M

### MACHINE SHOPS

**Construction.** Steel Machine-Shop Construction (Eiserne Werkstattbauten), H. Gruetz. Bauingenieur, vol. 5, no. 14, July 31, 1924, pp. 430-435, 12 figs. Discusses modern machine-shop construction, consideration of largely increased dimensions, roof construction, light conditions, and quotes various examples of internal arrangement.

**Inefficient Machinery, Cost of.** How Much Are Inefficient Machines Costing You? K. H. Condit. Am. Mach., vol. 61, no. 12, Sept. 18, 1924, pp. 451-452, 1 fig. Machine equipment sets production limits. Keeping track of cost of inefficient machines. Cost data show when to throw out obsolete equipment.

### MACHINE TOOLS

**Demand Forecast.** Forecasting Demand for Industrial Equipment, E. F. DuBrul. Mech. Eng.,

vol. 46, no. 9, Sept. 1924, pp. 539-542, 5 figs. Business cycle in machine-tool industry. Cooperative study of stabilization. Machine-tool barometer.

**Design.** Methods of Machine Tool Design, A. L. De Leeuw. Am. Mach., vol. 61, no. 8, Aug. 21, 1924, pp. 317-320, 7 figs. Feeds of intermittent type.

**Germany.** Progress in the Technics of Working Metals, with Special Reference to the Leipzig Spring Fair (Fortschritte der Metallbearbeitungstechnik unter Berücksichtigung der Leipziger Frühjahrsmesse), M. Buxbaum. Zeit. des Vereines deutscher Ingenieure, vol. 68, nos. 29 and 31, July 19 and Aug. 2, 1924, pp. 745-750 and 798-802, 27 figs. Reviews most important improvements in working metals, machine tools and tool industry, covering lathes, drilling and molding machines, planers, etc., grinding machines, circular and surface, grinding wheels, saws, files, hammers, etc.

**Magazine Attachments.** Design of Magazine Attachments, A. A. Dowd. Machy. (Lond.), vol. 24, no. 620, Aug. 14, 1924, pp. 617-620, 8 figs. Magazine attachments for irregular work.

**Olympia Exhibition, Eng.** British Machine Tools at the Olympia Exhibition. Engineer, vol. 138, no. 3585, Sept. 12, 1924, 16 pp. (Supp.), 47 figs. Descriptions of some of the British machine tools exhibited.

**Small Tools for.** Development of Tools Provides Simpler Ways for Performing Specific Operation W. L. Carver. Automotive Industries, vol. 51, no. 12, Sept. 18, 1924, pp. 524-525, 8 figs. Describes reamer having die-cast head and high-speed steel cutter blades, new line of adjustable shell reamers which makes use of five sizes of blade, and improved system of jig bushings.

**Standardization.** Contribution to the Question of Standardization of Machine Tools (Beitrag zur Frage der Vereinheitlichung im Werkzeugmaschinenbau), E. Toussaint. Praktische Maschinen-Konstruktion, vol. 57, no. 22, June 17, 1924, pp. 306-309. Discusses principal point regarding lathes and shows that even in far-reaching standardization peculiarity of construction by individual firms may be maintained.

**Standardization Versus Individuality.** L. D. Burlingame. Mech. Eng., vol. 46, no. 9, Sept. 1924, pp. 529-530 and 538. Discusses standardization in machine-tool industry, giving a word of caution against the too eager adoption of ill-advised standards.

### MACHINING METHODS

**Automobile Brake Parts.** Machining Parts for Four-Wheel Brakes, H. Campbell. Am. Mach., vol. 61, no. 12, Sept. 18, 1924, pp. 465-467, 9 figs. Details of machining operations on cylinders and pistons for hydraulic brakes in Timkin-Detroit axle plant.

**Automobile Cylinder Blocks.** Machining Buick Cylinder Blocks, J. Younger. Am. Mach., vol. 61, no. 13, Sept. 25, 1924, pp. 503-505, 10 figs. Methods used in shops of Buick Motor Car Co.

**Locomotive Cylinders.** New York Central Cylinders, L. C. Morrow. Am. Mach., vol. 61, no. 13, Sept. 25, 1924, pp. 493-494, 4 figs. Operation sequence and methods at West Albany shops of New York Central valuable for comparative purposes.

### MALLEABLE CASTINGS

**Europe.** A European View of the Malleable Question, T. Levoz. Foundry Trade J., vol. 30, no. 419, Aug. 28, 1924, pp. 175-177. Discusses what is suitable metal, selection of furnace, electric-furnace experiments, methods of producing malleable iron, etc.

### MARINE STEAM TURBINES

**Blade Material.** Steam and Compressed-Air Trials with Turbine-Blade Material (Dampf- und Druckluftblasversuche mit Turbinenschaufelmaterial), B. Schulz. Brennstoff- u. Wärmewirtschaft, vol. 6, no. 6, June 1924, pp. 138-140, 2 figs. Discusses tests carried out by German Navy in devising acceptance test for blade material; 25 per cent Ni steel gave best results.

### MATERIALS

**Overstrain and Strength.** A New Theory on Overstrain and Strength of Materials, H. P. Trendelenburg and G. V. Pickwell. Am. Soc. for Steel Treating—Trans., vol. 6, no. 2, Aug. 1924, pp. 145-170, 7 figs. Discusses new theory on mechanics of overstrain and strength, i.e., plastic transfer of proportional elastic range; increase in strength in any direction is at expense of strength in opposite direction; increase in strength in direction of overstrain is through mechanism of slip, etc.

### MATERIALS HANDLING

**Ford Motor Co. Plant.** Mechanical Handling at River Rouge, M. W. Potts. Indus. Mgt. (N. Y.), vol. 68, no. 2, Aug. 1924, pp. 67-114, 103 figs. Describes receiving and distributing raw materials, blast furnace as a materials-handling problem, world's most modern foundry, handling large castings through production operations in machine shop, power-house fuel handling and electric-furnace building, sawmill and the tractor assembly, successful innovations in plate-glass manufacture, mechanical handling in by-products plant, and miscellaneous industries within Ford plant.

### MEASUREMENTS

**Machine-Shop.** Shop Measurements, E. Buckingham. Mech. Eng., vol. 46, no. 9, Sept. 1924, pp. 535-538. English and metric standards of length and their interrelation. Accuracy and purposes of shop measurements.

### METALLOGRAPHY

**Applications.** Practical Metallography, S. P. Rockwell. Am. Mach., vol. 61, no. 13, Sept. 25, 1924, pp. 487-492, 18 figs. Applications of metallography to solution of problems in average plant. Practical methods of procedure. Illustrated studies

of various examples. Paper before Am. Gear Mfrs. Assn.

## METAL SPRAYING

**Capabilities and Applications.** Metal Spraying and Sprayed Metal, T. H. Turner and W. E. Ballard. Inst. of Metals, Advance Paper no. 14, for Mtg. Sept. 8-11, 1924, 17 pp., 25 figs. on supp. plates. Indicates critically actual capabilities of metal spraying as now practiced in England and other countries. Investigation includes examination of history of process and of its present capabilities and applications. Bibliography.

## METALS

**Attack by Acids.** How are Metals Attacked by Acids? (Wie werden Metalle von Säuren angegriffen?) R. Gans. Zeit. für Physikalische Chemie, vol. 109, no. 1-2, Apr. 12, 1924, pp. 49-64, 7 figs. Results of experiments with An-Ag and HNO<sub>3</sub>, and Ag and H<sub>2</sub>S to determine time and manner of attack.

**Elasticity of, Measurement.** Further Contribution to Dynamic Measurement of Elasticity in Metals and Alloys (Weiterer Beitrag zur dynamischen Elastizitätsmessung an Metallen und Legierungen), G. Welter. Zeit. für Metallkunde, vol. 16, no. 6, June 1924, pp. 213-220, 24 figs. Describes new testing method for determining impact-elongation elasticity; effect of falling weight on dynamic limit of elasticity; compares dynamic and static elongation test.

**Macrography.** New Process of Metal Macrography by Direct Impression on Films (Nouveau procédé de macrographie des métaux par impression directs sur pellicule), J. Durand. Génie Civil, vol. 85, no. 6, Aug. 9, 1924, pp. 131-133, 6 figs. Discusses direct examination of metals more or less polished and etched with reagent as part of acceptance test, giving details especially of segregations, deformations due to working, solidification, and effect of any factor modifying the structure.

**Microstructure.** Anomalies in Metals Disclosed by the Metallographic Microscope (Le anomalie dei metalli rilevate dal microscopio metallografico), V. Prever. Ingegneria, vol. 3, nos. 6 and 8, June 1 and Aug. 1, 1924, pp. 196-200 and 273-278, 38 figs. Discusses size of grain, annealing and cooling, and effect on microstructure and properties; heterogeneous inclusions, cavities, impurities, abnormal thermal conditions, etc.

**Plastic Deformation.** The Effect of Free Surfaces on the Plastic Deformation of Certain Metals, F. C. Thompson and W. E. W. Millington. Iron & Steel Inst., Advance Paper no. 9, for Mtg. Sept. 1924, 14 pp., 3 figs. partly on supp. plate. Gives reasons for believing that at free surfaces deformation will differ distinctly from that within mass; and shows importance of this in connection with determination of elastic limit and with elastic failure.

**Protective Coating of.** New Metal Coatings (Neuere Metallüberzüge). Zeit. für Metallkunde, vol. 16, no. 5, May 1924, pp. 175-179. Discusses Liebreich process of electrolytic coating with chromium to prevent corrosion, and Schulze electrolytic coating process of aluminum for protection against weather conditions or chemicals.

**Tensile Strength.** The Relationship between Tensile Strength, Temperature, and Cold-Work in Some Pure Metals and Single Solid Solutions, D. H. Ingall. Inst. of Metals, Advance Paper no. 8, for Mtg. Sept. 8-11, 1924, 24 pp., 7 figs. Results of investigation on silver, aluminum, nickel, 70:30 brass, and 80:20 cupro-nickel.

**Testing.** Importance of Elastic Limit, Elongation and Notched-Bar Test for Constructors (Ueber die Bedeutung der Elastizitätsgrenze, Bruchdehnung und Kerbzähigkeit für den Konstrukteur), P. Ludwik. Zeit. für Metallkunde, vol. 16, no. 6, June 1924, pp. 207-212. Discusses value of usual tensile-strength testing methods, emphasizes insufficiency of tensile test, uncertainty of measuring limit of elasticity, and suitability of combining tensile strength with notched-bar test.

**New Forms of Test Bars for Tensile Strength Test and Holding Devices** (Neue Zugprobestabformen und Einspannvorrichtungen), F. Rinagl. Maschinenbau, vol. 3, no. 21, Aug. 14, 1924, pp. 770-773, 4 figs. Discusses defects of present production of test bars and holding devices and describes improvements for short bars, new bar forms for brittle and elastic material, comparative cost of production.

## MILLING CUTTERS

**Cooling.** Cooling Cutters in Milling (Die Kühlung der Werkzeuge beim Fräsen), M. von Brandt. Werkstattstechnik, vol. 18, no. 15, Aug. 1, 1924, pp. 393-394, 3 figs. Discusses inadequate provisions for supplying cooling water to high-speed milling cutters; gives suggestions for effective cooling and states satisfactory results obtained.

**Cutting Ratio.** Cutting Ratios of Cutter Heads in Milling Aluminum Alloys (Die Ermittlung der günstigsten Schnittverhältnisse von Messerköpfen beim Fräsen von Aluminiumlegierungen), W. Lippart. Maschinenbau, vol. 3, no. 18, June 26, 1924, pp. 657-659, 5 figs. Discusses most favorable and economic angle of cutters, feeds, power consumption, etc.

## MILLING MACHINES

**Feed Drive.** Choice of Feed Drive in Milling Machines (Wahl des Vorschubantriebes bei Fräsmaschinen), E. Toussaint. Praktische Maschinen-Konstrukteur, vol. 57, no. 23, June 24, 1924, pp. 327-331, 14 figs. Shows by three different examples that independent drive of feed table is best solution, and that drive from cutter shaft must be eliminated.

**High-Production Milling.** How Milling Machine Service Has Helped Manufacturers, F. H. Colvin. Am. Mach., vol. 61, no. 11, Sept. 11, 1924, pp. 405-409, 12 figs. Shows how high-production milling can be secured on standard machines by use of well-designed fixtures.

**Specialized Work.** Wide Range of Specialized Work Now Performed by Milling Machines, W. L. Carver. Automotive Industries, vol. 51, no. 8, Aug. 21, 1924, pp. 356-360, 10 figs. Standard machines with special heads do great variety of work at small additional expense, and place this type of tool in semi-automatic class.

## MOLDING MACHINES

**Sandslinger.** Recent Developments in Moulding Practice. Eng. Production, vol. 7, no. 143, Aug. 1924, p. 263, 2 figs. Details of design and construction of sandslinger machines.

**Types.** Moulding Machines, J. McClelland. pp. 57-60 (includes discussion), 7 figs. Describes hand-operated, power, and jolt-ramming machines, and a boxless machine.

## MOLDING METHODS

**Condensers.** A Method of Moulding a Condenser. Foundry Trade J., vol. 30, no. 415, July 31, 1924, pp. 101-102, 4 figs. Practical details of molding and core making for making of a condenser. Main dimensions of casting are: Depth, with top and bottom flanges, approximately 8 ft.; diameter, 10 ft.; inside diameter of body, 9 ft.; thickness of metal, 1 1/2 in.

## MOLDS

**Production by Templets.** Production of Molds by Means of Templets (Die Herstellung von Gießformen mittels Schablönen), R. Lower. Zeit. des Österr. Ingenieur- u. Architekten-Vereines, vol. 76, no. 27/28, July 11, 1924, pp. 251-253, 11 figs. Gives various examples of application of templets in making molds.

## MOTOR BUSES

**Design.** European Motor Bus Design. Elec. Ry. J., vol. 64, no. 12, Sept. 20, 1924, pp. 448-452, 13 figs. Double-deck design coming in use more and more; effort being made to inclose upper deck for all weather; light wood bodies used; weight limitation imposed by Dept. of Police.

**Interurban Service.** Co-Ordinating Interurban Service. Elec. Ry. J., vol. 64, no. 11, Sept. 13, 1924, pp. 379-382, 4 figs. Bus lines operated by Pennsylvania-Ohio Elec. Co. parallel its interurban railway lines; operation successful as means of providing de luxe service; maintenance of coaches performed in company's garage.

**Railway-Operated.** North Shore Line Eliminates Bus Competition. Ry. Age, vol. 77, no. 7, Aug. 16, 1924, pp. 275-277, 5 figs. Chicago, North Shore & Milwaukee operates its own fleet of highway coaches tributary to main line.

**Types.** Discussion of Papers at the 1924 Annual Meeting. Soc. Automotive Engrs.—Jl., vol. 15, no. 2, Aug. 1924, pp. 163-174, 4 figs. Discussions of papers on Field and Future of Motorbuses, J. A. Emery, Double-Deck Motor Omnibus, R. W. Meade and Essentials of Successful Constant-Compression Engine, C. E. Sargent.

## MOTOR TRUCKS

**Brakes.** Through Air Brakes for Motor Truck Trains (Durchgehende Luftdruckbremse für Autzüge). Technische Blätter, vol. 14, no. 30, July 26, 1924, pp. 225-226, 3 figs. Details of design and operation of Knorr brake, applicable to each truck and functioning similar to air brakes used on railroad trains.

**Lighting.** Self-Contained Magneto Generator Designed for Truck and Tractor Lighting. Automotive Industries, vol. 51, no. 12, Sept. 18, 1924, pp. 529-530, 3 figs. Describes electric generator brought out by Harris Elec. Co. of San Francisco, Cal. Less than 0.5 volt and less than 0.3 ampere shown as a difference in output at engine speeds from 800 to 3000 r.p.m. Lubrication is effected from the oiling system of the engine.

**Manufacture.** Complete Gaging System Fosters Pride in Maintaining High Quality, W. L. Carver. Automotive Industries, vol. 51, no. 11, Sept. 11, 1924, pp. 472-476, 9 figs. Every individual in shop is convinced of benefits derived from accuracy in work made possible by exceptional tools for checking all parts manufactured in plant of the General Motors Truck Co.

**Q.M.C., U.S.A.** New Q.M.C. Trucks Drive on Four or Six Wheels, H. Chase. Automotive Industries, vol. 51, no. 6, Aug. 7, 1924, pp. 271-275, 11 figs. Rear-axle brakes run in oil and have lining attached to drum. Winch, driven off secondary gear set, is located entirely below frame. Units employed include Andrade self-locking differential, Covert gear set, and Hinkley engine. Universal helps in steering.

**Six-Wheel.** A Six-Wheel Truck with Four-Wheel Drive. West Machy, Wld., vol. 15, no. 7, July 1924, pp. 229-230 and 246, 5 figs. Describes truck designed by A. H. Lacey and C. M. Crosson; driving unit contains two spiral bevel-gear assemblies, each rigidly attached to helical-gear assembly, thus making one compact unit which is attached to main-frame crossmembers; chassis designed to cover city and interurban buses, long-distance trucking, refrigerator trucks, and all high-speed transportation.

**Thornycroft.** A Moderate Cost 25-30-cwt. Chassis. Motor Transport (Lond.), vol. 39, no. 1018, Sept. 1, 1924, pp. 271-273, 9 figs. Details of new chassis having four cylinders combined in single casting with detachable head, and bore and stroke of 95 mm. and 127 mm., respectively.

**Wheels.** Laboratory Strength-Tests of Motor-Truck Wheels, T. W. Greene. Soc. Automotive Engrs.—Jl., vol. 15, no. 2, Aug. 1924, pp. 150-155 and 174, 13 figs. Discusses tests of mechanical properties of six types of wheels as shown in radial compression test, skid test, elastic resiliency, also character of failures, load deflection curves for skid test, etc.

# O

## OIL ENGINES

**Heavy-Oil.** Evolution of the Heavy-Oil Engine (L'évolution des moteurs à huiles lourdes), R. E. Mathot. Société des Ingénieurs Civils de France—Mémoires et Compte Rendu des Travaux, vol. 77, no. 1-2-3, Jan.-Mar. 1924, pp. 143-181, 20 figs. Discusses properties of fuel oils, Diesel-type engines, explosion engines, and their design and construction.

**Power-Plant.** Types of Modern Power Plant Oil Engines. Oil Engine Power, vol. 2, no. 8, Aug. 1924, pp. 419-422, 6 figs. Savings due to elimination of air compressor and of geared camshaft drive have been applied to improvements in general features of design; chain which is used in place of timing gears has big factor of safety against wear.

**Water-Works.** Oil Engines for New York City's Water Supply. Oil Engine Power, vol. 2, no. 8, Aug. 1924, pp. 426-427, 2 figs. Specifications which are being prepared for replacement of steam-driven pumps at Clove Station, Staten Island.

## OIL FUEL

**Burners.** Oil Firing for Steam-Boiler and Central Heating Plants (Oelfeuerung bei Dampfkesseln und Zentralheizungen), M. Hottinger. Schweizerische Bauzeitung, vol. 83, nos. 25, 26; vol. 84, nos. 4 and 5, June 21, 28, July 26 and Aug. 2, 1924, pp. 292-295, 305-307, 44-48 and 58-62, 41 figs. Describes burners of various types used in industrial plants and locomotives; steam boiler plants with oil firing; oil firing for central heating boilers; kinds of oils and their properties, operating costs of heating by means of oil and of coke.

**Burning.** How They Heat with Fuel Oil on the Pacific Coast, C. W. Wright. Heat & Vent. Mag., vol. 21, no. 8, Aug. 1924, pp. 41-43 and 45, 4 figs. Notes on present practice in section of country where oil burning has long been successfully applied.

**Ignition Point of.** The Ignition-Point of Fuel Oils Under Pressure, J. Tauss and F. Schulte. Mar. Engr. & Motorship Bldr., vol. 47, no. 564, Sept. 1924, pp. 325-328, 10 figs. Account of recent important experimental work. Translated from Zeit. des Vereines deutscher Ingenieure, May 31, 1924.

## OXY-ACETYLENE CUTTING

**Cast Iron.** Cutting Cast Iron, J. Fitzgibbons. Welding Engr., vol. 9, no. 8, Aug. 1924, pp. 23-24, 2 figs. Chemical discussion of cutting cast iron by oxy-acetylene; elements found in cast iron and their affinity for oxygen.

## OXY-ACETYLENE WELDING

**Efficiency.** Present State of Autogenous Welding and Cutting of Metals (L'état actuel de la soudure autogène et du découpage des métaux), M. R. Thomas. Société des Ingénieurs Civils de France—Mémoires et Compte Rendu des Travaux, vol. 77, no. 1-2-3, Jan.-Mar. 1924, pp. 182-201, 6 figs. Discusses methods of assembling and welding, welding rods, cutting, equipment, etc.

**Practice.** Oxy-Acetylene Welding. Welding Engr., vol. 9, no. 8, Aug. 1924, pp. 34-40. Discusses torch manipulation; training welders; selection of welding rods and test of rods.

# P

## PAINTS

**Heat-Absorption-Reducing.** Paints of High Luminosity to Reduce Refrigeration Losses, H. A. Gardner and H. C. Parks. Paint Mfr.'s Assn. of U. S., Sci. Sec., circular no. 213, Sept. 1924, pp. 82-84, 2 figs. Suggests use of white or light tints for refrigerating cars or ships to reduce heat absorption.

**Insulation Value.** Insulation Value of Paint and Its Effect in Reducing Condensation, H. A. Gardner. Paint Mfr.'s Assn. of U. S., Sci. Sec., circular no. 212, Sept. 1924, pp. 80-81, 1 fig. Shows insulating power by metal pipes carrying cold water in warm rooms, painted parts of which show no condensation.

**Thickening.** Thickening of Paints (L'épaississement des peintures), C. Coffignier. Chimie & Industrie, vol. 11, no. 6, June 1924, pp. 1083-1085. Discusses phenomenon of thickening; thickening with polymerized and crude oils; how to avoid it.

## PAPER MACHINERY

**Combined Beating and Refining Engine.** Beating and Refining Engine. Paper, vol. 34, no. 20, Sept. 4, 1924, pp. 899-900, 2 figs. Describes combined beating and refining engine invented by Sheldon Leicester, designed to produce a continuous flow of stock, beaten as to length, hydration and flexibility (1) by regulating speed of motor, (2) by set of bedplates and (3) by dilution of stock.

**Grinders.** A Permanent Grinder for the Production of Wood Pulp for the Manufacture of Paper. Eng. Progress, vol. 5, no. 8, Aug. 1924, pp. 157-159, 6 figs. Describes method and practical design of grinder and results achieved in practice; grinding stone may be driven either electrically, hydraulically or by some other power.

## PAPER MILLS

**Electric Drive.** Details of Paper-Mill Drives and Power Service, H. E. Stafford. Indus. Engr., vol. 82, no. 8, Aug. 1924, pp. 360-367 and 400-401, 11 figs. Includes transformation and distribution of electric power throughout mill, together with types of motors

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1924-25 Volume

and kinds of drive used to connect motors to their loads and characteristics of paper-mill loads.

**Model Plant.** Model Paper-Making Plant. Engineer, vol. 138, no. 3578, July 25, 1924, pp. 95-99, 12 figs. partly on p. 106. Describes working model of up-to-date paper-making plant provided by nearly three dozen different firms, under organization of Paper Makers' Assn. of Great Britain and Ireland, as a joint exhibit at British Empire Exhibition. Designed to produce a finished roll of paper, 30 in. wide, at rate of 20 ft. to 100 ft. per minute, i.e., up to 1 cwt. dry paper in an hour.

**Steam Pressure and Consumption Regulation.** Workings of Ruths' Steam Accumulator. Paper, vol. 34, no. 15, July 31, 1924, pp. 662-664, 4 figs. Description of installation of Ruths' steam accumulator in Lessebo sulphite and paper mills, Lessebo, Sweden, showing results obtained by regulating variations in steam pressure and consumption. Translated from article by M. Kreyssig in *Wochenblatt fuer Papierfabrikation*.

## PIGMENTS

**Oil Absorption of.** The Oil Absorption of Pigments. J. H. Calbeck. Chem. & Met. Eng., vol. 31, no. 10, Sept. 8, 1924, pp. 377-382, 12 figs. A study based upon recent investigations of wetting properties of paint and varnish vehicles and upon volume relationship between vehicle and pigment. Bibliography. Paper read before Paint and Varnish Sec., Am. Chem. Soc.

## PIG IRON

**Judging and Mixing.** The Judging and Mixing of Pig-Iron. H. J. Young. Metal Industry (Lond.), vol. 25, no. 10, Sept. 5, 1924, pp. 227-228. Author's reply to the various criticisms of his recent paper by above title.

## PIPE

**Joints.** Pipe Joints for High Pressures and Temperatures. Power, vol. 60, no. 11, Sept. 9, 1924, pp. 396-397, 8 figs. Describes various types.

## PIPE, CAST-IRON

**Manufacture.** Manufacture of Cast-iron Pipe in the South. R. Moldenke. Am. Inst. Min. & Met. Engrs.—Trans., Advance Paper no. 1365-5, Sept. 1924, 5 pp. Discusses some economic conditions which have made career of cast-iron pipe industry in United States a checked one. Describes the two new developments in manufacture of cast-iron pipe, both along lines of centrifugal casting, and presents advantages and disadvantages of both processes. Statistics on production of pipe in United States at present time, as well as plants, and their capacities, so far as they are situated in South.

**Modern Methods of Pipe Manufacture by the Centrifugal Process.** E. J. Fox and P. H. Wilson. Foundry Trade J., vol. 30, no. 417, Aug. 14, 1924, pp. 131-139, 16 figs. Describes methods at works of Stanton Ironworks Co., Ltd., Stanton, operating on de Lavaud process.

## PISTONS

**Metals for.** Use of Light and Ultra-Light Metals for Pistons of Explosion Engines (au sujet de l'emploi des alliages légers et ultra-légers pour les pistons de moteurs à explosion). M. de Fleury. Académie des Sciences, Comptes rendus des séances, vol. 178, no. 26, June 23, 1924, pp. 2161-2164. See also Génie Civil, vol. 85, no. 5, July 19, 1924, pp. 71-72. Discusses advantages of light metal from standpoint of cooling and of lightness of piston.

## POWER PLANTS

**Management.** State Versus Private Management of Power Plants. A. T. Hadley. Engineering, vol. 118, no. 3058, Aug. 8, 1924, pp. 209-211. Concludes that history of state management creates strong presumption against encouragement of government-owned electric plants. Abstract of paper read before World Power Conference.

**Railway.** A Model Oil-Burning Railroad Power Plant. Ry. Age, vol. 77, no. 6, Aug. 9, 1924, pp. 237-240, 9 figs. Details of steam, air and electric power equipment of Missouri, Kansas & Texas Ry. Terminal, oil-fired boilers, evaporating 14.21 lb. water per lb. of oil, cost of generating electric power is less than one cent per kw-hr.

## PRESSES

**Hydraulic, Platen Design.** The Design of Hydraulic Press Platens. Machy. (Lond.), vol. 24, no. 662, Aug. 28, 1924, pp. 693-694, 2 figs. Suggestions on designing of platens; table giving suitable proportions for a range of circular platens capable of withstanding working loads of from 50 to 300 tons.

## PULVERIZED COAL

**Pulverizers.** Pulverized Coal Firing and the Kofino Pulverizer (Staubfeuerung und Kofinomühle). O. Berner. Elektrische Betrieb, vol. 22, no. 13, July 10, 1924, pp. 122-125, 8 figs. Design and construction of Kofino pulverizer plant, and examples of application.

## PUMPS

**British Empire Exhibition.** British Empire Exhibition: Pumps and Pumping Machinery. Engineering, vol. 118, no. 3059, Aug. 15, 1924, pp. 216-220, 11 figs. Describes exhibits, including motor-driven two-throw double-acting pump and 20,000-gal. turbo boiler-feed pump of G. and J. Weir, Ltd.; emergency bilge pump and 4-in. salvage pumping set of Drysdale & Co., Ltd.; Gwynne-Pennell rotary trap; and steam turbine boiler-feed pump and other pumping machinery of Gwynnes Engineering Co., Ltd.

**Classification.** Classification of Pumps (Classification des Pompes). H. Meuris. Assn. des Ingénieurs sortis des Ecoles Spéciales de Gand—Annales, vol. 14, series 5, 1924, pp. 172-182, 3 figs. Shows that

inventors have exhausted all possible systems and that progress must be sought in analysis of details, improvement in mechanical construction, etc.

**Rotary.** Positive Rotary Pumps for Oil-Engine Drive. Oil Engine Power, vol. 2, no. 9, Sept. 1924, pp. 480-482, 4 figs. Discusses characteristics of direct-connection to oil engines and pressures developed by them.

**Selection.** Comparison of Pumping Equipment. R. T. Livingston. Power Plant Eng., vol. 28, no. 16, Aug. 15, 1924, pp. 849-850. Discusses types of pumps and practical method of comparing pumping equipment.

## PUMPS, CENTRIFUGAL

**Characteristic Curves.** Centrifugal Pump Characteristic Curves. W. E. W. Millington. World Power, vol. 2, no. 8, Aug. 1924, pp. 103-107, 10 figs. Indicates a method of analysis of pump characteristic curves which, in author's opinion, is much more valuable in actual practice than usual method of employing equations which have proved to be unreliable in actual use.

## PYROMETERS

**Uses.** Modern Temperature-Measuring Apparatus (Die modernen Temperaturmessgeräte). F. Knoops. Metall u. Erz, vol. 21, no. 12, June 2, 1924, pp. 270-272. Discusses various groups of pyrometers, their field of application, advantages and drawbacks, errors in measuring, etc.

# R

## RAILWAY ELECTRIFICATION

**Coal Carriers.** Electrification of Coal Carrying Railroads. T. C. Wurts. Modern Min., vol. 1, no. 1, Aug. 1924, pp. 2-4, 5 figs. Describes electric operation of Norfolk & West Ry.; locomotives used are split-phase type; single-phase power, at potential of 11,000 volts, is collected from trolley wire and stepped down to operating potential by means of transformers mounted on locomotive.

**France.** Electrification of the Paris Suburban Lines of the State Railways (Note sur l'électrification des lignes de Banlieue des chemins de fer et l'état). M. C. Thomas. Revue générale des Chemins de Fer, vol. 43, nos. 1 and 2, July and Aug. 1924, pp. 3-25 and 109-119, 30 figs. Details of lines, generating stations, permanent way, traction and transformer substations, third-rail equipment; electric locomotives rolling stock, motor coaches, etc.

**Progress.** Electrification Progress and Power Supply. Ry. Age, vol. 77, no. 8, Aug. 23, 1924, pp. 333-336, 1 fig. Also Ry. Elec. Engr., vol. 15, no. 9, Sept. 1924, pp. 292-299, 1 fig. Brief abstracts of several papers presented on electrification at First World Power Conference, held at Wembley, Lond., Eng., which shows status of railway electrification in various countries.

## RAILWAY MOTOR CARS

**Development.** Automotive Rail-Cars and Their Development. Soc. Automotive Engrs.—Jl., vol. 15, no. 3, Sept. 1924, pp. 195-198. Discussion of following papers printed in June 1924 issue of Journal: The Modern Motor Rail-Car, M. L. McGrew; Motorized Railroad Equipment, E. J. Brennan; Motorization of "Light-Service" Rail-Transportation, E. Wanamaker.

**Diesel-Electric.** Construction of Railway Oil-Motor Cars (Der Bau der Eisenbahn-Oeltriebwagen). G. Soberski. Verkehrstechnik, no. 34, Aug. 22, 1924, pp. 355-358, 6 figs. Design, construction and equipment of cars, four-stroke, six-cylinder internal-combustion engine using light oil, 950 r.p.m., 75 hp. with coolers at each end of car, compressed air for speed change gear, storage battery for motor starting and car lighting.

**Gasoline.** Gasoline Motor Coaches Missouri Pacific R. Ry. Rev., vol. 75, no. 9, Aug. 30, 1924, pp. 307-310, 4 figs. Three new gasoline motor coaches built by J. G. Brill Co., Phila., Pa. for Missouri Pacific Ry. are of model 55 combination type having passenger and baggage compartments and are being used in districts where passenger traffic is light.

**Self-Propelled Passenger Car on N. Y., N. H. & H. Ry. Mech. Engr., vol. 98, no. 9, Sept. 1924, pp. 534-537, 5 figs. Describes combination passenger and baggage unit car, propelled by a 150-hp. Ricardo engine, through a transmission consisting of one Universal hydraulic variable-delivery pump, supplying oil to two Universal hydraulic variable-speed motors, one mounted on each truck frame.**

**Gasoline-Electric.** Distinctive Features Involved in New Gas-Electric Motor Rail Car. Ry. Rev., vol. 75, no. 10, Sept. 6, 1924, pp. 343-348, 8 figs. Describes gas-electric motor rail car built by Electro-Motive Co. in shops of St. Louis Car Co. having six-cylinder, 175-hp. gasoline engine; discusses power plant, car construction, car body, etc.

**Railcar Maintains Steam Train Schedule in Four Month Test.** Automotive Industries, vol. 51, no. 10, Sept. 4, 1924, pp. 432-434, 6 figs. Describes powerful car built by Nat. Steel Car Co. for Can. Nat. Rys., operating on main line between Hamilton and Toronto, Canada. Designed primarily for carrying passengers, with baggage as a secondary consideration; all-steel construction; length, 55 ft. 9 1/2 in.; width, 8 ft. 9 in.; floor height above rails, 3 ft. 9 1/2 in.; drives through mechanical gearing to one axle of each truck.

**The Gas-Electric Motor Car Is Reinstated.** Ry. Elec. Engr., vol. 15, no. 9, Sept. 1924, pp. 289-291, 5 figs. Also Ry. Age, vol. 77, no. 9, Aug. 30, 1924, pp. 371-378, 4 figs. No. Pacific & Chicago Great Western will use newly developed type of passenger

car; cars are driven by 175-hp. gasoline engine, direct connected to 110-kw. 700-volt generator which supplies power to two railway motors mounted on power truck. Car weighs 35 tons and seats 59 persons.

**Producer-Gas.** Suction-Gas Motor Cars (Sauggas-Triebwagen). D. Fleck. Verkehrstechnik, no. 27, July 4, 1924, pp. 279-284, 5 figs. Details of tests on line Vorwohle-Emmenthal with suction gas and with benzol drive; consumption of anthracite 1 kg. per 1 km., cost per km. was M 0.14 to M 0.20 for suction gas with benzol addition and benzol.

## RAILWAY OPERATION

**Employees-Management Cooperation.** Practical Method of Securing Co-operation. Ry. Age, vol. 77, no. 11, Sept. 13, 1924, pp. 453-456. Underlying principles of method in effect on Pennsylvania Railroad System for bringing about cooperation between management and employees, and manner in which it operates.

**I.C.C. Report.** Construction and Repair of Railway Equipment. Ry. Age, vol. 77, no. 7, Aug. 16, 1924, pp. 293-296. Interstate Commerce Commission censures six carriers for high cost of locomotive repairs in contract shops.

**Statistics.** Report Shows Improved Railroad Performance. Ry. Age, vol. 77, no. 7, Aug. 16, 1924, pp. 299-302, 4 figs. National Industrial Conference Board studies increased utilization of labor in train service.

**Train Control.** The Union Continuous Train Control. Ry. Signaling, vol. 17, no. 9, Sept. 1924, pp. 342-347, 8 figs. Discusses principles and method of operation of two-speed and three-speed systems as applied to traffic requirements.

**The Union Continuous Train Control Systems.** Ry. Age, vol. 77, no. 10, Sept. 6, 1924, pp. 413-416, 2 figs. Automatic train control developed by Union Switch & Signal Co. as being installed on Atchison, Topeka & Santa Fe between Chicago and Shopton, Ia., provides engineman with a continuously visible indicator on his locomotive from which he can at all times determine at what speed it is permissible to run. Development and operation of two-speed and three-speed apparatus.

## RAILWAY REPAIR SHOPS

**Freight-Car.** New Car Repair Facilities for the D. & R. G. W. Ry. Mech. Engr., vol. 98, no. 9, Sept. 1924, pp. 540-546, 21 figs. Describes modern shops of Denver & Rio Grande Western for repairing wood and steel freight cars. Organized with station to station method and balanced gangs. Methods of repairing.

**Street-Car.** Repairing Street Cars at the Hillcrest Shops. Can. Machy., vol. 32, no. 9, Aug. 28, 1924, pp. 19-21, 4 figs. Toronto Transportation Commission, with 1030 cars in service, overhauls units of system in well-equipped building covering five acres of ground; discusses Jones underfeed stokers, tunnel 650 ft. long, "emergency patients" and car straightener.

## RAILWAY SIGNALING

**Interlocking.** Mechanical Interlocking. Ry. Engr., vol. 45, no. 536, Sept. 1924, pp. 309-310, 4 figs. Gives diagrams and locking lists of Baker Street and Wembley Park stations on Metropolitan Ry.

**New Reading Interlocking at Camden.** A. H. Vocum. Ry. Signaling, vol. 17, no. 9, Sept. 1924, pp. 338-341, 10 figs. Electropneumatic plant with alternating current control includes unique train starting system describes tower and machine, alternating-current track circuits, air-line and conduit system, instrument and relay cases, etc.

## RAILWAY SHOPS

**Inspection Shops.** Modern Inspection Facilities for the Interborough System. Elec. Ry. Jl., vol. 64, no. 9, Aug. 30, 1924, pp. 305-308, 6 figs. Describes two of six storage yards and inspection buildings being built by City of New York to provide for 2266 cars of Interborough Rapid Transit system.

## RAILWAY TRACK

**Crossings.** Kensington-Delavan Grade Crossing Elimination. Ry. Rev., vol. 75, no. 11, Sept. 13, 1924, pp. 383-389, 10 figs. Erie and Lackawanna Rys. jointly eliminate two important street crossings at grade at Buffalo, N. Y.

**Curves, Guard Rails for.** Guard Rails on Sharp Curves. J. J. Burns. Ry. Rev., vol. 75, no. 9, Aug. 30, 1924, pp. 327-329, 5 figs. Louisville & Nashville Ry. uses new type of guard-rail fastening on lines of sharp curvature and heavy traffic.

**Elevation of.** Important Track Elevation Work Completed at Elyria, Ohio. Ry. Rev., vol. 75, no. 9, Aug. 30, 1924, pp. 312-315, 8 figs. Completion of work gives New York Central four tracks through Elyria, eliminating seven crossings in heart of city.

**Rail Canting.** Canting of Rails Now Favored by Many Roads. Ry. Age, vol. 77, no. 10, Sept. 6, 1924, pp. 404-406, 1 fig. Developments which have taken place on 36 representative roads in United States and Canada on question of canting rail inward in order to provide a bearing surface more nearly coinciding with contour of car and locomotive wheels.

**Stresses.** Relations of Track Stresses to Locomotive Design. Eng. News-Rec., vol. 93, no. 9, Aug. 28, 1924, p. 336. Wheel spacing, tire flanges, counterbalance important. Effect of new locomotive designs on maintenance costs. Abstract of paper read before Mech. Sec. of Am. Ry. Assn. by C. T. Ripley.

## RAILWAY YARDS

**Grade-Adjusting Device.** Mechanical Adjustment of Grade for Gravity Switching. Eng. News-Rec., vol. 93, no. 7, Aug. 14, 1924, pp. 260-262, 4 figs. Describes "mechanical hump" for varying grade at summit of incline for gravity switching at Ecorse

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1924-25 Volume

freight yard at new Detroit terminals of Pennsylvania, Detroit R. R.; table which forms summit of hump raised and lowered by jacks; starting grade varied from 1 to 3 per cent.

#### REFRIGERATING MACHINES

**Packing for.** Packing for Refrigerating Machines, R. E. Seamon. South. Engr., vol. 41, no. 7, Sept. 1924, pp. 39-41. Requirements of suitable packing for rod stuffing boxes on refrigerating machines.

#### REFRIGERATING PLANTS

**Rules and Formulas for.** Some Rules and Formulas for the Refrigeration Engineer, W. H. Motz. Refrigerating Eng., vol. 11, no. 2, Aug. 1924, pp. 51-56 (and discussion) 56-60 and 64-65. Gives general rules and formulas concerning mechanical equipment of ice-making and refrigerating plants; rules pertain to displacements, speeds, and power requirements of compressors; heat removed in condensers; water and surface requirements for condensers; capacities of ammonia receivers; refrigerating coils in air, evaporators for refrigerating liquids; quantity of brine and power requirements of brine circulation systems; refrigeration pipe, cans per ton of ice.

#### ROLLING MILLS

**Power Consumption.** Power Consumed in Rolling Steel, G. Fox. Iron & Coal Trades Rev., vol. 109, no. 2945, Aug. 8, 1924, pp. 235-236, 13 figs. Discusses ratio of demand to connected load, power consumption by main roll drives, power consumption and elongation, power consumption and rate of rolling. Abstract of paper read before Am. Iron & Steel Inst.

**Time Study and Measuring Power Consumption in Rolling Mills** (Zeitstudium und Kraftverbrauchs-messungen im Walzwerk), G. Bulle. Stahl u. Eisen, vol. 44, no. 32, Aug. 7, 1924, pp. 937-941, 5 figs. Discusses formulation of rolling plan, determining times for rolling and handling by stop watch, training of workers, works inspection, furnace improvements.

#### ROLLS

**Hardened and Ground.** Hardened and Ground Rolls, J. R. Adams. Foundry Trade J., vol. 30, no. 420, Sept. 4, 1924, pp. 200-201. Comparison of hardened-steel and chilled-iron rolls; melting and forging, annealing and machining, hardening, grinding. Extract from paper read before Am. Iron & Steel Inst.

## S

#### SAFETY CODES

**Aeronautical.** The American Aeronautical Safety Code, A. Halsted. Nat. Safety News, vol. 10, no. 3, Sept. 1924, pp. 27-29, 4 figs. Purpose of code is to establish uniform safety standards for construction and maintenance of aircraft and for their operation and flight, especially at airdromes.

#### SAND, MOLDING

**Research Work.** Research Work on Molding Sand—New and Old. Can. Foundryman, vol. 15, no. 9, Sept. 1924, p. 19. Extracts from tentatively adopted standardized testing methods and résumé of activities of joint committee on molding sand research.

**Testing.** Report on Molding Sand Tests. Foundry, vol. 52, no. 17, Sept. 1, 1924, pp. 675-680, 4 figs. Report of joint committee on molding sand research, Am. Foundrymen's Assn., giving tests for determining fineness and dye absorption properties, and methods for sampling shipments of sand.

#### SCREW THREADS

**Copper.** Comparison between Cold-Rolled and Cut Threads, Especially in Copper Screws (Vergleich zwischen kalt gerollten und geschmittenen gewinden, besonders bei Kupferschrauben), M. v. Schwarz. Werkstattstechnik, vol. 18, no. 14, July 15, 1924, pp. 369-372, 10 figs. Discusses increased application of cold rolling instead of cutting, and its advantages in bending, not cutting, fiber; shown by micrographs.

**Cutting.** Threading Tool and Gage Forms for the New Screw Thread Standard, R. E. Flanders. Am. Mach., vol. 61, no. 13, Sept. 25, 1924, pp. 481-486, 15 figs. Consideration of important points in manufacture of threads conforming to new Am. (National) Screw Thread Standards. Shape of cutting edges for threading tools and taps; proper outlines for gage points; preparation of charts for inspection by optical projection; Hardness comparator.

**Standards.** American Standard Screw Threads. Am. Mach., vol. 61, nos. 10, 11 and 12, Sept. 4, 11 and 18, 1924, pp. 383-387, 421-422 and 457-460, 3 figs. Standardization and unification approved by Am. Eng. Standards Committee, May 1924. For bolts, machine screws, nuts and commercially tapped holes.

**Worm.** The Gauging of Finish-ground Worms by Cylinders, H. E. Merritt. Engineer, vol. 138, no. 3580, Aug. 8, 1924, pp. 162-163, 3 figs. Shows that from certain fundamental worm dimensions size and position of a cylinder to gage any point on thread contour may be calculated, and in spite of apparent difficulty of problem, solution is very simple and easy of application.

#### SOLDERING

**Fluxes for.** Fluxes for Soft Soldering, T. B. Crow. Metal Industry (Lond.), vol. 25, no. 10, Sept. 5, 1924, pp. 224-226, 9 figs. Definitions; theory of soldering; experimental work carried out in connection with cleaning and protective properties of various fluxes, efficiency in causing solder to wet surface, efficiencies of tallow and resin as fluxes, influence of flux on surface tension of solder; tests under hydrogen. Contribution to a general discussion on "Fluxes and Slags in Metal Melting and Working" held by Faraday

Soc. and Inst. of Metals with coöperation of British Non-Ferrous Metals Research Assn. and Inst. Brit. Foundrymen.

#### SOOT BLOWERS

**Mechanical.** Tests of Mechanical Soot Blowers, R. June. Power, vol. 60, no. 9, Aug. 26, 1924, pp. 326-328, 4 figs. Describes tests made on an oil-fired horizontal water-tube boiler and on 12,000-sq. ft. boilers. They confirm some of the general claims that have been made from a strictly fuel-saving point of view.

#### SPRINGS

**Coiled.** Study on Coiled Springs (Une étude sur les ressorts enroulés), D. Landau. Technique Automobile et Aérienne, vol. 15, no. 125, 1924, pp. 47-49, 2 figs. Discusses helical, conical and spiral springs, and gives formulas for calculating tensile and bending stresses for various cross-sections and a table of coefficients.

#### STANDARDS

**German.** Report of the German Industrial Standards Committee (Normenausschuss der deutschen Industrie). Maschinenbau, vol. 3, no. 22, Aug. 28, 1924, pp. N131-N138, 4 figs. Proposals for standards for seamless drawn brass tubes for stuffing boxes, graphic symbols for pipe lines.

**Report of German Industrial Standards Committee** (Normenausschuss der Deutschen Industrie), Maschinenbau, vol. 3, no. 19, July 10, 1924, pp. N123-N130. Square-head screws, parallel measures, screw micrometer, linear measures.

#### STEAM

**Pressure-Volume-Temperature Relation.** M.I.T. Investigates Pressure-Volume-Temperature Relation of Steam, P. W. Swain. Power, vol. 60, no. 8, Aug. 19, 1924, pp. 284-286, 5 figs. Describes apparatus and methods employed at Mass. Inst. Technology for determining volume of water at various temperatures and relation between pressure, temperature and volume of saturated and superheated steam.

**Production from By-Product Producer Gas.** Power and Process Steam From By-product Producer Gas, C. H. S. Tupholme. Chem. & Met. Eng., vol. 31, no. 8, Aug. 25, 1924, pp. 300-303, 6 figs. Description of a highly efficient combination system evolved for plants using steam in course of production.

#### STEAM ACCUMULATORS

**Ruths.** First Experience and Trials with a Ruth Steam Accumulator Plant in Germany (Erste Erfahrungen und Versuche an einer Dr. Ruths-Speicheranlage in Deutschland), R. Schulze. Wärme, vol. 47, nos. 23 and 24, June 6 and 13, 1924, pp. 261-264 and 274-276, 14 figs. Discusses operation of accumulators, heat losses, efficiency of boiler plant with and without accumulator. June 13: Storage capacity, efficiency of boiler plant.

#### STEAM ENGINES

**Indicator Diagrams.** Study of Indicator Diagrams Made Easy, E. K. Benedek. Power, vol. 60, no. 7, Aug. 12, 1924, pp. 255-256, 6 figs. Discusses construction of characteristic lines and gives simple method of diagram analysis.

**Power Calculation.** New Method for Calculating Power of Reciprocating Engines (Méthode nouvelle pour calculer la puissance de la machine à piston), E. Tournier. Académie des Sciences—Comptes rendus des séances, vol. 179, no. 2, July 16, 1924, pp. 101-102. Gives formula for calculating hp. from weight of dry steam, adiabatic drop per unit weight of steam, actual condenser pressure, loss of steam, and maximum efficiency of engine.

**Uniflow.** Comparison of Four-Valve and Two-Valve Uniflow Engines, M. L. Barker. Power, vol. 60, no. 8, Aug. 19, 1924, pp. 289-290, 4 figs. Results of tests.

#### STEAM PIPES

**Expansion.** Compensation of the Linear Expansion of Steam Pipes, H. Menk. Eng. Progress, vol. 5, no. 7, July 1924, pp. 128-138, 8 figs. Discusses heat expansion of long piping and connecting by application of compensators between sections of pipe line, flexible compensating pipe, jointed compensation, pipe glands, etc.

#### STEAM POWER PLANTS

**Automobile.** Steam Plant of Fisher Body Corporation, C. K. Little. Power, vol. 60, no. 7, Aug. 12, 1924, pp. 240-243, 3 figs. Discusses plant of automobile body manufacturer having 30,000 sq. ft. of boiler heating surface; fuel is mixture of coal and lumber scrap, resulting in saving.

**Carolina Power & Light Co.** Cape Fear Steam Plant of Carolina Power and Light Co. So. Engr., vol. 41, no. 6, Aug. 1924, pp. 35-42, 16 figs. Describes plant of ultimate capacity of 60,000 kw.; present installation: one 15,000 kw. turbo-generator, three 11,360-sq.-ft. water-tube boilers; pressure, 325 lb.; superheat, 210 to 240 deg. Fahr.

**Development.** High Lights from the World Power Conference, A. L. Rice. Power Plant Eng., vol. 28, no. 16, Aug. 15, 1924, pp. 862-866, 3 figs. Economics of power development; advances in boiler practice; effect of high pressures on turbine design.

**Paper Plant, Passaic, N. J.** Methods of Operation at the Paterson Parchment Paper Co. Power Plant Eng., vol. 28, no. 18, Sept. 15, 1924, pp. 932-936, 10 figs. Operation of plant is characterized by engineering qualities of high excellence. Describes methods of determining coal consumption, boiler operation, engine equipment, and gives details of maintenance and operation.

**Pulverized-Anthracite-Slush Burning.** Susquehanna Collieries Co. Burns Pulverized Anthracite

Slush at Lykens, Pa. Coal Age, vol. 26, no. 8, Aug. 21, 1924, pp. 253-257, 10 figs. One of the first power plants to utilize anthracite slush in pulverized form. Coal mixed with 75 per cent water pumped to plant; boiler plant contains six 5000- and six 6000-sq. ft. water-tube boilers; present generating capacity, 6400 kw.

#### STEAM TURBINES

**Brunner.** Brunner High-Pressure Turbine Shows Improved Economy. Power, vol. 60, no. 13, Sept. 23, 1924, pp. 498-500, 4 figs. Steam velocities below those of usual practice are among refinements contributing to an efficiency, when non-condensing, comparable with uniflow engine.

**Development.** Evolution of Steam Turbines (L'évolution de la turbine à vapeur), C. Monteil. Technique Moderne, vol. 16, nos. 14 and 16, July 15 and Aug. 15, 1924, pp. 469-474 and 533-541, 22 figs. July 15: Discusses reaction in hydraulics and in steam turbines, Brown-Boveri-Parsons turbines; stages of speed and multiple turbine wheels, etc. Aug. 15: Discusses adaptability of steam turbines for high pressures, power factors, difficulties of last wheel; describes 40,000-kw. turbines of 1500 r.p.m., 12,000 to 15,000-kw. of 3000 r.p.m.; application of low-power turbines, use of high pressures and high superheating.

**Extra-High-Pressure.** Extra High-Pressure Steam Turbines, V. Nordström. Engineering, vol. 118, no. 3057, Aug. 1, 1924, pp. 178-179. Discusses recent developments to obtain better utilization of working power of steam by means of increased steam pressure, contemplating 30 kg. per sq. cm. and even 50 to 100 kg. per sq. cm.; also activity of De Laval Co. Abstract of paper of World Power Conference.

**High-Pressure.** Steam at 1,200 Deg. F. in a Unique Power Plant. Power, vol. 60, no. 1, Sept. 9, 1924, pp. 405-406, 1 fig. A turbine for 1200 deg. Fahr., 350 lb., supplied by a boiler where fuel and water are intimately mixed, at high combustion efficiency; used for propelling torpedoes. Features suggest possibilities for more economical stationary practice.

**Improving Efficiency of.** Steam Turbines, C. Parsons. Engineer, vol. 138, no. 3579, Aug. 1, 1924, pp. 140-142, 4 figs. Describes four methods of improving thermal efficiency of thermodynamic cycle without going to higher maximum temperature, and their application in turbine plant of 50,000-kw. power station to be erected at Crawford Avenue, Chicago, now nearing completion at Newcastle-on-Tyne. Abstract of paper read at World Power Conference.

**Marine.** See MARINE STEAM TURBINES.

#### STEEL

**Magnetic Testing of.** Field of Magnetic Testing Broad. Iron Trade Rev., vol. 75, no. 11, Sept. 11, 1924, pp. 663-665, 4 figs. Developments in magnetic method of examining steel open way to many new applications, particularly in case of irregular shapes; employment of method on regular shapes commercialized.

**Melting in Cupola.** Melting Steel in a Cupola, J. Grennan. Am. Foundrymen's Assn., Preprint No. 411, for Mtg. Oct. 11-16, 1924, 17 pp., 11 figs. Data of experiments conducted with a view to observing what actually happens to steel when it is melted in a cupola and to compare melting of steel with that of pig iron and scrap cast iron.

**Parts, Hot-Pressing of.** Hot-pressing Steel Parts. Machy. (Lond.), vol. 24, no. 612, Aug. 28, 1924, pp. 681-682, 4 figs. New application of a process heretofore employed only in manufacturing parts from softer metals. Now possible to hot-press steel parts in an almost endless variety of shapes. Briefly, process consists of heating slugs of steel to about 1800 deg. Fahr. and then pressing them to desired shape in tungsten-steel dies having cavities corresponding to outside of desired part.

**Special, Metallurgy of.** Modern Developments in the Metallurgy of Special Steels, W. H. Hatfield. Iron & Coal Trades Rev., vol. 108, no. 2938, June 20, 1924, pp. 1055-1057. Discusses improvement in process of manufacture and manipulation resulting in increases reliability, modified and new composition resulting in improved or new properties, more intimate knowledge of properties of steel from designers' standpoint. Abstract of paper read before Iron & Steel Sec., Empire Min. & Metallurgical Congress.

**Thermal Expansion.** Thermal Expansion of Soft and Hardened Steel (Thermische Ausdehnung von weichem und gehärtetem Stahl), A. Werner. Zeit. für Instrumentenkunde, vol. 44, no. 7, July 1924, pp. 315-320. Results of experiments with 34 samples of soft and hardened steels at temperatures from -200 deg. to +150 deg. C., details of expansions, effect of chemical composition, etc.

#### STEEL CASTINGS

**Cleaning.** Cleaning Steel Castings Economically. Foundry, vol. 52, no. 17, Sept. 1, 1924, pp. 688-690, 6 figs. Notes on methods of Ohio Steel Foundry Co., Springfield, O.

**Production.** The Production of a Large Steel Casting, H. V. Fell. Foundry Trade J., vol. 30, no. 416, Aug. 7, 1924, pp. 114-116, 18 figs. Describes an example of this class of work as carried out by a large British firm, especially molding operations.

**Semi-Steel, Manufacture of.** The Making of Semi-Steel Castings, G. W. Gilderman. Foundry Trade J., vol. 30, no. 413, July 17, 1924, pp. 44-45. Discusses mixtures and charging, preparation of mold, pattern proportion, and alloys.

**X-Ray Examination.** Technic of X-Ray Is Improving. Iron Trade Rev., vol. 75, no. 11, Sept. 11, 1924, pp. 668-671, 7 figs. Experience at Watertown arsenal, Watertown, Mass., in application of X-ray process to steel castings yields more accurate and definite results. Interpretation of radiographs are reduced to formulas.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1924-25 Volume

**STEEL, HEAT TREATMENT OF**

**Hardening.** The Hardening of Steel, W. Rosenhain. Iron & Steel Inst., Advance Paper no. 8, for Mtg. Sept. 1924, 17 pp., 9 figs. partly on supp. plate. Describes some of the outstanding phenomena connected with hardening and tempering of certain non-ferrous alloys, in order to show analogy which exists between these phenomena and well-known behavior of iron-carbon alloys, and considers its applicability to particular case of steel.

**High Speed Steel Tools.** Effect of Heat Treatment on the Cutting Capacity of High-Speed Steels (Influence du traitement thermique sur la capacité de coupe des aciers rapides), H. Pommerenke and R. Dewert. Revue de Métallurgie, vol. 21, no. 7, July 1924, pp. 371-395, 134 figs. Gives results of tests to find simple, rapid, and inexpensive method of hardness testing, based on tests with Herbert machine, including micrographic examination of structure.

**Heat Treating High Speed Steel Dies.** G. C. Davis. Forging—Stamping—Heat Treating, vol. 10, no. 9, Sept. 1924, pp. 360-362, 3 figs. Description of heat-treating department at plant of Gray & Davis, Inc., Cambridge, Mass. Heat treatment of high-speed steel blanking dies that do not readily lend themselves to grinding after treatment offer many difficult problems.

**Salt Baths.** Salt Baths, S. Tour. Am. Soc. for Steel Treating—Trans., vol. 6, no. 2, Aug. 1924, pp. 171-186, 2 figs. Discusses reasons for employing liquid heating mediums; design of furnaces and containers for melting salt baths; gives tables of composition of salt mixtures, salt baths for carbon tool steels, alloy tool steels and high-speed steels, etc.

**Spring Steel.** Heat Treatment of Steel Springs, J. K. Wood. Am. Mach., vol. 61, no. 12, Sept. 18, 1924, pp. 443-446. Commercial considerations; general requirements for a spring; spring steels and their compositions; coiling, forming, and heat treating helical and leaf springs.

**Tempering.** Kinetics of Tempering Process in Steel (Zur Kinetik der Anlassvorgänge im Stahl), W. Franke and E. Heymann. Zeit. für anorganische u. allgemeine Chemie, vol. 134, nos. 2 and 3, Apr. 8, 1924, pp. 137-171, 8 figs. Experiments following temper reactions of carbon steel plunged into water by measuring resistance and density, showing that speed of tempering between 78 deg. and 300 deg. depends very much on temperature, etc.

**Volume Changes.** The Changes of Volume of Steels During Heat Treatment, L. Aitchison and G. R. Woodvine. Iron & Steel Inst., Advance Paper no. 1, for Mtg. Sept. 1924, 14 pp., 9 figs. Results of investigation to determine (1) whether lateral expansion and contraction of metal is equal to longitudinal, (2) whether any difference is produced in behavior of specimens cooled slowly in dilatometer as compared with those hardened in air outside instrument, and (3) effect of cooling steel from different temperatures.

**STEEL, HIGH-SPEED**

**Forging and Tempering.** Forging and Tempering High-Speed and Carbon Tool Steels. Ry. Rev., vol. 75, no. 8, Aug. 23, 1923, pp. 282-283. Tool standards of Atchison, Topeka & Santa Fe Ry. are maintained by instructions in regard to proper methods for various classes of work.

**Nature of.** On the Nature of High-Speed Steel, M. A. Grossmann and E. C. Bain. Iron & Steel Inst., Advance Paper no. 6, for Mtg. Sept. 1924, 24 pp., 23 figs. partly on supp. plates. Account of physical phenomena occurring in high-speed steel from time of casting homogeneous melt to production of hardened tools, so far as changes in nature, amounts, and distributions of well-known constituents of such steel are concerned.

**STEEL MANUFACTURE**

**Blast-Furnace Process.** Effect of Sulfur on Blast-Furnace Process, T. L. Joseph. Am. Inst. Min. & Met. Engrs.—Trans., Advance Paper no. 1374-S, Sept. 1924, 11 pp., 3 figs. Points out distribution of this impurity in blast-furnace materials and indicates how its presence alters composition, quantity, and free-running or critical temperature of slag, and relation between these factors, fuel economy, and cost of iron. Pub. by permission of U. S. Bur. Mines.

**STEEL WORKS**

**Cold-Drawing Plants.** Operates New Cold Drawing Plant, J. D. Knox. Iron Trade Rev., vol. 75, no. 7, Aug. 14, 1924, pp. 423-427, 8 figs. Modern works of Anchor Drawn Steel Co., at Latrobe, Pa., 38 miles east of Pittsburgh. Various departments are laid out for straight-line production; primary annealing of coils is executed in gas-fired lead pots; description of cold-drawing process.

**Electricity in.** Electricity's Contribution to the Steel Industry, K. A. Pauly. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 9, Sept. 1924, pp. 831-839, 4 figs. Outline of processes involved in production of steel, followed by a discussion of characteristics of the various rolling mills and types of motors used to drive them. Considerations affecting choice of frequency. Author believes that greatest contribution of electricity to steel industry is providing of a means for economically using waste gases from blast furnaces. Points out importance, as a conservation measure, of utilization of blast-furnace gas and other sources of by-product power.

**STOKERS**

**Lubrication of.** Lubrication of the Automatic Stoker. Lubrication, vol. 10, no. 8, Aug. 1924, pp. 85-90, 11 figs. Discusses types of stokers, stoker drives, stoker lubrication and construction, design, and operating features involved.

**Savings with Small Boilers.** Mechanical Stoker Savings with Small Boilers, R. June. Power House, vol. 17, no. 16, Aug. 20, 1924, pp. 23-24, 2 figs. Re-

duction in cost of producing steam, increase in efficiency and availability of cheaper grades of fuel, among factors which prove installation economical.

**SUPERHEATED STEAM**

**Research.** Harvard Throttling Experiments Extended Data on Superheated Steam, P. W. Swain. Power, vol. 60, no. 9, Aug. 26, 1924, pp. 329-332, 4 figs. Work being done by Prof. Davis and Dr. Kleinschmidt at Harvard, where extremely accurate measurements are being made of Joule-Thomson effect.

**SUPERHEATERS**

**Heat Exchange in.** Heat Exchange in Steam Superheaters (Ueber den Wärmeaustausch in Dampferhitzern), C. Rühl. Wärme- u. Kälte-Technik, vol. 26, no. 14, July 22, 1924, pp. 115-118, 11 figs. Discusses heat transmission and describes patented pipe with interior partition having heat transmission of 1.2 times that of ordinary pipes.

**T****TACHOMETERS**

**Kourkène.** The Kourkène Tachometer (Le tachomètre, système Kourkène). Génie Civil, vol. 85, no. 7, Aug. 16, 1924, pp. 154-157, 9 figs. Design and construction of direct reading apparatus made by Précision Moderne at Paris, measuring heights as well as distances.

**Speed-Indicating-and-Recording.** Speed Indicating and Recording. Shipbldg. & Shipp. Rec., vol. 24, no. 6, Aug. 7, 1924, p. 171, 2 figs. Description of electrical tachometer equipment.

**TANKS**

**Horizontal, Chart for.** A Quick and Useful Horizontal Tank Chart, W. F. Schaphorst. West. Machy. Wld., vol. 15, no. 7, July 1924, pp. 227-228, 1 fig. Chart gives gallons of liquid in any horizontal tank without use of tables, formulas, figures, or computations of any kind. Inversely chart may be used for determining length of tank necessary to hold given number of gallons where diameter of tank and depth of liquid are known.

**TERMINALS, RAILWAY**

**Freight.** Some Things Which the Erie Railroad is Doing. Ry. Rev., vol. 75, no. 12, Sept. 20, 1924, pp. 423-430, 14 figs. Discusses freight terminals of Erie Ry. in New York and Chicago districts, with special reference to certain recent extension of its less-than-carload facilities which afford service distinct from that offered by any other railroad. In New York facilities have been augmented by inland freight stations which are operated by trucking service which is also available to shipper as substitute for store-door delivery. In Chicago car-float service on Chicago River operates two freight stations in heart of important industrial districts.

**TEXTILE INDUSTRY**

**France.** Progress Made Since the War in French Textile Manufacture (Les progrès effectués depuis la guerre dans la construction textile Française), A. Renouard. Société d'Encouragement pour l'Industrie Nationale—Bul., vol. 136, no. 5, May 1924, pp. 426, 494, 41 figs. Discusses wool, combing, carding, spinning and other processes and products and machinery used; similarly cotton, hemp, silk, and the advance especially in textile machinery.

**TEXTILE MACHINERY**

**British Empire Exhibition.** The Machinery of the Cotton Mill at the British Empire Exhibition. Engineering, vol. 118, nos. 3053, 3055 and 3060, July 4, 18 and Aug. 22, 1924, pp. 11-13, 89-91 and 247-251, 34 figs. partly on supp. plates. Also Engineer, vol. 138, no. 3582, Aug. 22, 1924, pp. 202-207, 28 figs. partly on pp. 208 and 212. Descriptions of textile machinery exhibited, including gins, bale breakers and openers, feeding machines, carding engines, drawing frames, spinning machines, weaving machines, folding and measuring machines, etc.

The Textile Industry Exhibit at Wembley. Electrician, vol. 93, no. 2413, Aug. 15, 1924, pp. 176-177, 3 figs. Describes electrical equipment of cotton machinery.

**TIME STUDY**

**Bicycle Assembling.** Time Study and Belt Conveying (Zeitstudien und Bandarbeit), E. Sachsenberg. Maschinenbau, vol. 3, no. 13, Apr. 10, 1924, pp. 433-439, 22 figs. Discusses connection between time study and synchronized conveying and gives example of assembling bicycles in 118 operations with aid of belt conveyor.

**TIRES, RUBBER**

**Balloon.** Dunlop Cord Balloon Tyres. Auto-Motor Jl., vol. 29, no. 35, Aug. 28, 1924, p. 722, 1 fig. Describes new Dunlop balloon tire; shows how wired edge of cover at one part of rim is depressed into well in center of rim, allowing edge of cover to be lifted over rim edge at opposite diameter.

**Non-Skid.** Two Notable Tyre Developments. Motor Transport (Lond.), vol. 39, no. 1017, Aug. 25, 1924, pp. 243-244, 6 figs. Low-pressure pneumatic and new design of solid tire that show phenomenal non-skid capacity.

**TRACTORS**

**German.** German Power Tractors for Agricultural Purposes, G. Fischer. Eng. Progress, vol. 5, no. 8, Aug. 1924, pp. 141-147, 14 figs. Discusses small motor plows, traveling speed, grippers for motor plows, tractor plows, and fuels for power plows.

**TUBES**

**Brass, Internal Stress Measurement.** A Method for Measuring Internal Stress in Brass Tubes, R. J. Anderson and E. G. Fahlan. Inst. of Metals, Advance Paper no. 1, for Mtg. Sept. 8-11, 1924, 13 pp., 7 figs. partly on supp. plates. Nature of stress in drawn tubing. Strip method, developed by authors, for measurement of stress in drawn tubes.

**V****VENTILATION**

**Problems.** Some Aspects of the Ventilation Problem, R. Grierson. Domestic Eng. (Lond.), vol. 34, no. 7, July 1924, pp. 146-153. Experiments show that rate of heat emission varies with state of physical rest or work and with age and sex of person under test; deals with all scientific and physiological aspects of ventilation and considers matters affecting design of plant.

**VIBRATIONS**

**Recording.** A New Process for Recording Small Vibrations (Ueber ein neues Verfahren zur Registrierung kleiner Schwingungen), G. Schmaltz. Maschinenbau, vol. 3, no. 18, June 26, 1924, pp. 639-641, 7 figs. Describes highly sensitive apparatus for recording small vibrations and gives examples of application; can be fixed to any part of machine.

**VISCOSIMETERS**

**Gallo.** A New Type of Viscosimeter (Un nuovo tipo di viscosimetro), G. Gallo and M. Tenani. Giornale di Chimica Industriale ed Applicata, vol. 6, no. 6, June 1924, pp. 280-283, 2 figs. Describes viscosimeter consisting of two parallel metal disks, very close together, rotating on same axis at different speeds, immersed in oil to be tested; develops formulas for calculation.

**W****WASTE HEAT**

**Utilization.** Economic Considerations in the Design of Waste-Heat Plants (Wirtschaftliche Betrachtungen bei der Bemessung von Abhitzeverwertungsanlagen), A. Konejung. Wärme, vol. 47, no. 30, July 25, 1924, pp. 345-348, 8 figs. Develops formulas and makes calculations for determining most suitable end temperature of heat-exchanging liquids and their velocity.

Possibility and Advantages of Coupling Power and Heat in Public and Industrial Plants (Möglichkeiten und Vorteile der Kraft-Wärme-Kuppelung in öffentlichen und industriellen Betrieben), C. Neger. Glückauf, vol. 60, no. 34, Aug. 23, 1924, pp. 735-741, 6 figs. Starting from drawbacks of steam operation with condensation for power production, recommends connecting heat-consuming plants with power plants in such a way that exhaust steam may be used for heating and other purposes.

**WATER POWER**

**Canada.** Water Power Development in Canada, J. B. Challies. Can. Engr. vol. 47, no. 8, Aug. 19, 1924, pp. 257-263, 3 figs. Also Engineering, vol. 118, no. 3061, Aug. 29, 1924, pp. 301-302. Outline of extent, utilization, and administration of water powers in Canada. Abstract of paper read before British Assn. for Advancement of Science.

**WATER TREATMENT**

**Railways.** How the Chemical Engineer Tackles the Water Problems of a Railroad, W. M. Barr. Chem. & Met. Eng., vol. 31, no. 9, Sept. 1, 1924, pp. 348-351, 6 figs. Points out some of the many problems of water supply on a railroad and emphasizes necessity of solving them with aid of a chemical engineer rather than a laboratory chemist. Elimination of scale-forming solids and simultaneous production of non-foaming water all over a railroad system is a major technical problem.

**WELDING**

**Equipment.** Welding Equipment in Service. Can. Machy., vol. 32, no. 8, Aug. 21, 1924, pp. 26-27 and 46-47, 1 fig. Describes proper methods for setting up tank outfit, crank open valves, averting trouble, release adjusting screws, regulators carefully made, disconnecting equipment, etc.

**Oxy-Acetylene.** See OXY-ACETYLENE WELDING.

**WIRE**

**Steel.** Tensile Properties of Some Steel Wires at Liquid Air Temperatures, W. P. Sykes. Am. Soc. for Steel Treating—Trans., vol. 6, no. 2, Aug. 1924, pp. 138-144, 2 figs. Compares tensile properties of low-carbon, nickel, and chrome-molybdenum steels at room temperature and that of liquid air (—180 deg. cent.).

**WIRE DRAWING**

**Effect on Steel Properties.** Wire Drawing and Properties of the Steel, G. F. Comstock. Iron Age, vol. 114, nos. 11 and 12, Sept. 11 and 18, 1924, pp. 621-624, and 705-707, 24 figs. Some of the changes due to progressive cold drawing. Static and structural effects. Analogy with copper. Changes due to progressive drawing traced by photomicrographic analysis. Study of grain size.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1924-25 Volume

# THE ENGINEERING INDEX

(Registered United States, Great Britain and Canada)

**THE ENGINEERING INDEX** presents each month, in conveniently classified form, items descriptive of the articles appearing in the current issues of the world's engineering and scientific press of particular interest to mechanical engineers. At the end of the year the monthly installments are combined along with items dealing with civil, electrical, mining and other branches of engineering, and published in book form, this annual volume having regularly appeared since 1906. In the preparation of the Index by the engineering staff of The American Society of Mechanical Engineers some 1200 technical publications received by the Engineering Societies Library (New York) are regularly reviewed, thus bringing the great resources of that library to the entire engineering profession.

Photoprint copies (while printing on a black background) of any of the articles listed in the Index may be obtained at a price of 25 cents a page. When ordering photoprints identify the article by quoting from the Index item: (1) Title of article; (2) Name of periodical in which it appeared; (3) Volume, number, and date of publication of periodical; (4) Page numbers. A remittance of 25 cents a page should accompany the order. Orders should be sent to the Engineering Societies Library, 29 West 39th Street, New York.

(See also page 938 of this issue for supplementary items.)

## ABRASIVE WHEELS

**Manufacture of Making Vitrified Abrasive Wheels.** Chem. & Met. Eng., vol. 31, no. 14, Oct. 6, 1924, pp. 531-533, 6 figs. Describes some of the problems in production of abrasive wheels from carborundum grains.

**Surface Grinding in Stone Work (Der Flächenschliff in der Gesteinsbearbeitung).** C. Krug. Tonindustrie-Zeitung, vol. 48, no. 73, Sept. 10, 1924, pp. 791-795, 14 figs. A series of articles on grinding wheels, grain and hardness, production, evaluation of abrasives, grinding in grinding machines, safety regulations, roller grinding machines, natural and artificial abrasives, etc.

## AERONAUTICS

**Theory of Flow.** Session on Flying of the VDI General Meeting (Tagung über Luftfahrt gelegentlich der Hauptversammlung des VDI, Hannover). Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 36, Sept. 6, 1924, pp. 926-928, 6 figs. Series of papers discussing progress in theory of flow and calculations of flow round asymmetric bodies, wing forms; theory of bearing wings or theory of circulation; light-weight construction.

## AIR CONDITIONING

**Humidifying Plants.** Air-Conditioning Plant in Textile Works. Sulzer Tech. Rev., no. 2, 1924, pp. 8-14, 8 figs. Describes Sulzer system of air-humidifying plants.

## AIR PUMPS

**Piston.** Piston Air Pumps (Die Kolbenluft-pumpen). Fördertechnik u. Frachtverkehr, vol. 17, Sept. 3, 1924, pp. 232-234, 8 figs. Construction of valve and slide-valve pumps, pipe lines and parts.

## AIRPLANE ENGINES

**Air-Cooled.** Air-Cooled Airplane Engines (Luftgekühlte Flugmotoren). E. Gossau. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 36, Sept. 6, 1924, pp. 921-925, 15 figs. Details of some 50 engines; limiting number of cylinders; diameters of cylinders and engine capacity; saving weight by eliminating water cooling; fuel and oil consumption; increase of performance by higher compression and r.p.m., etc.

**Condor.** The Rolls-Royce "Condor," Series III. Flight, vol. 16, no. 32, Aug. 7, 1924, pp. 444-450, 20 figs. Engine is of 12-cylinder water-cooled "vee" type, with cylinder banks placed at angle of 60 deg.; bore, 5 1/2 in.; stroke, 7 1/2 in.; normal b.h.p., 650; maximum speed (crankshaft), 2100 r.p.m.

**Details.** New Aeronautical Engines (Les nouveaux moteurs d'aviation). J.-A. Lefranc. Nature (Paris), no. 2631, Sept. 6, 1924, pp. 147-157, 10 figs. Details of recent engines, including 400-hp. Bristol-Jupiter, 450-hp. Panhard, 600-hp. Farman, and others.

**Power Measurements.** Correction of. Correcting Horsepower Measurements to a Standard Temperature. S. W. Sparrow. Nat. Advisory Committee for Aeronautics—Report, no. 190, 1924, 14 pp., 16 figs. Discusses relation between temperature of air at entrance to carburetor and power developed by engine; consideration of range of temperatures likely to result from changes of season, locality, or altitude.

**Supercharging.** Airplane Turbo-Supercharger Development in the United States. D. Gregg. Soc. Automotive Engrs.—Jl., vol. 14, no. 5, May 1924, pp. 532-538, 17 figs. Supercharger types; supercharger operation; air cooler and fuel system; propeller types; oxygen-supply system; heating apparatus; sea-level

pressure at great altitude; usefulness of turbo-supercharger.

## AIRPLANE PROPELLERS

**Airfoil Theory and.** Comparison of Model Propeller Tests with Airfoil Theory. Wm. F. Durand and E. P. Lesley. Nat. Advisory Committee for Aeronautics—Report, no. 196, 1924, 26 pp., 61 figs. Examination of degree of approach which may be anticipated between laboratory tests on model airplane propellers and results computed by airfoil theory, based on tests of airfoils representative of successive blade sections.

**Micarta.** Micarta Propellers. F. W. Caldwell and N. S. Clay. Nat. Advisory Committee for Aeronautics—Tech. Notes, nos. 198, 199, 200 and 201, Aug. and Sept. 1924. Pamphlet No. 198, 9 pp., 4 figs.; Materials. No. 199, 10 pp., 7 figs. partly on supp. plates: Method of construction. No. 200, 13 pp., 11 figs. partly on supp. plates: General description of design. No. 201, 17 pp., 15 figs.: Technical methods of design.

## AIRPLANES

**Cubaroo.** The Blackburn-Napier "Cubaroo" Aeroplane. Automobile Engr., vol. 14, no. 193, Sept., 1924, p. 274, 2 figs. "Cubaroo," in which Napier engine is fitted, is a three-seater torpedo-carrying plane; span, 88 ft.; length, 54 ft.; overall height, 19 ft.

**Flying Boats.** See FLYING BOATS.

**Performance Predetermination.** The Logarithmic Polar Curve—Its Theory and Application to the Predetermination of Airplane Performance. V. Cronstedt. Nat. Advisory Committee for Aeronautics—Tech. Notes, no. 205, Oct. 1924, 34 pp., 14 figs. Outlines theory and shows some of possibilities of Rith method, generally known as logarithmic polar curve for predetermination of airplane performance, and also shows modifications required by more recent conceptions of performance.

**Pilotless.** Latest Progress in Telemechanics. Pilotless Airplanes. (Les derniers progrès de la télé-mécanique. L'avion sans pilote.) E. Marcotte. Arts et Métiers, vol. 77, no. 45, June 1924, pp. 201-204. Discusses progress in distance control by means of Hertzian waves, Sperry stabilizers, pilotless mail carriers, etc.

**Racers.** Dayton Air Meet Shows Marked Progress in Civil and Commercial Flying. L. S. Gillette. Automotive Industries, vol. 61, no. 15, Oct. 9, 1924, pp. 636-639, 6 figs. Account of races and participating machines.

## AIRSHIPS

**Mooring at Sea.** Mooring Dirigibles at Sea. Flight, vol. no. 37, Sept. 11, 1924, pp. 562-563, 2 figs. Describes experiments of anchoring rigid airship to mobile mast; "Shenandoah" was moored to "Patoka" lying in Narragansett Bay.

## ALLOYS

**Aluminum.** See ALUMINUM ALLOYS.

**Lead.** See LEAD ALLOYS.

**Monel Metal.** See MONEL METAL.

## ALUMINUM

**Analysis.** Aluminum in Alloys. D. H. Brophy. Indus. & Eng. Chem., vol. 16, no. 9, Sept., 1924, p. 963. Simple and rapid method for analysis of aluminum.

**Production.** Aluminum, Its Production and Use

(Aluminium, seine Erzeugung und Verwendung), K. Arndt. Elektrotechnische Zeit., special no., Aug. 28, 1924, pp. 2-6, 8 figs. Discusses history of aluminum, processes of production from bauxite, electrolysis of cryolite-alumina, aluminum alloys, etc.

**Uses.** Aluminum and Its Applications (L'Aluminium et ses applications). M. L. Guillet. Société Industrielle de Mulhouse—Bul., vol. 90, no. 6, June-Aug., 1924, pp. 454-470. Discusses method of manufacture from bauxite, properties and impurities of aluminum, its uses and alloys; duraluminum; alpac.

**Use of Aluminum in Electrical Industries (Verwendung von Aluminium in der Elektrotechnik).** W. Wunder. Elektrotechnische Zeit., special no., Aug. 28, 1924, pp. 9-10, 5 figs. Discusses application of aluminum and aluminum alloys in motors, dynamos, transformers, cables, etc.

## ALUMINUM ALLOYS

**Aluminum-Copper-Tellurium.** Properties and Structure of Some Alloys of Aluminum-Copper-Tellurium. F. T. Sisco and M. R. Whitmore. Indus. & Eng. Chem., vol. 16, no. 8, Aug. 1924, pp. 838-841, 11 figs. Result of exploratory investigation on alloys of aluminum containing 5 per cent copper to which tellurium has been added in amounts from 0.25 to 5 per cent; physical properties of these alloys, and effect of tellurium on microstructure of aluminum; method of analysis for alloys.

**Aluminum-Silicon.** The New Aluminum-Silicon Alloys. J. D. Edwards and R. S. Archer. Chem. & Met. Eng., vol. 31, no. 13, Sept. 29, 1924, pp. 504-508, 8 figs. Pacz' process of "modification" and remarkable improvement in properties it brings about.

**Duralumin.** See DURALUMIN.

## APPRENTICES, TRAINING OF

**Foundry.** Recent Developments in Foundry Education and Training in France. J. G. Pearce. Foundry Trade Jl., vol. 30, no. 422, Sept. 18, 1924, pp. 248-249. Particulars regarding scheme recently put into operation by French Foundry Employers' Assn. to encourage entry of suitable youths to foundries by providing systematic apprenticeship and training courses for all, and means whereby any young man of capacity and intelligence may obtain knowledge and experience necessary to fit him for any position in the industry to which he may be promoted. Extracted from Bul. of Brit. Cast Iron Research Assn.

**Solves Training of Apprentices.** Iron Trade Rev., vol. 75, no. 16, Oct. 16, 1924, pp. 1018-1022, 6 figs. Wisconsin law requiring employed persons under 18 to spend one-half day each week in some school has enabled many workers to obtain trade training; foundry practice popular.

**Wisconsin Solves Apprentice Puzzle.** Foundry, vol. 52, no. 19, Oct. 1, 1924, pp. 752-757, 5 figs. Describes plan, successful over a number of years trial, evolved by state of Wisconsin, its industrial leaders, its educators and its great army of workmen. Outline of how plan works at plant of Falk Corp.

**Railways.** Apprenticeship Methods on the Santa Fe. Ry. Mech. Engr., vol. 98, nos. 6, 7, 8 and 9, June, July, Aug. and Sept., 1924, pp. 355-359, 415-418, 467-472 and 527-531, 28 figs. Description of apprenticeship methods followed on Atchison, Topeka & Santa Fe. How and why work was started; selection of apprentices; equipment; instructions given in shop schools, methods and schedule of shop work followed in the various departments of shops, tools furnished, qualifications of instructors and source of

# Classified List of Mechanical Equipment

## Manufactured by Firms Represented in MECHANICAL ENGINEERING

FOR ALPHABETICAL LIST OF ADVERTISERS, SEE PAGE 194

### Accumulators, Hydraulic

- \* Farrel Foundry & Machine Co.
- \* Mackintosh-Hemphill Co.
- \* Worthington Pump & Mchry. Corp'n.

### Aftercoolers, Air

- \* Ingersoll-Rand Co.

### Agitators

- Hill Clutch Machine & Fdry. Co.

### Air Compressors, Receivers, etc.

- (See Compressors, Receivers, etc., Air)

### Air Conditioning Apparatus

- \* American Blower Co.
- \* Carrier Engineering Corp'n
- \* Clarage Fan Co.
- \* Sturtevant, B. F. Co.

### Air-Jet Lifts

- \* Schutte & Koerting Co.

### Air Washers

- \* American Blower Co.
- \* Carrier Engineering Corp'n
- \* Clarage Fan Co.
- \* Cooling Tower Co. (Inc.)
- \* Sturtevant, B. F. Co.

### Alloys

- Driver-Harris Co.

### Ammeters

- \* Bristol Co.
- \* General Electric Co.
- \* Westinghouse Electric & Mfg. Co.

### Anemometers

- \* Taylor Instrument Cos.
- Weber, F. Co. (Inc.)

### Annealing

- \* American Metal Treatment Co.
- \* Nuttall, R. D. Co.

### Arc Welding Equipment

- \* Westinghouse Electric & Mfg. Co.

### Arches, Boiler Furnace

- \* McLeod & Henry Co.
- \* Titusville Iron Works Co.

### Arches, Fire Door

- \* McLeod & Henry Co.

### Arches, Ignition (Flat Suspended)

- \* Combustion Engineering Corp'n
- \* McLeod & Henry Co.

### Asbestos Products

- \* Carey, Philip Co.
- \* Garlock Packing Co.
- \* Johns-Manville (Inc.)

### Ash Lifts, Telescopic

- \* Gillis & Geoghagan
- \* Palmer-Bee Co.

### Autoclaves

- \* Farrel Foundry & Machine Co.

### Babbitt Metal

- \* Medart Co.
- \* Westinghouse Electric & Mfg. Co.

### Balancing Machines, Dynamic

- \* Olsen, Tinius Testing Machine Co.

### Balls, All Metals (Hollow Seamless)

- \* Hollow Ball Co., (Inc.)

### Ball Bearings, Gages, etc.

- (See Bearings, Gages, Ball)

### Balls, Brass and Bronze

- \* Atlas Ball Co.
- \* Gwilliam Co.

### Balls, Steel

- \* Atlas Ball Co.
- \* Gwilliam Co.
- \* New Departure Mfg. Co.
- \* S K F Industries (Inc.)
- \* Standard Steel & Bearings (Inc.)

### Barometers

- \* American Schaeffer & Budenberg Corp'n
- \* Taylor Instrument Cos.

### Barometers, Mercurial

- \* Tagliabue, C. J. Mfg. Co.

### Bearings, Ball

- \* Fafnir Bearing Co.
- \* Gwilliam Co.
- \* Marlin-Rockwell Corp'n

### \* New Departure Mfg. Co.

- \* Norma - Hoffmann Bearings Corp'n
- \* S K F Industries (Inc.)
- \* Standard Steel & Bearings (Inc.)
- \* Strom Ball Bearing Mfg. Co.

### Bearings, Collar Oiling

- Hill Clutch Machine & Foundry Co.

### Bearings, Radial Thrust

- \* New Departure Mfg. Co.

### Bearings, Roller

- \* Gwilliam Co.
- \* Hyatt Roller Bearing Co.
- \* Norma - Hoffmann Bearings Corp'n
- \* Royersford Fdry. & Mach. Co.
- \* Timken Roller Bearing Co.

### Bearings, Self-Oiling

- \* Brown, A. & F. Co.
- \* Doehler Die-Casting Co.
- \* Falls Clutch & Machinery Co.
- \* Hill Clutch Machine & Fdry. Co.
- \* Jones, W. A. Fdry. & Mach. Co.
- \* Link-Belt Co.
- \* Royersford Fdry. & Mach. Co.
- \* Wood's, T. B. Sons Co.

### Bearings, Tapered

- \* Timken Roller Bearing Co.

### Bearings, Thrust

- \* Fafnir Bearing Co.
- \* General Electric Co.
- \* Gwilliam Co.
- \* Hill Clutch Machine & Fdry. Co.
- \* Norma - Hoffmann Bearings Corp'n
- \* S K F Industries (Inc.)
- \* Strom Ball Bearing Mfg. Co.
- \* Timken Roller Bearing Co.

### Belt Dressing

- \* Dixon, Joseph Crucible Co.
- \* Gandy Belting Co.

### Belt Lacing, Steel

- \* Bristol Co.

### Belt Tighteners

- \* Brown, A. & F. Co.
- \* Hill Clutch Machine & Fdry. Co.
- \* Jones, W. A. Fdry. & Mach. Co.
- \* Link-Belt Co.
- \* Medart Co.
- \* Smith, F. L. & Co.
- \* Wood's, T. B. Sons Co.

### Belt Tighteners, Automatic

- Hill Clutch Machine & Fdry. Co.

### Belting, Canvas (Stitched)

- \* Gandy Belting Co.
- \* United States Rubber Co.

### Belting, Conveyor

- \* Gandy Belting Co.
- \* Goodrich, B. F. Rubber Co.
- \* Sandvik Steel (Inc.)
- \* United States Rubber Co.

### Belting, Elevator

- \* Gandy Belting Co.
- \* Goodrich, B. F. Rubber Co.
- \* United States Rubber Co.

### Belting, Endless

- \* Gandy Belting Co.

### Belting, Fabric

- \* Gandy Belting Co.

### Belting, Rubber

- \* Goodrich, B. F. Rubber Co.
- \* United States Rubber Co.

### Belting, Waterproof

- \* Gandy Belting Co.

### Bending & Straightening Machines

- \* Long & Allstatter Co.

### Bends, Pipe

- \* Frick Co. (Inc.)
- \* Vogt, Henry Machine Co.

### Billets, Steel

- \* Timken Roller Bearing Co.

### Blocks, Tackle

- \* Clyde Iron Work Sales Co.
- \* Roebbing's, John A. Sons Co.

### Blowers, Centrifugal

- \* American Blower Co.
- \* Clarage Fan Co.

### \* Coppus Engineering Corp'n

- \* De Laval Steam Turbine Co.
- \* General Electric Co.
- \* Ingersoll-Rand Co.
- \* Kerr Turbine Co.
- \* Sturtevant, B. F. Co.
- \* Westinghouse Electric & Mfg. Co.

### Blowers, Fan

- \* American Blower Co.
- \* Clarage Fan Co.
- \* Coppus Engineering Corp'n
- \* Green Fuel Economizer Co.
- \* Sturtevant, B. F. Co.

### Blowers, Forge

- \* American Blower Co.
- \* Sturtevant, B. F. Co.

### Blowers, Pressure

- \* American Blower Co.
- \* Clarage Fan Co.
- \* Lammert & Mann Co.
- \* Sturtevant, B. F. Co.

### Blowers, Rotary

- \* Lammert & Mann Co.
- \* Schutte & Koerting Co.
- \* Sturtevant, B. F. Co.

### Blowers, Soot

- \* Diamond Power Specialty Corp'n
- \* Sturtevant, B. F. Co.

### Blowers, Steam Jet

- \* Schutte & Koerting Co.

### Blowers, Turbine

- \* Coppus Engineering Corp'n
- \* Sturtevant, B. F. Co.

### Blueing (Metal)

- \* American Metal Treatment Co.

### Boards, Drawing

- \* Dietzen, Eugene Co.
- \* Keuffel & Esser Co.
- \* New York Blue Print Paper Co.
- \* U. S. Blue Co.
- \* Weber, F. Co. (Inc.)

### Boiler Baffles

- \* King Refractories Co. (Inc.)
- \* McLeod & Henry Co.

### Boiler Compounds

- \* Dixon, Joseph Crucible Co.
- \* Unisol Mfg. Co.

### Boiler Coverings, Furnaces, Tube

- \* Cleaners, etc.
- (See Coverings, Furnaces, Tube Cleaners, etc., Boiler)

### Boiler Fronts

- \* O'Brien, John Boiler Works Co.
- \* Titusville Iron Works Co.

### Boiler Settings, Steel Cased

- \* Casey-Hedges Co.
- \* McLeod & Henry Co.
- \* O'Brien, John Boiler Works Co.
- \* Vogt, Henry Machine Co.
- \* Walsh & Weidner Boiler Co.

### Boilers, Heating

- \* Casey-Hedges Co.
- \* Erie City Iron Works
- \* Keeler, E. Co.
- \* Leffel, James & Co.
- \* Lidgerwood Mfg. Co.
- \* O'Brien, John Boiler Works Co.
- \* Titusville Iron Works Co.
- \* Union Iron Works
- \* Walsh & Weidner Boiler Co.

### Boilers, Locomotive

- \* Casey-Hedges Co.
- \* Keeler, E. Co.
- \* Leffel, James & Co.
- \* Titusville Iron Works Co.
- \* Union Iron Works
- \* Walsh & Weidner Boiler Co.

### Boilers, Marine (Scotch)

- \* Bethlehem Shipbldg. Corp'n (Ltd.)
- \* Casey-Hedges Co.
- \* Leffel, James & Co.
- \* Titusville Iron Works Co.
- \* Walsh & Weidner Boiler Co.

### Boilers, Marine (Water Tube)

- \* Babcock & Wilcox Co.
- \* Bethlehem Shipbldg. Corp'n (Ltd.)
- \* Casey-Hedges Co.
- \* Connelly, D. Boiler Co.
- \* O'Brien, John Boiler Works Co.

### \* Erie City Iron Works

- \* Keeler, E. Co.
- \* Leffel, James & Co.
- \* Lidgerwood Mfg. Co.
- \* Morrison Boiler Co.
- \* O'Brien, John Boiler Works Co.
- \* Titusville Iron Works Co.
- \* Union Iron Works
- \* Vogt, Henry Machine Co.
- \* Walsh & Weidner Boiler Co.
- \* Webster, Howard J.
- \* Wickes Boiler Co.

### Boilers, Tubular (Vertical Fire)

- \* Bigelow Co.
- \* Casey-Hedges Co.
- \* Clyde Iron Works Sales Co.
- \* Keeler, E. Co.

- \* Walsh & Weidner Boiler Co.

### Boilers, Tubular (Horizontal Return)

- \* Bigelow Co.
- \* Casey-Hedges Co.
- \* Cole, R. D. Mfg. Co.
- \* Connelly, D. Boiler Co.

### Brakes, Air

- \* Allis-Chalmers Mfg. Co.
- \* General Electric Co.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1924-25 Volume

their supply, records maintained regarding work and qualifications of each apprentice, apprentice boards, instructors' conventions, moral training and discipline of apprentices, apprentice clubs, special apprentices, apprentice graduates, etc. Direct and indirect results derived from this apprentice training system.

#### AUTOMOBILE ENGINES

**Balancing.** Engine Balancing Calculations, M. Platt. *Automobile Engr.*, vol. 14, nos. 192 and 193, Aug. and Sept. 1924, pp. 243-249 and 275-281, 42 figs. Discusses balance of rotating masses; crankshafts; engine-balancing calculations. Appendices. Bibliography.

**Practical Balancing of Engine Components.** A. A. Bull. *Soc. Automotive Engrs.*—Jl., vol. 14, no. 5, May 1924, pp. 527-531, 9 figs. Discusses vibrations that may either be felt or heard in car and which are a result of lack of balance. From a production standpoint, influence of mechanical unbalance of parts and variation in their weight that may create different unbalanced forces are of principal concern; illustrates and analyzes specific instances. Commercial balancing of crankshafts, flywheels, clutches and propeller-shaft assemblies. Considers six and eight-cylinder engine balance, and gives vibration-test results, in terms of actual measurement on dynamometer and in car.

**Construction.** Special Problems in the Construction of Medium- and High-Pressure Automobile Engines (Sonderaufgaben beim Bau von Mittel- und Hochdruck-Kraftfahrzeugmotoren), F. E. Bielefeld. *Wirtschaftsmotor*, vol. 6, no. 7-8, Aug. 25, 1924, pp. 9-12, 7 figs. Discusses question of weight, least weight without reducing safety and life; high number of revolutions; further development of two-stroke engine.

**Fuels and Oils, Effects of.** Laboratory Tests Show Effects of Different Fuels and Oils on Engine Performance. *Automotive Industries*, vol. 51, no. 14, Oct. 2, 1924, pp. 608-610, 3 figs. Dynamometer laboratory of The Texas Co. in Long Island City given over to research on performance and engine wear. Nature and arrangement of testing equipment.

#### AUTOMOBILE FUELS

**Anti-knock Compounds.** A Suggested Mechanism for Antiknock Action, G. L. Wendt and F. V. Grimm. *Indus. & Eng. Chem.*, vol. 16, no. 9, Sept. 1924, pp. 890-893, 1 fig. Experiments show that tetraethyl lead and other anti-knock compounds actually have marked effect in recombining gaseous ions at ordinary pressures and temperatures while knock inducers similarly tested have no effect.

**Gasoline.** See GASOLINE.

**Tetralin.** Tetralin, Fred. Nathan. *Fuel*, vol. 3, no. 10, Oct. 1924, pp. 346-349. Its history, manufacture and use as fuel for internal-combustion engines; produced by process of hydrogenating naphthalene.

#### AUTOMOBILE MANUFACTURING PLANTS

**Fiat, Italy.** The Impressive Story of Fiat, J. A. Lucas and F. E. Bardorf. *Am. Mach.*, vol. 60, nos. 17, 18, 19, 21 and 25, and vol. 61, nos. 1, 2, 4, 6 and 8, Apr. 24, May 1, 8, 22, June 19, July 3, 10, 24, Aug. 7 and 21, 1924, pp. 603-607, 10 figs.; 655-659 and 693-696, 31 figs.; 763-767, 10 figs.; 927-931, 15 figs.; 1-4, 14 figs.; 49-53, 20 figs.; 157-160, 11 figs.; 223-225, 10 figs.; 295-296, 8 figs.; Apr. 24: Plants and products of large automobile company in Turin, Italy. May 1 and 8: Manufacture of ball bearings. May 22: Lingotto automobile plant; shop arrangement and management; apprenticeship system. June 19: Raw-material handling at Lingotto plant; forging and stamping departments; molding and machining operations in foundry. July 3: Methods employed in machining pistons for Fiat motor. July 10: Methods and tools used in making connecting rods. July 24: Methods employed in machining 4-cylinder block at Lingotto plant. Aug. 7: Machining methods for upper section of crankcase. Aug. 21: Final operations on crankcase.

#### AUTOMOBILES

**Alvis.** The Alvis Car. *Auto-Motor Jl.*, vol. 29, no. 37, Sept. 11, 1924, pp. 765-768, 12 figs. Gives technical details; monobloc engine is mounted in chassis on sub-frame of pressed steel, camshaft is carried in three large-diameter bearings and driven by timing gear wheels of hard phosphor bronze; overhead-valve engine; plungers are spring-pressed and lower ends of push-rods descend into them.

**Bodies, Manufacture of.** Automobile Body Engineering, W. F. Brown. *Automotive Mfr.*, vol. 66, nos. 3 and 4, June and July 1924, pp. 12-14 and 13-15. Describes strength, lines and general outline, vertical stresses, frame and window framing, quarters and roof, longitudinal stresses, body iron work, panel work, aluminum moldings and general use of light-weight metals, body framework, reducing weight and standards of weight.

**Bumpers.** Motor-Car Bumpers, J. R. Reyburn. *Soc. Automotive Engrs.*—Jl., vol. 15, no. 4, Oct. 1924, pp. 359-362, 9 figs. Characteristics of early bumpers; designing most protective bumper; importance of easy application; etc.

**Electrical Equipment.** New Electrical Equipment Line Designed for Higher Priced Cars, P. M. Heldt. *Automotive Industries*, vol. 51, no. 7, Aug. 14, 1924, pp. 326-329, 4 figs. Details of electrical equipment for automobiles, manufactured by De Jon Elec. Corp. of Poughkeepsie, N. Y. Generators and starting motors made with 4 1/2, 5 and 5 1/2 in. frame diameters; head at commutator end is an aluminum casting; third-brush control and magnetic cutout employed; closed-circuit ignition system comprises interrupter, distributor, and coil.

**Garages.** See GARAGES.

**Headlights.** Desirable Road-Illumination, C. A. Michel. *Soc. Automotive Engrs.*—Jl., vol. 14, no. 5,

May 1924, pp. 511-515, 10 figs. Laboratory approval-test specifications; specifications for desirable illumination; specially designed reflector and lens; parabolic-reflector disadvantages; photometric-test values.

**Headlights of Vehicles and Glare** (I fanali di testa dei veicoli e l'abbagliamento), G. Perli. *Industria*, vol. 38, no. 10, May 31, 1924, pp. 274-276, 8 figs. Discusses regulation of glare by changing position of light in reflector.

**Paris Show.** Novel Brake Mechanism and Dozen New Models Are Paris Show Features, W. F. Bradley. *Automotive Industries*, vol. 51, no. 15, Oct. 9, 1924, pp. 633-634, 1 fig. Great increase in fabric bodies and gain in overhead-valve engines.

**Rear-Axle Shafts.** Hot-Swaging of Rear-Axle Shafts, R. A. DeVlieg. *Soc. Automotive Engrs.*—Jl., vol. 14, no. 5, May 1924, pp. 507-510, 4 figs. Description of machines used and their mode of operation, and difficulties attendant upon their development.

**Starting and Lighting Apparatus, Electrical.** Electrical Manufacturers and Service Men Adjust Differences, C. P. Shattuck. *Automotive Industries*, vol. 51, no. 13, Sept. 25, 1924, pp. 563-566, 4 figs. Report of standards committee of Automotive Elec. Assn., on classification of standard lighting generators, starting motor and recommended practice in wiring.

**Studebaker.** New Features Involved in Studebaker Brake Linkage and Transmission. *Automotive Industries*, vol. 51, no. 13, Sept. 25, 1924, pp. 570-571, 3 figs. Details of four-wheel brake system which operates through a servo mechanism, and which is optional on all models. Transmission on Standard Six is very similar to that on other models.

**Tires.** See TIRES, RUBBER.

**Vauxhall.** Care and Maintenance of the 14 Hp. Vauxhall. *Autocar*, vol. 53, nos. 1505 and 1506, Aug. 22 and 29, 1924, pp. 323-325 and 383-385, 10 figs. Hints and advice on upkeep of four-cylinder car.

#### AVIATION

**Commercial.** Adequate Landing-Fields Will Develop a Commercial-Aviation Industry, A. A. G. Fokker. *Soc. Automotive Engrs.*—Jl., vol. 14, no. 5, May 1924, pp. 504-506 and 510. Shows that great progress in commercial aviation has been made in America during last three years, especially with reference to Air-Mail Service. Gives instances where additional airplane routes are feasible even now in United States. European aviation development. Urges necessity for attaining ability for aircraft to fly at night and specifies advantages secured in Europe now by combined over-night railroad-and-airplane service. "Wild" flying; classification of aerial transport. Provision of landing fields throughout United States urged as a present necessity. Future aviation probabilities and development of aerial traffic.

## B

#### BEARINGS

**Shaft.** Modern Shaft Bearings (Moderne Wellendrucklager), J. Schowalter. *Warne*, vol. 47, no. 31, Aug. 1, 1924, pp. 359-361, 6 figs. Comparison of design and working of a collar thrust bearing and a Vulcan single-disk segmental bearing for a propeller running at 75 r.p.m. and for 20,000 kg. thrust, and their field of application.

#### BEARINGS, BALL

Formulas for and Properties of Ball and Roller Bearings (Alcune formule e proprietà notevoli nella cinematica dei cuscinetti protanti a sfera e a rulli), S. R. Treves. *Industria*, vol. 38, no. 9, May 15, 1924, pp. 242-245, 5 figs. Develops formulas for calculating peripheral speed, coefficient of resistance, etc.

#### BEARINGS, ROLLER

**Railway Roller Stock.** Roller Bearings for Railway Rolling Stock (Rollenlager für Eisenbahnfahrzeuge), W. Lindner. *Kruppsche Monatshefte*, vol. 5, Aug.-Sept. 1924, pp. 187-189, 2 figs. Details of design of Krupp bearings, function of parts, lubrication, etc.

#### BELT DRIVE

**Arc of Contact, Increasing.** Methods That May be Applied for Increasing Arc of Contact With Low Belt Tension, F. E. Gooding. *Indus. Engr.*, vol. 82, no. 9, Sept. 1924, pp. 417-422 and 455, 16 figs. Describes special mechanical means whereby distance between shafts may be shortened and pulley ratios increased over usual recommended practice.

**Group vs. Individual Drive.** A Comparison of Group and Individual Drive, R. W. Drake. *Indus. Mgt. (N. Y.)*, vol. 68, no. 3, Sept. 1924, pp. 178-183, 6 figs. Analysis of factors which govern a choice.

#### BELTING

**Lumber Industry.** Transmission and Conveyor Belts in New Long-Bell Lumber Mill, W. A. Scott. *Belting*, vol. 25, no. 3, Sept. 1924, pp. 21-24, 9 figs. Large new plant of Long-Bell Lumber Co., Longview Wash., contains latest improved design of modern equipment; belting installations highly efficient.

**Rubber.** How Much Power Is That Rubber Belt Transmitting?, W. F. Schaphorst. *Belting*, vol. 25, no. 3, Sept. 1924, pp. 29-30, 1 fig. Gives table for determining horsepower being transmitted by rubber belt.

**Rubber Belting.** G. A. Frenkel. *Machy. (N. Y.)*, vol. 31, no. 2, Oct. 1924, pp. 122-124. Data and formulas required in designing rubber-belt transmissions.

**Types.** Characteristics and Attributes of Certain Classes of Belting, W. Stanier. *Belting*, vol. 25, no. 3, Sept. 1924, pp. 17-20, 2 figs. Combination of oak and special tannage declared "last word" in leather belting; other types also show improvement; discusses leather, rubber, metallic stitched fabric, and solid woven hair belting.

#### BLAST-FURNACE GAS

**Cleaning.** Electrical Cleaning of Blast Furnace Gases, N. H. Gellert. *Blast Furnace & Steel Plant*, vol. 12, no. 9, Sept. 1924, pp. 423-426. Discussion of different methods.

**Economical Use.** Blast-Furnace Gas Economy in German Iron Works, K. Rummel. *Iron & Coal Trades Rev.*, vol. 109, no. 2943, July 25, 1924, pp. 156-157, 6 figs. Discusses economic uses of gases, gas-fired vs. coal-fired boilers, gas-engine power stations vs. steam-turbine power stations with gas-fired boilers, waste-heat boilers behind gas engines, etc. Abstract of paper read before World Power Conference.

#### BLAST FURNACES

**Practice, Alabama.** Blast-Furnace Practice in Alabama, H. E. Mussey. *Am. Inst. Min. & Met. Engrs.*—Trans., no. 1376-S, Oct. 1924, 15 pp., 8 figs. In summarizing practice of district it may be stated that Southern practice is disposed to carry higher stove temperatures than Northern plants, also blast volume for given size of stack is higher; increased production may be expected as result of even larger furnaces than those now classified as large.

**Tuyères.** Number, Form, Diameter and Position of Blast-Furnace Tuyères. Effect of Their Number on the Efficiency of Blast Furnaces (Nombre, Forme, diamètre et position des tuyères de hauts fourneaux. Influence du nombre des tuyères sur la marche du fourneau), M. M. Derclaye. *Revue de Metallurgie*, vol. 21, nos. 6, 7 and 8, June, July and Aug., 1924, pp. 315-337, 396-421 and 450-461, 14 figs. Calculation of tuyères for any blast furnace; considerations limiting number of tuyères, position of tuyères round crucible, etc. Determination of total and partial heat balances. New theory of Mathesius and its application to heat balances.

#### BOILER EXPLOSIONS

**British Legislation.** Steam Boiler Explosions. *Colliery Guardian*, vol. 128, no. 3324, Sept. 12, 1924, pp. 674-675. Abstract of memorandum prepared by C. E. Stromeyer, chief engineer of Manchester Steam Users' Assn. for Prevention of Steam Boiler Explosions, dealing exclusively with steam-boiler clauses of new British Factories Bill.

#### BOILER FEEDWATER

**Concentration Control.** Systematic Control of Boiler-Water Concentration, C. M. Ware. *Power*, vol. 60, no. 17, Oct. 21, 1924, pp. 650-651, 2 figs. Describes three methods, any one of which can be applied according to its relative merit for plant concerned.

#### BOILER OPERATION

**Costs and Economies.** Boilers—Operation Cost and Economies, J. A. Whitlow. *Elec. Light & Power*, vol. 2, no. 10, Oct. 1924, pp. 18-19, 80, 82 and 84. Notes on grate area; kinds of grates and furnaces; feedwater heaters; economizers; superheat; and operating data.

**Combustion Control.** Combustion Control for Boilers, R. J. S. Pigott. *Mech. Eng.*, vol. 46, no. 10, Oct. 1924, pp. 590-592, 1 fig. Functions involved in operation; possibilities and methods of regulation; design, insulation; human factor in system.

#### BOILER PLANTS

**Equipment.** Increasing the Life of Equipment in Power Plants (Erhöhung der Lebensdauer maschineller Einrichtungen in Kraftanlagen), Braunkohle, vol. 23, no. 20, Aug. 16, 1924, pp. 382-392, 20 figs. Boilers and their safety, rules for acceptance tests, care of boilers, signs of wear, action of steam and pressure.

#### BOILERMAKING

**French Shops.** Important Boiler Construction in French Shops, C. L. Carden. *Boiler Maker*, vol. 23, no. 9, Sept. 1924, pp. 249-251, 5 figs. Describes Fives-Lille boiler works which have been enlarged since war and improvements made in Delaunay-Belleville boiler.

#### BOILERS

**Autogenous Welding.** Proposed Code of Rules to Govern Autogenous Welding on Steam Pressure Boilers. *Boiler Maker*, vol. 23, no. 9, Sept. 1924, pp. 257-262, 27 figs. Gives results obtained from tests and recommendations covering use of autogenous welding in steam boilers.

**Heat-Balance Calculation.** Calculation of the Boiler Heat Balance. *Power Plant Eng.*, vol. 28, no. 19, Oct. 1, 1924, pp. 991-995, 9 figs. Solution of a problem and an analysis of conditions which affect boiler economy over various periods of operation.

**Loading for Maximum Efficiency.** Loading the Boilers to Obtain Maximum Efficiency, Chas. E. Coburn. *Power*, vol. 60, no. 17, Oct. 21, 1924, pp. 642-643, 3 figs. Points out that by properly dividing load among boilers in service and by strict attention to keeping controllable losses at their lowest, boiler load may always be maintained at its reasonably highest efficiency.

**Locomotive.** See LOCOMOTIVE BOILERS.

**Multitubular.** Results of Tests of Multitubular Boilers with Direct Flow (Résultats d'essai de chaudières multitubulaires à flux direct), M. P. Pourchot. *Outillage*, vol. 8, no. 8, Aug. 1924, pp. 276-281, 5 figs. Describes recent installation at Loure Mines and Houillères de Montrambert Mines, where special difficulties had to be met; gives evaporation tests with low-grade fuels, etc.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1924-25 Volume

**Ratings.** Progress in the Rating of Heating Boilers. Heating & Vent. Mag., vol. 21, no. 10, Oct. 1924, pp. 46-48, 1 table. Comparison of three methods, including that announced by Chicago Master Steamfitters' Assn.

**Specifications.** Technical Specifications for the Supply of Forged or Stamped Pieces of Extra-Soft Rolled Steel for Boilers and Other Steam Vessels (Spécification technique pour la fourniture de pièces forgées ou embouties, en acier laminé extra-doux pour chaudières et autres appareils à vapeur). Associations Françaises de Propriétaires d'Appareils à Vapeur—Bull., vol. 5, no. 17, July 1924, pp. 171-176. Rules established by French Steam Boiler Users' Assn.

**Transportation.** Boiler Cars for Boilers That Can be Run on a Krupp Delivery Truck (Kesselwagen mit abfahrbaren Kesseln zum Umschlag des Ladegutes auf Krupp-Sattelschlepper). F. Finckh. Kruppsche Monatshefte, vol. 5, Aug.-Sept. 1924, pp. 167-171, 6 figs. Details of a freight car carrying four boilers crossways, and a motor truck or tractor on to which boilers can be rolled endwise, for more economic transportation.

## BOILERS, WATER-TUBE

**Temperature Variation.** Temperatures in Water-Tube Boilers. Power, vol. 60, no. 16, Oct. 14, 1924, p. 604, 1 fig. Investigations at Rensselaer Inst. show little variation throughout boiler.

## BRAKES

**Power.** Power Brakes on British Railway. W. E. Symons. Ry. & Locomotive Eng., vol. 37, no. 9, Sept. 1924, pp. 281-282, 2 figs. Reviews power-brake situation in Great Britain and discusses vacuum and air brakes.

**Switching Service, for.** Improving the Gravity Switching Service by Better Braking (Verbesserung des Schwerkraft-Verschleppdienstes durch verbesserte Bremsen). Wenzel. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 38, Sept. 20, 1924, pp. 986-990, 16 figs. Details of Thyssenhütte gravity braking device for railway switching service in which braking action is exerted on wheels by means of braking rails at each side of rail which are actuated by weight of cars passing.

# C

## CARS

**Lubrication.** Mechanical Lubrication of Railway-Car Axles (Die mechanische Schmierung der Eisenbahnachsen). W. Friedrich. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 34, Aug. 23, 1924, pp. 877-879, 7 figs. Details of Schneider-Friedrich system of roller-chain lubrication now being used on all German railway cars; comparative test data of oil-pad and chain lubrication.

**Parts Interchangeability.** Interchangeability of Parts in Railway Cars (Austauschbau bei Eisenbahnwagen). Klein. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 37, Sept. 13, 1924, pp. 965-969, 14 figs. Necessity for interchangeability for economic production and repairs of freight and passenger cars, its introduction in Germany, and details of standards.

## CARS, COAL

**Hopper.** Determining the Forces Active in an Automatic Unloader Car with Drop Door (Ermittlung der in einem Selbstentladewagen mit Klappenverschluss wirkenden Kräfte). M. Bieck. Glaser's Annalen, vol. 95, no. 5, Sept. 1, 1924, pp. 67-71, 16 figs. Calculation of forces acting on walls and on drop bottom; force of automatic action, etc.

**20-Ton.** 20-Ton Coal Wagons on the Great Western Railway. Ry. Engr., vol. 45, no. 537, Oct. 1924, pp. 351-353, 5 figs. On each 500 tons of coal conveyed in these cars there is nearly 400 ft. saving in length of trains; by their use increases capacity of private owners' sidings by 30 per cent.

## CARS, FREIGHT

**Bulk Goods.** Standard-Gage Fifty-Ton Freight Cars for Transportation of Bulk Goods (Regelspurige 50-t Eisenbahnwagen zur Beförderung von Massengütern). P. Krüger. Kruppsche Monatshefte, vol. 5, Aug.-Sept. 1924, pp. 171-186, 28 figs. Details of construction of freight cars embodying greatest economy and safety, including trucks, frames, automatic unloading arrangements, etc.

**Large-Capacity.** Introduction of Large-Capacity Freight Cars (Die Einführung der Grossgüterwagen). Flügel. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 38, Sept. 20, 1924, pp. 977-985, 19 figs. Discusses increase of carrying capacity from 15-20 tons to 50-60 tons, acceleration of circulation of cars, and cheapening of unloading by means of automatic devices; automatic couplings; bunker facilities in free ports; etc.

**Manufacture.** Economical Manufacture of Goods Trucks. Werner. Eng. Progress, vol. 5, no. 9, Sept. 1924, pp. 189-190, 1 fig. Deals with interchangeability of parts and successful introduction of principles in German shops.

**The Manufacture of Railway Coaches in Germany.** E. Cramer. Eng. Progress, vol. 5, no. 9, Sept. 1924, pp. 183-189, 20 figs. Quantity production of steel passenger cars; modern truck manufacture; freight trucks for heavy loads; tipping and special trucks; refrigerator cars; central buffer couplings.

## CARS, PASSENGER

**Dining.** New Rolling-Stock for Day East Coast

Trains. L. N. E. R. Ry. Gaz., vol. 41, no. 41, Oct. 3, 1924, pp. 439-445, 10 figs. Describes new vehicles, put in service, including all-electric "triple" restaurant cars.

**Germany.** Standard Passenger Cars for German State Railways (Die Einheitspersonenwagen der Deutschen Reichsbahn). Speer, Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 37, Sept. 13, 1924, pp. 957-964, 19 figs. Details of new type replacing individual types of various states.

**Side Girders, Shearing Stress in.** Shearing Stress in Passenger Car Side Girders. W. J. Meyer. Ry. Mech. Engr., vol. 98, no. 10, Oct. 1924, pp. 604-608, 12 figs. Analysis of procedure necessary in order to reduce weight without sacrificing strength.

**Trucks.** The Görlitz Truck (Das Görlitzer Drehgestell). Glaser's Annalen, vol. 95, no. 5, Sept. 1, 1924, pp. 71-73, 4 figs. Comparative data on American and Görlitz trucks, the latter having wheelbase of 11.8 ft. as in six-wheel trucks.

## CASE-HARDENING

**Locomotive Parts.** The Case-Hardening of Locomotive Components. Ry. Engr., vol. 45, no. 537, Oct. 1924, pp. 337-338, 1 fig. Deals with alternative steels and case-hardening factors.

## CASE IRON

**Structure.** Structure of High-Grade Cast Iron (Das Gefüge hochwertiger grauen Gusseisens). R. Kühnel and E. Neumann. Stahl u. Eisen, vol. 44, no. 35, Aug. 28, 1924, pp. 1042-1044, 5 figs. Discusses microstructure consisting of pearlite, graphite, and phosphide eutectic; difficulty of distinguishing between this and pearlitic casting.

**Testing.** Mechanical Tests of Cast Iron. Metal Industry (Lond.), vol. 25, nos. 13 and 14, Sept. 26 and Oct. 3, 1924, pp. 307-309 and 331-332. Consideration of the various classes of tests for determining "strength" properties of the metal.

## CENTRAL STATIONS

**Comines, France.** Central Power Station at Comines. J. Gould Coutant. Combustion, vol. 11, no. 4, Oct. 1924, pp. 276-278, 4 figs. Initial installation consists of three 25,000-kw. turbo-generators, served by 10 boilers; details of pulverized-coal equipment; results of pulverized-coal firing have warranted placing of fourth repeat order for apparatus for extensions to station.

**Heat Balance.** Heat Balance Study. F. H. Rosenkrants. Combustion, vol. 11, no. 4, Oct. 1924, pp. 278-283, 2 figs. Analysis of relative merits of various means adopted for reducing loss of heat to condenser and to stack. (Abstract.) Report of Prime Movers Committee of Nat. Elec. Light Assn.

**Interconnection with Steel Mills.** The Steel Industry and The Electric Utilities. M. Skinner and F. D. Mahoney. Iron & Steel Engr., vol. 1, no. 9, Sept. 1924, pp. 532-536, 3 figs. Discusses advantages of interconnection between electric power systems of larger steel companies and those of neighboring electric utility companies, and difficulties necessary to be overcome.

**Saginaw River, Mich.** Saginaw River Steam Plant Costs Explained. H. F. Eddy. Power, vol. 60, no. 16, Oct. 14, 1924, pp. 615-616. Author explains cause of exceptionally low cost—\$71 per kw. of rated capacity. (Abstract.) Paper before Nat. Elec. Light Assn.

**Steam-Turbine, Developments in.** Modern Tendencies in Steam-Turbine Power Plants. E. Berg and F. V. Smith. Mech. Eng., vol. 46, no. 10, Oct. 1924, pp. 577-582, 10 figs. High pressure, superheat, reheating, and steam extraction as affecting power-plant economy, and advantages obtained in their adoption for marine propulsion. Calculated analysis of steam and fuel consumption of a 50,000-hp. turbine-electric-drive passenger vessel.

**Switching Equipment.** Switching Equipment at the Hanover Central Station (Die Schaltanlagen des Grosskraftwerkes Hannover). H. Probst. Elektro-Jl., vol. 4, no. 8, Aug. 1924, pp. 213-215, 3 figs. Details of switching arrangements; 17,000-kva. generators; 6000 volts stepped up to 45,000-60,000 volt overhead transmission.

## COAL

**Heating Value and Air Exposure.** Loss of Heating Value of Bituminous Coal on Exposure to Air. J. P. Byrne and J. D. Davis. Indus. & Eng. Chem., vol. 16, no. 8, Aug. 1924, pp. 775-778, 5 figs. Method and results of determination of loss in heating value of coal on exposure to air.

**Ignition.** The Ignition of Coal. R. V. Wheeler. Fuel, vol. 3, no. 10, Oct. 1924, pp. 366-370, 5 figs. Tests to determine what relationship, if any, there is between chemical composition of coal and its ignition temperature; it is concluded that reaction responsible for "self-heating" of coal is mainly one of attachment of oxygen to molecules of high carbon content.

**Moisture in.** Moisture in Coal. W. S. Patterson. Power Engr., vol. 19, no. 222, Sept. 1924, pp. 329-330. Discusses boiler efficiency and wet coal, moisture and flue gas, moisture and economizer corrosion, moisture and spontaneous combustion, and appearance of wet coal.

**Specific Gravity and Ash Content.** The Specific Gravity and Ash Content of Coal. T. J. Drakeley and J. R. I. Hepburn. Chem. & Industry, vol. 43, no. 34, Aug. 22, 1924, pp. 277T-278T, 1 fig. Investigation to determine whether relation exists between specific gravity of sample of coal and its ash content; it is shown that no relation exists between true and apparent specific gravities and ash contents of samples of clean coal from same seam; relation exists between true and apparent specific gravities and ash contents of average samples and equation is given for calculating ash content of coal from specific gravity.

## COAL HANDLING

**Boiler House.** Coal and Ash Handling Plant. Eng. & Boiler House Rev., vol. 38, no. 4, Oct. 1924, pp. 135-140, 143-144, 147-148 and 150, 20 figs. Review of principal methods in present-day use for handling of coal and ash in boiler house.

**Conveyor, Belt.** Use of Conveyor Belts in Modern Coal Storage. Belting, vol. 25, no. 3, Sept. 1924, pp. 36 and 38, 3 figs. Describes methods of handling fuel by American Hominoy Co.; coal mechanically handled from freight cars to firebox.

**Shipping Plant.** Coal-Shipping Plant at the Clarence Works of Messrs. Dorman, Long & Company, Limited. Iron & Coal Trades Rev., vol. 109, no. 2951, Sept. 19, 1924, pp. 469-470, 3 figs. Details of new wharf and loading plant.

## COAL STORAGE

**Scientific.** Scientific Coal Storage. Blast Furnace & Steel Plant, vol. 12, no. 9, Sept. 1924, pp. 418-420, 1 fig. Summary of report of storage of coal committee of Am. Eng. Council.

## COMBUSTION

**Control.** Automatic Combustion Control. J. Fred Weller. Combustion, vol. 11, no. 4, Oct. 1924, pp. 295-297. Deals with essential elements to be controlled, namely, fuel supply in proportion to steam demands, air supply, removal of gases, and maintaining negative furnace pressure.

**Combustion Control.** E. G. Bailey. Iron & Steel Engr., vol. 1, no. 9, Sept. 1924, pp. 483-487, 5 figs. Discusses problems of control.

## CONDENSERS, STEAM

**Tubes.** Chlorine Keeps Condenser Tubes Clean. C. H. S. Topholme. Power Plant Eng., vol. 28, no. 20, Oct. 15, 1924, p. 1055, 1 fig. Process and apparatus, known as Chloronome, for continuous and automatic treatment of cooling water with measured trace of chlorine gas to prevent fouling of condenser tubes and other cooling surfaces with deposits of living organisms.

## CONVEYORS

**Building-Material.** Quantity Conveying in Building Construction and Mining (Massenbeförderung bei Hoch- und Tiefbauten). G. Garbotz. Deutsche Bauzeitung, vol. 58, no. 70, Aug. 30, 1924, pp. 137-141, 12 figs. Types of apparatus for conveying building material, including cranes, gravity concrete towers, cement spraying, etc.

**Chewing-Gum Plant.** Conveyors Handle Chewing Gum. W. B. Ranney. Mgt. & Administration, vol. 8, no. 4, Oct. 1924, pp. 387-390, 10 figs. System in William Wrigley, Jr. Co., Chicago plant.

## COUPLINGS

**Shaft.** Cast-iron Shrouded Shaft Couplings—Comment. W. Roland Needham. Machy. (Lond.), vol. 24, no. 626, Sept. 25, 1924, pp. 816-817, 1 fig. Corollary to article in Machy., Aug. 7, 1924, p. 582.

## CRANES

**Unloading.** Hoisting Apparatus. Electric Unloading Cranes. (Note sur l'étude des appareils de levage. Grues de déchargement à moteurs électriques). G. Catella. Arts et Métiers, vol. 77, no. 45, June 1924, pp. 220-227, 17 figs. Discusses choice of electric motor, calculation of power required, calculation of frame, and stability of crane.

**Unloading Plant of the New United Sugar Company at Ham (Somme).** [L'installation de déchargement de la Compagnie nouvelle de Sucreries réunies, à Ham (Somme)]. C. Dantin. Génie Civil, vol. 85, no. 9, Aug. 30, 1924, pp. 185-189, 7 figs. Details of design and operation of portal gantry and cranes for handling sugar beet; electric drive.

## CUPOLAS

**Operation.** Calculations for Cupola Furnace Operation (Berechnungen für den Kupolofenbetrieb). Zeit. für die Gesamte Giessereipraxis, vol. 45, nos. 29, 30, 33 and 34, July 20, 27, Aug. 17 and 24, 1924, pp. 209-210, 217-219, 242-243 and 250-252. Discusses furnace dimensions, quantity of air of combustion and of gases; and makes calculations for increasing or decreasing charges, etc.

**Schürmann Type.** Cupola Furnaces (Die Kupolöfen). L. Bolzani. Praktische Maschinen-Konstrukteur, vol. 57, no. 29, Aug. 5, 1924, pp. 411-412, 4 figs. Summary of development and functions of cupola furnaces; describes Schürmann furnace working with preheated air.

## CUTTING METALS

**Processes.** Economics of Metal Cutting Processes (Die Wirtschaftlichkeit der Trennverfahren). Kammerer and M. W. Gleich. Maschinenbau, vol. 3, no. 23, Sept. 11, 1924, pp. 863-865, 3 figs. Compares time and cost of cutting of various rolling-mill products by autogenous and Mars processes, showing advantages of latter, using a cutting disk.

**Progress in.** Foreign Progress in Cutting Metals. C. A. Beckett. Mech. Eng., vol. 46, no. 10, Oct. 1924, pp. 618-624, 17 figs. Shows manner in which solutions of some of the problems presented have been attempted by foreign experimenters, referring more specifically to problems (1) development of a standard method for testing tool material and material to be cut, (2) development of a standard heat-treating method, and (3) development of methods for testing tool performance.

## CUTTING TOOLS

**Steel for Standardization of.** Standardization of Cutting Steels (Beitrag zur Normung der Schneidstähle). R. Nerrlich. Werkstattstechnik, vol. 18, no. 17, Sept. 1, 1924, pp. 463-466, 3 figs. Terminology of surfaces and angles of edge of cutting tools.

# Manufactured by Advertisers **CLASSIFIED LIST OF MECHANICAL EQUIPMENT** Alphabetical List on page 194

## D

## DIES

**Drop-Forging.** Vital Factors in Design of Drop Forging Dies, W. Anslow. *Can. Machy.*, vol. 32, no. 10, Sept. 4, 1924, pp. 27-29, 18 figs. Points out that parting line, contraction and balance are important considerations in layout; life of dies, to large extent, is dependent upon design.

**Forging-Machine.** Steels for Forging Machine Dies, E. R. Frost. *Forging—Stamping—Heat Treating*, vol. 10, no. 10, Oct. 1924, pp. 368-371, 3 figs. Factors entering into choice of best die steel; points out that no definite formula or rule can be given which will cover many conditions encountered.

## DIESEL ENGINES

**Double-Acting.** American-Developed Double-Acting Diesel Engine. *Motorship*, vol. 9, no. 9, Sept. 1924, pp. 668 and 673-674, 4 figs. Particulars of new two-cycle, air-injection engine capable of being flanged directly to existing propeller shafts in Shipping Board vessels with minimum hull alterations.

Double Acting Diesels, Johnstone-Taylor. *Mar. Eng.*, vol. 29, no. 10, Oct. 1924, pp. 605-606, 3 figs. Describes designs by two British firms, namely, North Eastern marine and North British design.

More on the Double-Acting Diesel Engine. *Motorship*, vol. 9, no. 9, Sept. 1924, pp. 659-660, 4 figs. Uniflow port scavenging system developed by M. A. N. (Maschinenfabrik Augsburg-Nürnberg) has given successful test results.

The Worthington Double Acting Diesel. *Mar. Eng.*, vol. 29, no. 10, Oct. 1924, pp. 585-587, 9 figs. Details of new 2-cycle engine, with special reference to cylinder construction.

**High-Power.** High-Power Diesel Engines (Hochleistungs-Dieselmotoren), F. E. Bielefeld. *Wirtschaftsmotor*, vol. 6, no. 7-8, Aug. 25, 1924, pp. 7-8, 4 figs. Discusses compressor and compressorless types; improvements in atomizing and injecting fuel oil; comparison with Scott-Still engine.

**Mexican Fuel Oil.** Burning Heavy Fuel Oil in Diesel Engines, R. Hildebrand. *Eng. Wld.*, vol. 25, no. 3, Sept. 1924, pp. 167-168, 1 fig. Describes method employed by Fulton Iron Works Co. in solving problem of using heavy fuel oil in Diesel engines.

**Power Plants, Use in.** Use of Diesel Engines in Power Plants, L. R. Ford. *Power Plant Eng.*, vol. 28, no. 19, Oct. 1, 1924, pp. 1003-1004. Considerations affecting adaptability of Diesel engine. Paper read before N.A.S.E. convention.

## DRILLING

**Automobile Parts.** Drilling Operations on Automobile Parts, H. L. Tigges. *Machy.* (N. Y.), vol. 31, no. 2, Oct. 1924, pp. 109-111, 7 figs. Gives a number of examples of work performed in automobile plants on heavy-duty drilling machines built by Baker Bros., Inc., Toledo, O., speeds and feeds used for each job and production obtained being mentioned in each case.

## DRILLING MACHINES

**Boiler-Shop.** Economic Drilling Work in Boiler Shops (Wirtschaftliches Bohren in der Kesselschmiede), P. Naumann. *Maschinenbau*, vol. 3, no. 24, Sept. 22, 1924, pp. 894-896, 5 figs. Discusses principles for construction of drilling machines and describes a two-spindle machine designed accordingly.

**Drilling and Milling.** Drilling and Milling Work in Large-Scale Machine Construction (Bohr- und Fräswerke im Grossmaschinenbau), A. Schlegelmilch. *Zeit. des Vereines deutscher Ingenieure*, vol. 68, no. 34, Aug. 23, 1924, pp. 865-871, 18 figs. Details of new combined drilling and milling plant of Schiess Machine Works at Düsseldorf and comparative advantages.

**Pneumatic.** Economics of Compressed-Air Drilling Machines (Einiges über die Wirtschaftlichkeit von Pressluftbohrmaschinen), G. Salinger. *Maschinenbau*, vol. 3, no. 24, Sept. 22, 1924, pp. 896-897, 3 figs. Comparison with electric drilling machine; increasing efficiency of pneumatic machine; substituting gliding by rolling friction; shows superiority of roller bearings.

**Radial.** Locomotive-Frame Drilling Machines (Locomotivrahmen-Bohrmaschinen), E. Stephan. *Maschinenbau*, vol. 3, no. 24, Sept. 22, 1924, pp. 897-899, 6 figs. Advantages of drilling over cutting and punching; operation of frame-drilling machines; simultaneous drilling of several frames; etc.

## DURALUMIN

**Treatment.** Duralumin, How It is Treated, Handled and Protected Against Corrosion, H. C. Knerr. *Automotive Industries*, vol. 51, no. 15, Oct. 9, 1924, pp. 648-650. Instructions for working cover—forming, bending, tube bending, spinning, forging, riveting, welding and soldering; condensed data given on composition, mechanical properties and heat treatment.

## E

## ELECTRIC DRIVE

**Cost Comparison of Steam, Diesel, and.** Maximum Prices for Current Supply (Höchstpreise für Stromlieferung), W. Windel. *Elektrotechnische Zeit.*, vol. 45, nos. 38 and 39, Sept. 18 and 25, 1924, pp. 995-1000 and 1027-1032, 9 figs. Theoretical and practical comparison of cost of electric, steam, and

Diesel drive, for threshing machines and machine tools. Discussion of question of whether to buy current or produce it; cost of producing a kw-hr.

**Transition from Steam to.** The Transition from Steam to Electric Drive, E. E. Thomas. *Power House*, vol. 17, no. 18, Sept. 20, 1924, pp. 21 and 42. Shows that continuity of operation of auxiliaries is often facilitated by house turbines, augmented by electrical ties to main bus, relay protection being included to assure service.

## ELECTRIC FURNACES

**Heat-Treating.** Economics of Electrically Heated Annealing and Hardening Furnaces (Die Wirtschaftlichkeit des elektrisch beheizten Glüh- und Härteofens). *Elektrotechnischer Anzeiger*, vol. 41, nos. 148 and 149, Sept. 13 and 16, 1924, pp. 802 and 804, and 812-813. Details of various types of furnaces and their operation; advantages of electric furnaces.

Electric Furnace for Continuous Hardening and Tempering Wire, R. H. MacGillivray. *Am. Electrochem. Soc.*, Advance paper No. 10, for Mtg. Oct. 2-4, 1924, pp. 149-151, 3 figs. on supp. plates. Description of furnace, consisting essentially of two units, one an electric-heated air-hardening furnace, approximately 5.48 m. in length, and other an electric-heated, lead drawing pan, quenching being done in oil.

Electric Furnace Installation, R. S. Sawdey. *Iron & Steel Eng.*, vol. 1, no. 9, Sept. 1924, pp. 487-489, 4 figs. Describes electric furnaces installed at Van Dorn Iron Works Co., Cleveland, O.; installation consists of four double-end box-type furnaces.

**Medium- and Low-Temperature.** Medium and Low Temperature Applications, E. A. Hurme. *Iron & Steel Eng.*, vol. 1, no. 9, Sept. 1924, pp. 503-513, 24 figs. Application of small medium-temperature heat-treating furnaces; hearth-type tool-treating furnaces; tool-steel tempering furnace; large-size medium-temperature furnaces; furnaces for annealing castings; application of electric heat to annealing and hardening wire; applications of low-temperature heating; baking of motor armature; enameling; electric steam boilers; sheet-mill roll heaters.

**Melting.** Electric Melting Furnaces, J. A. Seede. *Iron & Steel Eng.*, vol. 1, no. 9, Sept. 1924, pp. 490-494, 8 figs. Review of development; refinements in furnace design, accessories and operation; increasing productive capacity of furnace.

**Refractories, Effect of Deoxidizing Slag on.** Fluorine in the Deoxidizing Slag, and Its Influence on Refractories in Basic Electric Furnace Practice, F. T. Sisco. *Am. Electrochem. Soc.*, Advance paper No. 19, for Mtg. Oct. 2-4, 1924, pp. 257-272. Deoxidizing slag as first formed; analyses of electric-furnace deoxidizing of slags; advantages and disadvantages of fluorine in deoxidizing slag; temperature and fluidity of slag and their effect on roof and walls; etc.

**Resistance.** An Electric Graphite Resistance Furnace, H. Bruan, A. L. Mehring and W. H. Ross. *Indus. & Eng. Chem.*, vol. 16, no. 8, Aug. 1924, pp. 821-822, 2 figs. Describes furnace which combines features of both Arsem and Tucker furnaces with some new features, and which was designed for such special reactions as those involved in pyrolytic treatment of phosphate rock under non-oxidizing conditions.

**Wire-Annealing.** Medium Temperature Furnace Installations, C. F. Cone. *Iron & Steel Eng.*, vol. 1, no. 9, Sept. 1924, pp. 494-503, 18 figs. Describes regenerative car-type furnace for annealing of wire, installed in Buffalo plant of Fowler & Union Horse Nail Co.

Electric Furnaces for Medium Temperatures, C. F. Cone. *Forging—Stamping—Heat Treating*, vol. 10, no. 10, Oct. 1924, pp. 375-379, 8 figs. Points out that regenerative-car type of furnace has eliminated many troubles in preliminary annealing of wire used in manufacture of horse-shoe nails. Paper presented before Assn. Iron & Steel Elec. Engrs.

## ELECTRIC LOCOMOTIVES

**Development.** The Development of the Electric Locomotive, A. H. Armstrong. *Mech. Eng.*, vol. 46, no. 10, Oct. 1924, pp. 608-617, 18 figs. General comparison of steam and electric locomotives; forms of motor drive; electric-locomotive rating; orthograph tests of locomotive impact on rails, etc.

**Passenger-Train.** Electric Passenger Train Locomotive for the Railway Line Gölitz—Königsberg, Paul Müller. *Eng. Progress*, vol. 5, no. 9, Sept. 1924, pp. 173-174, 4 figs. Approved D21 locomotive with rod drive, for heavy gradients. Supplied by Bergmann Elec. Works, Berlin.

## ELECTRIC RAILWAYS

**Articulated Trains and Self-Propelled Cars.** Articulated Trains and Self-Propelled Cars Ry. Age, vol. 77, no. 15, Oct. 11, 1924, pp. 641-643, 1 fig. Review of report by Committee on Heavy Electric Traction of Am. Elec. Ry. Assn., including study of light-weight equipment.

**Car Maintenance.** Equipment Maintenance, F. M. Brinckerhoff. *Elec. Ry. J.*, vol. 64, no. 13, Sept. 27, 1924, pp. 509-514, 8 figs. Discusses important considerations for expediting inspection and overhaul work; deals with such practical features of shop design as proper areas of floor space, use of lye tanks, provision for paint spraying and spray washing, adequate materials handling, and dipping and baking equipment.

**Operation.** Present status of Electric Railway Operation (Gegenwärtiger Stand der elektrischen Bahnbetriebe), W. Usbeck. *Zeit. des Vereines Deutscher Ingenieure*, vol. 68, no. 37, Sept. 13, 1924, pp. 943-949, 20 figs. Reviews present electric railways in Germany, power houses, characteristics of modern distributing plants and their advantages.

**Overhead Construction, Germany.** Overhead Construction for German Railway. *Elec. Traction*,

vol. 20, no. 9, Sept. 1924, pp. 415-416, 1 fig. Details of unusual refinement in overhead construction on Mittenwaldbahn; overhead is sectionalized or separated into sections which can be disconnected in case of disturbance; for return circuit running rails of track are used; special lighting protection.

**Safety Devices.** Automatic Safety Devices for A. C. Trains with Special Reference to the Hamburg Elevated (Selbsttätige Zugsicherungsanlagen mit Wechselstrom unter besonderer Berücksichtigung der Anlagen der Hamburger Hochbahn), C. Wolff. *Zeit. des Vereines deutscher Ingenieure*, vol. 68, no. 37, Sept. 13, 1924, pp. 970-975, 11 figs. Application of Thullen (American) safety system in which a train automatically indicates a section is clear as soon as it has left it.

**Sleeping Cars.** Sleep Via Traction. *Elec. Traction*, vol. 20, no. 9, Sept. 1924, pp. 413-414, 1 fig. Describes De Luxe sleeping cars for service between Indianapolis and Louisville.

## ELECTRIC WELDING

**Repairing Oil-Tank Bottom.** Electrically Welded Repairs to Oil Storage Tank Bottoms, L. F. Champion. *Min. & Metallurgy*, vol. 5, no. 214, Oct. 1924, pp. 493-494, 1 fig. Description of work in placing welded bottom in 55,000-bbl. tank of Pac. Oil Co.

## ELECTRIC WELDING, ARC

**Heavy Plate.** Arc Welding Heavy Plate, H. P. Eagan. *Welding Engr.*, vol. 9, no. 9, Sept. 1924, pp. 20-21, 3 figs. Arc welding of heavy plate can be successfully done if correct methods are used; three fundamental principles must be followed.

**Locomotive Repairs.** Electric Arc Welding on the Steam Locomotive, W. W. M. Brady. *Gen. Elec. Rev.*, vol. 27, no. 10, Oct. 1924, pp. 687-697, 26 figs. Superior economy and utility of electric arc welding for quickly making reliable repairs and building up worn surfaces.

**Ship Repair and Construction.** Metal Arc Welded Ships, J. W. Owens. *Welding Engr.*, vol. 9, no. 8, Aug. 1924, pp. 19-22 and 24, 6 figs. Residual stress and other fundamentals in design of metal arc-welded ships and welded structures in general.

**Theory.** Theoretical Considerations on Electric Arc Welding (Considérations théoriques sur la soudure électrique à l'arc), M. Lebrun. *Revue de Métallurgie*, vol. 21, no. 8, Aug. 1924, pp. 484-495, 20 figs. Electric characteristics of a welding arc; effect of kind of current and of covering of electrodes; characteristics of electrodes.

## ELECTRIC WELDING, RESISTANCE

**Spot-Welding Machine.** A Krupp Spot Welding Machine (Eine Kruppsche Punktschweissmaschine), J. Pretzschner. *Kruppsche Monatshefte*, vol. 5, July 1924, pp. 122-126, 7 figs. Details of an electric spot-welding machine using Krupp non-rusting steel, and its many applications.

## ELEVATORS

**Drum-Type Machine.** Operation of Electric Elevator Machines—Drum-Type Equipment, F. A. Annett. *Power*, vol. 60, no. 16, Oct. 14, 1924, pp. 609-612, 5 figs. Describes different classes of elevator machines in use and operation of drum-type machine both for overhead and basement installations.

**Swinging-Cradle Type.** Swing- or Finger-Tray Elevator for Handling Fresh Fruit in Crates, Barrels and Cases, G. F. Zimmer. *Indus. Mgt. (Lond.)*, vol. 11, no. 16, Oct. 1924, pp. 445-447, 3 figs. Describes swinging-cradle type of elevator, great size of which is necessary in order to accommodate largest crates and barrels in which fruit is imported; consists of five parts, viz., main steel structure, two endless chains, cradles, feeding-on and delivering-off gear.

## EMPLOYMENT MANAGEMENT

**Employee's Industrial Past.** The Employee's Past, D. A. Laird. *Indus. Mgt. (N. Y.)*, vol. 68, no. 3, Sept. 1924, pp. 152-160, 11 figs. Value of dispassionate records in employment work.

## EVAPORATION

**Air-Current.** The Effect of a Current of Air on the Rate of Evaporation of Water Below the Boiling Point, G. W. Himus and J. W. Hinchley. *Chem. & Industry*, vol. 43, no. 34, Aug. 22, 1924, pp. 840-845, 11 figs. Deals with certain aspects of evaporation of water in currents of air and treats of evaporation from water surfaces at different temperatures under varying conditions of draft.

## EVAPORATORS

**Vacuum.** Calculation of Heating Surface for Vacuum Evaporators (Calcul des surfaces de chauffe dans appareils d'évaporation sous le vide), Dessin. *Arts et Métiers*, vol. 77, no. 47, Aug. 1924, pp. 287-302, 8 figs. Principle of multiple-effect vacuum evaporators; determination of heating surface and coefficient of evaporation; temperature drop; apparatus of single, triple, and quadruple effect.

## F

## FACTORIES

**Equipment Maintenance.** Maintenance of Plant Equipment, W. L. Hitt. *Mgt. & Administration*, vol. 8, no. 1, July 1924, pp. 43-45, 1 fig. Maintenance of plant equipment at East Pittsburgh plant of Westinghouse Elec. & Mfg. Co. Describes organization of maintenance department, doors and windows, cleaning electric-light globes and reflectors, upkeep of fire equipment, and care of belting.

\* Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1924-25 Volume

**FIRE PROTECTION**

**Alarm System.** The "Gravity" Fire Alarm System. Colliery Guardian, vol. 128, no. 3226, Sept. 26, 1924, p. 811, 3 figs. Describes automatic fire-alarm system, dependent solely upon gravity for its motive power.

**FIREBRICK**

**Porosity.** Determination of Porosity of Firebrick (Porositätsbestimmungen an feuerfesten Steinen). E. Steinhoff and M. Mell. Berichte der Fachauschüsse des Vereins deutscher Eisenhüttenleute (Werkstoffauschuss), no. 44, Apr. 4, 1924, 6 pp., 3 figs. Examines six processes. Advantages of mercury displacement process. Describes new apparatus for its application.

**FITS**

**British Standards.** German Locomotive Works Uses British Limits and Fits (Maschinen einer deutschen Lokomotivfabrik zur Anwendung der englischen Passungsnormen). T. Damm. Werkstattstechnik, vol. 18, no. 18, Sept. 15, 1924, pp. 481-484, 6 figs. Details of limits and fits of British Eng. Standards Assn. and interchangeable parts adopted by Hanover Machine Works.

**FLIGHT**

**Fuel Economy in Flight.** Fuel Economy in Flight, H. T. Tizard. Roy. Aeronautical Soc.—Jl., vol. 28, no. 166, Oct. 1924, pp. 604-624, 7 figs. Author discusses following questions into which he divides problem: (1) What are principles governing most economical use of airplane in flight, having regard to weather conditions; (2) What are principles underlying design of airplanes to secure maximum efficiency of operation.

**FLOW OF GASES**

**Pipes.** Flow of Gas or Air in Pipes, Franklin H. Smith. Blast Furnace & Steel Plant, vol. 12, no. 10, Oct. 1924, pp. 448-449, and 451. By using formulas given, both high- and low-pressure flows may be estimated.

**FLOW OF STEAM**

**Supersaturation Losses.** Losses Due to Supersaturation in the Efflux of Steam (Su le perdite per soprasaturazione nell'efflusso del vapore d'acqua). E. Foa. Industria, vol. 38, no. 9, May 15, 1924, pp. 245-250, 2 figs. Develops formulas for calculating losses and velocity from degree of undercooling of condensation, and variation of undercooling in successive expansion.

**FLOW OF WATER**

**Closed Conduits.** Hydraulic Efficiency Tests on 43,000-h.p. Unit by the Gibson Method and the Allen Method, W. R. Way. Eng. Jl., vol. 7, no. 10, Oct. 1924, pp. 625-633, 9 figs. Tests carried on under operating conditions; Gibson method for measuring flow of water in closed conduits; test by salt-velocity method for measurement in large conduits, developed by Prof. Chas. M. Allen.

**FLYING BOATS**

**Rohrbach Ro II.** The Rohrbach Ro II Twin-Engine Flying Boat. Aviation, vol. 17, no. 14, Oct. 6, 1924, pp. 1084-1085, 2 figs. Describes flying boat built to designs of Paul Rohrbach by Metal Aeroplan A. S. of Copenhagen, Denmark. Span 95 ft. 8 in., overall length 54 ft. 6 in., weight empty 8360 lb., and normal weight loaded 13,750 lb.

**FORGINGS**

**Steel, Brittleness of.** Brittleness of Steel Due to Tempering After Being Forged Cold (Om anlöpningsprodhet). G. Wazau. Jernkontorets Annaler, no. 7, 1924, pp. 343-360, 19 figs. Examples where steel parts, which have been drawn after having been worked in cold condition, have become very brittle, and investigation of such breaks by means of etching of sections according to Fry's method.

**Steel, Testing of.** Proposed Definitions and Specifications for Tests of Iron and Steel Forgings and Steel Castings (Förslag till begreppsbestämningar (nomenklatur) vid provning av metaller draghållfasthet m. m.). J. O. Roos. Jernkontorets Annaler, no. 8, 1924, pp. 404-450, 2 figs. Communication from Government Testing Inst. Gives nomenclature referring to tensile-strength measurements of steel and iron in Swedish, English, French and German, also test specifications of several countries.

**FOUNDRIES**

**American Decrease.** Decrease in Foundries Noted. Foundry, vol. 52, no. 20, Oct. 15, 1924, pp. 801-805, 7 figs. Statistics indicate less number of castings plants in operation in 1924 than in 1922.

**European and American.** Comparison of European and American Foundries Compared, H. M. Lane. Foundry Trade Jl., vol. 30, no. 422, Sept. 18, 1924, p. 245. Extract from paper presented to South Metal Trades Assn.

**German Practice.** German Foundry Practice, Werner Foundry Trade Jl., vol. 30, no. 421, Sept. 11, 1924, pp. 229-230 and (discussion) 230 and 232. Recent advances. Details of tests. Abstracts of address at Int. Foundry Trades Exhibition.

**Gray-Iron.** Tunnels Facilitate Handling of Material in New Foundry, P. Dwyer. Iron Trade Rev., vol. 75, no. 14, Oct. 2, 1924, pp. 879-883 and 897, 11 figs. Also Foundry, vol. 52, no. 20, Oct. 15, 1924, pp. 806-812, 10 figs. Description of new foundry of Studebaker Corp., at South Bend, Ind., and notes on methods employed. Designed and equipped for a potential melting capacity of 400 tons of gray-iron castings per day.

**FREIGHT HANDLING**

**Monorail Overhead Carrying System.** Relieving Railway Terminal Freight Congestion, J. L.

Miller. Can. Machy., vol. 32, no. 12, Sept. 18, 1924, pp. 34-36, 2 figs. In author's opinion, overhead carrying system of monorail type offers greatest degree of flexibility and economy in handling goods in freight sheds.

**FUEL ECONOMY**

**High Temperatures and.** Fuel Economy and the Measurement of High Temperatures, R. Hadfield. Iron & Coal Trades Rev., vol. 109, no. 2946, Aug. 15, 1924, pp. 273-274. Discusses steam boilers, forge furnaces and furnaces for heat treatment of steel, temperature measurement in furnace, flame temperature, and furnace efficiency, regenerators and recuperators, heat transmission and heat balance in furnaces and melting furnaces. Abstract of paper read before First World Power Conference.

**Railway Service.** Heat Economy and Railway Service, Landsberg. Eng. Progress, vol. 5, no. 9, Sept. 1924, pp. 170-172. Points out that German state railways consume 9 to 12 per cent of total German coal production; economic efficiency of locomotives; influence of load; other fuel consumers.

**FUELS**

**Coal.** See COAL; PULVERIZED COAL.

**Lignite.** See LIGNITE.

**Oil.** See OIL FUEL.

**Peat.** See PEAT.

**Producer Gas.** See PRODUCER GAS.

**Pulverized Coal.** See PULVERIZED COAL.

**Recovery from Ashes.** Recovering the Unburned Fuel from Ashes, S. H. Bunnell. Combustion, vol. 11, no. 4, Oct. 1924, pp. 287-288, 2 figs. Describes three German inventions in practical use for recovering usable coke from common ashes, namely, magnetic ash separator produced by Krupp Works, Weber system, and Schilde system.

**Technology.** Notes on Recent Developments in Fuel Technology, R. Wigginton. Fuel, vol. 3, no. 10, Oct. 1924, pp. 343-345. Utilization of coal in America; steam accumulator; pulverized fuel; cracking of oils; purification of coal gas; atomic energy as source of power; coking power of coal.

**FURNACES, ANNEALING**

**Fisher.** New Annealing Equipment for Strip Steel. Iron Age, vol. 114, no. 15, Oct. 9, 1924, pp. 907-909, 5 figs. Notes on new annealing equipment of Worcester Pressed Steel Co., Worcester, Mass. Electric mule on rack for charging; ample combustion space in furnaces; arrangement for cooling boxes and quick charging of furnaces.

**G****GARAGES**

**Construction.** New Large-Scale Garage (Eine neue Massengarage), H. Luckhardt. Motorwagen, vol. 27, no. 23, Aug. 20, 1924, pp. 411-413, 6 figs. Details of patented arrangement in which stalls are placed at angle of 45 deg. instead of 90 deg., giving greater accommodation.

**Problem of Garage Construction.** (Das Problem des Kraftwagenhauses). P. Pistor. Wirtschaftsmotor, vol. 6, no. 7-8, Aug. 25, 1924, pp. 1-6, 6 figs. Details of Pistor system of construction in which garage is a multiple-story roundhouse with drive-in car stall and drive-out in a continuous curve; no elevators.

**GAS PRODUCERS**

**Slagging.** The Slagging Producer in Steel Works, K. Huessener. Iron & Steel Engr., vol. 1, no. 9, Sept. 1924, pp. 457-464, 3 figs. History, description, uses and advantages.

**GASOLINE**

**Natural-Gas.** Application of Refrigeration Processes to the Production of Natural Gasoline, E. F. Burton. Refrig. Eng., vol. 11, no. 3, Sept. 1924, pp. 83-90, 8 figs. Notes based upon experience and observation of author and information obtained through publications of Bur. of Mines and other publications; author believes that more attention should be given to utilization of waste residue gas for production of low temperatures through expander, and that further investigation be made of possibilities of using more volatile parts of plant product, especially propane, for cooling gases.

**GASOLINE ENGINES**

**Water Condensation from Exhaust Gas.** Heat Transfer in the Condensation of Water from Engine Exhaust Gas, Rob. F. Kohr and L. Butler. Indus. & Eng. Chem., vol. 16, no. 9, Sept. 1924, pp. 885-889, 8 figs. Describes apparatus devised by Bur. of Standards for condensing large part of water contained in exhaust, thus making it possible continually to compensate during flight of gas-filled airships for weight of fuel burned.

**GEAR CUTTING**

**Processes.** Bases and Recent Progress in Gear Cutting (Grundlagen und neuere Fortschritte der Zahnräderzeugung), K. Kutzbach. Zeit. des Vereins deutscher Ingenieure, vol. 68, nos. 36 and 41, Sept. 6 and Oct. 11, 1924, pp. 913-920 and 1075-1081, 74 figs. Discusses various kinds of gears, teeth and gear-cutting apparatus; grinding processes.

**Tooth-Section Generator.** An Improved Photo-mechanical Tooth-section Generator, H. E. Merritt Machy. (Lond.), vol. 24, no. 625, Sept. 18, 1924, pp. 777-779, 6 figs. Describes improved form of apparatus for obtaining a large-scale profile of any generated

gear-tooth section by a photographic process. Gives a tooth section in white on a black ground.

**Truck Drive.** Machining Gears for an Electric-Truck Driving Mechanism, F. H. Colvin. Am. Mach., vol. 61, no. 14, Oct. 2, 1924, pp. 535-537, 11 figs. Describes machining of gears for drive of trucks built by Commercial Truck Co., Phila., Pa. Special tools for undercutting; fixtures for hardening bore of gear; overcoming distortion in large internal gears.

**GEARS**

**Design.** Gear Designing Tables, L. S. Burbank Machy. (N. Y.), vol. 31, no. 2, Oct. 1924, pp. 141-143. Gives four tables which provide a simple and direct method of determining relation between pitch and power-transmitting capacity of either spur gearing or bevel gearing.

**Double Helical.** Proper Profile of Miller for Double Helical Spur Gear (Das richtige Profil des Fingerfräasers für Kammwalzen), B. Szöke. Werkstattstechnik, vol. 18, no. 16, Aug. 15, 1924, pp. 417-421, 18 figs. Discusses calculation of theoretically correct construction, and approximations deduced from it, correcting a general error in profile.

**Helical, Calculation of.** Helical Gear Problems Simplified, O. M. Burkhardt. Am. Mach., vol. 61, no. 14, Oct. 2, 1924, pp. 529-530. Method of calculation which will render graphical solutions far more accurate than before.

**Pinions, Dynamic Stresses in Rotating.** Mathematical Theory of Dynamic Stresses in Rotating Gear Pinions, P. Heymans. Mech. Eng., vol. 46, no. 10, Oct. 1924, pp. 583-587 and (discussion) 587-589, 3 figs. Theoretical study of dynamic stresses in rotating gear pinions developed in course of investigation by photoelastic method of stresses in gear pinions undertaken by Research Laboratories and Ry. Motor Eng. Dept. of Gen. Elec. Co., Schenectady, N. Y., conducted at Mass. Inst. Technology. Shows that in all disturbed elastic media a force applied cyclically along any closed contour results in oscillatory deformations and corresponding dynamic stresses. Likewise in rotating gear pinions a torque acting on perfectly formed and spaced gear teeth sets up similar dynamic stresses.

**Quiet, Production of.** Quiet Gears and Their Production. Soc. Automotive Engrs.—Jl., vol. 14, no. 5, May 1924, pp. 545-557, 14 figs. Symposium regarding advantages of the various production methods that have been adopted by several of the leading automobile companies for reducing noise of gears and results that have been obtained by use of these methods, containing following papers: Some Sidelines on the Gear Problem, W. R. Griswold; Need of Grinding Carburized and Hardened Gears, O. H. Schafer; Oil-Treated Steel and Ground Gears, L. A. Danse; Polishing and Burnishing of Gear Teeth, R. E. Linn; Checking Tooth-Forms by the Comparator, W. G. Hildorf; and Importance of Accuracy of Tooth-Form, A. H. Frauenthal.

**Spur, Strength of.** The Strength of Spur Gears. Automobile Engr., vol. 14, no. 193, Sept. 1924, pp. 262-264, 6 figs. Gives method of accurately estimating stresses involved.

**Teeth, Shape of.** Effect of Shape of Tooth on the Quality of the Gear (Der Einfluss der Zahnform auf die Güte der Verzahnung), G. Olah. Werkstattstechnik, vol. 18, nos. 16 and 17, Aug. 15, and Sept. 1, 1924, pp. 424-427, and 456-461, 25 figs. Proposed standardization of curves of teeth; conditions gearings must fulfil; comparison of different kinds of involute teeth in order to find most favorable shape.

**GRINDING**

**Regrinding Practice.** Regrinding Methods Outlined, B. K. Price. Abrasive Industry, vol. 5, no. 9, Sept. 1924, pp. 226-230, 7 figs. Practice at plant of Houpt Machine Co., Long Island City, N. Y., in regrinding cylinders.

**Textile Castings.** Grinding Braiding Machine Parts Rapidly and Accurately, H. R. Simonds. Abrasive Industry, vol. 5, no. 9, Sept. 1924, pp. 221-224, 7 figs. Account of abrasive operations pursued in finishing textile castings.

**GRINDING MACHINES**

**Circular.** Logarithmic Diagram for Determining Machining Time for Circular Grinding Machines (Logarithmisches Diagramm zur Maschinenzeitbestimmung von Rundschleifmaschinen), G. Ganz. Werkstattstechnik, vol. 18, no. 17, Sept. 1, 1924, pp. 461-463, 5 figs. Calculation of time for piece work by means of a diagram; reversing of machines and its effect on time of grinding, etc.

**Surface.** Feed Arrangement in Disk Surface Grinding Machines (Die Werkstückbewegung bei Diskus-Flächenschleifmaschinen), C. Krug. Werkstattstechnik, vol. 18, no. 17, Sept. 1, 1924, pp. 452-455, 7 figs. Discusses uniform and irregular movement of work table; arrangement of inclined planes with oil feed; hydraulic drive with automatic control.

**H****HAMMERS**

**Pneumatic.** Economic Study of Forging Practice with Special Regard to Pneumatic Hammers (Wirtschaftlichkeitsstudie des Schmiedebetriebs unter besonderer Berücksichtigung der Schmiedelufthämmer), M. Cyron. Glaser's Annalen, vol. 94, nos. 1, 6, 12 and vol. 95, no. 4, Jan. 1, Mar. 15, June 15 and Aug. 15, 1924, pp. 3-11, 65-72, 154-162 and 56-64, 49 figs. Deals with phenomena in connection with iron and steel forging; behavior of steam and pneumatic hammers from economic viewpoint; practical investi-

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1924-25 Volume

gations on most important types of pneumatic hammers: two-cylinder hammers, drop hammer for testing, and results of tests of various types of hammers.

#### HARDNESS

**Ball Hardness Testing.** The Ball Indentation Hardness Test, S. L. Hoyt. Am. Soc. Steel Treating—Trans., vol. 6, no. 3, Sept. 1924, pp. 396-420, 4 figs. Refers to Eugen Meyer's investigation of Brinell's ball indentation hardness test first published in 1908 in which he showed that hardness of metal cannot truly be represented by one figure, or, in other words, resistance to penetration varies with degree of penetration of ball; author of present paper discusses Meyer's analysis to throw light on our present methods of hardness testing.

#### HEAT TRANSMISSION

**Pipes.** Heat Transfer in Small Pipes, F. C. Blake and W. A. Peters, Jr. Indus. & Eng. Chem., vol. 16, no. 8, Aug. 1924, pp. 845-846, 2 figs. Method developed by authors of measuring water temperature by drawing off portion.

**Research.** Research in Heat Transmission, E. Buckingham. Refrig. Eng., vol. 11, no. 3, Sept. 1924, pp. 91-94. Conduction, relation and convection; conduct of research in heat transmission; employment of dimensional analysis; variables involved in complete mathematical theory of heat transmission; suggestions in regard to planning of research programs.

#### HEATING, ELECTRIC

**Industrial.** Electric Heating with Special Reference to Central Stations, E. D. Sibley. Iron & Steel Eng., vol. 1, no. 9, Sept. 1924, pp. 513-515, 1 fig. Shows present development of electric heating.

#### HEATING, HOT WATER

**Central Stations.** Use of Mechanical Devices in Central Hot-Water and Steam Heating Plants (Emploi d'organes mécaniques dans les installations de chauffage central par l'eau et la vapeur), A. Nési. Chaleur & Industrie, vol. 5, no. 52, Aug. 1924, pp. 389-396, 9 figs. Discusses use of centrifugal pumps, vacuum pumps, fans, and their operation in connection with heating plants; reduction of fuel consumption.

#### HYDRAULIC TURBINES

**Discharge Losses.** Energy Losses of Hydraulic Turbines at Discharge (Energie perdue par les organes de décharge des turbines hydrauliques), J. Calame. Bulletin Technique de la Suisse Romande, vol. 50, nos. 16, 18 and 19, Aug. 2, 30 and Sept. 13, pp. 197-201, 228-232, and 237-241, 15 figs. Discusses calculation of water losses due to frequent and extreme variation of load; compensating errors of evaluation of water losses; gives numerical calculation for various plants.

**High-Speed.** High-Speed Hydraulic Turbines (Turbine hydraulique extra-rapide), F. Prasil. Revue Générale de l'Electricité, vol. 16, nos. 7 and 8, Aug. 16 and 23, 1924, pp. 274-280, and 311-321, 35 figs. Discusses tendencies in turbine construction and describes improvements made by Th. Bell & Co., Switzerland, in their type of high-speed turbine; details of tests carried out at Bell shops.

**Pelton.** Units of Pelton Wheels Under Varying Conditions (Die Einheitsgrößen der Becherturbinen unter wechselnden Bedingungen), G. Karras. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 35, Aug. 30, 1924, pp. 902-904, 9 figs. Discusses peripheral velocity, friction, hydraulic efficiency, torque, and specific r.p.m., and makes calculations.

**Properties.** Properties of Hydraulic Turbines with Constant Number of Revolutions and Very Variable Head (Die Eigenschaften der Wasserturbinen bei gleichbleibender Drehzahl und stark veränderlichem Gefälle), R. Duba. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 34, Aug. 23, 1924, pp. 872-876, 10 figs. Shows, on basis of characteristic braking curves, how these curves may be used for determining properties and efficiency of turbine of constant revolution and variable head; gives application of results of three braking tests.

#### HYDROELECTRIC DEVELOPMENTS

**Big Creek, California.** Progress on the Big Creek Hydro-Electric Project, D. H. Redinger. Compressed Air Mag., vol. 28, no. 12, Dec. 1923, vol. 29, nos. 1, 3, 4, 9 and 10, Jan., Mar., Apr., Sept. and Oct. 1924, pp. 720-724, 747-750, 803-808, 837-842, 989-992 and 1013-1017, 76 figs. Outline of part of undertaking being pushed forward by Southern Cal. Edison Co.; details of work in connection with power houses nos. 1, 2, 3 and 8, Shaver Lake tunnel, dams, etc.

**Ontario.** Power Generation on the Kaministiquia River. Power House, vol. 17, no. 18, Sept. 20, 1924, pp. 19-20, 3 figs. Development at Kakabeka Falls, Ont., operating under 180-ft. head; main source of electricity supply for cities of Port Arthur and Fort William.

#### HYDROELECTRIC PLANTS

**Design.** Regulating Guaranties for Hydraulic Plants (Regulierungsgarantien für Wasserkraftanlagen), K. Lubowsky. Elektrotechnische Zeit., vol. 45, no. 39, Sept. 25, 1924, p. 1025. Discusses difficulties in design of plants to reconcile demand for reduction of moments of gyration (reduction of generator mass), with keeping low variation in voltage connected with load fluctuations.

**Ice Troubles.** Measures Taken in Sweden Against Ice Troubles at Water Power Plants, A. F. Samsöe. Engineering, vol. 138, no. 3065, Sept. 26, 1924, p. 463. Paper, abridged, contributed to Sec. B of World Power Conference.

**Protective Rack.** Construction and Upkeep of Racks for the Protection of Hydraulic Turbines (La construction et l'entretien des grilles pour la protection des turbines hydrauliques). Génie Civil, vol. 85, no. 11, Sept. 13, 1924, pp. 225-230, 5 figs. Details of various types of racks, and mechanical racks for cleaning them, as installed at Wynau and Bezau, Switzerland, and Chevre.

**Spain.** High-Voltage Power Supply in Spain. Elec. Rev., vol. 95, no. 2438, Aug. 15, 1924, pp. 253-255, 8 figs. Gives notes on Riegos y Fuerza del Ebro undertaking; describes equipment of various plants.

**Whitingham, Vt.** The Davis Bridge Power Plant Development of the New England Power Company, E. B. Collins and H. R. Wilson. Gen. Elec. Rev., vol. 27, no. 10, Oct. 1924, pp. 665-672, 11 figs. Located at Whitingham, Vt., and consists of two (ultimately three) 20,000-hp. hydroelectric units. Describes diversion tunnel and spillway, intake structure, pressure tunnel, turbines and generators, low-tension switching equipment, high-voltage equipment, transformers, etc.; can transmit at 66,000 and 110,000 volts simultaneously.

## I

#### ICE PLANTS

**Developments.** Developments in Ice-Making Plants, H. P. Hill. Power Plant Eng., vol. 28, no. 19, Oct. 1, 1924, pp. 1015-1016. Outline of present practice and probable development as presented to N.A.S.E. convention.

#### IGNITION

**Gas and Oil Engines.** Process of Ignition in Gas and Oil Engines (Der Zündungsvorgang in Gas- und Oelmotoren), R. Schöttler. Wärme, vol. 47, no. 33, Aug. 15, 1924, pp. 381-384, 14 figs. Discusses phenomenon of ignition and its control on basis of experimental work of various scientists.

#### INDUSTRIAL MANAGEMENT

**Budgeting.** Budgeting Advertising Expense, J. L. Palmer. Mgt. & Administration, vol. 8, no. 4, Oct. 1924, pp. 394-395, 3 figs. Develops, by assuming a typical case, a possible method of planning and controlling advertising expenditures.

**Cost Control.** Quality Manufacturing at Predetermined Costs, E. F. Roberts. Factory, vol. 33, no. 4, Oct. 1924, pp. 495-497, 544, 548, 552, 556, 560, 564 and 568, 3 figs. Describes how Packard Motor Car Co. established time standards and how workmen are paid so that variations in time and in cost of labor are kept at minimum; advantages of payment method which is integral part of cost-control system.

**Graphic Control.** Graphic Control in a Small Hosiery Mill, W. E. Haseltine. Mgt. & Administration, vol. 8, no. 2, Aug. 1924, pp. 161-166, 20 figs. How charts are employed in a small hosiery mill to give control of all factors entering into operation, to show just where enterprise is at a given time and whither it is headed.

**Maintenance Division Organization.** Organization of Maintenance Division, F. A. Waldron. Mgt. & Administration, vol. 8, no. 1, July 1924, pp. 39-42, 4 figs. Planning its duties for economy of operation.

**Maintenance Work.** Managing Maintenance Work with Economy, T. Clark. Mgt. & Administration, vol. 8, nos. 2 and 3, Aug. and Sept., 1924, pp. 191-196 and 299-302, 11 figs. Describes application to a construction and maintenance department of a manufacturing plant, of a complete system of planning and routing work, and payment of bonuses based on times determined by accurate time study. Methods of determining and using standard times for repair work.

**Prague Conference.** Scientific Management at Prague Conference, Mech. Eng., vol. 46, no. 10, Oct. 1924, pp. 624-625. Brief abstracts of papers by American authors presented at First International Management Congress held at Prague, July 20-24, 1924, treating of management problems including industrial relations, budgetary control and education.

**Production-Costs Reduction.** The Reduction of Production Costs, H. Varley. Indus. Management (Lond.), vol. 11, nos. 2 and 16, Jan. 24, and Oct. 1924, pp. 41 and 437-440. Jan. 24: General observations. Oct.: Cost of machine idleness; justification for new machine; saving of handling time; relative cost of operation; replacing machinery every year.

**Pulp and Paper Industry.** Paper and Pulp Manufacturing, S. E. Thompson and W. E. Freeland. Mgt. & Administration, vol. 8, no. 4, Oct. 1924, pp. 397-402, 6 figs. Job standardization, wage incentives and bonus plans of general application.

**Shoe Factories.** Management Factors in the Shoe Industry, S. E. Thompson and W. E. Freeland. Mgt. & Administration, vol. 8, no. 1, July 1924, pp. 75-81, 8 figs. Methods which solve marketing and manufacturing problems.

**Time Study.** See TIME STUDY.

**Tool System.** A Well-Planned Tool System. Eng. Production, vol. 7, nos. 143 and 144, Aug. and Sept. 1924, pp. 229-232 and 268-271, 26 figs. Details of comprehensive scheme; discusses tool department, stores, depots, receipt, identification and classification, shortages, issue, replacement, etc.

**Waste Elimination.** See WASTE ELIMINATION.

#### INDUSTRIAL RELATIONS

**Employees-Management Cooperation.** Cooperation in Industry, S. Rea. Min. Congress J., vol. 10, no. 9, Sept. 1924, pp. 421-423. Enlightened industrial management recognizes need for direct

negotiation and mutual understanding. Principles underlying Pennsylvania Railroad system plan of employee-management relationship.

**Improvement.** Industrial Relations, Rob. E. Tally. Min. & Metallurgy, vol. 5, no. 214, Oct. 1924, pp. 478-480. Industry created by capital and labor; duties of employer; duties of organization heads and bosses; other factors of influence between employer and employee.

#### INSULATORS, HEAT

**Heat Losses through.** Heat Losses through Insulating Materials, R. H. Heilman. Mech. Eng., vol. 46, no. 10, Oct. 1924, pp. 593-602 and (discussion) 602-606, 18 figs. A rational method for their determination by means of conductivity coefficients of materials. Results of 94 tests on commercial pipe coverings and insulating cements conducted at Mellon Inst. Indus. Research of Univ. of Pittsburgh. Describes experimental methods. Discusses from a physical and mathematical standpoint exact character of thermal conductivity and its relation to temperature gradients and differences.

#### INTERNAL-COMBUSTION ENGINES

**Catalysis Applied to.** Catalysis and the Internal Combustion Engine, E. Sokal. Chem. & Industry, vol. 43, no. 35, Aug. 29, 1924, pp. 2837-2847. Points out that so far catalytic coating called "Katalite" has been used in engines without any change in engine; it is considered possible and even probable that with certain changes, much greater effects could be produced which might have bearing on utilization of low-grade fuels, running of engines at constant-compression pressure, and various other questions of design and operation.

**Detonation.** Relative Effects of Some Nitrogen Compounds upon Detonation in Engines, T. A. Boyd. Indus. & Eng. Chem., vol. 16, no. 9, Sept. 1924, pp. 893-895, 3 figs. Data show that, in general, nitrogen compounds which are most effective for suppressing detonations are the primary and secondary amines.

**Exhaust-Gas Analysis.** Composition of Exhaust Gas of Explosion Motors (Die Abgaszusammensetzung von Explosionsmotoren), M. Moeller and M. U. Rühlmann. Motorwagen, vol. 27, no. 23, Aug. 20, 1924, pp. 400-403, 7 figs. Describes Siemens & Halske CO + H<sub>2</sub> meter and shows that content in unconsumed gases is dependent on load, compression, nozzle position of carburetor, time of ignition and lubrication of engine.

[See also AIRPLANE ENGINES; AUTOMOBILE ENGINES; DIESEL ENGINES; GASOLINE ENGINES; IGNITION; OIL ENGINES; SEMI-DIESEL ENGINES.]

#### IRON

**Corrosion.** The Influence of Emulsoids Upon the Rate of Solution of Iron, J. N. Friend, D. W. Hammond and G. W. Trobridge. Am. Electrochem. Soc., Advance paper No. 14, for Mtg. Oct. 2-4, 1924, pp. 197-207, 6 figs. A possible method is suggested, of treating natural and other waters, to render them less corrosive towards ferrous and non-ferrous metals in practice. Results of experiments on corrosion of iron in lead-acetate solution and in copper-sulphate solution; rate of solution of iron in dilute sulphuric acid.

**Molten, Specific Gravity of.** Method of Determination of the Specific Gravity of Molten Iron, and of Other Metals of High Melting Temperature. (Metod för bestämning av spec. vikt hos flytande järn och andra svårsmälta metaller), C. Benedicks, D. W. Berlin and G. Phragmén. Jernkontorets Annaler, vol. 108, no. 6, 1924, pp. 308-33, 9 figs. Molten metal is contained in U-shaped tube of very high melting point and difference of levels in two legs of tube is measured by electrical methods; said difference is produced by pressures of inert gas and difference of said pressures is measured by means of mercury column. Report from Swedish Metallographical Inst.

#### IRON AND STEEL

**History.** Notes on the History of Iron and Steel, G. E. Trackray. Am. Soc. Steel Treating—Trans., vol. 6, no. 4, Oct. 1924, pp. 443-490. Compilation of some of salient points of history; notes were selected from various records, writings, researches, investigations by archaeologists, and others.

**Impact Testing.** Periods of Recovery, Temperature, Grain Size, and Force Lines in Repeated-Impact Tests (Erholungspausen, Temperatur, Korngrösse und Kraitwirkungslinien bei der Dauerschlagprobe), E. H. Schulz and W. Prügel. Berichte der Fach-ausschüsse des Vereines deutscher Eisenhüttenleute (Werkstoffausschuss), no. 40, Apr. 4, 1924, 7 pp., 12 figs. Shows that periods of recovery of one or more days result in decided increase of final number of blows. Mild steel and wrought iron show a maximum at 175 deg.

**Pickling, Bibliography on.** Pickling of Iron and Steel, A Bibliography, V. S. Polansky. Blast Furnace & Steel Plant, vol. 12, nos. 7, 8 and 9, July, Aug. and Sept., 1924, pp. 326-328, 368-371, and 431-434. Contains articles on machines and equipment, pickling in acid solutions, pickling in salt solutions, electrolytic pickling, inhibitors and accelerators, effect of pickling, recovery of spent liquors, etc. See also Forging—Stamping—Heat Treating, vol. 10, nos. 7, 8 and 9, July, Aug. and Sept. 1924, pp. 267-269, 298-301 and 350-354.

#### IRON, PIG

**Grading and Mixing.** Grading and Mixing of Pig Irons. Metal Industry (Lond.), vol. 25, nos. 7 and 8, Aug. 15 and 22, 1924, pp. 155-156 and 179-180. Discusses American method of grading by analysis; noteworthy changes in American opinion as to,

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1924-25 Volume

complete chemical grading; difficulties of complete chemical limits; influence of melting conditions difficult of complete explanation on chemical basis; accuracy of analyses, scope of analytical control, scope of control by fracture, graphite condition and thermal influences, and chilling.

## L

### LABOR

**Eight-Hour Day.** Eight-Hour-Day Application in Continuous Running (Applications simples de la journée de huit heures dans les entreprises à service continu). J. Schwarz. Schweizerische Bauzeitung, vol. 84, no. 10, Sept. 6, 1924, pp. 115-117, 8 figs. Mathematical treatment of on-time and off-time for continuous operations. (In French.)

**Eight-Hour Shifts.** Economies of Eight-Hour Shifts in Ironworks (Wirtschaftliche Auswirkung der Achtstundenschieft in Hüttenwerken). E. Hofmann. Stahl u. Eisen, vol. 44, no. 37, Sept. 11, 1924, pp. 1101-1105, 1 fig. Discusses decrease of output per capita, reasons for failure of eight-hour shifts, influence of length of shift on frequency of accidents and of sickness.

**Firemen.** Qualitative Remuneration of Firemen (Ein Weg zur qualitativen Bezahlung der Heizerarbeit). K. Münzre. Wärme, vol. 47, no. 35, Aug. 29, 1924, pp. 406-409, 6 figs. Work of firemen and losses in combustion; determining quality of firemen's work; bonus by means of Duplex-Mono slide rule.

**Two and Three Shifts.** The Working Shift in German Iron and Steel Works. Iron & Coal Trades Rev., vol. 109, no. 2952, Sept. 26, 1924, p. 516. Discusses question of favorable influence on production due to recent introduction of two-shift system (in lieu of previous three-shift system) in German iron and steel works.

### LABORATORIES

**Hydraulic.** The Hydraulic Laboratory of the Instituto Católico de Artes e Industrias (Spain) (Laboratorio hidráulico del I.C.A.I.). J. M. F. de Castro. Anales de la Sociedad de Ingenieros del Instituto Católico de Artes e Industrias, vol. 3, no. 4, 1924, pp. 350-358, 9 figs. Details of mechanical and electrical equipment, and activities of laboratory.

### LATHES

**Bench.** Vidal Precision Bench Lathe. Machy. (Lond.), vol. 24, no. 626, Sept. 25, 1924, pp. 841-843, 6 figs. Describes lathe made by Vidal Eng. Co., Croydon, England; is of 3-in. centers, bed being 33 in. in length; bed is of flat type with sloping edges.

**Turret.** New Turret Lathe has Greater Power and Range of Feed. Automotive Industries, vol. 51, no. 15, Oct. 9, 1924, pp. 652-653, 4 figs. No. 1—A universal hollow hexagon turret lathe of Warner & Swasey Co. is featured by all-steel geared head, increased number and range of feeds and feed control in carriage aprons.

### LEAD ALLOYS

**Lead-Antimony.** Grain Growth in Lead Containing One Per Cent of Antimony. R. S. Dean and W. E. Hudson. Am. Chem. Soc., J., vol. 46, no. 8, Aug. 1924, pp. 1778-1786, 5 figs. Discussion of mechanism of grain growth as indicated by results of investigation of relations of time, temperature and amount of deformation to grain size.

### LIGNITE

**Char.** Ignition Temperature of Some Lignite Char (Entzündungstemperaturen einiger Braunkohlengruden). A. Faber. Braunkohle, vol. 23, no. 22, Aug. 30, 1924, pp. 430-432. Results of experiments to determine temperature of spontaneous combustion of four kinds of char.

### LOCOMOTIVE BOILERS

**Boiler-Sheet Flanging Machine.** Cold Flanging of Locomotive Boiler Sheets. Boiler Maker, vol. 24, no. 8, Aug. 1924, pp. 232-233, 9 figs. Outline of work of pneumatic flanging machine developed to speed up sheet-metal production.

**Repairing Pneumatic Tools for.** Using Compressed-Air Tools in Locomotive-Boiler Repairs (Die Verwendung von Pressluftwerkzeugen in der Eisenbahn-Lokomotivkessel-Reparatur). E. Pallas. Maschinenbau, vol. 3, no. 23, Sept. 11, 1924, pp. 859-863, 9 figs. Describes most recent pneumatic tools and their construction, and application in removing boiler tubes and rivets, repairing tubes, thread cutting, etc.

### LOCOMOTIVES

**Baldwin.** Baldwin Locomotives for the Madras & Southern Mahratta Railway. Ry. Gaz., vol. 41, no. 10, Sept. 5, 1924, p. 314, 2 figs. Describes 4-6-2 and 2-8-2 type locomotives built by Baldwin Locomotive Co. for Madras & Southern Mahratta Ry.; "Pacific" and "Mikado"-type engines are built to large proportions for working heavy express passenger and freight trains on 5-ft. 6-in. gauge.

**Cabs, Temperatures in.** Temperatures in Cabs of Freight Locomotives Passing through Tunnels of the Chesapeake & Ohio Railroad. S. H. Katz and E. G. Meiter. Ry. & Locomotive Eng., vol. 37, no. 9, Sept. 1924, pp. 264-268, 3 figs. Gives results of tests and investigations conducted by Bur. of Mines in tunnels of Chesapeake & Ohio Ry. to improve conditions of temperatures in cabs of freight locomotives.

**Coaling Plants.** Recent Plants for Coaling Locomotives (Einige neuzeitliche Lokomotiv-Bekohlungsanlagen). B. Garlepp. Maschinenbau, vol. 3, no. 24, Sept. 22, 1924, pp. 890-894, 10 figs. Describes cranes, movable bunkers, etc., for stations of a daily

capacity of up to 300-400 tons coal; track arrangement, coal stacks, etc.

**Condensing.** Reciprocating Steam Locomotives With Condensation (Die Kolbendampfmaschinen-Lokomotive mit Kondensation). K. Pfaff. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 30, Sept. 20, 1924, pp. 997-1003, 18 figs. Discusses effect of condensation by means of diagrams and shows that a superheated-steam condensing locomotive does about double the work of a saturated-steam locomotive of same heating surface, i.e., same fuel consumption.

**Cylinders, Machining.** Machining of Locomotive Cylinders and Valve Liners (Bearbeitung von Lokomotivzylindern und Kolbenschieberbüchsen). E. Trebi. Werkstattstechnik, vol. 18, no. 18, Sept. 15, 1924, pp. 489-492, 12 figs. Details of drilling and milling machines of various types.

**Decapod.** Tests of Decapod Show 14 Per Cent Fuel Saving. Ry. Age, vol. 77, no. 15, Oct. 11, 1924, pp. 635-638, 12 figs. Abstract of report in Bul. No. 32 (copyright 1924 by Pa. R. R.), giving results of test plant trials; latest Pennsylvania class II locomotives show expected economy with short cut-off.

**Design.** New Locomotive Construction (Neue Wege im Lokomotivbau). F. Meineke. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 37, Sept. 13, 1924, pp. 937-942, 13 figs. Discusses increased pressure and temperature for more economic working, Krupp turbo-locomotives, Diesel locomotives, 1200-hp. Diesel-electric locomotives of Russian State Railways, operating Diesel locomotives with hydrogen, etc.

**Diesel-Engined.** German Diesel Locomotives. F. Meineke. Eng. Progress, vol. 5, no. 9, Sept. 1924, pp. 167-170, 8 figs. States that several locomotives with Diesel engines are being built in Germany, representing very remarkable solutions of problem; describes different types.

**Electric.** See ELECTRIC LOCOMOTIVES.

**Freight.** I D Superheated Freight Locomotives for Serbia (I D-Heissdampf-Güterzug-Lokomotiven für Serbien). W. Franke. Glasers Annalen, vol. 95, no. 4, Aug. 15, 1924, pp. 51-56, 12 figs. Design, construction and equipment of locomotives built by Linke-Hofmann Works, capable of pulling train of 420 tons at 35 km. per hr.

**Garratt.** The Latest Garratt Locomotive Development. Ry. Gaz., vol. 41, no. 19, Sept. 26, 1924, pp. 408-409, 2 figs. Engine, constructed for Burma railways, is first of its kind to be constructed with eight coupled wheels, and is reputed to be largest locomotive yet constructed for meter gauge.

**Lubrication.** Lubrication and its Effect on Locomotive Service. Ry. Age, vol. 77, no. 13, Sept. 27, 1924, pp. 558-561. Value of specific gravity and viscosity tests questioned; cylinder oil must be atomized; direct feed to cylinders unnecessary; friction and temperature tests with different oils; etc. Paper read at Traveling Engrs. Assn.

**Mallet.** Brotan Boiler Applied to Hungarian Mallet. Ry. Mech. Engr., vol. 98, no. 10, Oct. 1924, pp. 583-586, 4 figs. Describes locomotive designed to handle traffic on Fiume-Moravia section of Budapest-Fiume line on Hungarian State Railways; weight 241,000 lb.; 220 lb. steam pressure.

**Mixed-Traffic.** New Mixed-Traffic Locomotives for the Great Southern & Western Railway, Ireland. Ry. Engr., vol. 45, no. 537, Oct. 1924, pp. 345-348, 8 figs. Tests made with first of series have proved adaptability of class for handling fast passenger trains, although primarily built for freight traffic.

**Mountain Type.** Central of Georgia Ry. Mountain Type Passenger Locomotives. Ry. Rev., vol. 75, no. 13, Sept. 27, 1924, pp. 457-460, 4 figs. New 4-8-2 type passenger locomotive constructed by Am. Locomotive Co. for handling heavy passenger trains; equipped with Nicholson thermic siphons.

**Parts Testing.** Production and Testing in Locomotive Construction (Fabrikations- und Prüfverfahren im Lokomotivbau). Werkstattstechnik, vol. 18, no. 18, Sept. 15, 1924, pp. 492-495, 11 figs. Details of methods followed by Linke-Hofmann works in Breslau for finishing and testing crossheads and guides.

**Pennsylvania Ry.** Development on. Motive Power Development, Pennsylvania Railroad System. P. T. Warner. Baldwin Locomotives, vol. 2, no. 4 and vol. 3, nos. 1 and 2, Apr., July and Oct. 1924, pp. 3-26, 33-57 and 3-29, 162 figs. Apr.: Traces development of power up to year 1868, when standard locomotive designs were adopted. July: Covers period 1868 to 1899, in which year Pennsylvania adopted Atlantic type for fast passenger service. Oct.: Discusses development from 1899 to present time.

**Santa Fe.** Santa Fe Locomotives, Canadian National Railway. Can. Ry. & Mar. World, no. 320, Oct. 1924, pp. 487-489, 4 figs. Built for heavy transfer service at Toronto, to operate between Mimico and Danforth; designated as T-t-a class; total weight, without tender, 409,000 lb.

**Starter.** Street Locomotive Starter. Ry. Rev., vol. 75, no. 14, Oct. 4, 1924, pp. 518-521, 6 figs. New type of locomotive starter, or booster, developed by C. F. Street, Greenwich, Conn.

**Steam-Turbine.** The First German Turbine Locomotive. R. Lorenz. Eng. Progress, vol. 5, no. 9, Sept. 1924, pp. 165-166, 5 figs. Describes condensing turbine locomotive built in Germany by firm of F. Krupp, Essen; author states that introduction of steam turbines to drive locomotives would save railways 20 to 30 per cent of coal now consumed.

**The First Krupp Turbine Locomotives** (Die erste Krupp'sche Turbinenlokomotive). R. Lorenz. Krupp'sche Monatshefte, vol. 5, Aug.-Sept. 1924, pp. 129-136, 8 figs. Details of construction, bearings and lubrication, condensers, feedwater heaters, Schmidt superheaters, ventilators, etc.

**Superheaters for.** See SUPERHEATERS.

**Switching.** Light-Weight Locomotives for Shunting Purposes. Indian & Eastern Engr., vol. 55, no. 1, July 1924, pp. 18-19, 3 figs. Discusses extended use of gasoline locomotive in classification yards; engine is of four-cycle internal-combustion type, having four water-jacketed cylinders (bore, 120 mm., stroke 140 mm.) and developing 40 hp. at 1000 r.p.m.

**Tenders.** Exhaust-Steam-Driven Tenders with Piston Locomotives (Abdampftriebender bei Kolbenlokomotiven). R. P. Wagner. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, no. 7, July 15, 1924, pp. 141-144. Discusses tender fitted with engine using exhaust steam of piston engine, and gives details of equipment and operation.

**Uniflow.** A Uniflow Locomotive is Built for Russia. J. Stumpf. Ry. Mech. Engr., vol. 98, no. 9, Sept. 1924, pp. 517-521, 8 figs. Describes 0-10-0 type locomotive built by Nydquist & Holm, Trollhättan, Sweden, for Russian government; equipped with a Walschaert valve gear. A remarkably high vacuum has been obtained by redesigning cylinder exhaust pipes. See also Ry. Age, vol. 77, no. 8, Aug. 23, 1924, pp. 327-331, 8 figs.

**Valve-Gear Setting.** Helpful Suggestions for Setting Valve Gear. H. W. Stowell. Ry. Mech. Engr., vol. 98, no. 10, Oct. 1924, pp. 596-597, 1 fig. Simple formulas used to obtain correct alterations for eccentric rods and valve rods.

**Venezuela R. R.** Locomotives of the Great Venezuelan Railroad (Die Lokomotiven der Grossen Venezuela-Eisenbahn (Südamerika)). E. Neuhaus. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, no. 6, June 15, 1924, pp. 129-132, 7 figs. Design, construction and equipment of various types of locomotives for Caracas-Valencia line.

### LUBRICATING OILS

**Manufacture.** How Oil Companies Manufacture Industrial Lubricants. W. Miller. Eng. Wld., vol. 25, no. 3, Sept. 1924, pp. 169-171, 3 figs. Outlines modern processes of manufacturing lubricating oils; Abstract of paper read before Nat. Assn. Purchasing Agents.

**Testing.** Testing Lubricating Oils (Ueber die Prüfung von Schmierölen). G. Spettmann. Praktische Maschinen-Konstrukteur, vol. 57, no. 28, July 29, 1924, pp. 399-400. Discusses importance of testing; describes methods of testing; chemico-physical tests for classification of oils, mechanical for determining lubricating value; temperature measurement of bearings.

### LUBRICATION

**Essentials.** The Essentials of Lubricating Engineering. A. F. Brewer. Indus. Mtg. (N. Y.), vol. 68, no. 3, Sept. 1924, pp. 145-151, 9 figs. How to minimize depreciation of expensive machinery.

**Railway Motors.** The Importance of Efficient Lubrication of Railway Motors. C. Bethel. Elec. J., vol. 21, no. 10, Oct. 1924, pp. 467-472, 9 figs. Outlines results of recent tests made to determine main factors affecting operation of waste-packed bearings; tests were conducted both in laboratory and in service.

## M

### MACHINE TOOLS

**Wembley Exhibition.** The Machine Tool Exhibition. Eng. Production, vol. 7, no. 144, Sept. 1924, pp. 257-267, 24 figs. Describes and illustrates important exhibits; high-speed side-planing machine, girder radial drilling machine, vertical drilling machine, high-power universal milling machine, turret lathe with covered bed, slot milling machine, bench drill, etc.

### MACHINING METHODS

**Automobile-Engine Parts.** Pierce-Arrow Machining Processes. J. Younger. Am. Mach., vol. 61, no. 15, Oct. 9, 1924, pp. 571-573, 10 figs. Account of major operations on latest product of Pierce-Arrow plant, the model 80 car.

### MALLEABLE CASTINGS

**Manufacture and Properties.** Malleable Castings. Eng. Production, vol. 7, no. 145, Oct. 1924, pp. 311-312, 1 fig. Notes on their properties and manufacture.

### MALLEABLE IRON

**Production in Short Annealing Periods.** Possibilities of Producing Malleable Iron and Intermediate Products of Value in Short Annealing Periods. A. Hayes and W. J. Diederichs. Am. Soc. Steel Treating—Trans., vol. 6, no. 4, Oct. 1924, pp. 491-498, 5 figs. Outlines laboratory methods for producing malleable iron in 31 hours or less and for producing intermediate products of desirable physical properties; relations between method of treatment, microscopic structures and physical properties. Photomicrographs.

### MATERIALS HANDLING

**Automobile Manufacturing Plants.** Material Handling as Our Key to Many Savings. M. R. Denison. Factory, vol. 33, nos. 1 and 2, July and Aug., 1924, pp. 30-33, 60, 62, 64, 66, 68, 70, 72, 74, 76, 78, 80, 82, 84 and 86; and 190-193 and 242-246, 27 figs. Important economies in labor, in inventory, and in floor space that have come out of material-handling methods at Studebaker plant. Details of methods.

**Cement Industry.** Handling 42,000,000 Tons of Raw Material a Year. L. N. Duryea. Mgt. & Administration, vol. 8, no. 1, July 1924, pp. 155-160, 11 figs. Mechanical conveying methods in cement industry.

**Piping, Ammonia**

- \* Frick Co. (Inc.)

**Piping, Power**

- \* Crane Co.
- \* Kellogg, M. W., Co.
- \* Pittsburgh Valve, Fdry. & Const. Co.
- \* Steere Engineering Co.
- \* Vogt, Henry Machine Co.

**Pitot Tubes (See Tubes, Pitot)****Planimeters**

- \* Altmeyer, Theo. & Sons
- \* American Schaeffer & Budenberg Corp'n
- \* Bristol Co.
- \* Crosby Steam Gage & Valve Co.
- \* Dietzgen, Eugene Co.
- \* Keuffel & Esser Co.
- \* New York Blue Print Paper Co.
- \* U. S. Blue Co.
- \* Weber, F. Co. (Inc.)

**Plate Metal Work**

(See Steel Plate Construction)

**Pointers, Bolt**

- \* Landis Machine Co. (Inc.)

**Polishing Machinery**

- \* Builders Iron Foundry
- \* Rorysford Fdry. & Machine Co.

**Powdered Fuel Equipment (for Boiler and Metallurgical Furnaces)**

- \* Allis-Chalmers Mfg. Co.
- \* Combustion Engineering Corp'n
- \* Grindle Fuel Equipment Co.
- \* Quigley Furnace Specialties Co.
- \* Smidth, F. L. & Co.
- \* Worthington Pump & Machinery Corp'n

**Power Transmission Machinery**

- \* Allis-Chalmers Mfg. Co.
- \* Brown, A. & F. Co.
- \* Chain Belt Co.
- \* Diamond Chain & Mfg. Co.
- \* Falls Clutch & Machinery Co.
- \* Farrel Foundry & Machine Co.
- \* Foote Bros. Gear & Machine Co.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1924-25 Volume

**Glass Plants.** Handling of Materials in Modern Glass Plant, D. M. Ewell. Eng. Wld., vol. 25, no. 3, Sept. 1924, pp. 157-161, 10 figs. Describes facilities at works of Owen Bottle Co., Charleston, W. Va. See also Belting, vol. 25, no. 3, Sept. 1924, pp. 48-54, 10 figs.

**Metal-Working Plants.** Handling Materials in Metal Working Plants. Can. Machy., vol. 32, no. 12, Sept. 18, 1924, pp. 29-33, 8 figs. Types of equipment; moving cars and materials; types of cranes.

## METALS

**Cleaning.** Modern Methods of Cleaning Metals. Metal Industry (N. Y.), vol. 22, no. 10, Oct. 1924, pp. 402-404, 5 figs. How application of modern machinery and volume-production methods has lowered costs in metal-cleaning department and insured uniformly thorough work.

**Corrosion.** Notes on Corrosion Testing by Different Immersion Methods, H. S. Rawdon and A. I. Krynsky. Am. Electrochem. Soc., Advance paper No. 20, for Mtg. Oct. 2-4, 1924, pp. 273-286, 5 figs. Need for choosing a corrosion test which shall in some measure approximate service conditions is emphasized and illustrated by reference to an unusual case of corrosion in a submarine cable. Describes general types of immersion tests. Comparative results of immersion tests on chromium steels. Pub. by permission U. S. Bur. Standards.

The Micro-Chemistry of Corrosion, C. H. Desch. Am. Electrochem. Soc., Advance paper No. 18, for Mtg. Oct. 2-4, 1924, pp. 251-256. Description of apparatus employed in a microscopical study of early stages of corrosion and of method of testing alloys.

**Endurance.** Correlation of Endurance Properties of Metals, D. J. McAdam, Jr. Am. Soc. Steel Treating—Trans., vol. 6, no. 3, Sept. 1924, pp. 393-395. Summary of paper presented by permission of Secretary of Navy.

**Protection.** Metal Protection (Metallschutz), E. Maass. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 34, Aug. 23, 1924, pp. 880-883. Reviews theories on corrosion of metals; corrosion of aluminum; processes for protecting metals; corrosion of condenser tubes.

**Uses.** The First Use of Metals, T. A. Rickard. Eng. & Min. J., Press, vol. 117, nos. 13, 15 and 19, Mar. 29, Apr. 12 and May 10, 1924, pp. 528-530, 602-604 and 759-762. Early mining and metallurgical practice and uses of metals. Mar. 29: Gold and silver. Apr. 12: Copper and bronze. May 10: Iron, lead and zinc.

**Work Hardness, Effect of Temperature on.** Effect of Temperature on Work Hardening Metal, E. G. Herbert. Can. Machy., vol. 32, no. 8, Aug. 21, 1924, pp. 19-21, 12 figs. Experiments prove heat essential in some stamping operations, and that cutting tools increase durability at speeds which raise work to its critical temperature.

## MOLDING MACHINES

**Types.** Types of Molding Machines, R. E. Search. Metal Industry (N. Y.), vol. 22, no. 10, Oct. 1924, pp. 397-398, 4 figs. Describes representative machines made in United States and abroad.

## MONEL METAL

**Welding.** Welding Monel Metal. Can. Machy., vol. 32, no. 12, Sept. 18, 1924, pp. 39-40, 2 figs. Discusses precautions to be observed in welding of monel metal which are not ordinarily followed in welding steel.

## MOTOR BUSES

**Bodies.** Developments in Motorbus-Body Design, H. G. Bersie. Soc. Automotive Engrs.—Jl., vol. 15, no. 4, Oct. 1924, pp. 346-351 and 358, 13 figs. Discussion of subject from viewpoint of passenger, as motor bus approaches him, as he enters it and as he judges quality of transportation it affords.

**California.** Some Notes on Automobile Stages in California, F. D. Howell. Soc. Automotive Engrs.—Jl., vol. 15, no. 4, Oct. 1924, pp. 292-299, 19 figs. Evolution of motor-carrier industry; types of service; requirements for stage and motor-bus service; mechanical features.

**Operation and Maintenance.** The Operation and Maintenance of the Motorbus, J. B. Stewart, Jr. Soc. Automotive Engrs.—Jl., vol. 15, no. 4, Oct. 1924, pp. 311-316, 1 fig. Discusses use in inter-city service, selection of motor bus or motor coach, brake rigging, repairs and replacements, use of anti-skid devices, reinforced cross-links, overcoming disadvantages of pit, and ventilation.

**Public-Utility Operation.** Public-Utility Experience with the Motorcoach, V. E. Keenan. Soc. Automotive Engrs.—Jl., vol. 15, no. 4, Oct. 1924, pp. 320-323, 6 figs. Experience of United Elec. Ry. Co., Providence, O. About 16 per cent of electric-railway mileage in Providence to be abandoned because it does not pay cost of electric operation. Comparison of earning power of motor bus and street-railway car.

**Six-Wheel.** New Six-Wheel, Double-Deck Bus Brakes on All Wheels. Automotive Industries, vol. 51, no. 14, Oct. 2, 1924, pp. 613-614, 6 figs. Brief description of latest product of Moreland Motor Truck Co. of Los Angeles, Cal. Seats 60; air-operated Lockheed hydraulic brakes.

## MOTOR TRUCKS

**Fleet-Operating Costs.** An Analysis of Costs for 10 Years of Fleet Operation, R. E. Plimpton. Soc. Automotive Engrs.—Jl., vol. 14, no. 5, May 1924, pp. 539-544, 7 figs. Discusses operating costs and their relation to age of vehicle. Comparison of costs.

Observations of a Superintendent of Motor-Truck Fleet-Operation, J. F. Winchester. Soc. Automotive Engrs.—Jl., vol. 14, no. 5, May 1924, pp. 496-503, 16 figs. Methods of mechanical upkeep; special tools and fixtures used, and details of maintenance practice;

engineering factors that affect fleet operation; tire selection; advocates a magazine system of chassis lubrication; treats brakes, wheels and accessories from standpoint of design, simplicity and accessibility being keynote; operating costs, records and record forms.

**Relation of Producer and Consumer.** The Relation of the Vehicle Builder to Motor Transport, D. Beecroft. Soc. Automotive Engrs.—Jl., vol. 14, no. 5, May 1924, pp. 522-525 and (discussion) 525-526 and 538. Motor trucks, motor cars and motor buses used wholly for business purposes are considered by author in his plea for more clearly defined relations between producer and consumer. Paper is largely a presentation of view engineer must take of the situation. Dollar-earning fundamental is reason for author's consideration of subject.

**Testing.** Modern Methods of Truck Testing, W. L. Day. Mgt. & Administration, vol. 8, no. 3, Sept. 1924, pp. 285-287, 6 figs. Notes on new method of testing employed at plant of Gen. Motors Truck Co. and recording instruments used.

## O

## OIL ENGINES

**Heavy-Oil.** The Polar Heavy-Oil Engine. Gas & Oil Power, vol. 20, no. 229, Oct. 2, 1924, pp. 3-4, 3 figs. Its evolution into the "H" type.

**High-Compression.** The Functioning of High Compression Oil Engines, Johnstone Taylor. Gas & Oil Power, vol. 20, no. 229, Oct. 2, 1924, pp. 1-2. With special reference to injection and combustion of fuel.

**Light-Oil Types.** High-Speed Petrol and Paraffin Engines, J. Okill. Gas & Oil Power, vols. 19 and 20, nos. 223, 224, 225, 226, 227, 228 and 229, Apr. 3, May 1, June 5, July 3, Aug. 7, Sept. 4 and Oct. 2, 1924, pp. 127-128, 147-148, 167-168, 190-191, 212-213 and 216, 235-236 and 13-14, 20 figs. Features and management of lighter-fuel types of oil engine.

## OIL FUEL

**Boiler Preparation for.** Preparing Boiler for Oil Burning, G. Spencer. Plumbers Trade J., vol. 77, no. 6, Sept. 15, 1924, pp. 492-493, 4 figs. Discusses arranging and setting refractory linings and baffles, etc.

**Central Heating with.** Oil Fuel for Central Heating, A. F. Baillie. Domestic Eng. (Lond.), vol. 44, no. 8, Aug. 1924, pp. 167-171. Advantages and disadvantages of oil fuel, relative costs compared with coke, amount and different methods of storage, specific heat of oil and amount of heating surface required, frictional loss in pumping through pipes, etc.

**Fire Prevention.** Petroleum (Il petrolio), C. E. Della Chiesa. Industria, vol. 38, no. 15, Aug. 15, 1924, pp. 422-424. Discusses its use as substitute for coal in steam boilers, its advantages, means for preventing oil from taking fire and for extinguishing fires.

**Flash Point.** The Flash Point of Fuel Oil, Mar. Eng., vol. 29, no. 10, Oct. 1924, pp. 596-598. Résumé of U. S. Navy's investigations; heating and pumping tests; temperatures at which inflammable gases form; conclusions.

**Uses.** Liquid Fuels (Combustibili liquidi). Elettricità, vol. 3, no. 14 (series 4), July 15, 1924, pp. 106-108. Discusses petroleum and its application; evolution of heavy-oil engines; Diesel engines; shale-oil industry; lignite and peat; benzol; alcohol; vegetable oils, etc.

## OILS

**Viscosity.** The Viscosity of Oils at High Temperatures, A. R. Fortsch and Rob. E. Wilson. Indus. & Eng. Chem., vol. 16, no. 8, Aug. 1924, pp. 789-792, 3 figs. Data and curves covering viscosity determinations on wide variety of oils from Mid-continental and similar crudes up to temperature of 495 deg. Fahr.; outline of method of interpolation.

**Viscosity-Temperature Curves.** Viscosity-Temperature Curves of Fractions of Typical American Crude Oils, F. W. Lane and E. W. Dean. Indus. & Eng. Chem., vol. 16, no. 9, Sept. 1924, pp. 905-911, 6 figs. Results of investigation made by Bur. of Mines; discusses method of rectifying temperature-viscosity curves, and possibility of its practical utilization.

## OPEN-HEARTH FURNACES

**Design.** Some Recent Developments in Open-Hearth Steel Practice, G. A. V. Russell. Iron & Coal Trades Rev., vol. 109, no. 2944, Aug. 1, 1924, pp. 197-198. Discusses limitations of furnace charges; furnace hearths, coke-oven gas; mixed gases, thermal efficiency, furnace regenerators, furnace construction, etc. Abstract of paper read before Yorkshire Assn. of Instn. Civil Engrs.

**Sulphur Absorption from Gas.** Absorption of Sulphur from Gas of Siemens-Martin Furnace (Die Aufnahme des Schwefels aus dem Heizgas im Siemens-Martin-Ofen), A. Jung. Berichte der Fachgesellschaft des Vereins deutscher Eisenhüttenleute (Stahlwerks-ausschuss), no. 83, Apr. 11, 1924, 4 pp. Discusses sulphur content of briquettes, coal, generator gas and gas-producer slag; effect of steam addition to gas producer; relation between sulphur content of gas and of ingot.

## OXY-ACETYLENE CUTTING

**Cutting Tips, Manufacture of.** Making Oxy-acetylene Cutting Tips. Machy. (Lond.), vol. 24, no. 626, Sept. 25, 1924, pp. 838-840, 6 figs. Cost-reducing methods used in manufacturing cutting tips for oxy-acetylene outfits.

## OXY-ACETYLENE WELDING

**Automobile Bodies.** All-Steel Automobile Bodies, J. W. Meadowcroft. Welding Engr., vol. 9, no. 9,

Sept. 1924, p. 24. Discusses oxy-acetylene, electric and other processes used; many advantages claimed for all-welded bodies; lightness, strength and smooth finish.

**Plumbing and Heating Work.** Welding in Plumbing and Heating, H. E. Wetzell. Welding Engr., vol. 9, no. 8, Aug. 1924, pp. 17-18, 3 figs. Work done in place with oxy-acetylene cutting and welding; joints, connections and special fittings economically welded.

## P

## PEAT

**Drying.** Drying Peat with High Percentages of Moisture, J. W. Brassington. Power House, vol. 17, no. 10, Oct. 5, 1924, pp. 21-23, 1 fig. Modified type of paper-drying machine advocated as practical and fool-proof equipment to enable peat to be sold in successful competition with other fuels.

The Drying of Peat for Power Production, G. K. Fletcher. World Power, vol. 2, no. 9, Sept. 1924, pp. 156-163. Considers possibilities of using peat for purposes of power production.

**Preparation and Briquetting.** New Process of Preparing and Briquetting Peat, R. Schade. Iron & Coal Trades Rev., vol. 109, no. 2952, Sept. 26, 1924, p. 520. Outlines new German method of peat preparation, by which not only water in peat, but also sugar contained in it, are separated.

## PHOTOELASTICITY

**Gear Stresses, Analysis of.** The Photoelastic Method for the Determination of Causes of Failure of Metal Structures, P. Heymans, G. R. Brophy and A. L. Kimball, Jr. Am. Soc. Steel Treating—Trans., vol. 6, no. 4, Oct. 1924, pp. 506-514, 12 figs. Results obtained through scientific study of stresses set up in metal structures, resulting from design and method of installation or assembly; investigation applied specifically to study of pinion gears; as result of photoelastic method of analysis, predictions as to form of failures were made and then substantiated by actual tests with steel gears.

## PIPE

**Fittings, Specifications for.** Specifications for Pipe Fittings, H. E. Collins. Mgt. & Administration, vol. 8, no. 1, July 1924, pp. 83-87, 1 fig. Notes on American standard for flanged fittings; kind and quality; valves. Tables giving dimensions for standard weight fittings and extra-heavy fittings.

**Stresses in.** Stresses in Thin Circular Pipes, etc., Under Symmetrical Loads, G. P. Manning. Concrete & Constructional Eng., vol. 19, nos. 7 and 8, July and Aug. 1924, pp. 437-442 and 491-495, 6 figs. Develops formulas and makes calculations.

## PIPE, CAST-IRON

**Centrifugally Cast.** Manufacture of Cast-Iron Pipe in the South, R. Moldenke. Min. & Metallurgy, vol. 5, no. 214, Oct. 1924, pp. 472-474. Centrifugally cast pipe; difficulties in casting sand-spun pipe. Abstract of A.I.M.E. paper.

Modern Methods of Pipe Manufacture by the Centrifugal Process, E. J. Fox and P. H. Wilson. Iron & Coal Trades Rev., vol. 109, no. 2948, Aug. 29, 1924, pp. 344-346, 8 figs. Discusses process details, process of centrifugally casting, and output of centrifugal machines, giving comparative data.

## PISTON RINGS

**Manufacture.** Piston-rings and their Production, J. McIntosh. Machy. (N. Y.), vol. 31, no. 2, Oct. 1924, pp. 93-94, 1 fig. Methods of machining, finishing, testing, facing sides, and grinding outside diameter.

## PRESSES

**Hydraulic.** Hydraulic Presses in the Rubber Industry (Hydraulische Pressen in der Gummi verarbeitenden Industrie), C. Walther. Gummi-Zeitung, vol. 38, no. 43, July 25, 1924, pp. 878-881, 10 figs. Design and construction of presses used in production of hollow bodies.

## PRODUCER GAS

**Analysis.** Producer Gas, R. T. Haslam. Indus. & Eng. Chem., vol. 16, no. 8, Aug. 1924, pp. 782-784, 2 figs. Apparent equilibrium between its constituents and influence of depth of fuel bed.

**Utility of.** Producer Gas as an Industrial Fuel, D. J. Demorest. Chem. & Met. Eng., vol. 31, no. 15, Oct. 13, 1924, pp. 578-581, 3 figs. Consideration of its utility and economies obtained through its proper use.

## PULVERIZED COAL

**Advantages.** Advantages in Burning Pulverized Coal, F. L. Wolf. Steam Coal Buyer, vol. 2, no. 2, Sept. 1924, pp. 22 and 24, 1 fig. Practical description showing why pulverized coal gives more perfect combustion, with figures on comparative costs.

**Boiler Firing.** Powdered Coal for Small Boiler Plants, T. W. Atterbury. Power Plant Engr., vol. 28, nos. 18, 19 and 20, Sept. 15, Oct. 1 and 15, 1924, pp. 937-939, 996-999 and 1048-1050, 12 figs. Describes unit pulverizer method of pulverizing and firing; system makes powdered coal an economical fuel for plant with few boilers. Analysis of operating costs. Comparative advantages and desirable characteristics of unit pulverizer.

**Boiler Performance.** Pulverized-Coal Boiler Performance, Brunot Island Power Station, L. W. Heller. Power, vol. 60, no. 16, Oct. 14, 1924, pp. 600-603, 9 figs. States that 22 months of operation has shown that this method of burning Pittsburgh coal has operat-

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1924-25 Volume

ing characteristics that are desirable and will be dominating factors in selection of furnace equipment in future; general arrangement and operating performance.

**Locomotive Firing.** Pulverized Fuel for Canadian Locomotives, A. J. T. Taylor. *Eng. JI.*, vol. 7, no. 10, Oct. 1924, pp. 633-635, 2 figs. Review of possibilities of economy in use of fuel for railway purposes.

**Propagation of Combustion Zone.** The Propagation of a Zone of Combustion in Powdered Coal, F. S. Sinnott and L. Slater. *Fuel*, vol. 3, no. 10, Oct. 1924, pp. 350-355, 4 figs. Determination of minimum temperature for combustion.

**Steam Power Plants.** Steam Generation with Pulverized Fuel, D. Brownlie. *Can. Engr.*, vol. 47, no. 12, Sept. 10, 1924, pp. 343-344. Development of system of low-temperature carbonization of coal with reference to important installations in Great Britain, on Continent and in United States; efficiencies obtained by system. Abstract of paper read before Inst. Elec. Engrs.

## PUMPS

**Characteristics, Determination of.** Determining Pump Characteristics, R. T. Livingston. *Power Plant Eng.*, vol. 28, no. 20, Oct. 15, 1924, pp. 1063-1065, 3 figs. Approximate pump characteristics can be determined graphically from given data.

**Circulating, Motor-Driven.** Motor-Driven Circulating Pumps, H. B. Seeley. *Elec. Wld.*, vol. 84, no. 13, Sept. 27, 1924, pp. 689-691, 3 figs. Characteristics of circulating system, applications of various pump combinations, desirable speed requirements and economical operation.

## PUMPS, CENTRIFUGAL

**Boiler-Feed, Turbo.** Sulzer Turbo Boiler Feed Pumps, Sulzer Tech. Rev., no. 1, 1924, pp. 3-7, 4 figs. Advantage of steam-turbine drive; types of turbines used for drive; how turbo boiler-feed pumps are governed.

## PYROMETERS

**Optical.** An Optical Pyrometer. Metal Industry (Lond.), vol. 25, no. 14, Oct. 3, 1924, pp. 329-330, 2 figs. Construction and technical features of "Pyro" pyrometer.

# R

## RAILS

**Corrugation.** Tracks of Street Railways and Formation of Corrugation (Zur Frage des Strassenbahnoberbaues und der Riffelbildung), N. Buer. *Bautechnik*, vol. 2, no. 38, Sept. 5, 1924, pp. 420-421, 5 figs. Track laying in paved streets; shortening of life of track by corrugation of rails; possible explanations of formation of corrugation.

## RAILWAY ELECTRIFICATION

**Austria.** Electrification of the Austrian Federal Railways, Jas. A. G. Pennington. *Ry. Rev.*, vol. 75, nos. 13 and 14, Sept. 27 and Oct. 4, 1924, pp. 470-475, and 508-511, 7 figs. Present state of enterprise. Sept. 27: Operating characteristics and traffic density; conditions which necessitate change of motive power. Oct. 4: Hydroelectric plants, scheme of transmission and distribution, and motive power.

**British Railways.** The Future of Main-Line Electrification on British Railways, H. E. O'Brien. *Instn. Elec. Engrs.—JI.*, vol. 62, no. 333, Sept. 1924, pp. 729-755 and (discussion) 755-781, 9 figs. Shows that probable density of traffic in ton-miles on main railway arteries is so great that cost of energy, including all capital charges, will not be prohibitive, also that cost of electric locomotives will not be a capital charge, and that when reductions in cost of locomotive operation and maintenance (due to simple construction of electric locomotive) are taken into account, total cost of locomotive operation is substantially less for electricity than for steam.

**Europe.** The Electrification of Foreign Railways, Including Recent Developments and Projects, S. P. Smith. *World Power*, vol. 2, nos. 1, 2 and 4, Jan., Feb. and Apr. 1924, pp. 44-51, 111-116 and 216-223, 4 figs. Jan.: Germany. Feb.: Austria and Hungary. Apr.: France and Holland.

**Spain.** The 3000-volt Electrification of the Spanish Northern Railway, A. I. Totten and H. C. Hutchinson. *Gen. Elec. Rev.*, vol. 27, no. 10, Oct. 1924, pp. 658-664, 11 figs. Section between Ujo and Busdongo now being electrified as initial step of extensive program. Describes this most recent substitution of electric locomotives for steam locomotives, locomotives themselves, motors, control, auxiliary equipment, substations, transformers, motor-generator sets, and overhead line construction.

**United States.** The Electrification of Railways in United States, Including Recent Developments and Projects, S. P. Smith. *World Power*, vol. 2, nos. 6 and 7, June and July 1924, pp. 338-346 and 38-44, 6 figs. Deals with roads electrified in America.

## RAILWAY MOTOR CARS

**Gasoline.** The Gasoline Railroad-Car for Branch Lines, W. L. Bean. *Soc. Automotive Engrs.—JI.*, vol. 15, no. 4, Oct. 1924, pp. 306-310, 7 figs. Discusses principal factors of design. Weight-space and weight-power ratios of prime importance. Transmission systems compared. See also *Ry. Age*, vol. 77, no. 13, Sept. 27, 1924, pp. 635-639, 6 figs.

**Gasoline-Electric.** The Gasoline-Electric Car, A. H. Candee. *Elec. JI.*, vol. 21, no. 10, Oct. 1924, pp. 481-483, 4 figs. Discussed possibilities and developments.

**Operation.** Motor Rail-Cars, J. W. Cain. *Soc. Automotive Engrs.—JI.*, vol. 15, no. 4, Oct. 1924, pp. 317-319. Ascribes limited success of McKee gasoline-driven car and one of the gasoline-electric type that were introduced in early part of present century and were pioneers among self-propelled cars for railway use, to their excessive weight and to engine and transmission troubles. Present state of industry. Advantages of motorization.

**Types.** Motor Coaches for Railways, G. Soberaki. *Eng. Progress*, vol. 5, no. 9, Sept. 1924, pp. 175-182, 23 figs. Development of railway motor cars; modern types—their advantages and disadvantages.

## RAILWAY OPERATION

**Cinders Disposal.** Report on the Handling and Disposing of Cinders. *Ry. Eng. & Maintenance*, vol. 20, no. 10, Oct. 1924, pp. 402-404. Discusses track layout and equipment for wasting; committee recommends more extensive use of cinders as ballast, equipment for handling direct from pit to point of use; storage of cinders. Committee report of Roadmasters & Maintenance of Way Assn.

**Freight-Train Loading.** Maximum Loading of Freight Trains. *Ry. & Locomotive Eng.*, vol. 37, no. 9, Sept. 1924, pp. 278-280. Computing adjusted tonnage ratings for maximum freight-train loads.

**Passenger-Train Handling.** The Smooth Handling of Passenger Trains, E. R. Boa. *Central Ry. Club—Official Proc.*, vol. 32, no. 4, Sept. 1924, pp. 1605-1609 and (discussion) 1609-1627. Discusses phases that are contributing factors and outlines manner in which air brake, throttle, and reverse gear should be manipulated to insure smooth train handling.

**Psychology in.** Psychology in Railway Operation (Ueber Psychologie und Eisenbahnwesen), K. Marbe. *Archiv für Eisenbahnwesen*, no. 5, Sept.-Oct. 1924, pp. 729-744. Paper read before psycho-technic committee of German Railways, discussing psychology in relation to train operation; accident prevention, change in work to relieve monotony; etc.

**Time Tables.** Instructions for Determining the Schedule Times for Trains by the Graphic Method (Anweisungen für die Ermittlung der Fahrzeiten der Züge nach den zeichnerischen Verfahren), M. Dittmann. *Organ für die Fortschritte des Eisenbahnwesens*, vol. 79, no. 6, June 15, 1924, pp. 117-129, 8 figs. Gives details of five different methods for given line and given locomotive and weight of train.

**Train Control.** A Continuous Conductive System of Train Control. *Ry. Rev.*, vol. 75, no. 14, Oct. 4, 1924, pp. 501-504, 1 fig. Clifford system of automatic train control gives continuous indication two blocks in advance of danger condition.

**Economic Advantages of Automatic Train Control.** Jos. Beaumont. *Ry. Rev.*, vol. 75, no. 14, Oct. 4, 1924, pp. 507-508. Information on direct saving which accrues by elimination of train stops on Chicago Rock Island & Pac. Ry.; analysis of economic value of automatic train control.

**Pennsylvania's Experience with Automatic Stops.** A. H. Rudd. *Ry. Age*, vol. 77, no. 15, Oct. 11, 1924, pp. 645-646. Value of cab signal; effect on track capacity; conclusions. (Abstract.) Paper read before Am. Ry. Assn. See also *Ry. Signaling*, vol. 17, no. 10, Oct. 1924, pp. 391-393.

**The Miller Train Control on the C. & E. I.** H. H. Orr. *Ry. Signaling*, vol. 17, no. 10, Oct. 1924, pp. 393-394. Improved design in service since 1914; maintenance separated between signal and motive power.

**Train Control Development on the C. & O.** B. T. Anderson. *Ry. Signaling*, vol. 17, no. 10, Oct. 1924, pp. 394-397. Features of first installation; new features of a c. system; failure of automatic-train-control devices; train-control organization; effect on track capacity; interchangeability.

## RAILWAY REPAIR SHOPS

**Box Cars, Rebuilding.** Time Record in Rebuilding Box Cars, A. C. L. R. R., O. A. Wallace. *Ry. Rev.*, vol. 75, no. 15, Oct. 11, 1924, pp. 533-537, 13 figs. Voluntary contest originated in four system shops demonstrates advantages obtained in progressive repair system.

**Car-Repair Billing.** A. R. A. Car Repair Billing, B. F. Jamison. *Ry. Mech. Engr.*, vol. 98, no. 10, Oct. 1924, pp. 610-613. Points out possibilities of individual roads saving, and conversely losing, probably millions of dollars depending upon whether or not they handle A. R. A. billing in a systematic manner in accordance with rules, employing constant checks of all kinds to maintain accuracy of work. Requirements of the various persons who have responsibility of executing system of car-repair billing. Handling of accident reports. Abstract of paper read at Chief Interchange Car Inspectors' and Car Foremen's Assn. of Am.

**Drypipes.** The Inside and Outside Drypipe. *Ry. & Locomotive Eng.*, vol. 37, no. 9, Sept. 1924, pp. 261-264, 6 figs. Describes method of repairing drypipe leakage.

**Locomotives.** Locomotive Repairs in New Burlington-Denver Shops, H. Campbell. *Am. Mach.*, vol. 61, nos. 12 and 14, Sept. 18 and Oct. 2, 1924, pp. 447-450 and 531-533, 19 figs. New shops of C. B. & Q. R. R. near Utah Junction, Denver, Col. now in operation. Time-saving and cost-lowering tools and fixtures. Details as to special tools and methods.

**Tool Shops.** Central Tool Makers' Shops in Railway Repair Works (Zentrale Werkzeugmacherei eines Eisenbahn-Ausbesserungswerkes), M. Boehme. *Glasers Annalen*, vol. 95, no. 3, Aug. 1, 1924, pp. 37-40, 4 figs. Shows layout of shop and machine tools, stores and tools for turning wheels and tires, etc.

## RAILWAY SHOPS

**Locomotive Cylinder Shop.** A Modern Loco-

motive Cylinder Shop, E. A. Custer. *Baldwin Locomotives*, vol. 3, no. 2, Oct. 1924, pp. 45-53, 10 figs. Describes method of machining locomotive cylinders; gives design and equipment of plant of Baldwin Locomotive Works, Eddystone plant.

**Micrometers, Application of.** Application of Micrometers in Railway Shops, M. H. Williams. *Ry. Mech. Engr.*, vol. 98, no. 10, Oct. 1924, pp. 615-618, 7 figs. Interchangeability of pins and bushings for valve motion is made possible by use of micrometers.

**Stores Methods in.** Store Methods on the Norfolk & Western, J. W. Wade. *Ry. Age*, vol. 77, no. 14, Oct. 4, 1924, pp. 605-608, 8 figs. Particulars of new stores-department methods which have brought about a large reduction in material investment.

## RAILWAY SIGNALING

**Automatic, for Rapid Transit.** The Automatic Signal System of the Berlin Electric Rapid Transit Railways, G. Kemmann. *Eng. Progress*, vol. 5, no. 9, Sept. 1924, pp. 191-197, 9 figs. Development of automatic signal system—its extent in Berlin and its performance.

**Interlocking.** New Low-Voltage Interlocking on the Delaware & Hudson, A. H. Rice. *Ry. Signaling*, vol. 17, no. 10, Oct. 1924, pp. 375-377, 6 figs. Points out that remote control of switches and signals, in connection with new coaling plant, permits high-speed movements.

## RAILWAY TRACK

**Crossings.** Grade Crossings as a Municipal Engineering Problem. *Eng. News-Rec.*, vol. 93, no. 15, Oct. 9, 1924, pp. 579-581. Brief review of present and prospective conditions in a number of cities in United States. Track elevation usual method.

**Standard Formulae for Calculating Point and Crossing Dimensions.** R. D. Walker. *Ry. Engr.*, vol. 45, no. 537, Oct. 1924, pp. 339-340, 4 figs. Problems illustrating use of standard formulas as given for four methods, and more difficult problems.

**Maintenance, Germany.** Aims in Management of German Permanent Way (Neuere Ziele der Bewirtschaftung des deutschen Oberbaues), Kurth. *Zeit. des Vereines deutscher Ingenieure*, vol. 68, no. 30, Sept. 20, 1924, pp. 994-996. Discusses initial cost and maintenance, track laying, training of operators, care of track and ties, etc.

**Turntables.** New 85-Ft. Diameter Locomotive Turntables for the Bombay Baroda & Central India Railway Company. *Ry. Gaz.*, vol. 41, no. 10, Sept. 5, 1924, pp. 310-311, 4 figs. Turntable has diameter of 85 ft. and is designed for 5 ft. 6 in.-gauge locomotives weighing up to 200 tons; deck type with central balance.

## REFRACTORIES

**Carborundum.** Physical Characteristics of Specialized Refractories—Part V: Thermal Conductivity of Carborundum Refractories, M. L. Hartmann and O. B. Westmont. *Am. Electrochem. Soc.*, Advance paper No. 21, for Mtg. Oct. 2-4, 1924, pp. 287-312, 13 figs. Details of tests made.

**Sillimanite.** Preparation of Artificial Sillimanite for Refractory Uses, C. E. Sims, H. Wilson and H. C. Fisher. *Am. Electrochem. Soc.*, Advance paper No. 22, for Mtg. Oct. 2-4, 1924, pp. 327-343, 8 figs. partly on supp. plates. Describes experimental work leading to adoption of a furnace for preparation of artificial sillimanite. Raw materials, and characteristics.

## REFRIGERANTS

**Organic Brines.** Organic Refrigerating Brines, H. F. Zoller. *Indus. & Eng. Chem.*, vol. 16, no. 10, Oct. 1924, pp. 1073-1075, 1 fig. Deals with non-aqueous and aqueous brines; factors affecting choice of brine; advantages of alcohol-water mixture; summarizes advantages of certain organic refrigerating brines of methyl-ethyl alcohol or glycerol type over inorganic chloride brines.

**Properties.** Properties of Refrigerants, H. D. Edwards. *Refrig. Eng.*, vol. 11, no. 3, Sept. 1924, pp. 95-116, 20 figs. Report containing data on physical properties, effect on various lubricants, effect on human life or health, inflammability, explosive qualities, method of testing purity, precautions essential in handling, etc.

## REFRIGERATING MACHINES

**Absorption.** The Absorption Ice Machine, H. A. Cranford. *Southern Engr.*, vol. 41, no. 2, Apr. 1924, pp. 57-59, 1 fig. What to do when overhauling the system and how to handle the various apparatus.

## RIVETING

**Machines, Electrically Driven.** Application of Work-Regulating Drive in Hydraulic Machines (Die Anwendung des Arbeitsreguliertriebes bei hydraulischen Maschinen), P. Hohnen. *Maschinenbau*, vol. 3, no. 23, Sept. 11, 1924, pp. 850-852, 3 figs. Describes A. E. C. automatically regulated electric motor and compares a riveting plant driven by such a motor with one having hydraulic drive.

## ROLLING MILLS

**Adjustable-Speed Drives.** Adjustable Speed Drives for Rolling Mills, L. A. Umansky. *Iron & Steel Engr.*, vol. 1, no. 9, Sept. 1924, pp. 515-532, 27 figs. Discusses advantages to be derived from use of adjustable-speed drive, and necessary speed range and capacity; elementary cases of speed-regulation problems; comparison and selection of systems.

**Electric Drive.** The Bar Mill and Structural Mill Electrification of the Phoenix Iron Company, J. S. Erichson. *Elec. JI.*, vol. 21, no. 9, Sept. 1924, pp. 403-407, 9 figs. Details of conversion from steam to electric drive, which consists of 3000-hp. 600-volt, compound-wound, compensated, adjustable-speed d.c. motor, driving through herringbone-gear unit.

Electric Equipment of the Reversing Rolling Mill

**Manufactured by Advertisers** **CLASSIFIED LIST OF MECHANICAL EQUIPMENT** **Alphabetical List on page 194**

- Recorders, SO<sub>2</sub>**  
\* Tagliabue, C. J. Mfg. Co.  
\* Uehling Instrument Co.
- Recording Instruments**  
(See Instruments, Recording)
- Reducing Motions**  
\* Crosby Steam Gage & Valve Co.
- Refractories**  
\* Drake Non-Clinkering Furnace Block Co.  
\* King Refractories Co. (Inc.)  
\* Maphite Co. of Amer.
- Refrigerating Machinery**  
\* De La Vergne Machine Co.  
\* Frick Co. (Inc.)  
\* Ingersoll-Rand Co.  
\* Johns-Manville (Inc.)  
\* Nordberg Mfg. Co.  
\* Vilter Mfg. Co.  
\* Vogt, Henry Machine Co.  
\* Westinghouse Electric & Mfg. Co.
- Regulators, Automatic Arc-Furnace**  
\* Westinghouse Electric & Mfg. Co.
- Regulators, Blower**  
\* Foster Engineering Co.  
\* Mason Regulator Co.
- Regulators, Condensation**  
\* Tagliabue, C. J. Mfg. Co.
- Regulators, Damper**  
\* Coppus Engineering Corp'n  
\* d'Este, Julian, Co.  
\* Fulton Co.  
\* Kieley & Mueller (Inc.)

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1924-25 Volume

at the Angleur Steel Works (L'équipement électrique du train réversible des Acieries d'Angleur), M. Odier. Association des Ingénieurs Electriciens sorti de l'Institut Electrotechnique Montefiore—Bul., vol. 2, series 7, no. 6, June 1924, pp. 206-235, 21 figs. Discusses higher patents and subsequent development of electric drive for reversible mills, its advantages in saving of power and upkeep, details of reversible motor, flywheel converter group, connections, etc.

**Four-Roll System.** Four-Roll System for Three High Mills (Das Vierwalzensystem für Triowalzenwerke), H. Cramer. Berichte der Fachausschüsse des Vereins deutscher Eisenhüttenleute (Walzwerksausschuss), no. 34, Jan. 30, 1924, 4 pp., 4 figs. Blind passes and how to avoid them; using a second middle roll; accurate control of rolls; etc. See also Stahl u. Eisen, vol. 44, no. 39, Sept. 25, 1924, pp. 1170-1172, 2 figs.

**Hot Beds.** New Type of Mechanical Hot Bed-Iron Age, vol. 114, no. 16, Oct. 16, 1924, pp. 990-991, 4 figs. Elliptical moving members insure proper advance of rails, billets, etc., with less direct transfer of heat, in hot bed developed by W. McKee, which represents radical change from present type. See also Iron Trade Rev., vol. 75, no. 16, Oct. 16, 1924, pp. 1016-1017, 4 figs.

**Power Consumption.** Time Study and Measuring Power Consumption in Rolling Mills (Zeitstudien und Kraftverbrauchsmessungen im Walzwerk), G. Bulle. Berichte der Fachausschüsse des Vereins deutscher Eisenhüttenleute (Walzwerksausschuss), no. 35, Jan. 30, 1924, 5 pp., 5 figs. Discusses time tables for mill, recording power consumption, stop-watch records of operations, determination of weights rolled, training of workers, etc.

## S

### SAND, MOLDING

**Bonding Substance of.** The Bonding Substance of Molding Sands, H. B. Hanley. Am. Foundrymen's Assn.—Bul., vol. 3, no. 2, Apr. 1924, pp. 6-10. Its composition, properties and tests.

### SCALES

**Computing.** The Development of the Modern Computing Scale. Can. Machy., vol. 32, no. 11, Sept. 11, 1924, pp. 19-22, 4 figs. Brief outline of evolution of methods of weighing from shekels of silver of 1860 B.C. to products of Dayton Scale Works, Toronto, in 1924.

### SCREW THREADS

**Rolled.** Rolled Screw Threads (Ueber gerollte Schrauben), M. Heimig. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, no. 6, June 15, 1924, pp. 132-133, 3 figs. Details of microstructure of cut and rolled screw threads, tensile strength, expansion and efficiency.

### SEMI-DIESEL ENGINES

**Deuts Marine.** The Deutz Marine Semi-Diesel Engine (Der Deutzer Schiffs-Semi-Dieselmotor). Motorwagen, vol. 27, no. 23, Aug. 20, 1924, pp. 408-411, 8 figs. Details of compressorless Diesel, its increased efficiency, smallest fuel consumption being 166 g. per hp. hr. at 320 effective hp.

### SHAFTS

**Flexible.** Experimental Research on Flexible Shafting for Transmission (Ricerche sperimentali sugli alberi flessibili da trasmissione), A. Alpe. Industria, vol. 38, no. 10, May 31, 1924, pp. 269-274, 8 figs. Results of experiments; application of flexible shafting in operation of grinding wheels, dynamos, etc.

**Lineshafting.** Some Notes on Line Shafting, H. Seymour. World Power, vol. 2, no. 9, Sept. 1924, pp. 170-172. Discusses considerations in selecting lineshafting; erection of shafting; choice of couplings.

### SHAPERS

**Tooling of.** Tooling Reciprocating Machine Tools. Eng. Production, vol. 7, no. 142, July 1924, pp. 197-198, 4 figs. Shaping machines.

### SMOKE

**Abatement.** Economy through Smoke Abatement, H. B. Meller. Indus. & Eng. Chem., vol. 16, no. 10, Oct. 1924, pp. 1049-1051. Present-day conditions respecting smoke abatement; results of investigation of smoke and dust problem of Pittsburgh.

### SPRINGS

**Release of.** Effect Produced by the Release of Springs (Les effets produits par la détente d'un ressort), C. Reynal. Arts et Métiers, vol. 77, no. 47, Aug. 1924, pp. 312-317, 6 figs. Discusses rectilinear and curvilinear motion of springs on release, velocity of release, and develops formulas for calculating forces exerted.

### STANDARDS

**German N. D. I. Reports.** Report of the German Industrial Standards Committee (N. D. I.-Mitteilungen). Maschinenbau, vol. 3, no. 23, Sept. 11, 1924, pp. 875-880, 6 figs. Details of proposals for screws with conical square head and with point and hexagonal head; size of letters and figures for marking castings, etc.; colors for distinguishing pipe lines; forged flanges for shafts.

### STEAM

**Discharge Computations.** Simplifying Steam-Discharge Computations, S. D. Barclay. Power, vol. 60, no. 16, Oct. 14, 1924, pp. 613-614, 5 figs. Presents curves which have proved to be quick and convenient

method for finding areas for given discharges or amount of steam discharged for given conditions when area is known.

**High-Pressure.** High-Pressure Steam at the V. D. I. High-Pressure Session (Hochdruckdampf nach dem Stande der Hochdrucktagung des V. D. I. am 18. und 19. Januar 1924), Berner. Braunkohle, vol. 23, nos. 22 and 24, Aug. 30 and Sept. 13, 1924, pp. 425-430, 462-466, 16 figs. Series of articles on properties and application of high-pressure steam, boiler materials, and boiler construction. Experiences and requirements in practical boiler operation; views on maximum-pressure steam.

**Physical Properties.** Study of the Physical Properties of Steam (Étude sur les propriétés physiques de la vapeur d'eau), C. Roszak. Chaleur & Industrie, vol. 5, nos. 49, 50, and 52, May, June and Aug. 1924, pp. 213-223, 283-292, and 402-407, 25 figs. Part I: Saturated steam; determination of heating temperature of water, total heat of saturated steam and of heat of evaporation; specific heats; relation between temperature and pressure of water; volume and specific heat and condensation; conduction. Part II: Superheated steam; specific heat and constant pressure; total and superheated steam; specific volume and characteristic equation. Part III: Discussion of work at University of Munich. Part IV: Determination of heat of vaporization. Part V: Specific heat. Part VI: Relation between temperature and saturation pressure of water. Part VII: Volume and specific weight in saturated water-steam mixture. Part VIII: Conductivity. Part IX: Total heat of superheated steam, Knoblauch-Raisch-Hansen formulas.

**Physics of.** The Physics of Steam, C. L. Hubbard. Southern Eng., vol. 41, nos. 3 and 4, May and June 1924, pp. 50-51 and 59-65, 3 figs. Definitions of steam and their applications to practical problems. Action of steam in steam engine.

**Power and Process Work Use for.** Generating Mechanical Energy in Works Using Heating Steam. Sulzer Tech. Rev., no. 1, 1924, pp. 7-14, 10 figs. Discusses advantages of installing steam plant arranged for exhaust or extracted steam utilization in industrial plants; field of application of back-pressure engine; back-pressure engine working on conjunction with another power source; steam-extraction plant; Sulzer oil-operated steam-pressure regulator.

### STEAM ENGINES

**Triple-Expansion.** An Experimental Triple Expansion Engine. Power Engr., vol. 19, no. 222, Sept. 1924, pp. 351-352, 1 fig. Describes experimental steam engine and accessories which have recently been supplied to Corp. of City of Cardiff and installed at Technical College, by W. Sisson & Co., Ltd.

### STEAM POWER PLANTS

**Alignment of Equipment.** Procedure for Aligning Power Equipment. Power Plant Eng., vol. 28, no. 20, Oct. 15, 1924, pp. 1051-1054, 3 figs. Points out importance of proper alignment and discusses methods.

**Economic Operation.** Efficiency in Steam Power Plant Operation, L. M. Arkley. Eng. J., vol. 7, no. 10, Oct. 1924, pp. 635-638, 2 figs. Discusses possibility of effecting economy in operation of steam plants; preparations for boiler tests; heat losses; Orsat apparatus; causes of low percentage of CO<sub>2</sub>; summary of procedure to ascertain causes of low boiler efficiency; CO<sub>2</sub> recorders.

**High-Pressure.** High Pressure Steam at Weymouth, I. E. Moulthrop. Stone & Webster J., vol. 35, no. 3, Sept. 1924, pp. 309-317, 3 figs. Gives detailed description of design and equipment of Weymouth power station of Edison Elec. Illuminating Co. of Boston, highest commercial steam power plant in world.

**High Pressure, Superheat, and Reheating in.** Pressure, Superheat, Steam Extraction and Reheating as Affecting Power Plant Economy, Eskil Berg. Franklin Inst.—J., vol. 197, no. 6, June 1924, pp. 727-739, 8 figs. Notes on gain by high steam pressure; high superheat; gain by high steam pressure and superheat combined; steam extraction; reheating; capacity rating; high pressure and high steam temperature.

**Long-Bell Lumber Co., Wash.** 18,000-kw. Plant Serves Lumber Company. Power, vol. 60, no. 17, Oct. 21, 1924, pp. 638-641, 5 figs. Long-Bell Lumber Co. operates its Longview (Washington) properties from its own central plant of 18,000-kw. present capacity; conveyor system delivers hogged fuel to Stirling-type boilers, provided with extension furnaces; ashes are removed by sluicing; electric drive is used extensively throughout plant.

**Steel Works.** Steel Company Builds New Power Plant. Power Plant Eng., vol. 28, no. 20, Oct. 15, 1924, pp. 1034-1041, 9 figs. Details of power plant of new blast furnace and coke plant of Columbia Steel Corp. at Provo, Utah; includes tabular data on equipment used.

### STEAM TURBINES

**Developments.** The Modern Steam Turbine on Land and Sea, C. A. Parsons. Power House, vol. 17, no. 16, Aug. 20, 1924, pp. 25-29, 4 figs. Turbo-electric generating units now being built up to 60,000 kw.; thermal efficiency over all, coal to electricity of 27.80 per cent expected in recent installations; mechanical gearing, reheating steam, etc.

The Steam Turbine, C. A. Parsons. Engineering, vol. 138, no. 3065, Sept. 26, 1924, pp. 469-470. Correlates certain well-known principles of thermodynamics with practical progress of steam turbine and with important advances that are being made at present time. Paper read at Int. Mathematical Congress.

**Disk Wheels, Protection from Axial Vibration.** The Protection of Steam Turbine Disk Wheels From Axial Vibration, W. Campbell. Gen. Elec. Rev., vol. 27, nos. 6, 7 and 8, June, July and Aug. 1924, pp. 352-360, 459-484 and 511-535, 99 figs. June: Troubles

which gave rise to investigation made by Gen. Elec. Co., and preliminary work which led to discovery of cause of difficulty. July: Nature and theory of vibration in turbine wheels, and reasons for necessity of placing reliance on actual tests in addition to purely analytical methods. Aug.: Methods of design and testing for protection of turbine bucket wheels from axial vibration. Paper read at A.S.M.E. spring mtg.

**Economy, Conditions Affecting.** Conditions Affecting Steam Turbine Economy, J. Y. Dahlstrand. Power Plant Eng., vol. 28, no. 20, Oct. 15, 1924, pp. 1041-1043, 1 fig. Outline of conditions which interfere with maintenance and high economy.

**High-Pressure.** Steam Boilers at Very High Pressure (Les machines à vapeur à très haute pression), A. Troller. Nature (Paris), no. 2618, June 7, 1924, pp. 364-368, 5 figs. Discusses Genevevillers 45,000-hp. equipment, Brown Boveri high-pressure turbines and data, Blomquist boilers, etc.

What the World Power Conference Showed About Modern Steam Turbines and Their Design. Elec. Wld., vol. 84, no. 14, Oct. 4, 1924, pp. 737-740. Abstracts of four authoritative papers on high pressure showing general lines of development in Great Britain, Holland, Sweden and United States.

**Installation.** Installing an 1,875-Kva. Impulse Steam Turbine, Claude C. Brown. Power, vol. 60, no. 17, Oct. 21, 1924, pp. 648-650, 1 fig. Résumé of details worked out in installation of each of four steam turbo-generators at plant of large Western sugar refinery.

**Lubrication.** Turbine Lubrication, N. E. Funk. Indus. & Eng. Chem., vol. 16, no. 10, Oct. 1924, pp. 1080-1084, 4 figs. Discusses difficulties experienced in applying many lubricating oils that are considered by refiners to be high-grade products; problems of turbine lubrication; action of oil as heat-dissipating agent; destruction of oil in operation; effects produced by destructive agents; care of lubricant in service.

### STEEL

**Carbon.** Iron-Carbon Diagram and Most Important Structural Elements of Carbon Steels (Das Eisen-Kohlenstoff-Diagramm und die wichtigsten Gefügebestandteile der Kohlenstoffstähle), K. Daevs. Berichte der Fachausschüsse des Vereins deutscher Eisenhüttenleute (Werkstoffausschuss), no. 42, Apr. 4, 1924, 10 pp., 20 figs. Discusses critical points, significance of lines and points in diagram, changes in very rapid cooling and hardening, structural elements, etc.

**Cutting-Tool.** Influence of Ledgeburite Structural Elements in the Production and Treatment of Cutting Steels (Der Einfluss der ledeburitischen Gefügebestandteile bei der Erzeugung und Behandlung von Dreh- und Schnittstählen), F. Kapatz. Berichte der Fachausschüsse des Vereins deutscher Eisenhüttenleute (Werkstoffausschuss), no. 41, Apr. 4, 1924, 7 pp., 13 figs. Details of ledgeburite steels, composition and size of net structure, decrease of hardening capacity by overloading with alloy metals, effect of velocity of solidification, etc. See also Stahl u. Eisen, vol. 44, no. 38, Sept. 18, 1924, pp. 1133-1138, 2 figs.

**Dephosphorizing.** Dephosphorizing in the Martin Furnace and the Electric Furnace by Means of the Basic Process (Defosforazione al forno Martin ed al forno elettrico col processo basico), E. De-Luigi. Rassegna Mineraria Metallurgica e Chimica, vol. 61, no. 2, Aug. 15, 1924, pp. 29-34. Details of oxidizing agents and reactions, composition of slag, etc.

**Locomotive.** High-Manganese Steel for Locomotives, E. F. Cone. Iron Age, vol. 114, no. 14, Oct. 2, 1924, pp. 824-825, 4 figs. Its properties when incorporated in cast-steel engine frames and crossheads. Composition and heat treatment.

**Macroscopic Examination.** The Macroscopic Examination of Steel, V. O. Homerberg. Am. Soc. Steel Treating—Trans., vol. 6, no. 3, Sept. 1924, pp. 295-314, 30 figs. Explains manner in which segregation takes place in steel; method of preparing specimens; formulas of etching reagents, together with directions for their use and necessary precautions to be taken; macrographs are included to illustrate results obtained from use of these different reagents.

**Oxy-Acetylene Flame Applied to.** Steel under the Oxy-Acetylene Flame, A. S. Kinsey. Am. Soc. Steel Treating—Trans., vol. 6, no. 4, Oct. 1924, pp. 515-524, 2 figs. Points out that in burning of oxy-acetylene flame, which produces temperature of about 6300 deg. Fahr., border combustion occurs which makes it possible to melt steel without oxidizing it; odd shapes and sizes of steel to be hardened, tempered or annealed may easily be heated with oxy-acetylene torch, which has additional advantage of being adaptable to confined areas; economy and efficiency of oxy-acetylene flame is largely attributable to remarkable purity of 99.5-per cent oxygen, now commercially available.

**Rivet.** Effect of Sulfur on Endurance Properties of Rivet Steel. Am. Soc. for Testing Mats., Preprint No. 4a, for Mtg. June 24-27, 1924, 15 pp., 9 figs. Third preliminary report of Joint Committee on Investigation of Phosphorus and Sulfur in Steel. Describes endurance tests made at U. S. Naval Eng. Experiment Station, and results obtained.

Metallographic Investigation of Effect of Sulfur on Rivet Steel. Am. Soc. for Testing Mats., Preprint No. 4b, for Mtg. June 24-27, 1924, 75 pp., 85 figs. partly on supp. plates. Fourth preliminary report of Joint Committee on Investigation of Phosphorus and Sulfur in Steel. Results of microscopic investigation, investigation of non-metallic inclusions, and investigation of microstructure.

**Spheroidized Cementite in Hypoeutectoid.** Spheroidized Cementite in Hypoeutectoid Steel, R. S. MacPherran and J. F. Harper. Am. Soc. Steel Treating—Trans., vol. 6, no. 3, Sept. 1924, pp. 341-374, 20 figs. Results of authors' experience in method of heat treating large forgings; results obtained by spheroidization of cementite of pearlitic constituent seem to warrant treatment given; treatment applied to

cast steel results in corresponding improvement of physical properties. Photomicrographs.

**Stainless.** Stainless Steel and Stainless Iron O. K. Parmiter. *Am. Soc. Steel Treating—Trans.*, vol. 6, no. 3, Sept. 1924, pp. 315-340. Reviews history and development of stainless steel and stainless iron of 13 per cent chromium type; problems involved in manufacture of this material; its composition and effect of various elements upon it; heat treatment, forging, normalizing, annealing and hardening; physical properties; general properties of stainless steel; applications and possibilities of stainless iron.

**Test Results.** What is Steel? A. Sauvour. *Min. & Metallurgy*, vol. 5, no. 214, Oct. 1924, pp. 465-468, 2 figs. Notes on thermic curves of blast furnaces; epochal contributions of Henry M. Howe; results of tests on Armco iron; electrolytic iron; Norway iron; low-carbon steel; steel containing 0.30 per cent carbon. (Abstract.)

#### STEEL CASTINGS

**Defects.** Some Steel Foundry Experiences, H. V. Fell. *Foundry Trade J.*, vol. 30, no. 422, Sept. 18, 1924, pp. 239-240, 19 figs. Describes a few steel castings which have been made by author and indicates their defects and means by which they were overcome.

**Sink Heads.** Proportioning and Shaping of Sink Heads, J. H. Hall. *Iron Age*, vol. 114, no. 14, Oct. 2, 1924, pp. 822-823. How not only a saving of metal can be secured, but a lowering of cost of steel, if proportioning and shaping of risers is carefully studied. Advantages of use of a comparatively new kind of riser which is cone shaped.

#### STEEL, HEAT TREATMENT OF

**Annealing.** Annealing of Plates Used in Electrical Construction (Le recuit des tôles utilisées dans la construction électrique), R. Cazaud. *Revue de Métallurgie*, vol. 21, no. 8, Aug. 1924, pp. 473-483, 18 figs. Requirements of thin sheets used in electric machines; effect of mechanical treatment on magnetic qualities; effect of temperature, silicon content, atmosphere, etc.

**Railway Shops.** Heat Treatment of Steel. Ry. J., vol. 30, no. 10, Oct. 1924, pp. 22-24, 3 figs. Deals with handling of different tools, heat treatment of same in tool-tempering room of Atchison, Topeka & Santa Fe shops at Topeka, Kan.

**Quenching.** Quenching Diagrams for Carbon Steels in Relation to Some Quenching Media for Heat Treatment, H. J. French and O. Z. Klopsch. *Am. Soc. Steel Treating—Trans.*, vol. 6, no. 3, Sept. 1924, pp. 251-294, 22 figs. Gives quenching diagrams for carbon steels containing from 0.25 to 1.25 per cent carbon; in these are shown relations between Rockwell hardness, microstructure, thermal transformations and cooling velocity determined at 720 deg. cent.; general relations between quenching diagrams and various quenching media for heat treatment. Bibliography.

#### STEEL, HIGH-SPEED

**Chromium in.** The Nature of the Function of Chromium in High Speed Steel, E. C. Bain and M. A. Grossmann. *Am. Soc. Steel Treating—Trans.*, vol. 6, no. 4, Oct. 1924, pp. 430-442, 17 figs. Results of measurement of effect of heat treatment upon hardness, impact strength and volume change in case of four high-tensile steels; data, in some measure, reveal function of chromium in high-speed steel; photomicrographs show principal structural changes responsible for effect of heat treatment upon properties.

**Hardness, Brinell and Rockwell.** Comparison of Brinell and Rockwell Hardness of Hardened High Speed Steel, S. C. Spalding. *Am. Soc. Steel Treating—Trans.*, vol. 6, no. 4, Oct. 1924, pp. 499-504, 6 figs. Steels were treated under varying temperatures and both Rockwell and Brinell hardness numbers were obtained; these are tabulated and shown in accompanying curves.

#### STEEL INDUSTRY

**Central-Station Power for.** Power Service for the Steel Industry in the Pittsburgh District, Chas. R. Riker. *Elec. J.*, vol. 21, no. 9, Sept. 1924, pp. 442-445. Brief review of existing and potential relationship between central-station companies and steel industry.

#### STEEL MANUFACTURE

**Ordinance Steel.** The Manufacture of Ordinance Steel, J. B. Rhodes. *Forging—Stamping—Heat Treating*, vol. 10, no. 10, Oct. 1924, pp. 380-383. Points out that greatest steps in improving ordinance steels have been in heat treatment; freedom from cracks, flaws and microscopic inclusions essential. Paper read before Am. Iron & Steel Inst.

#### STEEL WORKS

**Electrical Equipment, Application of.** Electrical Engineering as a Leading Factor in the Development of Modern Steel works, W. Geyer. *Iron & Coal Trades Rev.*, vol. 109, no. 2943, July 25, 1924, pp. 153-154. Discusses electric motors, cranes and transporters auxiliary machines, power production, compressed-air supply, rolling mills, steel production in electric furnaces. Abstract of paper read before World Power Conference.

**Electrification of.** The Rehabilitation of Steel Mills, J. M. Moore and H. M. McLain. *Elec. J.*, vol. 21, no. 9, Sept. 1924, pp. 424-427, 7 figs. Points out advantages of electrification and necessity for formulating definite plan for rehabilitation of existing plant equipment.

**Machine Tools in.** Machine Tools and Their Auxiliaries in the Steel Mills, J. F. Kelly. *Iron & Steel Engr.*, vol. 1, no. 9, Sept. 1924, pp. 466-482 and 536-544, 30 figs. Notes on selection of machine tools; history and development of tools; modern practice; reversing planers; gear-cutting machines; grinding machines; boring mills; radial drills; automatic control of machine tools; lubrication.

#### STOKERS

**Steam Engine as Drive.** The Steam Engine as a Stoker Drive. *Power Plant Eng.*, vol. 28, no. 19, Oct. 1, 1924, pp. 1000-1002, 4 figs. Slow speed, continuous range and automatic torque-speed adjustment are among desirable characteristics.

#### STREET RAILWAYS

**Car Materials.** New Materials in Car Body Construction, J. A. Dewhurst. *Elec. Ry. J.*, vol. 64, no. 14, Oct. 4, 1924, pp. 549-552, 5 figs. Points out that development of steel-covered laminated wood panels has made possible construction of type of side girder which has strength and rigidity of steel and at same time gives better insulation, less noise and reduced weight.

**Electric Switches for.** Electric Switches for Street Railways (Elektrische Weichenstellvorrichtungen für Strassenbahnen), E. Halle. *Elektro-J.*, vol. 4, no. 6, June 1924, pp. 166-168, 7 figs. Design and construction of Schwinge and double-magnet types of locking frames made by AEG.

**Noise Elimination.** Elimination of Noise, C. L. Van. Auker. *Elec. Traction*, vol. 20, no. 9, Sept. 1924, pp. 405-412, 13 figs. Deals with track, wheel, wheel and track, journal, brake, truck, gear, compressor, motor, body, roof, trolley and other noises in operation of street cars.

**Three-Car Articulated Trains.** Detroit Operates New Three-car Articulated Train, A. C. Colby. *Gen. Elec. Rev.*, vol. 27, no. 7, July 1924, pp. 441-448, 10 figs. Describes three-car articulated unit place in operation on Woodward Ave. line by Dept. Street Rys., designed to handle heavy passenger traffic on this route.

#### SUPERHEATERS

**Locomotive.** Criticism of Locomotive Superheaters (Zur Kritik des Lokomotivüberhitzers), R. P. Wagner. *Zeit. des Vereines deutscher Ingenieure*, vol. 68, no. 37, Sept. 13, 1924, pp. 951-956, 29 figs. Requirements of steam superheaters, types used in Germany, possibilities of developments, bases for calculations.

**Locomotive Superheaters.** Superheater Co. (Locomotive Superheaters)—Bul. 11. Description, operation and maintenance of Elesco type "A" locomotive superheater.

## T

#### TIME STUDY

**Usefulness of.** Making and Using Time Studies, H. K. Reed. *Indus. Mgt. (N. Y.)*, vol. 68, no. 3, Sept. 1924, pp. 165-169, 2 figs. Problems of "maintenance" of time study, discussing those factors which, in final analysis, determine degree of concrete usefulness of time study in modern management.

#### TIRES, RUBBER

**Efficiency.** The Efficiency of the Pneumatic Tyre, H. S. Rowell. *Rubber Age*, vol. 5, no. 6, Aug. 1924, pp. 301-304 and (discussion) pp. 304-309. Notes on transmission of energy; prevention of skidding; avoidance of noise; mud splashing, etc.

#### TRANSPORTATION

**Small Consignments, London.** Small-Consignment Commodity-Distribution in London and Its Environs, J. Paterson. *Soc. Automotive Engrs.—J.*, vol. 15, no. 4, Oct. 1924, pp. 352-358, 5 figs. Traces commodity movement from ships to lighters and to warehouses, from warehouses to stores, from stores to homes, to surrounding towns and to country districts, and gives details of distribution and collection system developed and operated by Carter, Paterson & Co., Ltd., Lond., a system employing horse-drawn and motor-vehicle equipment.

#### TUBES

**Blast-Furnace-Slag.** A New Process for Producing Tubes (Ein neues Verfahren zur Herstellung von Röhren), F. Riedel. *Berichte der Fachausschüsse des Vereines deutscher Eisenhüttenleute (Ausschuss für Verwertung der Hochofenschlacke)*, no. 4, Jan. 18, 1924, 2 pp., 1 fig. Production of tubes from blast-furnace slag without addition of binders; tensile strength of tubes.

**Brass, Annealing of.** Annealing of Brass Tubing in the Electric Furnace, R. M. Keeney. *Am. Electrochem. Soc., Advance paper No. 9*, for Mtg. Oct. 2-4, 1924, pp. 137-147, 3 figs. Methods and equipment at plant of French Mfg. Co., of Waterbury, Conn. Electric brass annealing proven to be more economical than annealing with wood fuel.

**Brass, Manufacture of.** The Manufacture of Brass and Copper Tubes, G. Evans. *Metal Industry (Lond.)*, vol. 25, nos. 10, 13 and 14, Sept. 5, 26 and Oct. 3, 1924, pp. 217-219, 297-299 and 321-325, 20 figs. Refinery or foundry for copper-billet casting. Deals with development of piercing machines, describing present types of machine in use, their operation and adjustment. Describes suitable heating furnace and gives a plan of typical modern piercing-mill layout.

#### TURBO-GENERATORS

**Westport Station, Baltimore.** Turbine Packing, Bleeding Arrangements and Other Features of Westport Station Addition. *Power*, vol. 60, no. 16, Oct. 14, 1924, pp. 605-608, 3 figs. Describes special type of high-pressure packing gland, use of vertical hairpin tube heaters with special check valves and d.c. ball-bearing electrical auxiliaries, which are features of two newly installed 20,000-kw. turbo-generators ordered from Gen. Elec. Co. to replace four engine-driven 2000-kw. generators.

## U

#### UNLOADERS

**Modern types.** Modern Construction of Grabs for Unloading (Neuzeitige Bauarten von Verladegreifern), R. Hänchen. *Praktische Maschinen-Konstrukteur*, vol. 57, no. 31, Aug. 19, 1924, pp. 429-434, 16 figs. Discusses new automatic grabs for bulk goods as to form, operation and efficiency, including Demag, Landi, Weigner, Méguin, Hulett and Losenhausen.

## V

#### VALVE GEARS

**Lentz.** Steam Distribution by Means of Lentz Valve Gear (Stoomverdeling door middel van Lentz-kleppen), F. Muller. *Ingenieur*, vol. 39, no. 32, Aug. 9, 1924, pp. 595-602, 16 figs. Describes Lentz system of steam valve gear and governor, and their application to compound locomotives and ship-propulsion machinery.

#### VAPORS

**Pressures.** Vapor Pressure Curves for System, Containing Alcohol, Ether, and Water, E. A. Louder, T. R. Briggs and A. W. Browne. *Indus. & Eng. Chem.*, vol. 16, no. 9, Sept. 1924, pp. 932-935, 4 figs. Describes apparatus for determining vapor pressure; determination of vapor pressures of certain mixtures; from data obtained pressure-temperature curves have been constructed.

#### VISCOSIMETERS

**Fischer-Bauer.** Measuring Viscosity in Ceramics (Viskositätsmessungen in der Keramik), E. F. Bauer. *Berichte der Deutschen Keramischen Gesellschaft*, vol. 5, no. 2, Aug. 1924, pp. 27-75, 2 figs. Discusses various methods, and describes Fischer-Bauer apparatus, constructed on drop-ball principle with a counterweight added to decelerate time of drop. Examples of application.

**Kleiver.** Relation between Time of Flow of Kleiver Rapid Viscosimeter and the Engler Viscosimeter (Ueber die Beziehung zwischen den Ausflusszeiten des Kleiverschen Schnellviskosimeters und des Englerschen Viscosimeters), H. W. Kleiver, R. Bilfinger and K. Mauch. *Zeit. für angewandte Chemie*, vol. 37, no. 36, Sept. 4, 1924, pp. 693-695. Experiments show that there is only a rough regularity in Kleiver apparatus and this cannot be reduced to a law.

## W

#### WASTE ELIMINATION

**Methods.** Organizing to Prevent Materials Waste, C. B. Auel. *Mgt. & Administration*, vol. 7, nos. 6, 7, and 8, June, July and Aug. 1924, pp. 669-674, 65-70 and 185-190, 13 figs. Prevention and salvage of waste at Westinghouse plant. Standardization of parts; preparation of standards; purchasing specifications; manufacturing allowances and specifications; stores stocks control; quarterly "clean-up"; storing, boxing, and shipping; use of obsolete copper wire; etc.

#### WASTE STEAM

**Utilization.** Present State of Waste-Steam Technology and Economics in Germany (Gegenwärtiger Stand der Abdampftechnik und Abdampfwirtschaft in Deutschland), H. Treitel. *Zeit. des Vereines deutscher Ingenieure*, vol. 68, no. 35, Aug. 30, 1924, pp. 896-901, 11 figs. Discusses types of machinery and processes for turning to account all heads of heat and avoiding losses by condensation, including back-pressure machines, mixed steam, exhaust steam, etc.

#### WATER SOFTENING

**Permutit.** Note on a Permutit Water Purification Plant (Note sur une installation d'épuration d'eau à la "Permutite" au siège de Victor 3-4, à Rauxel), M. Stoeffler. *Chaleur & Industrie*, vol. 5, no. 52, Aug. 1924, pp. 383-385, 1 fig. Details of permutit tests and comparative cost of apparatus and operations.

#### WELDING

**Automatic Welding Machines.** Automatic Welding of Tank. *Welding Engr.*, vol. 9, no. 9, Sept. 1924, pp. 17-19, 5 figs. Describes new machine which automatically welds circular end seams; revolves around work; flame oscillates; increases production.

**Electric.** See ELECTRIC WELDING; ELECTRIC WELDING, ARC; ELECTRIC WELDING, RESISTANCE.

**Monel Metal.** See MONEL METAL.

**Oxy-Acetylene.** See OXY-ACETYLENE WELDING.

**Rails.** Welding of Non-Imbedded Tracks (Schweißung freiliegender Gleise), Wattmann. *Maschinenbau*, vol. 3, no. 24, Sept. 22, 1924, pp. 902-904. Experiences in track welding and comparative cost of welded joints and fishjoints. See translation in Eng. Progress, vol. 5, no. 9, Sept. 1924, p. LIX, 1 fig.

#### WOODWORKING PLANTS

**Flooring Plants.** A New Electrically Driven Flooring Plant, E. B. Clement. *Gen. Elec. Rev.*, vol. 27, no. 9, Sept. 1924, pp. 602-608, 12 figs. Describes plant of Mitchell Bros. Co., at Cadillac, Mich. including notes on substation.

Catalogue data of firms marked \* appear in the A.S.M.E. Condensed Catalogues of Mechanical Equipment, 1924-25 Volume

Above—A 14" "U.S." Expansion Joint on a circulating water line from a Westinghouse condenser. This joint is subjected to extreme vibration by pulsations of water pump.

At right—A 22" "U.S." Joint on a cold water inlet to condenser, where flanges are  $\frac{3}{8}$ " out of parallel.

Trade Mark

## Save your pipe lines from fatigue

Most materials are rapidly fatigued by vibration such as is frequently caused in pipe lines by the action of pumps on the line. Rubber is not affected nor is it liable to crystallization. The "U.S." Rubber Expansion Joint, for that reason, is the ideal joint for installations which are subject to frequent or continual vibration, or any other special stress.

The regular "U.S." Joint with parallel flanges is also flexible enough to serve as a connection between flanges which are out of parallel and which would otherwise require a Dutchman or special joint.

Descriptive catalog of "U.S." Expansion Joints sent on request.

The United States Rubber Company is the manufacturer of "U.S." Rainbow gaskets, made from the famous "U.S." Rainbow universal red sheet, and of "U.S." Vanda and Wizard gaskets for high pressure and superheat conditions.

# *Many Engineers Favor the Steam Drive because of its Dependability*

**M**ODERN power plant engineering is appreciating more and more the *dependability* of steam auxiliary drives for such important units as boiler feed pumps, condenser circulating pumps, and exciters. The Terry steam turbine receives its energy directly from the boiler, thus avoiding the cycle of the main unit or house turbine, generator, switch-board fuses and wiring required by motors, and eliminating the possibility of shut-downs.

The steel case Terry turbine is especially designed for the latest type super-stations using high pressures and superheats. Many

unusual features make it the most *dependable* unit of its type. Terry turbines are noted for their durability, reliability, ease of operation and long life.

Illustrated below are two of four Terry steel case turbines driving boiler feed pumps in the new addition to the Cleveland Electric Illuminating Company plant. There are a total of 23 Terrys in the entire plant.

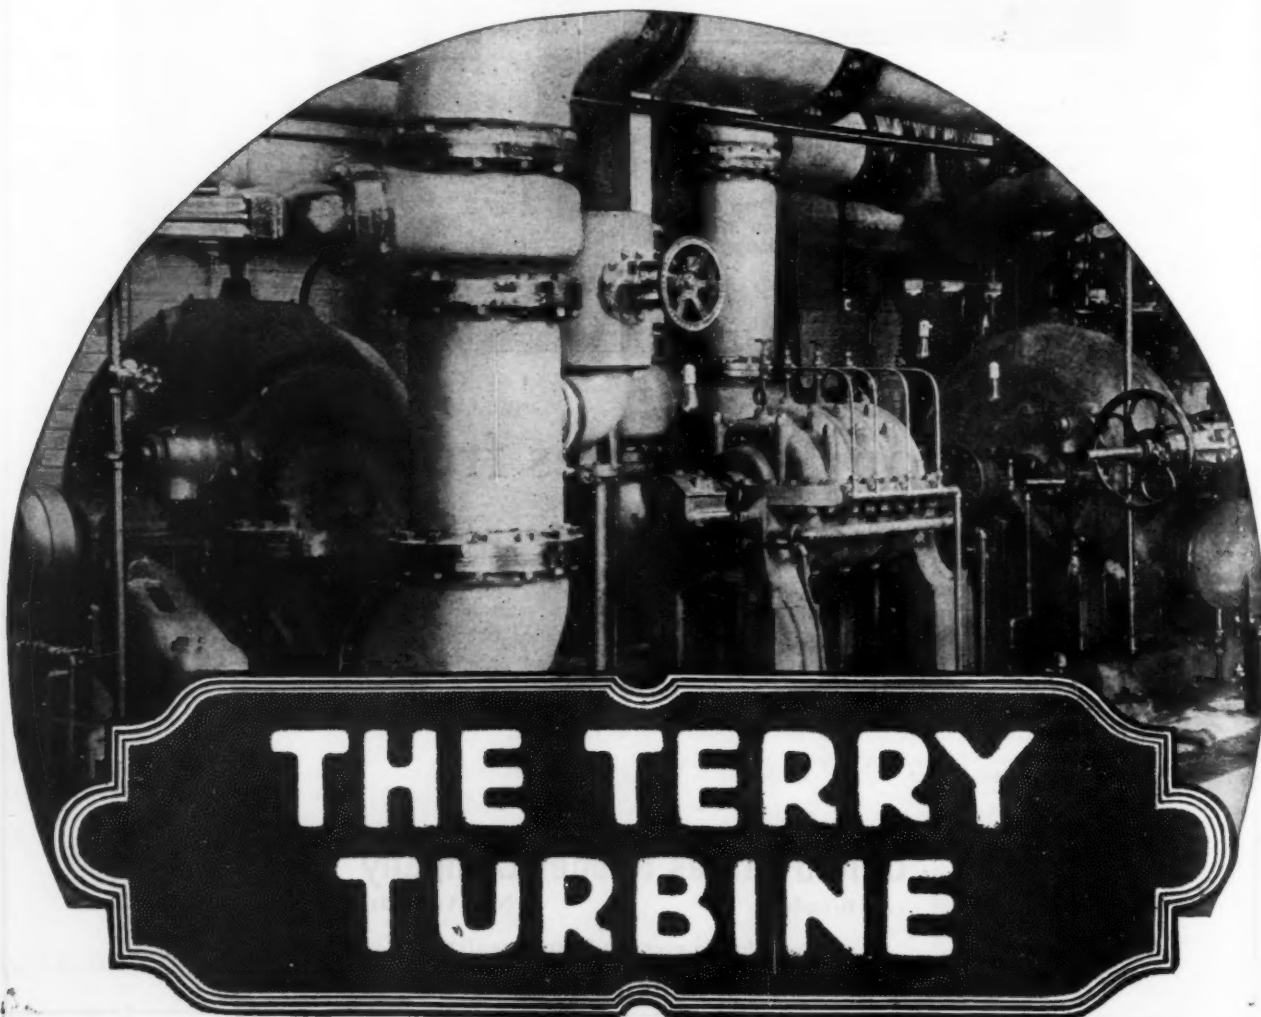

There is a Terry for every need within the scope of auxiliary drives. Let a Terry engineer give you the facts. Bulletin on request.

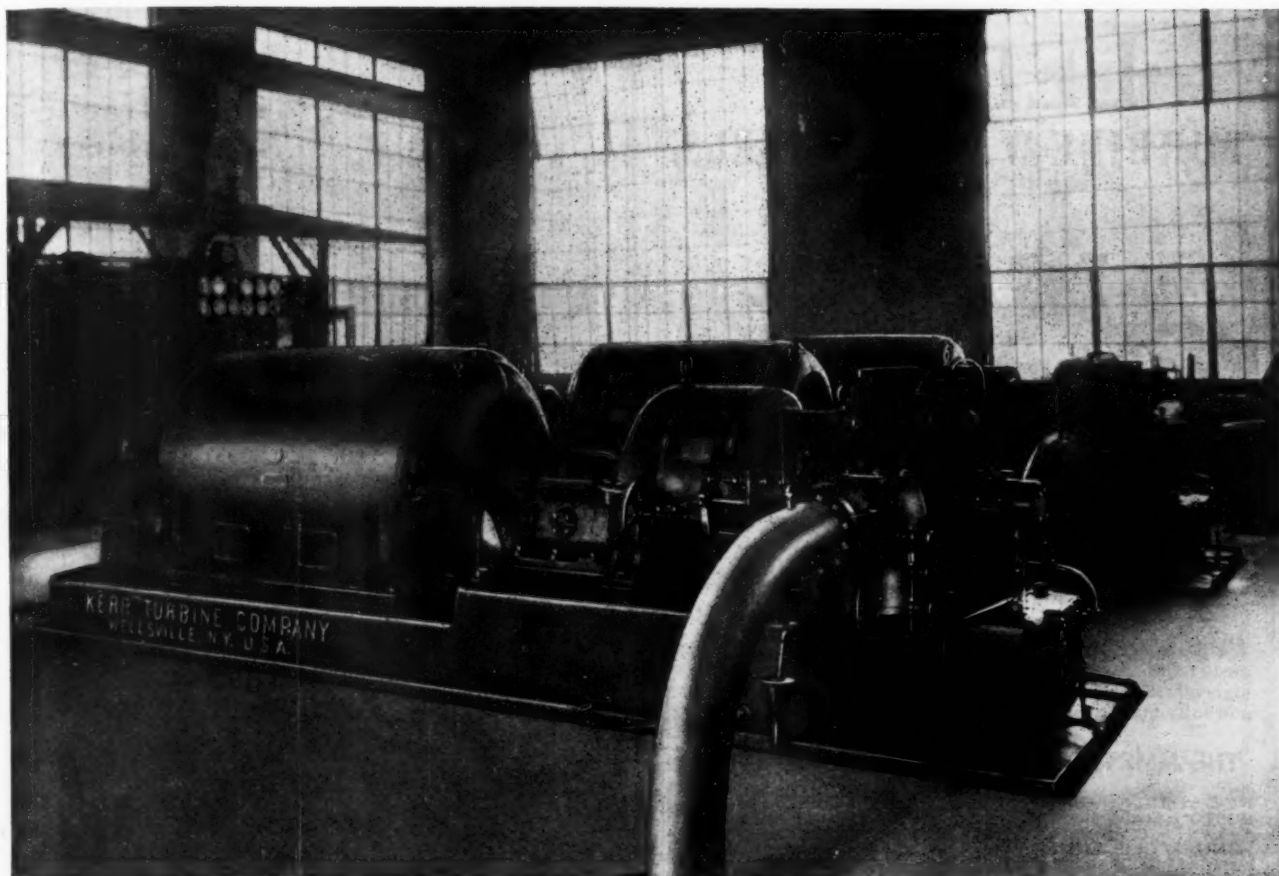

## THE TERRY STEAM TURBINE COMPANY

T-928

*Three 1250 Kw. Kerr Non-Condensing Turbine Generators at the Gulf Refining Company, Port Arthur, Texas*

## Power a virtual by-product in this refinery

Low pressure steam for operating the oil stills is obtained from the exhaust of these three KERR TURBINES.

Superheated steam in expanding through the turbines develops power and is exhausted clean and dry, ready to give up most of its heat to the stills. There is practically no extra fuel expense for power, which is virtually a by-product of the process work.

Complete satisfaction has been given by the turbines which have been in operation since 1917.

Kerr Turbines are giving many other important refineries the benefits of this practice. Wherever exhaust or bleeder steam is required for process work, a very great return on the investment may rightfully be expected.

Write for Bulletins describing Kerr High, Low and  
Mixed Pressure Turbines and Kerr Bleeder  
Turbines in ratings to 2,000 Kw.

## POWER TEST CODES A.S.M.E. 1923

TEST CODE FOR  
HYDRAULIC POWER PLANTS AND  
THEIR EQUIPMENT

Revised by a Joint Committee and Published by  
The American Society of Mechanical Engineers  
25 West 40th Street, New York

## Concerning the A.S.M.E. Power Tests Codes

The entire collection of Power Test Codes, when complete, will affect a wide range of industrial enterprises and provide a course of procedure by which everything ranging from a super power station to a boiler feed pump can be tested to see if they comply with the terms of purchase or if they are operating at the desired efficiency. Further information regarding these codes will be furnished upon request.

## The Test Code for Hydraulic Power Plants and Their Equipment

The first of a series of sixteen codes to be issued during 1924 as a result of more than six years of work on the revision of the Power Test Codes of 1915.

The Code which was developed by a Joint Committee of the A.S.C.E., A.I.E.E., N.E.L.A. and the A.S.M.E., not only contains standard methods for testing the entire plant or any elementary part or parts of the plants, but tables useful in recording and computing the results, and directions for the use of instruments and apparatus required for the various measurements.

## City Conveniences where Central Station Power is not Available

**T**HE Hydrolite is a practical hydro-electric plant that gives city conveniences to country homes.

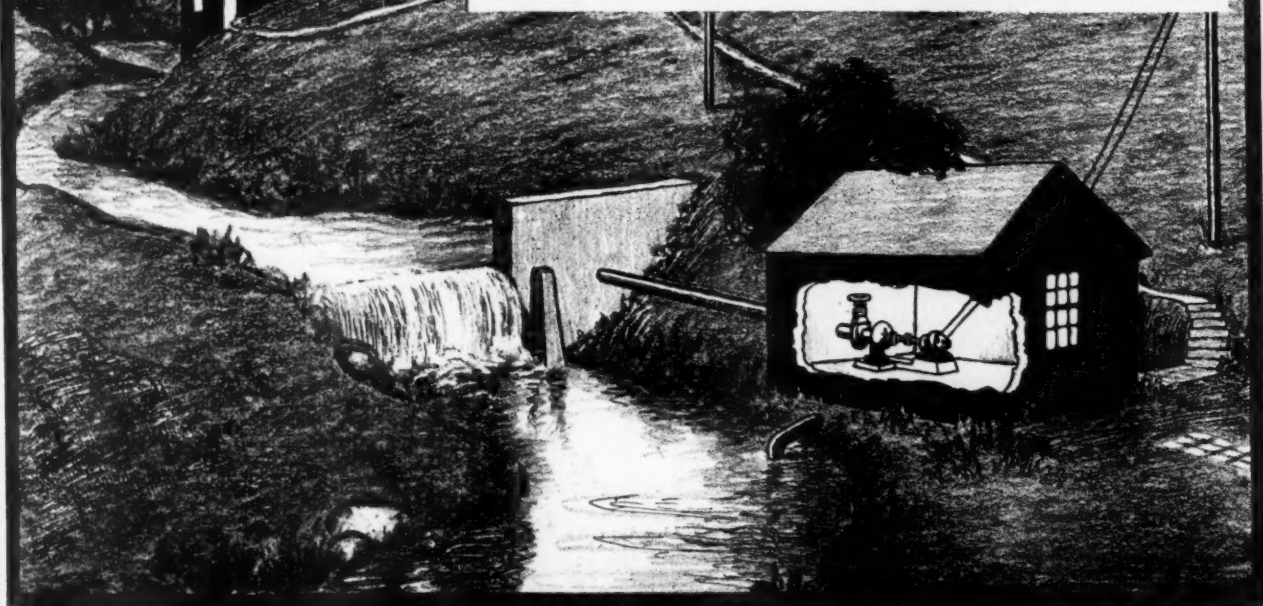

It runs with less water and under lower heads than other types of turbines. An artesian well, running stream, or large spring will operate it.

Many of these plants are in operation. Some supply light and power to fine residences and others to small industrial plants.

Made in standard sizes to generate from 150 to 500<sup>1</sup>/<sub>2</sub> watts. Larger sizes built to order.

# The "Universal Unafflow"

A review of the history of steam engineering will show that there never has been a time when one engine was so predominant over all other engines of similar and other types as the "Universal Unafflow" is over other steam engines being built today. This is because the "Universal Unafflow" principle is an original and novel idea which was patented. This patent with fifty others—many of major importance and all owned exclusively by the Skinner Engine Company—render copying impossible and make it

## Motor-Generator Sets

Automatically controlled  
at  
"Lumber Yard Substation"  
Kingston Coal Co.  
Kingston, Pa.

Generators may operate either in series or parallel, thus delivering 275 or 550 volts as desired.

In this case automatic control seemed desirable but in many cases manual control of both A.C. and D.C. is entirely satisfactory. In most cases an automatic reclosing circuit breaker to restore power to the main line after "shorts" will answer every requirement.

Ridgway M-G sets with liberal synchronous motors are the proper prescription for low power factor lines. Ask for bulletin No. 30.

ESTABLISHED 1892

## Does This Fit into Your Plans for 1925?

WHEN you go to your trade in 1925, what could possibly be sweeter music to their ears than a story of greater net profits! What could possibly have a stronger appeal than a story of reduced service costs!

If such a story for 1925 fits into your plans, by all means investigate the proposition that is being offered today in Master Motors. It is a proposition that deals in cold facts about the elimination of stalled motors; the elimination of burned out windings; the elimination of blown out fuses and many other troubles that "eat away" the profits of your dealers.

If you sell or design electrically driven appliances, the Master proposition will at least prove interesting reading. Write us for it today.

The Master Electric Co.

# POWER SHOW SECTION

THIRD NATIONAL  
EXPOSITION of POWER and  
MECHANICAL ENGINEERING  
EQUIPMENT

December 1st to 6th  
Grand Central Palace  
New York, N. Y.

*Diagrams of Floor Spaces  
and List of Exhibitors  
Given on  
Pages 12, 13 and 14*

Portion of Main Floor just before opening of Power Show last year

## Third Annual Exhibition of Power and Mechanical Engineering Equipment will have broader appeal to A.S.M.E. Members than heretofore.

A.S.M.E. MEMBERS have a two-fold interest in the Third Annual Exposition of Power and Mechanical Engineering Equipment which will be held at the Grand Central Palace during the week of the Society's Annual Meeting, and which will be nearly three times as extensive as when first held in December 1922. Their primary interest lies, of course, in the opportunity it affords for seeing and examining the latest machines and devices developed by leading manufacturers of mechanical engineering equipment, and of meeting in person the engineers and sales executives with whom in many cases they have been corresponding, or have known through previous business relations.

An almost equally important reason for being interested, however, lies in the fact that prominent members of the Society have been consulted in all important matters relating to the manage-

ment of the Exposition; and that the recommendations of its special advisory committee, headed by I. E. Moulthrop, have been followed in every instance where a question of policy or ethics was involved. One important result of this cooperation has been the broadening of activities this year, so that the diversity of exhibits shown; and the range of subjects covered by semi-technical lectures, industrial films, etc., will approximate the wide range of engineering matters in which A.S.M.E. members, as a whole, are interested.

Over three-hundred manufacturers will be represented by exhibits, which will occupy 150,000 square feet on three floors of the "Palace"; and will be arranged in accordance with the floor-space diagrams, etc., shown on the three following pages. These exhibits will include power plant apparatus and accessories, power transmission machinery,

materials handling equipment, heating, ventilating and air conditioning apparatus, refrigerating machinery, machine tools, and machine shop equipment. Specific information regarding many of the exhibits will be found in the accompanying two-color advertising pages.

A new feature of the Exposition this year will be a series of semi-technical lectures on the following topics:

The Boiler Room  
Steam Prime Movers  
Oil and Gas Engines  
Hydroelectric Power Plant Equipment  
Materials Handling  
Modern Machine Tool Developments  
Mechanical Power Transmission  
Mechanical Refrigeration  
Heating and Ventilating

These lectures will be held in the Assembly Hall at times which will not conflict with the A.S.M.E. proceedings; and will be supplemented by visits to the various exhibits of machinery and apparatus touched on in the lecture and discussion. The selection of speakers has not been completed, but every effort will be made to secure engineers of prominence in the respective fields covered. Moving pictures of an industrial or technical character will also be shown, and it is expected that recent "releases" along this line will add greatly to the novelty and interest of the Show.

Aside from its commercial aspect the Exposition offers other distinctive opportunities which, although less obvious, are almost as important in their contribution toward the upbuilding of the engineering industries. Those of our members whose connection with mechanical engineering matters has become highly specialized will find it an enjoyable means of "brushing up" their general knowledge; and of securing a personal contact with more recent developments, regarding which they might otherwise be too much dependent on their engineering associates or assistants.

The younger members, on the other hand, and particularly those who are just entering the engineering field, may readily secure a fund of practical and commercial information which will constitute an important supplement to their recent technical education.

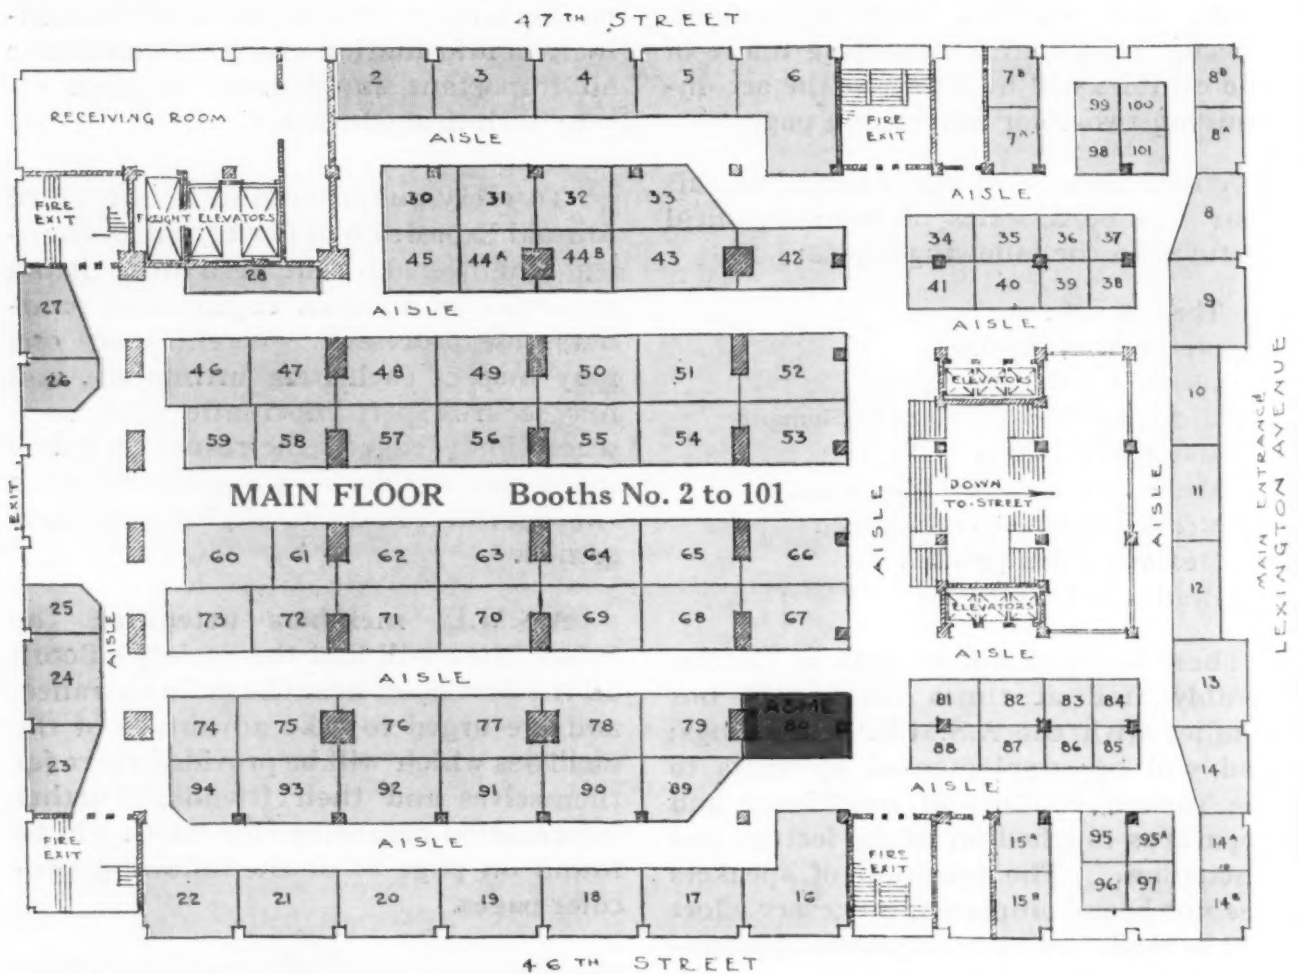

To every one attending it, the Third Annual Exposition of Power and Mechanical Engineering, will be a huge living catalogue of modern engineering products and processes, wherein every one may inspect each item intimately, and may secure expert information from men whose knowledge is the result, in many instances, of life long association with the special phase of engineering concerned.

A.S.M.E. members attending the Power Show will find the Society's Booth on the first floor, near the main entrance, and are urged to take advantage of the facilities which will be provided there for themselves and their friends. Further information regarding this booth will be found on page 94 of the following two-color pages.

# High Operating Efficiency— Low Repair Cost—

Next to safety—these two features should be your first consideration in selecting the boilers that are most suitable for your plant.

## BIGELOW-HORNSBY WATER-TUBE BOILERS

Booth No. 68

### POWER SHOW

Grand Central Palace  
New York

DECEMBER 1 to 6, 1924

A complete model of the Bigelow-Hornsby boiler will be on display, under actual working conditions, showing the circulation of water within the boiler and method of gas flow. There will also be on exhibition full size front course of a Bigelow Horizontal Return Tubular Boiler.

are notable for their excellence in economical steaming.

The scientific design provides for the maximum percentage of direct heating surface, extremely rapid circulation and free steam liberation.

Dry steam at all ratings and high flexibility in meeting all demands promptly are assured.

The gas flow is contrary to the circulation, so that the hottest gases meet the hottest water. The coolest gases are used to preheat the water entering the rear vertical tubes of the boilers. The construction affords ease of access for inspection, cleaning and tube renewals, when required. No tube hand-hole plates or stayed surfaces.

Furnished in units containing from 3750 to 55,000 sq. ft. of heating surface.

Write for illustrated Bigelow-Hornsby Catalog.

Your Invitation  
to see our new  
developments

# Vogt

## DROP FORGED STEEL VALVES AND FITTINGS

THIS is your invitation to become familiar with our most recent developments—a series of Vogt Drop Forged Steel Gate Valves. Their sizes range from 1 to 6 inches inclusive; pressures are to 900 pounds, and they are used successfully for temperatures as high as 1100° F. Valve bodies are machined from one-piece solid steel forgings.

Although Vogt Drop Forged Steel Gate Valves will be the feature of this exhibit, all types and sizes of Vogt Drop Forged Steel Valves and Fittings will be upon display—there will be 231 different valves and fittings.

Vogt representatives shall gladly discuss with you your valve and fitting problems, and explain the advantages of Vogt Drop Forged Steel Valves and Fittings.

The place is the Grand Central Palace, New York City.

## 11½ Years' Service and Still Going Strong!

*G&G Telescopic Hoists are built for quick and efficient ash removal; save time, labor and money*

**A**fter 11½ years' service in Public School No. 61, on East 12th Street, New York City, a Model A G&G Telescopic Hoist is still in first class operating condition.

This was the first G&G Telescopic Hoist installed for the Board of Education of the City of New York in February 1913. Since that time several new electric models have been brought out and today there are eighty four G&G Hoists operating in New York City Schools, 77% being Model E electrically operated Hoists. A recent typical installation is shown in the illustration.

The same sturdy, dependable materials and careful workmanship which went into the Model A Hoist 11½ years ago, characterize the present day G&G models. They are built for rapid removal of ashes, with saving of time and the elimination of unnecessary labor. In the case of the electric Hoists, the amount of current consumed is remarkably low.

If you will tell us the quantity of ashes to be removed daily, distance of lift and something about the working conditions of your plant (submit sketch if possible) we will recommend type of hoist to use and give you the cost. Illustrated booklet on request.

Above: Bethlehem-Weir Regenerative Condenser, the latest development in condenser practice.

Below: Bethlehem-Weir Turbo-Feed Pump. A single-stage centrifugal pump, direct connected to an impulse turbine. For discharge pressures up to 650 lbs.

Above: Bethlehem-Weir "Multiflow" Feed Water Heater. Surface type, using copper tubes as heating surface.

## A dependable unit for every power plant requirement

THE engineer who is selecting equipment for a modern power plant will find that for each of the various auxiliary services there is a dependable Bethlehem-Weir unit that will fill the requirements economically and satisfactorily.

There are Bethlehem-Weir Pumps for every duty, Bethlehem-Weir Condensers, Feed Water Heaters, Evaporators, Air Compressors, and other units, to cover every power plant need.

Each of these Bethlehem-Weir units is conscientiously built of selected materials on a scientific design based on a complete analysis of all the factors involved, and is thoroughly fitted for its allotted work.

Entrusting the auxiliary services in a plant to Bethlehem-Weir Equipment means that all of the auxiliary units measure up to the same high standard, and, because of their capability and long life, contribute measurably to the economy of the plant.

# FAFNIR OFFERS The Key to Power

As long as the shafts and pulleys go around at the necessary speed, some engineers think they are getting all the power that can be asked. Because they will not check up on the difference between their potential power and the actual power delivered, they remain blind to the tremendous reservoirs of power, unused but always available if only they will help themselves, in their own plants.

And it is in the line shafting that most of this untapped reserve is concealed. *Fafnir Ball Bearing Hanger Boxes* are the key with which the executive can unlock this closed door to his reserve if he will. We will hold out this key to you at the Power Show—will you accept it?

# You Will Have an Opportunity to Examine "MONO" BOILER BAFFLES

A tight baffle wall is one of the most important safeguards against heat loss and coal waste.

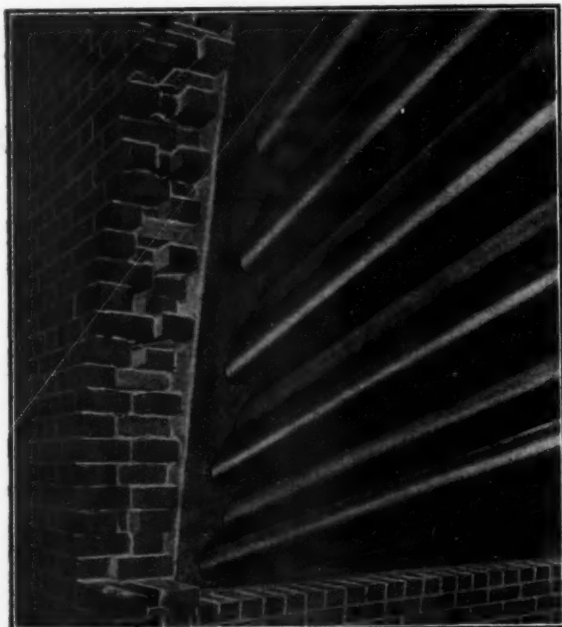

Boiler baffling that is correctly built will force the products of combustion to come in contact with from 90% to 98% of the effective heating surface of the boiler and reduce the temperature of the escaping flue gas to within approximately 50° of the saturated steam temperature and so, from the moment of its installation, increase the value of your coal pile. By extracting the limit of heat units before reaching the flues, proper baffling will make each ton of fuel do its utmost and the heat it produces will be saved.

This is how "Mono" Boiler Baffling will reduce your operating costs.

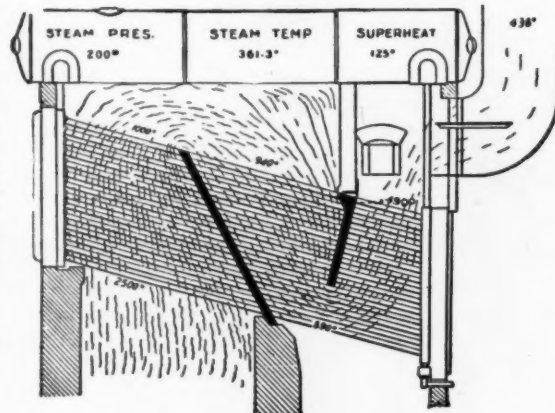

## "MONO" BAFFLES

"Mono" (Monolithic) Boiler Baffling hugs the tubes, no matter at what angle they are set; and it is one piece, no joints, cracks or seams to open up. It can be installed in any position on any boiler and will give maximum efficiency for years.

Tubes may be withdrawn and replaced, or cleaned with air-driven turbine cleaners.

The Illustration above Shows a First-Pass "Mono" Baffle as Seen through an Opening in the Side Wall, Looking toward the Rear of the Boiler. Note the Absolutely Monolithic Construction—the Close Fit around Tubes and against the Walls—and the Entire Freedom from any possibility of Leakage.

"Mono" Baffling will not (unlike other bafflings) crack, spall or burn away.

### Service:

In as much as all boilers are not baffled alike and the baffling on like boilers varies with the service conditions, we earnestly recommend that you consult our engineers before installing or renewing baffles.

Send for our bulletin and list of users. Then ask the man who uses "Mono."

## FLAME BRAND High Temperature Cements

### Blue Flame (Dry) Fire Brick Cement:

Is a carefully compounded high temperature cement made of the highest grade refractory materials obtainable and is especially adapted for the bonding of mason work, building of boiler furnaces, in reverberatory and other types of high temperature furnaces. Blue Flame Cement fluxes on the face of the joints and when fluxed it forms a gas-tight joint.

### Red Flame (Dry) Veneer Cement:

A mixture made from the very best heat-resisting materials and is used as a wash veneer on the face of the fire brick exposed to the products of combustion, prevents infiltration of cold air into the fire box, also the cracking, checking and spalling of fire brick.

### White Flame (Dry) Insulating Cement:

Is used for covering all exposed heating surfaces in Power Houses where high pressure steam is generated and superheat used, such as covering boiler shells, drums, heads, feed water heaters, valves, pipes, fittings, also for insulating purposes between brick work and metal jackets on boilers and retorts, roofs of projected arches and heat treat furnaces.

Write for Bulletin "B" on our line of Flame Brand Refractories.

# BAILEY

## BOOTHS

**See This Chart in Colors at the Power Show  
December 1-6, 1924**

It is a diagrammatic representation of a boiler with superheater, economizer and air heater with forced and induced draft fans to show the application of Bailey Meters.

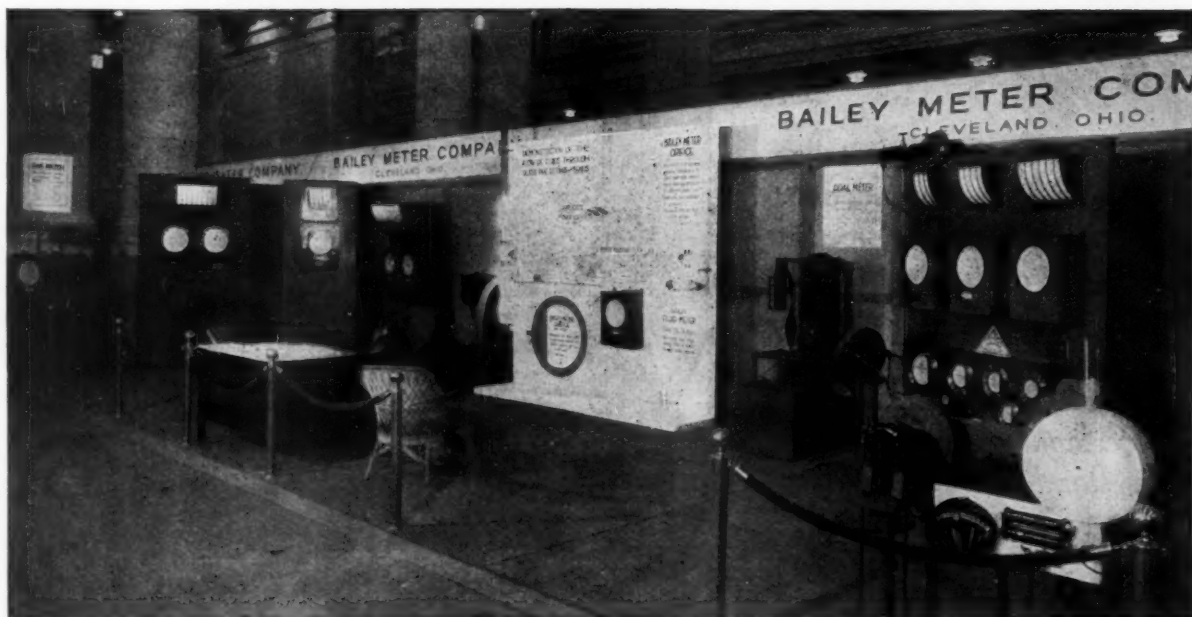

The most important information such as steam flow from the boiler, air used for combustion, stoker or pulverized coal feeder speed, temperature of the gases leaving the boiler, leaving the economizer and leaving the air heater, as well as the air leaving the air heater should be recorded. The temperature of the feed water entering and leaving the economizer as well as the superheated steam temperature are also of sufficient importance to be recorded.

Visit our booths at the power show and not only learn how the above information can be obtained with three Bailey Recorders, but inspect the actual equipment which will give you this essential data for most efficient boiler operation.

**Write for data and information  
on Bailey Meter Equipment.**

# METERS

## 54 AND 55

### Your inspection is invited of the following Bailey Meter Co. Equipment

Bailey Panel Boards upon which will be mounted the following equipment:

Bailey Boiler Meters for Steam Flow, Air Flow, Fuel Feed and Flue Gas Temperature.

Bailey Multi-Pointer Gages for draft, pressure, temperature, speed and other factors.

Totalizing Boiler Meter for double outlet boilers.

Steam Flow Meters.

Gas Meter with Pressure Compensator.

Indicating and Recording Tachometers for speeds varying from  $\frac{3}{5}$  of a R.P.M. to 6000 R.P.M.

Pressure and Temperature Recorders in various combinations.

Meters for coal and other granular material.

The application of the above equipment will be explained by the use of a large chart in color representing a modern boiler installation.

# Selecting Your Boiler Furnace Linings

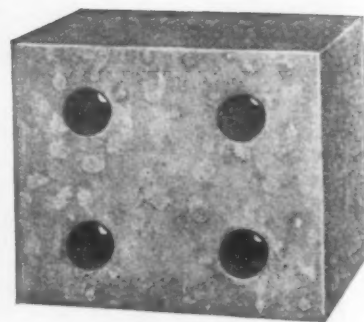

Among over 2,500 installations of the Bernitz Construction, *The Philadelphia Electric Company* is one of the many companies which has selected BERNITZ CLINKER-PROOF SUPER BLOCKS, "*The Permanent Furnace Lining*," as standard equipment for its boiler furnaces. The Delaware and Chester stations are 100% equipped. Since its first order for Bernitz Blocks, this company has placed 48 repeat orders.

Why not select a lining for your furnaces which will *absolutely* eliminate clinker troubles and setting failures? A free and clear clinker zone further assures continuous operation and better combustion in your furnaces.

Our 1924 Edition catalog gives complete information. Bulletin "B-2" describes the Bernitz Super Blocks as adapted to boiler furnaces and bulletin "W.G." as adapted to water gas generator linings. Copies of above publications gladly furnished on request.

Boston, Mass.

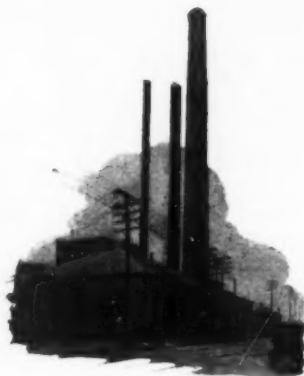

New York Office

350 Madison Ave.,  
New York City

Atlanta Baltimore Chicago Cleveland Detroit Philadelphia Pittsburgh St. Louis San Francisco

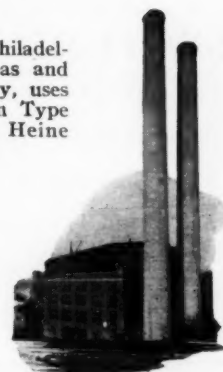

Metropolitan Power Company uses Elesco Outside Header Construction Superheaters in Connolly Boilers

Sandusky Gas and Electric Company uses Elesco Outside Header Construction Superheaters in Connolly Boilers

Cromby Station, Philadelphia Suburban Gas and Electric Company, uses Elesco Convection Type Superheaters in Heine Boilers

## Why these and many other stations are Elesco Equipped

**First:** Multiple pass arrangement insures thorough mixing of steam so that all particles are heated uniformly. This, coupled with a true proportioning of heat-generating surfaces and steam flow areas, produces an unexcelled performance.

**Second:** Most flexible in design. Forged return bends permit units of any length and form necessary to meet all requirements.

**Third:** Only design having minimum steam joints and still maintaining a correct proportioning of steam flow areas and heating surfaces.

**Fourth:** Ball joints have proved most efficient for ease of inspection, ready installation and eliminating necessity of objectionable hand holes.

**Fifth:** Construction permits of minimum draft loss, minimum opportunity for accumulation of soot, and maximum accessibility.

# 92.7% EFFICIENCY

*Overall including boiler, water-cooled  
walls, stokers and economizers  
an outstanding triumph for*

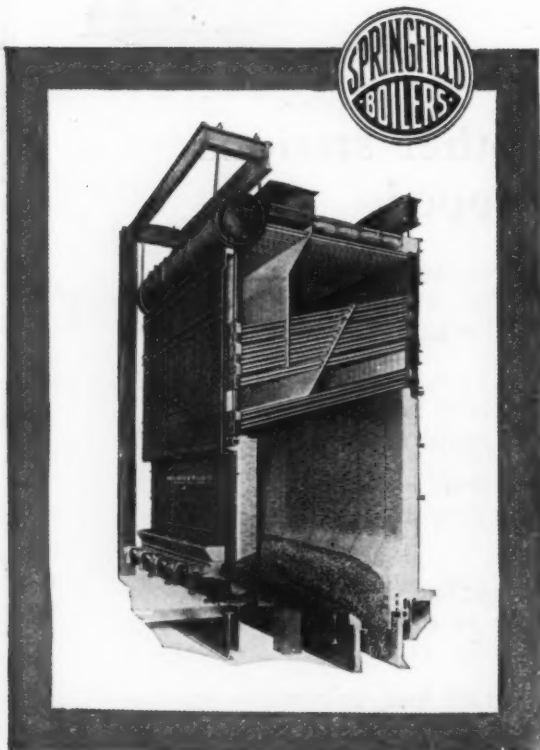

# SPRINGFIELD BOILERS

**SECTIONAL  
ALL STEEL**

**No stay bolts  
No bent tubes**

*Each hand hole covers four tubes*

**All Sizes—All Pressures**

## *at Hell Gate*

Efficiency and capacity results at Hell Gate Station of the United Electric Light and Power Co., New York City, where fifteen SPRINGFIELD boilers are in operation, give ample evidence that their operating principle is sound and scientific and that their mechanical features are correct.

The last boilers installed were equipped with underfeed type of stokers, superheaters, economizers, and water-cooled side walls, and with these units at a recent test an overall efficiency of 92.7% was obtained.

During a recent capacity test, an average rating of 461% was maintained for eleven consecutive hours, and peak of 603% was recorded.

That performance of this high grade is to be expected of SPRINGFIELD boilers is the evident conviction of Engineers who are erecting the largest stations. That they have given satisfaction where used is shown by the large share of repeat orders received by us.

### *Let's get acquainted* *We'll be looking for you at the Power Show*

You'll find our fellows at Booths 274 and 275, on the mezzanine floor next to the open court.

Come and discuss your coal and ash handling problems with them. They'll be there to explain how you can capitalize the advantages of G-W Mechanical Handling Equipment in any plant under your supervision.

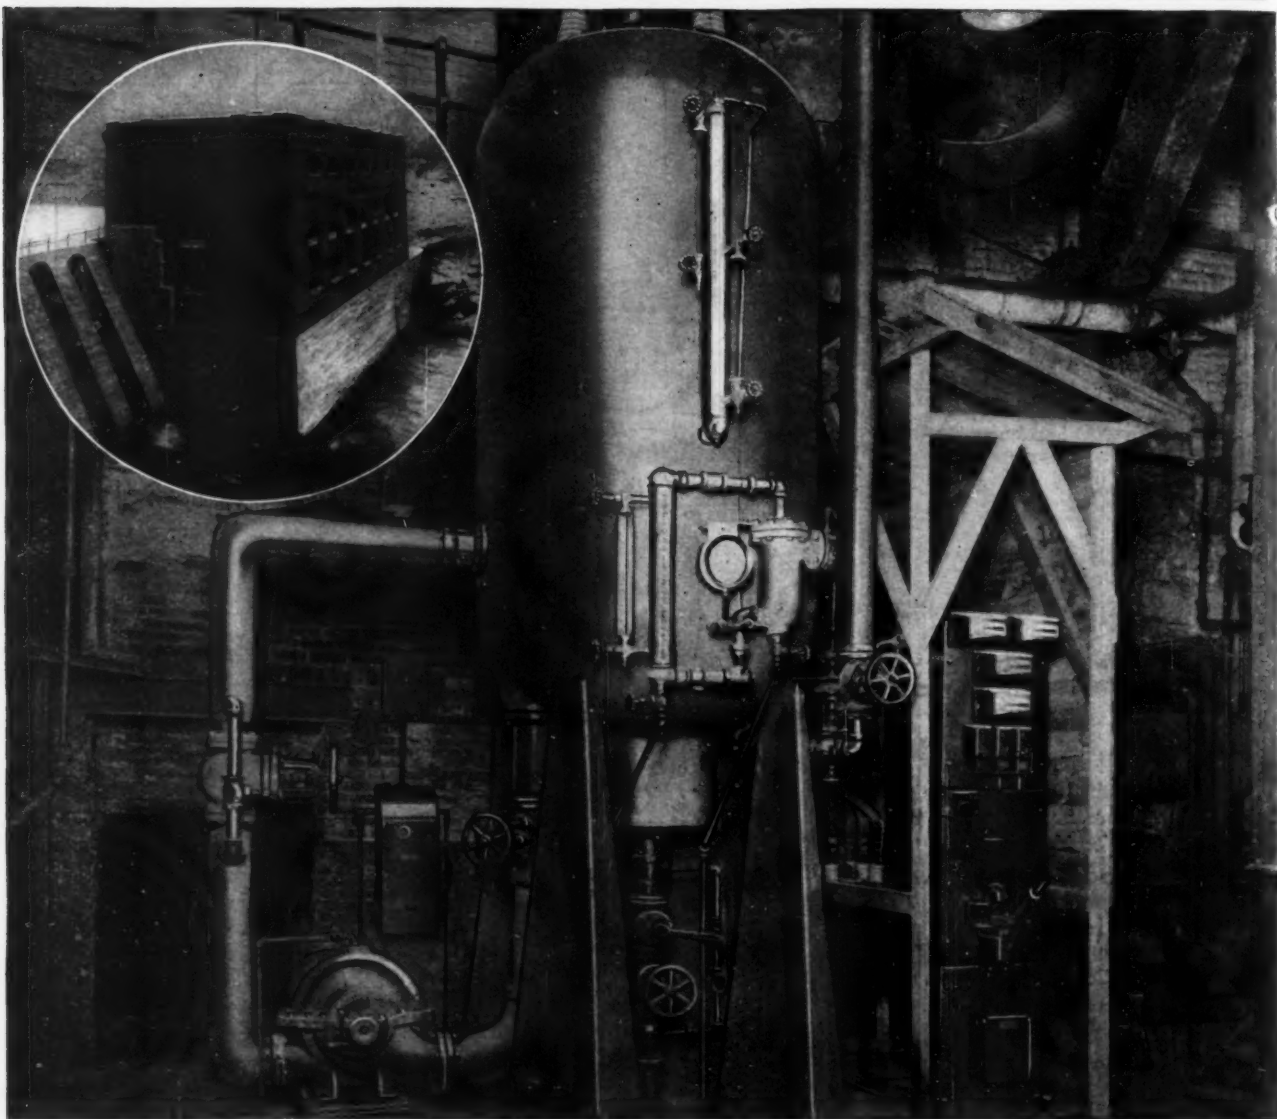

Our engineers have a lot of "brass tacks" information you'll be glad to get—information concerning economies *that have been accomplished* in other plants and many of which can be realized in your own plant.

COME—and get acquainted with the G-W men who are always at your service.

MAIN OFFICE: 18 HILL STREET, HUDSON, N. Y.

# Gifford Wood Co.

## COAL HANDLING EQUIPMENT

## Useful Steam from Waste Water Power

Ask the G-E Sales Office nearest  
you for complete information cover-  
ing your requirements.

**General Electric Company**  
Schenectady, N. Y.  
Sales Offices in all Large Cities

The G-E Electric Steam Generator makes possible the maintenance of a steam supply sufficient for night and holiday demands without operating the main boiler plant.

Utilizing as it does water power which would ordinarily be wasted, the G-E Electric Steam Generator effects a substantial reduction in operating expenses.

G-E engineers will be glad to show you how to obtain full value from your power plant by installing this equipment, which can be furnished in capacities up to 30,000 kilowatts.

43B-450

# GENERAL ELECTRIC

# G-E Small Turbines

## And you get more than just the Turbine

That is, you do if you belong to the big family of *G-E Turbine* users. You get the advantage of a nation-wide engineering organization.

It is desirable to have experts within easy reach to consult about matters of turbine operation. You can call in G-E Turbine specialists anytime. And they understand the problems.

Therefore, specify G-E Turbines. Specify them for driving your auxiliaries too—pumps, exciters, etc. In other words, take advantage of this G-E engineering assistance, which is at your command.

# Boiler Furnace Economies

If you are trying to keep down expenses—and all good engineers are—you certainly ought to have the STEEL MIXTURE Bulletins in your desk. They are full of practical engineering data which you can develop into actual cash savings in furnace upkeep. Mail the coupon below and be ready to save on your next furnace lining renewal.

Boiler-Door  
Arches and  
Fire-Box Blocks

STEEL MIXTURE Boiler-Door Arches, Fire-Box Blocks, Veneer Lining and other specialties cost less because they last longer and are *easier to install* than ordinary fire brick. Shorter shut-downs; less trouble. One STEEL MIXTURE Block equals 9 to 39 fire bricks; less labor to handle and only 1/6 to 1/3 as much joint surface next to the fire. Blocks for your particular furnace are factory-assembled, inspected, numbered, and shipped with key diagram for easy assembling. These and other STEEL MIXTURE Refractories (see coupon) are fully described in the Bulletins. Check the ones which interest you and—

*Mail the Coupon*

# TWO STEAM TRAPS FREE !

That is literally what you get when you install the Sarco. For you can purchase *three* SARCO Steam Traps for the cost of one of the "float" or "bucket" type. And a Sarco will do exactly the same work of the larger, more cumbersome, more costly makes.

The Sarco costs about one-third the price of others because we do away with complicated, unnecessary levers, gauges, packing, stuffing boxes and the like, which cost money.

## STEAM TRAP SARCO

is a small, simple steam trap with only one moving part. Has no parts getting out of order or requiring frequent repair.

It can be placed anywhere on the line, at any angle. Saves floor space. Saves building a platform or digging a pit.

The Sarco is sold with the distinct understanding that it will automatically drain condensate without loss of live steam—that it will do all any other non-return trap will do. Then why pay three times the price of the Sarco, especially when you can try the Sarco for 30 days without cost to you and return it if not satisfactory.

*Booklet E-3 and full particulars on request. Write today.*

## "NORMA"

### PRECISION BALL BEARINGS

#### *For High-Speed, High-Duty Performance*

Where the utmost of serviceability must be had under long-continued operation at high speeds—there is the recognized place of "Norma" Precision Bearings in the machinery world. Proved by the tests of time and service, they have been progressively bettered to meet ever harder conditions—rather than cheapened to meet low-price competition. They are daily demonstrating their superlative dependability in hundreds and hundreds of thousands of high-speed, high-duty machines where the failure of a bearing would mean losses a thousand times the cost of the original bearing equipment.

## "HOFFMANN"

### PRECISION ROLLER BEARINGS

#### *For heavy Loads and Hard Service*

Speed qualities equal to those of the best ball bearing, combined with a steady load capacity far beyond that of any ball bearing and a temporary overload capacity which no ball bearing has—these distinctive features suggest the field for "Hoffmann" Precision Roller Bearings in the mechanical industries.

Where the duty is hardest and the operating conditions most difficult and the necessity for stand-up-ability the greatest—there do "Hoffmann" Roller Bearings reveal their true value and return the dividends which justify their use. Made in standard and self-aligning types, for all speeds and powers.

PRECISION BALL, ROLLER AND THRUST BEARINGS

# BEARINGS

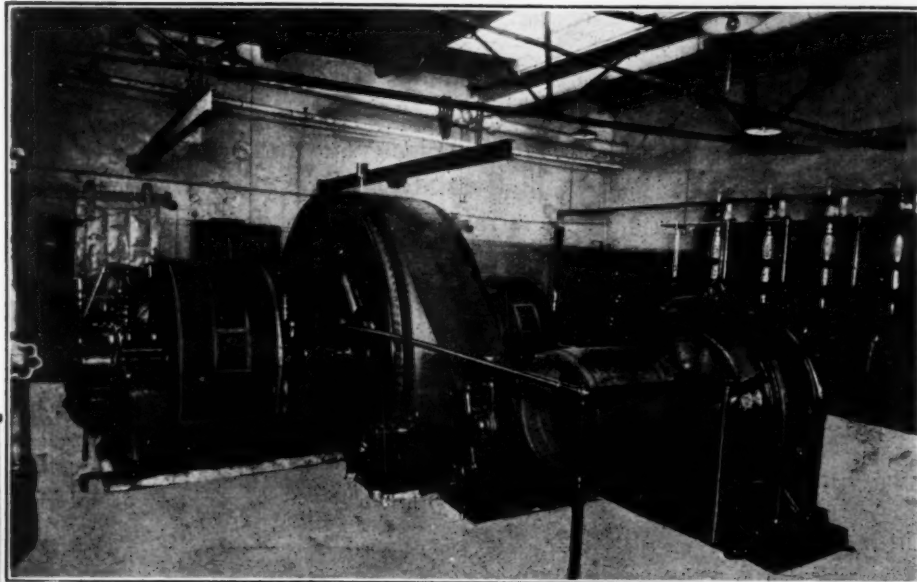

# 25% More Power from the Same Gas Engine

Saved—  
31 feet of  
floor space

Saved—  
62 feet of  
belting

## Five Points:

- 1—The Lenix increases the arc of contact between belt and pulley.
- 2—The Lenix maintains constantly and accurately the proper tension in the slack side of the belt.
- 3—The Lenix saves floor space, building space and belting because of freedom in pulley locations.
- 4—The Lenix saves in bearing friction, lubrication and renewal of bearings because of reduced bearing pressure.
- 5—The Lenix permits the use of less expensive, high speed and high efficiency motors or generators because of the higher pulley ratios.

300 HP Gas Engine driven Alternator  
Engine pulley 114" diameter, 31" face,

Alternator pulley 27" diameter, 27" face.  
Pulley centers 10 feet.

This increase in the capacity of a 300 H.P. gas engine driven alternator is one of three highly important benefits derived by a western power company from the installation of a Lenix Drive. That company needed space for an additional unit. The Lenix reduced the floor space of 41 feet of the original layout to 10 feet. The space reduction of 31 feet enabled them to place the new unit in the same engine room. The cost of the addition to the building was saved. The new belt is approximately 62 feet shorter than the original belt and this saving in belting was more than sufficient to pay for the Lenix.

*In the words of the general manager of the power company,*

*"We were able to shorten our belt centers approximately 31 feet; this has meant a great saving to us in room and permitted room for an additional unit. The drive has also been very helpful by eliminating belt slippage and belt trouble generally and increasing the capacity of the unit about 25%. It has also increased the life of our belt and we are highly pleased with the operation of this drive from that standpoint as well as the saving of space."*

The Lenix will be exhibited at the Power Show, December 1-6 at Booth 281-2 on the Mezzanine Floor. There will be a visual demonstration by the stroboscopic method of the elimination of belt slippage and increase in capacity of the Lenix short center belt drive over the ordinary open belt drive. Everyone interested in the transmission of power from one unit to another should see this demonstration and all who visit the Power Show are cordially invited.

## CAST STEEL GATE VALVES

# CURTIS ENGINEERING SPECIALTIES

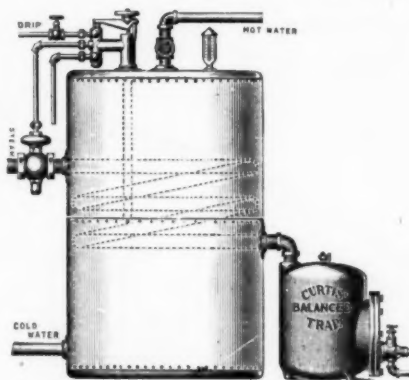

THE CURTIS IMPROVED  
DAMPER REGULATOR

The plunger is operated by steam direct from the boiler, and the whole pressure in the boiler is therefore available to operate the damper if needed. In practice, only enough pressure is used to lift the weight, usually not more than ten pounds to the square inch on the plunger.

The motion of the damper will begin to change from one direction to the other on a minimum variation of steam pressure. We guarantee a saving of ten per cent of the fuel over the best hand regulation, and it often reaches fifteen per cent.

CURTIS  
TEMPERATURE REGULATOR

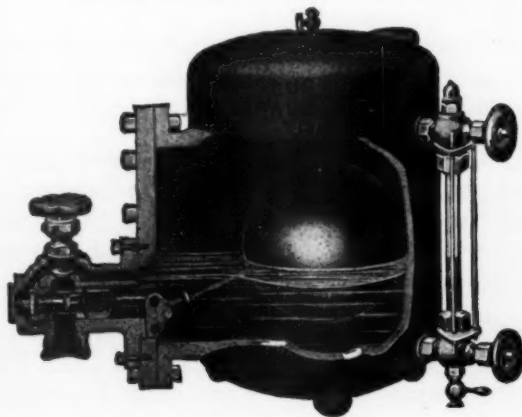

Controls any temperature from 0 to 300° F. Adapted to hot-water supply for hotels, baths and restaurants, public buildings, school houses, hospitals, dry rooms.

TYPE G STEAM  
PRESSURE REGULATOR

A new departure in the self contained type of Pressure Regulating Valve practice. All the internal working parts can be removed while the Valve is in the pipe line, including seats and mountings. These parts can be quickly replaced, making it very accessible, convenient and economical for overhauling or repairs.

CURTIS BALANCED STEAM TRAP

A perfectly balanced and practically frictionless valve. The valves can be removed without breaking a joint, starting a gasket, or taking out a bolt. Will operate perfectly on high or low pressure.

CURTIS DIAPHRAGM  
AND LEVER REGULATOR

Designed to control initial pressures up to 200 lbs. and reduced pressures from 0 lbs. to 30 lbs. It is particularly adapted to conditions where the initial pressure varies considerably, or may drop to or below the reduced pressure.

*All Curtis Engineering Specialties are shown in Catalog No. 53.*

# "Stream-Line Flow" Non-Return Valve

for  
High Pressure  
High Temperature  
Service

## Outside Indication

An indicator of the working of a Non-Return Valve is a most desirable arrangement. It furnishes an absolute check upon the condition of the Valve.

The Class "XD" Elliott-Lagonda Non-Return Valve uses an outside dashpot, with balancing and indicating arm. The arm at all times shows the position of the disc; the disc cannot move without the indicating arm being correspondingly raised or lowered.

The Class "XD" Valve has many features of design which are interesting and effective. The "Stream Line Flow" design makes for minimum pressure drop through the Valve. There are no corners or pockets; a venturi opening between seat and disc; moving parts partially balanced, not requiring support by the steam flow.

Built of high grade materials with ample factor of safety. Designed for high pressure, high temperature service.

Ask for Bulletin S-5.

### At the Power Show

Elliott Company will have on display a representative showing of Elliott-Ehrhart Condensing Equipment, including cut-out models of Air Ejectors. A De-aerator will be displayed and water samples will be examined for oxygen content. Cut-out models will show the construction of Elliott-Lagonda Non-Return Valves, Faber Blow-off Valves, Strainers, and other products will be thoroughly covered.

You are welcome at our booths.

CRANE PIPING WHICH SERVES THE MAIN POWER UNIT IN THE WATERVLIET PAPER COMPANY MILLS, WATERVLIET, MICHIGAN. MR. CHAMBERLAIN IS CHIEF ENGINEER OF THIS PLANT

## WHERE GOOD PIPE-LINE ENGINEERING BEGINS

This huge engine gets no wet steam. Even slugs of accumulated condensation are held back by the Crane steam separator above it.

A thinking engineer has made the 18-inch separator serve another important function. By placing it in the horizontal span of the supply piping, he takes advantage of its volume to absorb any vibration in the piping. He mounted the lubricator on the separator too, so that the oil becomes thoroughly mixed with the steam be-

fore it reaches the cylinder. A provision of convenience which is appreciated by any operating engineer is the location of the wheel of the geared throttle-valve beside the exhaust valve.

Yet good design is not all. The special features of this installation are insured for their full value by the use of piping materials of proved quality. Here, as in thousands of other well-designed plants, Crane quality in valves, fittings and pipe bends satisfies every requirement of strength and durability.

Units of  $\frac{1}{4}$  to 3 H.P. are carried in stock in a variety of ratios. They are of compact and simple construction affording an economical means of obtaining an efficient reduction in a small space.

## SINGLE AND DOUBLE HELICAL GEARS

These Helical Gears are of the same general specifications as our standard spur gears. They can therefore, be operated on the same shaft centers and will be found to be an ideal drive where high speed and smooth operation are necessary.

## RENOLD-BOSTON SILENT CHAIN DRIVES

1 to 30 H.P. carried in stock  
Larger sizes made to order

Under ideal conditions the efficiency of "R-B" Drives is 99.5%, and even under commercial conditions the efficiency will approximate 98% without appreciably diminishing throughout their life.

*Note the chain construction:*

The case hardened segmental bush  
The case hardened and ground rivet  
The large rivet diameter  
The 140° bearing surface maintained throughout chain life  
The ground link faces  
The extremely simple riveted joint

Nearly 3000 sizes "BOSTON GEARS" carried in stock at  
20 DISTRIBUTING POINTS

No. 931 Spring type for Control of Liquids. Complete as you see it here, and ready to be installed.

*Illustration of Fuel Oil Burning Equipment carrying a No. 931 Sylphon Temperature Regulator Installation at the Providence Dye & Bleach Works by Petroleum Heat and Power Co.*

## Sylphon adds the safety factor to this mammoth fuel oil job

**I**NSTALLED on the Secondary Heater, a Sylphon Temperature Regulator adds a great factor of safety, and by automatically regulating the temperature of the oil at 150° to 160°F (normally), delivers it at the most efficient atomizing temperature.

On an oil supply tank, a Sylphon Temperature Regulator, by automatically regulating the oil to a temperature (normally) of 100° to 110°F, safeguards against the generation of gases in the tank, makes for easy pumping and big steam savings.

### *The secret of the accurate Sylphon control is the Sylphon Bellows*

This bellows, in the head of the instrument, is drawn from a flat sheet of metal, *without soldered seam*. Complete in one piece, and so sensitive to the slightest change in temperature that it (by being expanded and contracted) always opens or

closes the valve in the steam line, thus maintaining the desired temperature in the secondary heater and storage oil tank.

# "PENNSYLVANIA"

The "PENNSYLVANIA" ARMORFRAME embodies the accepted Single Roll principle of Coal Crushing, in unbreakable STEEL CONSTRUCTION

Coal Crushers for Central Stations, Gas Works and Industrial Power Plants, deserve the same engineering scrutiny, independent of other equipment, with which the principal units of modern Power Plant apparatus are selected.

*What is more fundamental than a crusher that will deliver an uninterrupted supply of properly prepared coal?*

Patented

"PENNSYLVANIA"

ARMORFRAME CRUSHER

Patent pending

The "Pennsylvania" ARMORFRAME with side housings of 30" Bethlehem girder beams, is the notable achievement of more than 30 years of Single Roll Crusher development.

An unbreakable frame, combined with spring controlled breakerplate and steel shear pin safety device affords triple tramp iron protection.

This powerful fabricated construction, cast steel bearing housings, die cast interchangeable bushings and patented segmental roll have been successfully combined to afford the unfailing coal crusher reliability, so long desired by engineers and operators for this exacting service.

### SKAYEF REEPLACE BOX

Designed to meet conditions where it may be impractical to remove present hanger frames

Fits regular hanger frames of corresponding size

1. It is securely clamped to shaft by means of taper adapter sleeves and lock nuts—No play between shaft and sleeves.
2. It takes care of shaft contraction and expansion.
3. It requires no bearing adjustment.
4. It keeps dirt out and lubricant in.
5. It possesses the maximum in flexibility and adaptability though it is not self-aligning.

THE Skayef Self-Aligning Ball Bearing Hanger illustrated below has been used in numerous industries in practically every country throughout the world and has achieved undisputed supremacy by over fourteen years of satisfactory service. It is the only ball bearing hanger which possesses within the bearing itself, the true self-aligning feature.

## SIMPLEX BOILER FEED METERS

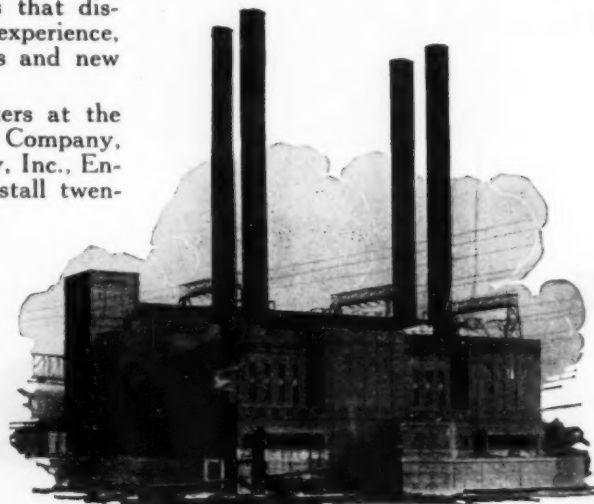

THE best evidence of the merits of a device is that discerning engineers and users, after some years' experience, select the same apparatus for future extensions and new installations.

After four years' experience with Simplex Meters at the Colfax Power Station of the Duquesne Light Company, Cheswick, Pa., (Dwight P. Robinson & Company, Inc., Engineers and Constructors), it was decided to install twenty-one more of the same type in the extension to this plant, making a total of fifty-five Simplex Meters in this one station alone.

Simplex Meters indicate, record and register the flow of boiler feed water. Their record of many years of satisfactory service in the leading power plants in the country warrants their adoption for your boiler room.

The daily chart records are of special value in checking results obtained under all service conditions and are indispensable to proper supervision.

*Let us explain in detail how they can serve you.*

# SILENT CHAIN DRIVES

75 H.P. Morse Silent Chain Driving from motor to line shaft.

## Transmitting power 98.6% efficiently under heavy service conditions

In plants where large amounts of power must be transmitted under severe operating conditions, Morse Silent Chain Drives have conclusively established their trustworthiness.

They transmit 98.6% of the developed motor horsepower year in and year out, and sustain this efficiency thruout the life of the drive. They do not slip, chatter or wear with age, and are sufficiently flexible and elastic to absorb or cushion all shocks and jars due to starting, stopping or sudden overloads. They protect bearings, motor armatures and other rotating parts against the excessive wear and tear customarily experienced with other forms of drive.

Morse Chains maintain steady uniform sprocket

and chain speeds, permit a high ratio of speed reduction in a single drive, and can use standard speed motors to operate machines at the most desirable speeds.

Morse Silent Chains may be operated on short or long centers as most convenient. They run slack and therefore without excessive journal friction, and may be used in hot, cold or damp places without deterioration. They require only little lubrication at infrequent intervals.

Let Morse Engineers tell you more about these 98.6% efficient drives and the unusual economy they always give under severe operating conditions.

Be sure to visit our Booth No. 265 at the Third National Power Show, Grand Central Palace, Dec. 1 to 6 inclusive.

in Booth 32 Power Show Dec. 1st to 6th  
Grand Central Palace, New York

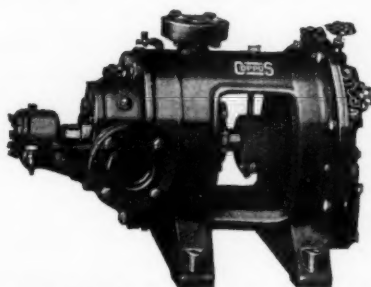

showing the latest and most approved  
Coppus Power Plant Auxiliaries,

described in  
brief below. And  
our engineers  
will gladly tell  
you more.

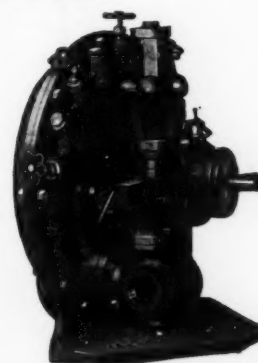

Type C Coppus Undergrate  
Blower

If you fire by hand, a Coppus Type "C" Blower in your boiler wall will show a marked fuel saving and insure a higher steaming capacity and steady pressure. Takes no floor space.

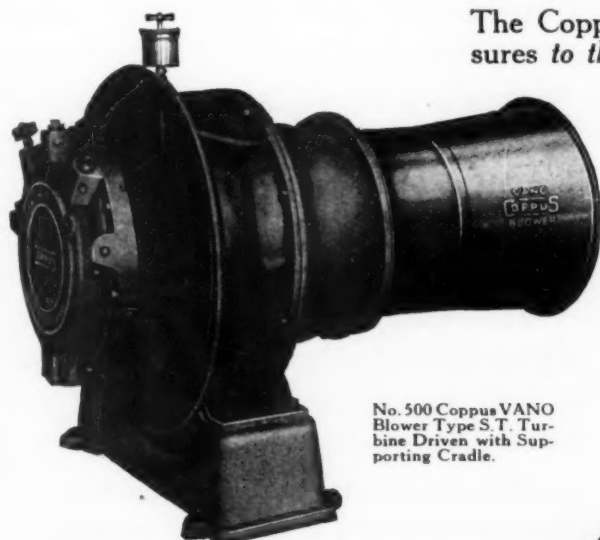

Type T.B. Coppus Centrifugal Boiler-Feed  
Pump, Multi-Stage

The Coppus Turbo Feed Pump insures to the small and medium sized plant the high efficiency, even feed pressure and other advantages resulting from the use of centrifugal feed pumps.

Type T.C. Coppus Steam Turbine. 2 row velocity stage impulse type up to 50 brake H.P.

For auxiliary drives, where electricity is not available nor desirable, the Coppus Steam Turbine is most satisfactory and efficient.

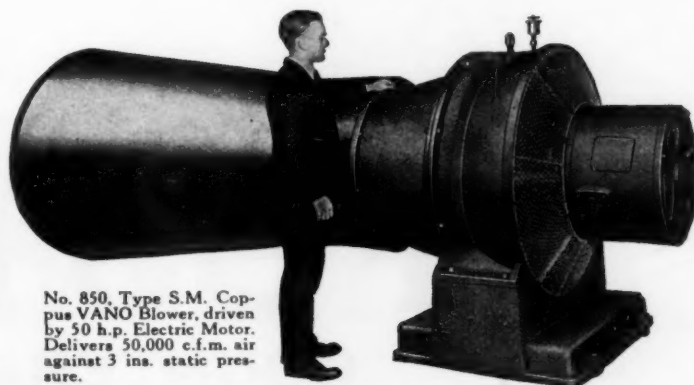

No. 500 Coppus VANO  
Blower Type S.T. Turbine Driven with Supporting Cradle.

For Mechanical Stokers and Induced Draft, the Coppus Vano Blower is the most efficient made.

It combines the advantages of the centrifugal and propeller blower and is admirably adapted for either direct motor or turbine drive.

Made in all sizes and for all pressures.

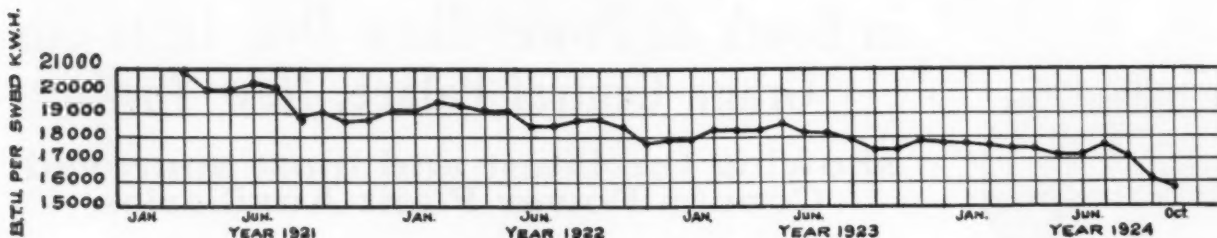

No. 850, Type S.M. Coppus VANO Blower, driven by 50 h.p. Electric Motor. Delivers 50,000 c.f.m. air against 3 ins. static pressure.

Obtain a full set of Coppus Bulletins—at our Booth or by mail. Ask us about your particular problem.

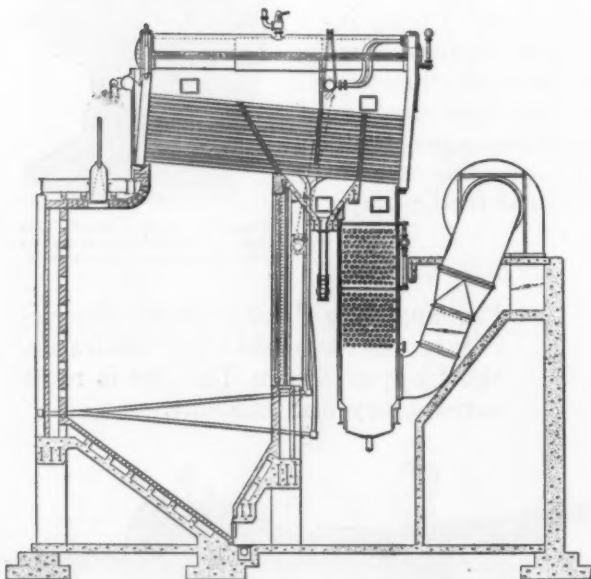

Coppus Engineering Corporation, 342-46 Park Ave., Worcester, Mass.

# Lakeside's new

The above curve shows how the Lakeside efficiency has gradually improved throughout the four years of operation. The decided increase in efficiency, beginning August 1924, occurred when the new installation of Radiant Heat Superheaters and Foster Economizers was first put into operation.

Combined Foster Superheater-Economizer installation at the Lakeside Plant of the Milwaukee Electric Ry. & Lt. Co.

The results of the acceptance tests on the economizer show how Foster equipment is helping Lakeside—as well as thousands of other plants—to generate power economically.

In these tests, the Foster Economizers increased the feed water temperature more than 110°F., and reduced the flue gas temperature over 320°, representing a fuel saving of between 9 and 10 percent.

The Foster Radiant Heat Superheater, at Lakeside and in many other installations as well, has established itself as an unqualified success.

This unique type of superheater, the latest development of Foster pioneering, is installed as part of the furnace wall.

# FOSTER

# ECONOMIZERS

# record—

## 15795 B.t.u. per Kilowatt-hour

"For the month ending November 10, Mr. John Anderson, Chief Engineer of Power Plants of the Milwaukee Electric Railway & Light Co., reports:

I am very pleased indeed to report this month the following station statistics:

B.T.U. per switchboard kw. hr.—15795

Boiler efficiency during steaming—91.64%

Boiler Room efficiency plus banking—89.31%

It is equipped with the rosette type of soot blower, which provides for the absolute control of the amount of superheat, and by use of these soot blowers, constant superheat is obtained at all loads. Its location in the furnace setting protects the brickwork and reduces furnace maintenance.

The Lakeside record, and results in other plants amply prove the efficiency and durability of this type of equipment.

## EDWARD VALVES

**E**FFICIENCY, the keynote in modern generating station design, must be provided in valves to the same extent that it is found in turbines and other major apparatus. It is found in valves only when skill and knowledge are constantly directed toward the perfection of design and construction. The choice of Edward Valves for most of the large power plants operating at the higher pressures and temperatures is a worth-while indication of their ability not only to meet the efficiency demanded, but to set new standards.

# Decided Savings in Operating Cost— will follow the proper regulation of operating pressures

Economical Operating Pressures will be easily maintained after your plant is equipped with

## MASON REGULATORS

Our experience gained during the forty years devoted to the development and manufacture of automatic pressure regulators is at your service.

**Mason Standard  
Reducing Valves**

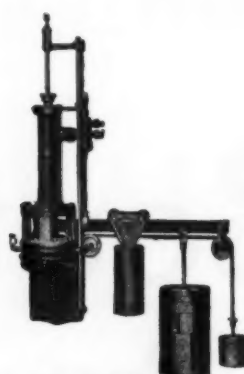

Reduces and maintains even pressure of steam and air regardless of the variation of the initial pressure or of the volume of steam and air required. Sizes  $\frac{1}{2}$  in.-2 in. bronze body. Sizes  $2\frac{1}{2}$  in.-10 in. iron body, bronze mounted.

There is always an efficient point at which reduced steam, air, water, oil and other service pressures should be carried. Any irregularity or deviation from this fixed pressure is waste.

**Mason Boiler Feed Line  
Regulator**

For controlling steam-driven boiler feed pumps. Size  $\frac{1}{2}$  in.-1 $\frac{1}{2}$  in. bronze body. Size 2 in.-4 in. iron body, bronze mounted.

**Mason Hydraulic  
Damper Regulator**

Assures accurate regulations of boiler pressure—Double Acting—positive movement and actuated by water pressure in both directions. Equipped with  $2\frac{1}{4}$  in., 3 in., 4 in. and 5 in. diameter operating cylinder.

**Mason Pump Regulator**

For controlling the discharge pressure of steam-driven pumps—10 to 150 lb. pressure. Sizes  $\frac{1}{2}$  in.-1 $\frac{1}{2}$  in. bronze body. Size 2 in.-4 in., iron body, bronze mounted.

The economy and efficiency of your plant demands unfailing reliability in pressure control. Only by automatic and scientific regulation can this absolute control be assured. Uncertainty is eliminated.

*Visit our booth at the Power Show.  
See our regulators—talk with our  
engineers about them and your problems*

Dealers in all principal cities carry Mason Regulating Devices in stock. The full line is described in our 200-page catalog, a copy of which will be mailed on request.

Buy through your dealer.  
Write to us for technical catalog.

**MASON REGULATOR CO.**  
Adams & Medway Sts., Boston, Mass.

# How a California plant has eliminated boiler cleaning

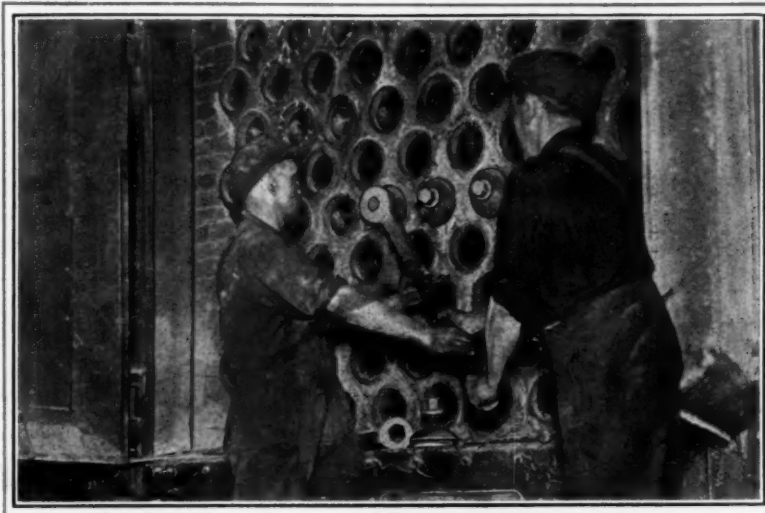

**T**HE chief engineer of a certain Los Angeles manufacturing plant was troubled for many years by boiler scale. He had a hard problem to contend with because his water supply came from a deep well and contained a lot of scale-forming minerals. In addition his 350 H.P. Hawkes boiler was operated at high rating on shavings for fuel, and the hot spotty fire was continually burning out boiler tubes.

Scale formed so rapidly in the tubes that it deposited  $\frac{1}{8}$  inch thick in two weeks' time, causing frequent turbinizing, which had to be done on Sundays. Boiler compounds of various kinds were unable to overcome the difficulty.

Realizing that boiler repair and maintenance was costing entirely too much and that the water supply was at the base of the trouble, the chief engineer got in touch with The Permutit Company, water conditioning specialists.

The water was analyzed, operating conditions carefully studied and upon their recommendation two Permutit Water Softeners were installed. These were four feet six inches in diameter and delivered 16,800 gallons of absolutely soft water in 24 hours. That was in February, 1923. On August 22, 1924, the company wrote us as follows:

"We were having a great deal of trouble from boiler scale, and found it necessary to wash the boiler once a week, with loss of time due to tube replacements and such. Since installing Permutit Equipment we have had no scale, and much more soft water than we were promised. The replacement of tubes and other boiler repairs has been steadily decreased, while the operation of the boiler and plant has been 100% more efficient. Permutit has solved our boiler scale problem, and we are glad to recommend it to those who are having this trouble."

***IF you are troubled with boiler scale, if you want to put an end forever to boiler cleaning, tube replacements and repairs, read this page.***

*Is this a familiar scene in your plant? It should not be. With proper equipment you need not open your boilers from one year's end to another—except for inspection.*

The story told in this letter is a common one. It has been repeated in hundreds of plants all over the country, from big central power stations to little 50 H.P. heating boilers. No matter whether you operate a large plant or a very small one, there is a type of Permutit Softener that will solve your problem.

It will pay you to know more about this subject of water supply—to learn what the experience of other chief engineers has been. Our booklet, "Reducing Fuel and Boiler Plant Operating Costs" covers the subject fully. It is authoritative and answers many of the day-to-day problems you meet in your work. Return the coupon below for a free copy today. There is no obligation.

**The Permutit Company**  
440 Fourth Ave. New York

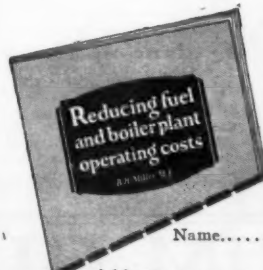

See our exhibit at the Power Show, Grand Central Palace, New York, December 1st to 6th, 1924. Booth No. 3.

**T**HE Permutit Company are the largest specialists in water conditioning, the only firm that makes all types of water treating equipment, including both rapid and slow regenerating softeners.

Zeolite water softeners were introduced and developed in the United States by The Permutit Company, and today their installations cover every state in the Union, and every county in many states.

A special research laboratory and staff are maintained for solving the technical problems that arise in connection with industrial water softening. No plant is so large or so small but that there is Permutit apparatus to fit its needs.

*Why  
lubrication  
is important  
to plant  
executives*

## Here is specific oil for specific economies

### *Why is Gargoyle Cylinder Oil 600-W the most widely known steam cylinder lubricant?*

Because through sheer merit of service over a period of 47 years, it has become the standard of comparison among steam cylinder oils. As a result, it is endorsed by users and engine builders everywhere. Today, there is more Gargoyle Cylinder Oil 600-W sold throughout the world than any other brand of cylinder oil on the market.

### *What qualities earned this reputation?*

Its ability to (1) atomize readily over a wide range of steam pressures and temperatures; (2) readily adhere to wet surfaces; (3) prevent leakage of steam past piston and rod packing; (4) clean working parts when it is first introduced; (5) to lubricate without causing char and carbonization.

These qualities result from refining the highest quality crudes by the Vacuum process.

### *Do physical tests determine these qualities?*

No. Specific gravity, cold test, flash point, viscosity, and other laboratory tests are not true indications of its lubricating value. The only real test of steam cylinder oil is whether or not it will give the desired results in actual service. Gargoyle Cylinder Oil 600-W so tested will always form a lubricating film between rubbing surfaces and prevent leakage of steam past valves, pistons and rod packings.

### *What are the dollars and cents benefits to an operator of steam engines using Gargoyle Cylinder Oil 600-W?*

Insurance of uninterrupted operation; lower production costs resulting from a decrease in the amount of power required to operate; and lower cost of lubrication through the small rate of feed required. A typical example of the latter:

Careful comparative tests carried out on a horizontal slide valve engine, showed the following comparative results using different qualities of steam cylinder oils.

	Frictional Load	Oil drops per minute
No lubrication	22% of rated h.p.	0
Ordinary cylinder oil	18% " " "	10
Better grade cylinder oil	16% " " "	4
Gargoyle Cylinder Oil 600-W	11% " " "	2

The Vacuum Oil Company has other grades of Steam Cylinder Oils which provide for a wide range of operating conditions. However, before prescribing the correct oil for you to use, we always study the mechanical and operating conditions of your steam engines. Write to our nearest branch listed below.

#### **Domestic Branches:**

New York (Main Office)	Detroit	Peoria

Dallas	New Haven	Springfield, Mass.
Des Moines	Oklahoma City	St. Louis

#### **THE LUBRICATION AUDIT**

Here is a condensed outline showing how the Company's knowledge and experience is brought to bear on individual plant problems:

**INSPECTION:** A thoroughly experienced Vacuum Oil Company representative cooperates with your plant engineer or superintendent in making a careful survey and record of your mechanical equipment and operating conditions.

**RECOMMENDATIONS:** We later specify, in a written report, the correct oil and correct application of the oil for the efficient and economical operation of each engine and machine.

*This report is based on:*

- 1 The inspection of the machines in your plant.
- 2 Your operating conditions.
- 3 Our 58 years of lubricating experience with all types of mechanical equipment under all kinds of operating conditions throughout the world.
- 4 Our outstanding experience in manufacturing oils for every lubricating need.

**CHECKING:** If, following our recommendations in this Audit, you install our oils, periodical calls will be made to see that the desired results are continued.

FOR THE ABOVE FREE SERVICE address our nearest branch office.

# 15,795 B. t. u. per Net K. W. Hour —Another Record for Lakeside!

A new and interesting booklet describing Lakeside, the World's Most Efficient Steam Plant, will be distributed by this Company at the

**POWER SHOW**  
Booths 288-289

Come in and get your copy—there's no obligation attached.

**T**HE Lakeside Station of the Milwaukee Electric Railway & Light Company has again broken its own remarkable record of operating economy.

During October, fuel consumption amounted to just 15,795 B. t. u. per net kilowatt-hour produced.

The sixteen Edge Moor Boilers at Lakeside, totalling 24,568 b. h. p., have played an important part in establishing this station as the most efficient steam plant in the world—a position to which its operating records unquestionably entitle it.

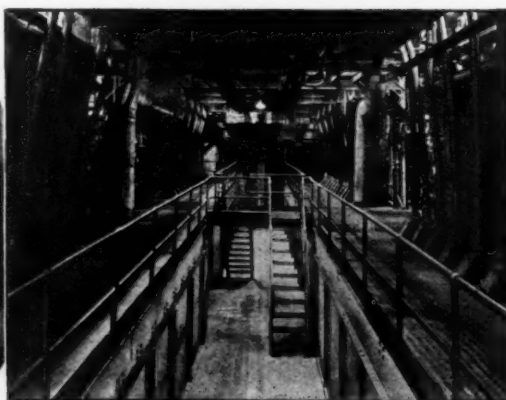

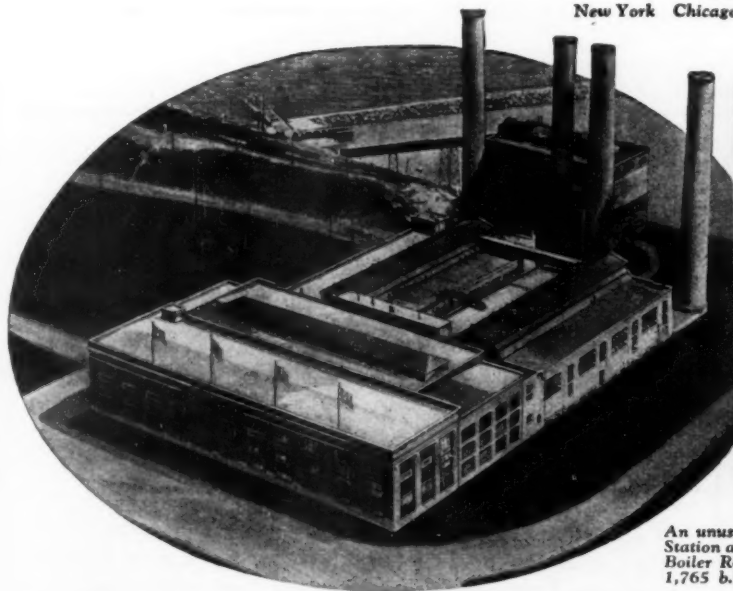

Let us show you how Edge Moor Boilers can help to reduce your power costs.

## AT BOOTH No. 336 - POWER SHOW - DEC. 1-6

### SANDVIK BELT CONVEYORS IN A POWER PLANT

A Typical Example Of How They May Be Used To Advantage

Note the Simple Arrangement of a  
SANDVIK STEEL BELT CONVEYOR  
Distributing Coal Into Bunkers.

The Top Run Is Made Sliding On Wood  
Runners.

The Return Run is Supported by Idlers Spaced  
about 25' 0" apart.

A Simple Traveling Plow is used for Discharg-  
ing Load Instead of the Cumbersome and Exp-  
ensive Trippers Commonly Used with Fab-  
ric belts.

A Working Model  $\frac{1}{10}$  size  
Handling Coal Will Be On Ex-  
hibit at the Third National Ex-  
position of Power and Me-  
chanical Engineering, Booth 336.

Sandvik Belts are Economical to Install, Depend-  
able and Give Long Uninterrupted Service.

STEEL BELT CONVEYOR

# OLSEN TESTING MACHINES

## OLSEN-CARWEN BALANCING MACHINES

Olsen-Carwen Static-Dynamic Balancing Machine No. 3-C  
*Pat'd. U. S. and Foreign Countries*

Olsen-Carwen Static-Dynamic Balancing Machines indicate the amount of unbalance both statically and dynamically, in ounce inches on indicating dials; differentiating between the two, and also indicate the exact angle or plane of such unbalance. The point along the length of the rotor at which the static unbalance should be corrected is also indicated, thereby avoiding the introduction of a dynamic couple.

For accuracy plain bearings are used in mounting the parts to be balanced in the Balancing Machine and where the part to be balanced, as in the case of a crankshaft, is mounted in more than two bearings in the crank-case, it is mounted in three or more bearings in the Balancing Machine.

## KNOWLEDGE IS POWER

Eliminate Vibration—Secure Perfect Balance with Speed and Economy

Where the static balance is sufficient, as for instance in a narrow rotor or where speed is not excessive, the Olsen-Lundgren Static Scale will indicate the amount of unbalance accurately in ounce inches and also locate the exact angle of unbalance. This scale is made in various sizes to balance all sizes and weights of parts, and thus eliminates the use of level ways.

All the latest up-to-date Olsen Testing Machines for determining the strength and quality of material.

The Herbert Pendulum Hardness Tester for determining by the time test the equivalent of the Brinell test, or by the scale test a "work hardness" or resistance to working with a tool, which is not measured by any other instrument.

# What happens when corrosion attacks condenser tubing?

Microstructure of a corroded condenser tube. Magnified 75x.

Engineers will be interested in seeing this sample board which shows the remarkable ductility of Scovill Cup Drawn Admiralty Condenser Tubing.

AT OUR BOOTH NO. 69 we will have our metallographic microscope and we will show actual specimens of condenser tubing which failed in service due to:

- splitting or season cracking
- incorrect composition
- internal flaws (gas pockets)
- incorrect structure.

We will also show the microstructures of Scovill Cup Drawn Admiralty and Scovill Special Muntz Condenser Tubing.

Engineers should take this opportunity to study the microstructure of condenser tubing at first hand.

## SILENCE—THE SIGN OF PERFECTION

**W**HO does not have admiration for a piece of moving machinery that does its work smoothly—quietly? It is not the noiseless performance alone that wins respect. It is a recognition of what has gone before to make this quietness possible—perfect workmanship every step of the way, perfect relation of one moving part to another and perfect assembly—the product of long-experienced specialists.

All this carefulness is embodied

in the production of SRB Bearings. Bars of High Carbon Chromium Steel are chemically analyzed and tested. Balls are forged by SRB experts—grinding is carefully and accurately done. Finally, all parts are assembled with watch-like precision to form a perfect unit. Only this is responsible for the exceptional silence of SRB Bearings for Industrial Service. You are invited to see these features of SRB Bearings in our booth at the Power Show.

## ATWOOD Steam Gate Valves

Designed for 400 and 600 pounds steam pressure and a total temperature of 750 degrees Fahrenheit.

The disc in these valves is so designed that unavoidable distortions, due to temperature changes and line strains, will be properly compensated for. Ball and socket joints are used in the discs and the disc mounting is attached to the disc by means of a dove tail joint.

The joint between the stem and disc nut is made by casting the steel around the Monel stem,—an exclusive feature of the Atwood design.

A new descriptive bulletin we are distributing gives complete facts. Write today for your copy.

## At the NEW YORK POWER SHOW~ Operate Diamond "Valv-in-Head" Soot Blowers Yourself

In our booth you will find the "Valv-in-Head" soot blower mounted with wall box to imitation boiler wall. A calorized Diamond soot blower element is coupled to the soot blower head.

Operate this automatic valved soot blower yourself. Note the ease of operation and the proper speed of rotation. See how the special floating mechanism on the wall box permits motion in any direction and prevents binding of the head. Watch the trigger close and open the valve as you rotate the gears. By variation in this trigger it is possible to secure very quick opening of

the valve or very slow opening.

Our representatives will demonstrate how, by proper arrangement of the cam, control of steam jets from the rotating element is assured.

These are only a few of the interesting features of this equipment. Your personal inspection will reveal the others.

And finally you will like to examine the actual service records showing the many economies effected by Diamond "Valv-in-Head" soot blowers. They are the best paying investment in the Power Plant. Ask for Bulletin 235, etc.

### NATIONAL WATER COLUMN ILLUMINATOR

PATENTED

The National Water Column Illuminator has been designed to secure effective illumination of the boiler water column and other water level gauges, especially in Central Stations and power plants. It consists of a rugged casting containing the incandescent lamp and socket, a reflector and lens. Two of these illuminators are mounted on either side of the glass columns so as to concentrate the light upon the actual water level or meniscus which due to the total reflection of the light beam is thus made very conspicuous and easily visible even when the water gauge may be at a level some 40ft. above the boiler room floor. See Fig. 1. Means are provided for blowing compressed air over the lens to clean off accumulated dust. Illumination from below prevents annoying reflections from the glass. It will withstand the disruptive force of an exploding glass. Its installation is very reasonable. Is in daily use in some of the country's largest plants.

(56) Water Tube Boilers, Horizontal Tubular Boilers

PART I A.S.M.E. CATALOGUE

### ERIE CITY IRON WORKS

ERIE, PENNSYLVANIA

Manufacturer of Vertical Water Tube Boilers, Horizontal Water Tube Boilers, Return Tubular Boilers, "Economic" Portable Boilers, Shaking Grates, Powdered Coal Apparatus

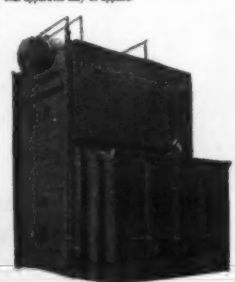

#### HORIZONTAL WATER TUBE BOILER:

Erie City Boilers maintain a high efficiency due to their free circulation, ample steam flowing surface, large steam-holding capacity, correct baffling and the correct ratio of grate to heating surface. The tubes are of the most efficient diameter and length. All openings and outlets are conveniently placed and of the proper design. Minimum head room required.

The material is selected with utmost care, formed and cut with modern tools and fabricated by skilled mechanics who have had years of training in correct boiler building.

Provided with regular grates, shaking grates, mechanical stokers, gas or oil burners, or powdered coal apparatus. The furnace can be designed for wood, refuse, bagasse or similar fuels.

fuel. Any type of grate, mechanical stoker or powdered coal apparatus may be applied.

These boilers are carried in stock at our works in units up to 800 horse power. Larger units built to order.

If you have an unusual condition to meet—as an uncommon steam temperature, space limitation or fuel selection, let our engineering department and you in its solution.

#### HORIZONTAL TUBULAR STATIONARY BOILER:

The design is the product of many years of experience and is in keeping with the best boiler practice.

#### VERTICAL WATER TUBE BOILER:

Liberates dry steam at a lower cost than any other known type of boiler.

The tubes, being upright, are completely surrounded by the moving gases, resulting in maximum heat absorption, as well as very rapid circulation.

There are no handholes or other unnecessary and trouble-causing joints.

The entire weight of the boiler is supported by a self-contained steel structure. The boiler, suspended by the upper drum resting on saddles secured to the steel structure, is free to expand or contract without restriction.

Supplied with or without a superheater. Provision can be made for firing with various grades and kinds of

PART I A.S.M.E. CATALOGUE

Pulverized Coal Apparatus, Steam Engines (57)

### ERIE CITY IRON WORKS

ERIE, PA.

Best joints, with inner and outer straps, are standard for longitudinal seams. Our plates are rolled the correct thickness throughout, checked by micrometer measurement. Angle bracing is used throughout. All openings and outlets are carefully designed for accessibility and safety.

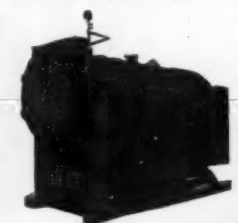

The workmanship is kept at a high standard. All rivet holes are punched on a multiple punching table for accuracy, reamed, and every rivet driven by machine. Caulking is done with pneumatically driven round-nosed tools. Tubes are set in reamed and channeled holes and carefully loaded with a roller expander.

Erie City Boilers are designed with a minimum factor of safety of five. Each boiler is carefully tested. The stock sizes range from 20 to 200 horse power for 150 lbs., 125 or 100 lbs. working pressure.

Catalogue describing our boilers will be sent on request.

#### ERIE CITY ECONOMIC BOILER:

Careful and thorough construction, mobility, economy, safety and durability are the characteristics that have made this boiler a criterion of its type.

There are no stay-bolts water sides to fill with sediment and burn out or flat cross sheets to be exposed by low water and thereby cause an explosion.

The materials are of the same high quality as our stationary types and conform to the requirements of the A. S. M. E. Boiler Code. The furnace is fire brick lined with suitable air spaces to prevent warped plates.

These boilers can be furnished complete, including stack, in sizes from 20 to 150 horse power for 150, 125, and 100 lbs. working pressure.

A certificate of inspection can be had by purchaser on request.

#### PULVERIZED COAL APPARATUS:

We are now manufacturing a perfected, self-contained unit Pulverized Coal Burner, known as the Seymour Pulverizer and Furnace.

The pulverizer unit consists of a magnetic separator, pulverizer and drive, blower and necessary piping. The

furnace is of special design to protect the furnace lining and to utilize much of the heat otherwise lost by radiation.

Briefly its advantages over other types of firing are, utilization of all grades of coal, constant and maximum efficiency at all rates of firing, perfect flexibility to meet load demand changes, accurate control of air to fuel ratio.

Send for Pulverized Coal Apparatus Bulletin.

#### LEITE POPPET VALVE ENGINE:

This engine is the result of years of experimentation and practical service and its success has proved gratifying to us.

Its intricate poppet valves remain tight throughout the life of the engine. It is designed so that vibration is at a minimum. Can be operated condensing or non-condensing using saturated or superheated steam, without any structural complications.

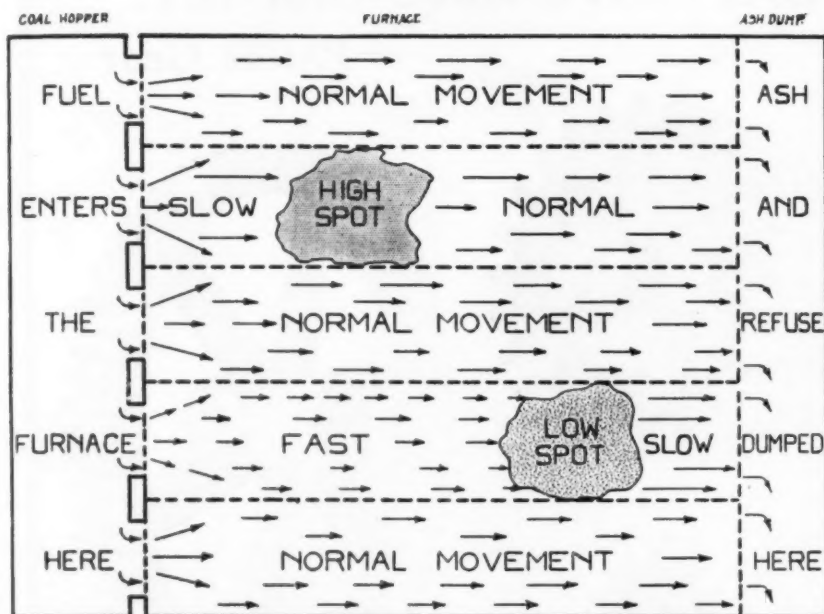

Our most convincing argument for its purchase is that you ask the man who owns one what he thinks of it.

Bulletins and detailed information sent upon request. See also our Great Advertisers in MECHANICAL ENGINEERING.

When looking through your copy of the newly issued 1924-25 volume of A.S.M.E. CONDENSED CATALOGUES, you will find interesting data on our two pages Nos. 54 & 55

of the fuel bed

FUEL BED DIAGRAM-5-RETORT DETROIT UNDERFEED STOKER

If you'll study the diagram above you will get a first rate idea of one of the outstanding reasons back of the steadily mounting popularity of Detroit Multiple Retort Stokers. The fuel bed is LEVEL. Gravity being eliminated, there is NO AVALANCHING. From coal hopper, to ash dump, every movement of the fuel bed is mechanical and UNDER CONTROL. Independent adjustments of stoker ram and separate adjustment of stroke of pusher rod, give complete control of fuel movement on EACH RETORT.

Should a high spot develop in the fuel bed, the flow of coal to the high spot may be retarded. Should a low spot develop the feed of the fuel may be immediately increased while the movement of fuel away from the low spot is retarded.

Detroit Underfeed Stokers possess many exclusive features—features which win the high regard of every operating man. There is a Detroit Stoker for every service.

## As Easy to Read as a Clock

One glance at a Motoco thermometer and you know the *exact* temperature. The red pointer stands out in strong contrast against the bold, black figures on the white dial.

No danger of errors in reading. No risk of damaged goods or processes gone wrong.

Even when you wish to know the temperature at a dark or inaccessible point, the Motoco can be easily read because the dial can be mounted in the light as far as 50 ft. from the sensitive bulb at the other end of the capillary tubing.

The Motoco is guaranteed to be unfailingly accurate and embodies many features found in no other thermometer.

Yet it costs about the same as hard-to-read glass-tube thermometers of the better grade.

Furnished with tubing or rigid stem for temperatures between minus 40° and plus 750° F.

Ask for our new catalog No. 11.

## Best Out of Three In Actual Service Competition

**I**N 1922 the H. F. Watson Co., manufacturers of roofing and insulating material at Erie, Pa., installed a 360 H. P. Connelly water tube boiler in the same power plant with boilers of two other makes and operated under identical conditions.

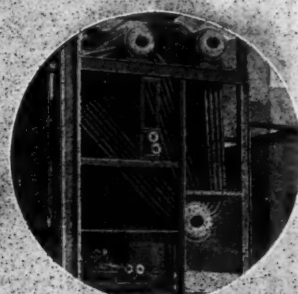

The performance of the Connelly was so gratifying to the men responsible for maintaining profits through the years to come that when additional capacity became necessary the following year, an order was immediately placed for two 423 H. P. Connellys.

Such repeat orders are the best evidence of what users think of any product. Connelly boilers have a unique record of repeating against competition and under all circumstances.

Generators of steam continue to buy Connelly boilers for both large and small requirements because of the economy of operation, quick steaming ability and dry steam furnished by the patented Connelly design.

*Built in units of from 200 to 3000 H. P. and for steam pressures up to 400 lbs. Fully explanatory catalog gladly sent on request.*

## The 1924 Edition of the A.S.M.E. BOILER CONSTRUCTION CODE

Gray Cloth Binding  
208 Pages—Size  $5\frac{1}{2} \times 7\frac{3}{4}$  inches

*The Most Complete and Exact Manual of  
American Boiler Practice that has  
Ever Been Published*

More than two hundred Interpretations formulated by the A.S.M.E. Boiler Code Committee during the past four years, have been incorporated and written into the 1924 Boiler Construction Code; certain of the rules have been explained and amplified; and whenever necessary charts, tables and diagrams have been used. In fact no detail has been overlooked which could make the new code complete and more clearly applicable to general boiler construction than any previous edition.

While the paging of the 1924 code has been altered to provide for the increased volume of rules and the page size has been reduced to  $5\frac{1}{2} \times 7\frac{3}{4}$ , the subjects and paragraphs in the Power Boiler Section of the code have been left unaltered in arrangement in order that reference to paragraphs may remain uniform, and therefore, of greater convenience to users.

A new and valuable section which has been added to the code is the rules for Inspection of Material and Steam Boilers. Four years of preliminary investigative and research work were required to formulate these rules.

Of particular interest to the boiler manufacturer is the revised and greatly enlarged Material Specification Section which has been amplified and brought up to date for all of the materials used in the construction of boilers and now constitutes Section 11 of the Code.

The new code consists of:

Section I Construction Rules for Power Boilers  
Section II Material Specifications  
Section VI Rules for Inspection  
Appendix, embracing explanatory notes and recommendations relating to boiler construction.

Index — Complete and carefully arranged.

**Price \$2.50 (to A.S.M.E. Members \$2.00)**

### Interpretations of the Boiler Code

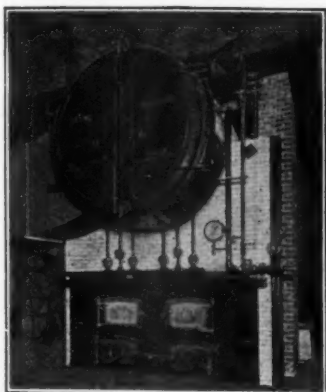

Second only to the Boiler Code in importance, are the Interpretations, formulated at the monthly meetings of the Boiler Code Committee and issued in data sheet form.

These Interpretations are prepared after the Committee's careful consideration of the numerous inquiries regarding the application of the code; problems not fully covered by the code and when there is any question of doubt on the part of the users of the code.

Knowing the value of the Interpretations to all those interested in the code, the Society has inaugurated the practice of supplying them on regular subscriptions, together with an attractive cloth binder which will hold both the Interpretations and the Boiler Code. Subscriptions including binder—\$3.00 a year.

## Cole-Manning Vertical Fire-Tube Boilers

This type of boiler is constructed in units up to 400 horse-power and for pressure of 200 lbs. or more. Boiler shell is supported on a one-piece cast iron base which can be fitted with stationary or shaking grates. Smoke box is provided with removable cast iron cover and connections for all standard soot-cleaning devices. The evaporative performance, super-heating qualities and small floor space per horse power combine to make a most desirable and economical unit.

Further information regarding Cole Boilers, Tanks, Plate Work, etc., will be found on page 49 of the 1924-25 volume, A.S.M.E. Condensed Catalogues.

# UNION WATER TUBE BOILERS

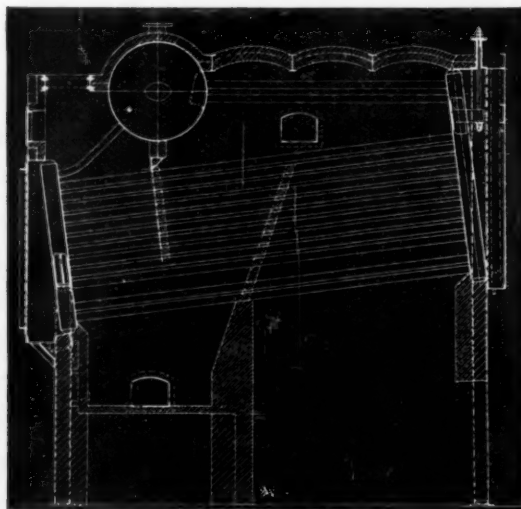

Standard UNION Horizontal Longitudinal Drum Water Tube Boiler, incorporating in its design the distinctive features shown in the cut opposite. These, and other features make for high efficiency, safety, long periods of continuous service and low maintenance.

For nearly forty years we have been concentrating on the development and manufacture of high pressure steel boilers exclusively, and we offer the UNION Water Tube Boilers in both the horizontal straight tube longitudinal and cross drum designs and the vertical bent tube types, for pressures up to 400 lbs. in practically all sizes.

We have one of the largest and most modern boiler manufacturing plants, with sales representatives in all principal cities to serve you.

Above shows the UNION Bent Tube Vertical Type Boiler. We make this in two, three and four-drum designs, depending on service, conditions and specifications.

This shows the UNION Horizontal Cross Drum Type Water Tube Boilers, with all of the above mentioned distinctive features in the Longitudinal Drum Boiler.

POWER

Vol. 60, No. 9

**M**ODERN plant designed to supply electrical energy, compressed air and heating steam for the operation of an activated sewage disposal plant. Steam supply for heating sludge and recovery of heat from purified sewage made an interesting problem in design.

## Power Plant of Milwaukee Sewage Disposal Works

**A**FTER years of study and practical demonstration in a testing plant, the City of Milwaukee has developed one of the most modern and efficient sewage-disposal systems in the country. It is to be operated on the activated sewage principle with numerous innovations to facilitate the process, including the recovery of sludge for the making of fertilizer. The project is now nearing completion. The operation will serve in heating surface to grate area.

from the solids filtered out of the sludge, put before the designer the problem of a power plant containing air-compressor equipment, turbo-alternators for driving pumps, filter drums, screens, conveyors, together with the operation of drying equipment and the co-ordinating of a seasonal heating demand, resulting from the necessity of heating sludge before filtering in cold weather, with the attending power requirement. The plant will handle 2,000,000 gal. daily from a temperature 68 to 1 3 to 7 hp. vertical engine.

## Another Case of Undivided Responsibility

The designers of this plant decided as far as possible to avoid the annoyance of dividing the responsibility between manufacturers. Sturtevant Economizers, Forced and Induced Draft Fans together with their driving units were installed and the designers look to one manufacturer for service and satisfactory operation.

Our engineering service department will gladly co-operate with you in the selection of the equipment best suited to your needs.

WEBSTER SELECTED  
SMITHING COAL

WEBSTER

You can't get blood  
out of a stone;  
but . . . . .

You can get a lot of heat out of low  
grade coal, if you burn it on the  
**TAYLOR STOKER**

That is one reason why the number of Taylor installations in the Mid-West has grown and still continues to grow at a remarkable rate.

Another reason is that the Taylor Stoker has been developed to the point where it handles the clinkering Western coals without the slightest difficulty.

The Indiana Service Corp., Ft. Wayne, Ind., for instance burns Indiana coal, generally regarded as hard to handle on stokers.

"The Taylor saved our lives this winter (1923-1924) when the load jumped to 20,000 kw," they say and comment on the ease of operation, little attention required, and cleanliness of fires.

Consumers Power Co., Grand Rapids, Mich.; Dayton Power & Light Co.; Fort Dodge Gas and Electric, Muscatine Lighting Co., Northern Ohio Traction and Light Co., Iowa Railway and Light Co., Cedar Rapids, Iowa; Peoples Gas and Electric Company, Mason City, Iowa are just a few of the many other plants that are burning Mid-Western coals without difficulty while maintaining high efficiencies on the New Taylor Stoker.

Do you know the NEW Taylor Stoker? Every power plant Executive and Engineer will be interested in the many radically new features of design that make the New Taylor, the simplest, most efficient and most economic system of combustion. They are all clearly and concisely pictured in the New Taylor Catalog. The coupon is for your convenience in requesting a copy.

**The Taylor  
Stoker**

the Simplest,  
Most Efficient,  
Most Economic  
System of Combustion

*Hytempite is carried in stock in every industrial center for immediate delivery.*

**QUIGLEY FURNACE SPECIALTIES CO., Inc.**  
26 Cortlandt St.      New York

# True to SIZE and SHAPE

A STANDARD insulating brick should be 9 inches long by  $4\frac{1}{2}$  inches wide by  $2\frac{1}{2}$  inches thick,—to conform with the size of standard fire brick. Any variation in the size adds to the cost of installing insulated masonry walls.

Sil-O-Cel Brick have always been noted for their extreme uniformity to size and shape, as compared to any other type of insulating brick available.

Now, a new process has been perfected by means of which each Sil-O-Cel Brick passes through a final machining operation to dress all surfaces smoothly and evenly. This affords a positive check on size and shape, and makes the supremacy of Sil-O-Cel Brick more definite than ever before.

In addition to the greater ease in laying brick insured by this new process, tighter joints between the brick are made possible because no excess mortar is required to provide for irregularities. Sil-O-Cel Brick are laid with thin, tight joints insuring a minimum of heat loss through the joints.

Due to the fact that Sil-O-Cel Brick are manufactured true to standard brick sizes, they cover a greater area per number of brick than do other forms of insulating brick which are under-sized. This amounts to from 8 per cent to 20 per cent greater volume of insulation per thousand brick units in many cases. This fact adds greatly to the economy of using Sil-O-Cel Brick Insulation.

A sample brick gladly sent to responsible officials requesting it on company letterheads.

## The Engineering Societies Library

ONE of the largest collections of engineering literature in the world is that found in the Engineering Societies Library, 29 West 39th Street, New York.

It comprises 115,000 volumes, including many rare and valuable reference works not readily accessible elsewhere. Over 1,100 technical journals and magazines are regularly received, including practically every important engineering journal in the civil, mechanical, electrical, and mining fields.

The library is open from 9 a.m. to 10 p.m., with trained librarians in constant attendance. Its resources are at the service of the engineering and scientific public.

### FACTS AND FEATURES OF THE A.S.M.E. AND ITS SERVICE

#### Membership

17,501 Members.

#### Meetings

- 2 General Meetings a year, each of 4 days' duration; Annual Meeting in New York each December; 1925 Spring Meeting in Milwaukee.
- 3 Regional Meetings of groups of Local Sections at distributed centers.
- 342 Meetings each year of Local Sections and branches in 64 industrial centers.
- 347 Meetings each year of Student Branches in 79 Technical Schools and Colleges.

#### Committees

The following Committees engage the time, thought and energy of over 1,250 members of the Society in the preparation of standards, professional papers, meetings, in research work, and in the dissemination of literature for the advancement of the engineering profession and industry:

- 69 Technical Committees
- 37 Administrative Committees
- 64 Local Section and Branch Executive Committees, besides numerous Special Committees in each Section.
- 13 Professional Divisions:
  - Aeronautics, Forest Products, Fuels, Machine Shop Practice, Management, Materials Handling, National Defense, Oil and Gas Power, Petroleum, Power, Printing Machinery, Railroads and Textiles.

#### What the Society Is Doing (In Part)

Advancing the Society's long-established position in engineering and industrial standardization. The importance of this activity has been greatly increased since the organization of the American Engineering Standards Committee.

Continuing the revision of the Power Test Codes of 1915. Seven of the 19 codes, to be known as the Test Codes of 1923, are now available. Another great engineering and professional achievement.

Maintaining the high standing in the development of industrial safety codes long since established by the Society.

Supporting the American Engineering Council, securing the representation of the engineer through his professional body in current legislation affecting him.

Promulgating the new Boiler Code, power boiler section, and continuing two additional codes. An acknowledged signal contribution from the engineering profession.

Supporting national engineering events for promoting the profession, such as the World Congress of Engineers, 1926.

## Eighteen Thousand Engineers

from many industries

Who Specify or otherwise Influence the  
Selection of Mechanical Equipment

will be present in person or spirit at  
the forthcoming Annual Meeting of

### The American Society of Mechanical Engineers

#### Time and Place

The 1924 A.S.M.E. Annual Meeting will be held as usual at the Engineering Societies Building, New York City, from December 1-4 inclusive.

#### Program

The technical program for the coming meeting contains a well-balanced list of strong papers. There will be the usual representative papers of interest and value to the power-plant field, which will be presented in four sessions: one on oil burning, one on steam power generation, one on oil engines and gas turbines, and one on hydraulic-power-plant problems. There will also be an impressive array of titles of interest to the engineer who is interested in machine design, machine-shop practice, and management, including those of papers presenting new information about mechanical springs, lubrication, methods of measuring hardness of metals, and gears. Members of the Society interested in management will enjoy the session at which Taylor's classic paper on shop management will be re-presented, and by papers dealing with production control, the design and manufacture of a standard machine, and management development in a modern hosiery plant.

Strength and Proportions of Wheels, Wheel Centers and Hubs, Discharge of Flow-Measuring Nozzles for Air, and the Temperature at which a Liquid Evaporates into a Gas, are subjects of papers which will make up another session of general engineering interest. Three valuable papers on Research and Lubrication will furnish information of importance to designing engineers. The National Defense Division will open its session with an address by Assistant Secretary of War Davis on the Engineering of National Defense. The remainder of the session will be taken up with a consideration of technical problems of ordnance design and ordnance materials. The Railroad Session will be devoted to a discussion of the Zoelly turbine-driven locomotive. The Textile Division will discuss the development of the spinning frame and the engineer's field in industrial economics. Joint sessions with the Amer. Society of Refrigerating Engineers and the Amer. Society of Safety Engineers will be held during the meeting.

### FACTS ABOUT THE JANUARY ISSUE OF

## MECHANICAL ENGINEERING

#### Circulation

The circulation of MECHANICAL ENGINEERING is now over 21,000 a month, while additional demands for the January number will require us to print a total of at least 22,000 copies. This circulation represents in one grouping the largest number of prominent engineers identified with the selection and purchase of mechanical equipment ever recorded as readers of a monthly engineering publication.

#### We Can Help Prepare Your Advertisement

Our Copy Service Department is composed of men who combine advertising experience with an accurate knowledge of engineering matters, and they will be glad to cooperate in preparing copy which will insure a satisfactory representation for your firm. Upon request, a complete advertising suggestion will be submitted for your consideration.

#### What Space Costs

Rates for single insertions in the January issue are as follows:

Full page.....	\$140.00
Half page.....	75.00
Quarter page.....	40.00

(Annual rates on application)

Adequate listings of products in the Classified Index are included if order is received in time to permit of the necessary rearrangements of the Index.

#### Closing Date—Dec. 3, 1924

Because of the increased size of both editorial and advertising sections in the January number we cannot promise to submit proof on any copy received after December 3. Earlier copy will naturally secure more careful attention than that received at the last minute. Please make your reservation promptly and let us have copy and cuts as soon as possible thereafter.

*January, 1925*

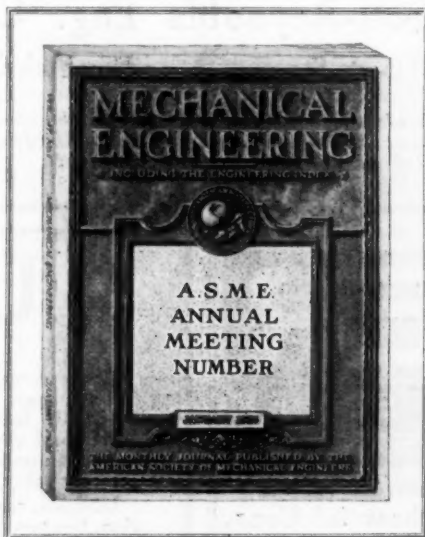

# A.S.M.E. ANNUAL MEETING NUMBER MECHANICAL ENGINEERING

*"More than an advertising medium— a builder of industry."*

The January number of **MECHANICAL ENGINEERING** will contain a complete and accurate report of the 45th Annual Meeting of The American Society of Mechanical Engineers, and it is certain that a great majority of the members of the A.S.M.E., and other readers, will go through their copies very carefully from cover to cover. Those in attendance at the meeting will find in this number a means of preserving the information there obtained; while those not in attendance will depend upon it for an authoritative account of the many important facts that will be brought out.

Each month **MECHANICAL ENGINEERING** contains the advertisements of leading manufacturers in practically all divisions of mechanical equipment.

Many of these advertisers increase their space for the January issue; while many other firms who do not use space regularly recognize the extra importance of this number and arrange for special representation

therein. Both in point of editorial interest and in the volume of advertising carried, the A.S.M.E. Annual Meeting Number is always the most noteworthy issue of the year.

The January issue of **MECHANICAL ENGINEERING** will bring to its advertisers actual and potential results difficult to estimate. It offers advertising value plus, and manufacturers of machinery, apparatus, and materials utilized in industrial and power plants are invited to take advantage of this exceptional opportunity by arranging for appropriate space.

*To get a good position, your reservation should be made at once.*

## BIG ISSUE OF THE YEAR

**To Manufacturers of Mechanical Equipment:**

**MECHANICAL ENGINEERING** is the one publication that focuses on the executive men in charge of the production work of the manufacturing and power plants of the country, and the consulting engineers who design, construct and specify equipment for such plants. It is the logical publicity link between the manufacturer of mechanical

equipment and the great market of the manufacturing industries.

You are able to meet the readers of **MECHANICAL ENGINEERING**, including the 17,500 members of The American Society of Mechanical Engineers, under exceptional conditions through the medium of the January A.S.M.E. Annual Meeting Number, so be sure you are properly represented in this issue.

Machine Shop

Foundry

## Back of every Croll-Reynolds Product

are the foundries, machine shops, and other manufacturing facilities of our big plant here illustrated, which is located at Weatherly, Pa., (130 miles from New York City) and has a thirty year record of successful operation and continuous growth.

Favorable location, efficient equipment, and a thoroughly-experienced operating personnel, permit an unusually high-grade output, at costs which satisfy the most discriminating buyers.

VERSUS

COOLING TOWER—Which?

Which type of water cooling device is better for your plant?

The answer depends on the nature of the duty, the climate, and the amount and value of available space.

No sweeping claim of superiority for either type can be justified in the absence of specific information covering plant conditions.

We investigate, then quote you on best type for your particular service.

## The Engineering Societies Library

ONE of the largest collections of engineering literature in the world is that found in the Engineering Societies Library, 29 West 39th Street, New York.

It comprises 150,000 volumes, including many rare and valuable reference works not readily accessible elsewhere. Over 1,300 technical journals and magazines are regularly received, including practically every important engineering journal in the civil, mechanical, electrical and mining fields.

The library is open from 9 a.m. to 10 p.m., with trained librarians in constant attendance. Its resources are at the service of the engineering and scientific public.

## Allis-Chalmers Centrifugal Boiler Feed Pumps

### The Boiler Feed Pumps of undivided responsibility

This means one Company selects and stands back of a complete unit of its own manufacture consisting of both pump and drive. The pump illustrated is the smallest size we have recently developed for feeding boilers of from seven hundred fifty to sixteen hundred boiler horse power. It is built with the same care and along the same lines as our well known boiler feed pumps of larger sizes. Your inquiry will bring you our recommendations for the best Centrifugal Pumping Unit for boiler feed or other service.

## ***A question of Dollars and Cents***

Does the first cost determine your air compressor selection, or has experience proved that low cost price too often means an expense rather than an investment?

You install an air compressor because you need it to increase production and reduce manufacturing costs. This can be done only when the compressor you select is a *machine you can afford to use.*

The efficient compressor is measured by one standard—its ability to actually deliver air at the least cost per cubic foot, taking into account costs of power, attendance and repairs.

Such a compressor is compact and self-contained. It has reliable and automatic regulation so that high operating efficiency is secured at both *full and partial loads.* Lubrication is automatic, and reliable.

In the Ingersoll-Rand Type "XCB" Compressor you will find all of these improved features of design and construction. In its operation you will find there reliability and economy needed to reduce your compressed air costs.

*It's a question of dollars and cents — and value received.*

## Buy Good Pumps

**M**ANAGERS of extensive industrial plants find that it pays to standardize on reliable, high grade equipment. They find also that in a large plant interchangeability is valuable, as are also high efficiency and responsible guarantees.

The managers and engineers of the Cheney Silk Mills, one of the largest and oldest silk manufacturers in the world, carrying materials through every process from raw silk to the finished goods, occupying over 35 acres, and employing 4,500 people, have for these reasons standardized on De Laval Centrifugal Pumps, some of which are shown in the accompanying illustrations. A recent letter from Cheney Bros. states:

"The equipment shown in the photograph in the dressing mill is a De Laval centrifugal pump, No. 12802, Type 2P3, total head 347 ft., speed 3,500 r.p.m., capacity 175 gal. per min., directly connected to G.E. 35-hp. motor, used for pumping water in air washing mechanism in connection with the Parks-Cramer humidifying system. Our engineer in the dressing mill tells us that this pump has given us exceptional service. It operates 24 hours in the day and practically every day in the year except, perhaps, a few days in the summer when the humidity becomes great, making it unnecessary to operate the system. The pump has been used constantly since the mill was built in 1911 and has given entire satisfaction."

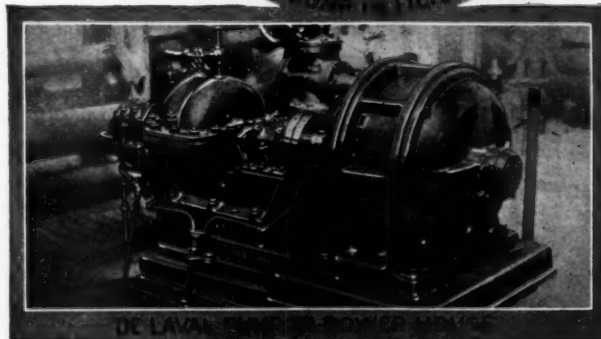

De Laval pumps are themselves standardized, in that all parts are made to limit gages, so that renewals ordered from the factory can be inserted by unskilled men. The horizontally split casing is used throughout, and all internal parts are at once accessible upon lifting the casing covers, and can be removed after loosening the bearing caps. Each pump is fully guaranteed as to delivery, efficiency, and other characteristics, and is fully tested before leaving the De Laval works. The workmanship and materials are of the highest grade, insuring long and satisfactory service.

We have a comprehensive centrifugal pump catalog which we would be glad to send to managers, engineers and others interested in securing reliable pumping equipment. Ask for Catalog B-50.

# KENNEDY

Valves for every power plant service

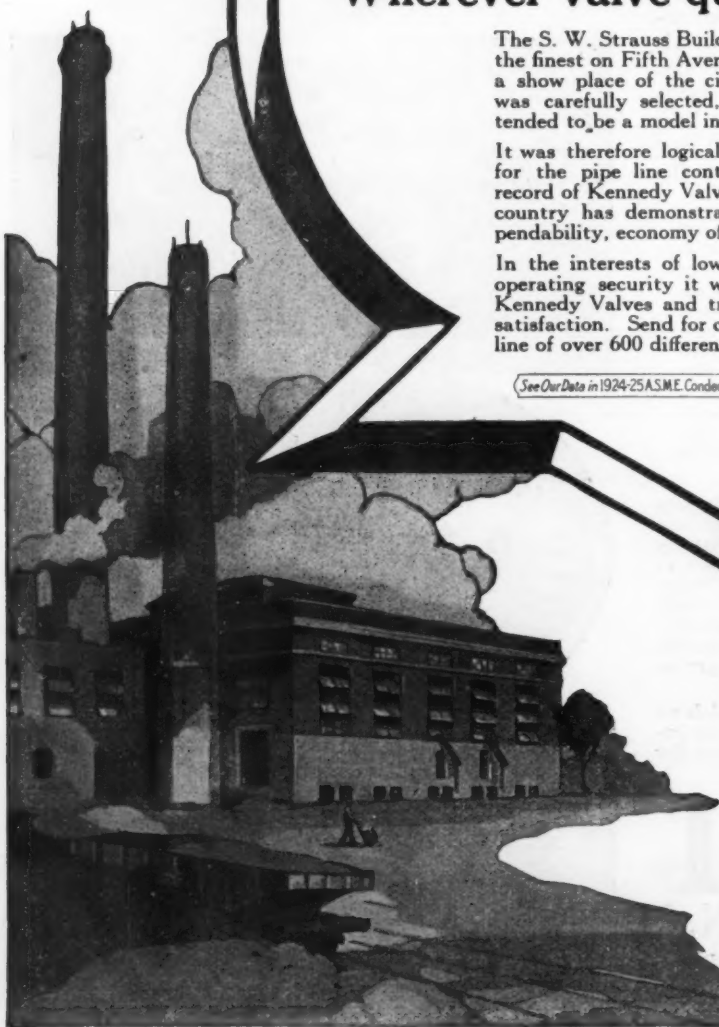

## Wherever valve quality is important

The S. W. Strauss Building in New York is one of the finest on Fifth Avenue—which means that it is a show place of the city. All of the equipment was carefully selected, for the building was intended to be a model in every respect.

It was therefore logical to select Kennedy Valves for the pipe line controls, for the half-century record of Kennedy Valve installations all over the country has demonstrated their exceptional dependability, economy of operation, and durability.

In the interests of low operating costs and high operating security it will pay you to investigate Kennedy Valves and try out a few to your own satisfaction. Send for catalog describing the entire line of over 600 different types and sizes.

## ENGINEERING and INDUSTRIAL STANDARDS

# CODE for the Identification of Piping Systems

The purpose of this Committee is readily conveyed by its name and its work has been divided among the following sub-committees:

1. Sub-committee on Identification by Colors, Frank P. Ingalls, Chairman
2. Sub-committee on Classification, Crosby Field, Chairman
3. Sub-committee on Identification Markings other than Color, William S. Morrison, Chairman

and there is also an Executive Committee, the personnel of which consists of the Chairman and Secretary of the Sectional Committee and the Chairmen of the three Sub-committees.

### *Sectional Committee Formed*

The organization of the Sectional Committee on a Code for the Identification of Piping Systems took place on June 14, 1922 under the procedure of the American Engineering Standards Committee. The National Safety Council and The American Society of Mechanical Engineers are Joint Sponsors for this project. The Committee now consisting of 35 members representing 30 organizations has for its Chairman, Mr. Amos S. Hebble, Superintending Engineer, Southern Pacific Company, American S. S. Lines, Pier 49, North River, New York, N. Y., and for its Secretary, Mr. Ira G. Hoagland, Secretary, National Automatic Sprinkler Assn., 80 Maiden Lane, New York, N. Y.

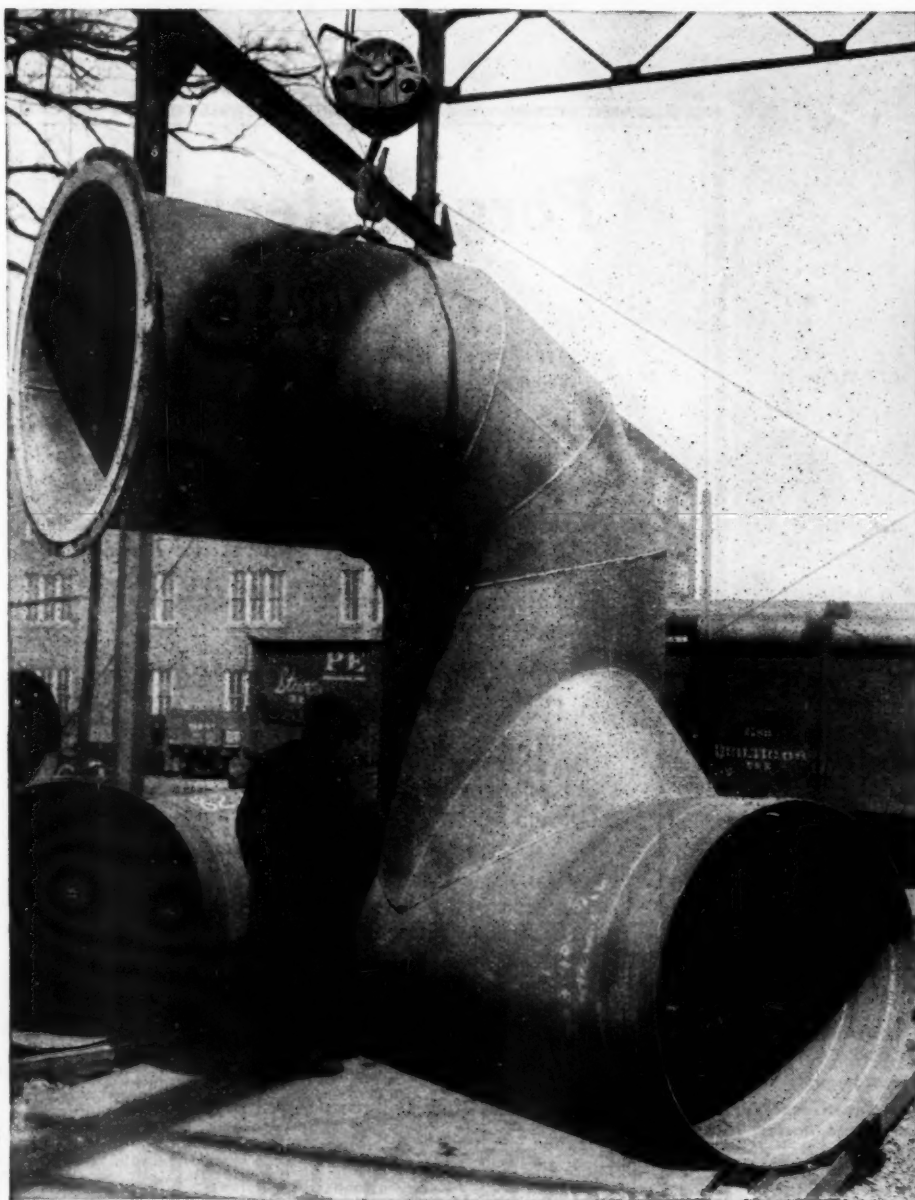

In December 1923 the Sub-Committee on Identification by Colors completed its report. In January 1924 the Sectional Committee reviewed it but decided to take no action concerning it until the report of the Sub-Committee on Identification Markings other than Color was in its hands. Recently this last named report was sent to the members of the entire Sectional Committee in mimeograph form so it is expected that shortly both these reports will be finally discussed and voted on, after which they will be printed in pamphlet form. To these will be added the report of the Sub-Committee on Classification which is progressing rapidly.

# Steere Steel Pipe and Fittings

Gas Water Steam Air

## ***This is NOT a special fitting***

***By Steere Arc Welding methods*** such pieces are produced at practically the same cost as standard fittings. The cost is usually less than the pattern expense alone as required in cast iron construction.

***Steere methods simplify*** the most complicated piping layouts.

***Steere-Van Stone Joints*** greatly simplify and reduce the cost of the field construction work.

***A complete service within one organization—  
Engineering—Shops—Field Erection***

Whether your requirements cover straight pipe, fittings, unusual shapes or combinations

**We Know We Can Save You Money**

## Forged steel pipe flanges

*All types and sizes including the new 400 and 600 pounds standards*

**T**HE modern demand is for the flanges that have demonstrated their superiority over all other types—flanges of unbreakable forged steel.

No other organization is so well equipped and qualified to meet this demand as the American Spiral Pipe Works. For more than twenty years this organization has been the largest manufacturer of forged steel flanges.

### *Orders filled from stock*

Orders ranging from a few flanges up to large quantities can in almost all cases be filled from our large stock which averages over fifty thousand flanges of the types listed opposite and ranging in size from  $\frac{3}{4}$  to 60 inches.

Representative of the many extreme pressure plants using Taylor Forged Steel Flanges is the new plant of the Detroit Edison Co. Our Detroit Edison flanges are operating under 450 pounds pressure and 700 degrees superheat.

### AMERICAN SPIRAL PIPE WORKS

*For 20 years the largest manufacturers of forged steel flanges*

# Do it with SMOOTH-ON

# Now CROSS MARKED

for convenience  
and economy

Service Sheet is the only sheet packing most plants need. This saves money by cutting down your stock room investment. Service Sheet also saves money in the plant because it can be used thinner than other packings with even greater reliability. It is one of the "Standard Seven" Johns-Manville Packings.

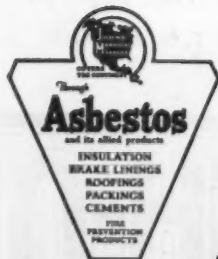

## Service Sheet Packing

**N**OW more economical than ever — as the thousands of plants using it will find.

Lines spaced one inch apart are now ruled lengthwise and crosswise on every sheet, covering it with one-inch squares.

By following these lines and counting squares, a piece of sheet can be cut to practically any dimension without a rule. Straight, accurate cutting is easy, preventing waste due to crooked or jagged edges. Center points are easily established and a number of gaskets can be quickly laid out on a sheet so as to get the maximum number of gaskets with the minimum of scrap.

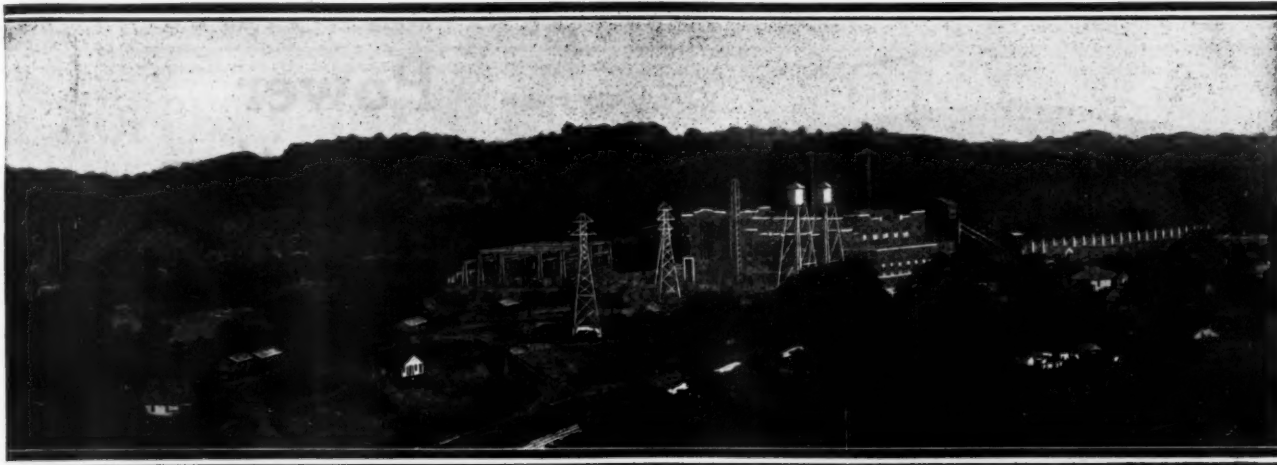

This saves time and money on the cutting bench, in addition to the other Service Sheet economies in the stock room and plant.

## Power Plant Materials

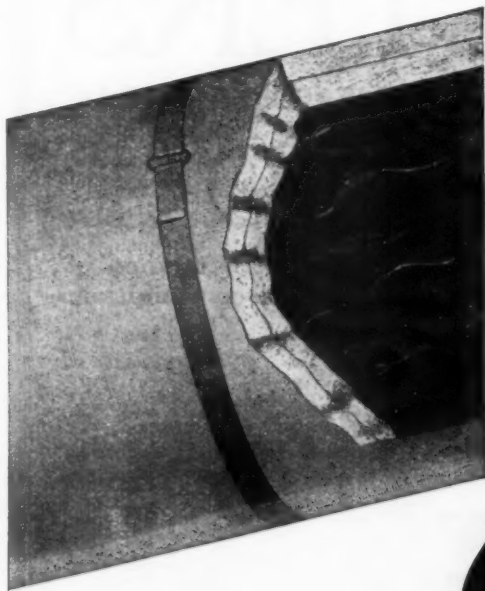

Philo, Ohio, plant of the Ohio Power Co. Sargent & Lundy, Chicago, Consulting Engineers.

## Another power-giant uses Carey Hi-Temp

**A few outstanding installations  
of Carey Hi-Temp in oil refin-  
eries and central stations**

Ohio Power Company, Philo, Ohio  
Cahokia, Union Electric Light & Power Com-  
pany, East St. Louis, Mo.  
Dallas Power & Light Company, Dallas, Texas  
Connecticut Light & Power Co., Devon, Conn.  
Delaware Station, Philadelphia Electric Com-  
pany, Philadelphia, Pa.  
Gulf Refining Company, Port Arthur, Texas  
The Texas Company, Port Arthur, Texas  
Sinclair Refining Company, East Chicago, Ill.  
Coden Refining Company, Tulsa, Okla.

**T**HE development of higher tempera-  
tures is progressing rapidly, and even  
more rapidly in oil production than in  
power-development.

Central stations are therefore watching  
with interest the result of using special  
insulations and other materials in the ex-  
treme superheat used in oil refining, and  
the notable service of Carey Hi-Temp in  
standing these high temperatures without  
deterioration or loss of efficiency has already  
brought about its adoption in many of the  
central stations and industrial power plants  
recently constructed.

The Philo, Ohio, plant of the Ohio Power  
Company, illustrated above, is one of these  
recent Carey Hi-Temp installations. Super-  
heat temperature is 700 to 800 degrees and  
the high pressure lines are covered with  
two inches of Carey Hi-Temp and two  
inches of Carey 85% Magnesia.

The high insulating efficiency of Hi-Temp together  
with its remarkable mechanical strength after ex-  
posure to temperatures up to 1000 degrees F. make  
it an ideal inner layer for 85% Magnesia, providing  
the permanence of mechanical strength under  
superheat which Magnesia does not possess.

Write for Bulletin 101, describing Hi-Temp and its  
application to superheated steam and oil lines.

Branches in all principal cities

## HOPPES V-NOTCH METER

—Accurate—

Because it **WEIGHS** the head

Right there it differs from all other weir Meters that depend upon floats to give precision readings. The height of water behind the V-Notch is weighed in a specially constructed copper vessel suspended from a coil spring which is carefully adjusted and calibrated. The movement of the vessel opposed by the spring is always in exact proportion to the flow through the V-Notch. The recording pen is directly attached to the vessel and moves in true proportion to the flow. By changing the angle of the V-Notch the capacity of the meter may be increased or decreased to suit changed conditions.

Every Hoppes V-Notch Meter is tested in an up-to-date laboratory at all rates of flow and is guaranteed to be accurate to within  $1\frac{1}{2}\%$  at any rate of flow regardless of water temperature.

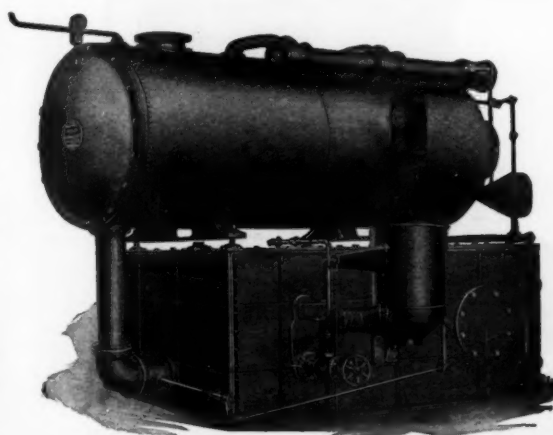

We also Manufacture Feed Water Heaters, Live Steam Purifiers, Steam Separators, Oil Eliminators and Exhaust Heads.

### DETERMINE CO<sub>2</sub> Electrically

Know whether you have a complete combustion or waste—and determine it electrically, by using BACHARACH Electric CO<sub>2</sub> Meters (S. & H. Type). Simple in design, ever reliable, no delicate parts no chemicals, no time lag. The readings are always reliable under any and all conditions and may be continuously recorded on a chart in the engineers' office. To maintain high combustion efficiency you can depend upon Bacharach Electric CO<sub>2</sub> and CO Meters and Bacharach Recorders.

## "HILL CLUTCH" MILL EQUIPMENT

Years of Service at Full Efficiency

—NOT THE FIRST COST

Is the dominant thought in the "Industrial Type" Gear Speed Transformer

Low Speed End  
Note removable side  
and cover offering  
great accessibility.

A nest of plain spur gears revolving in oil changes the revolutions per minute of the input shaft to some desired revolutions per minute of the output shaft. The power transmitted is the same in both shafts. The efficiency is higher than any other form of gearing.

It is the "short cut" from motor to machine or from shaft to shaft where speeds are widely different. It eliminates cumbersome speed changing devices and saves power losses.

## OPPORTUNITIES IN RUBBER No. 5

### Resiliency Plus Strength

If your problem requires a material combining resiliency with great strength, consider these facts:

The whole power of an automobile passes through a universal joint of fabric and rubber.

The strongest transmission belt material per unit of cross section is rubber and fabric.

Rubber alone, of certain new

compounds, in a strip ½" x ⅛" will support the weight of a man.

Many applications to utilize the strength of rubber, either alone or combined with fabric, have been developed through cooperation with the B. F. Goodrich Rubber Company. Bring your problems to us—perhaps they can be solved with rubber.

THE B. F. GOODRICH RUBBER CO., Akron, Ohio  
ESTABLISHED 1870

"Best in the Long Run"

In Seattle,  
as in Philadelphia  
— GANDY

#### TILE CONVEYOR

GANDY BELT: 16 inch, 4 ply, 22' centers; 8" drive and idler pulleys; screw take-ups; speed 80 r. p. m.; from 1½ h. p. motor, geared down for drive. Belt slides over metal covered table as shown in photograph; tile oiled by felt roll running in pan of oil; equipment and belt sold as a unit.

Belt recommended to all brick and clay plant managers by C. A. Houlahan, superintendent of the plant.

## YOU CAN'T SMELT MUCH METAL WITH A MAGNI- FYING GLASS ! ! !

—And you need more powerful belts when you tackle jobs where heat, steam, oil and exposure affect the belting. Even the best rubber and leather belts cannot give knock-down-drag-out service on jobs that call for Stitched Cotton Duck Belts. Gandy Belt is *not* a substitute. It is built for use on conveyors, elevators, drives; under conditions that make ordinary belting inadequate. Gandy Belt is backed by a record of almost half a century of such service to industry. Let us tell you more about it. Write for complete information and samples of Gandy Belt. *Tough and pliable—but not expensive.*

THREE TYPES: Gandy Stitched Cotton Duck Belting, for ordinary indoor work. Thermo-Gandy, specially treated for outdoor installations and extremes of heat, cold, steam, etc. Gandy Wax-Impregnated Belt; white, washable, for conveying food products in bulk.

## GANDY

The name "Gandy" is not a generic term covering all Stitched Cotton Duck belt. It is the trade marked name designating *only* the product of the Gandy Belting Company of Baltimore, Maryland, who originated this type of belting in 1880. Gandy Belt is distinguished by the green edge and the Gandy trade mark.

*Jones Speed Reducer driving a Conveyor in a Cement Mill. Motor speed, 720 R.P.M. Final speed, 73 R.P.M. Ratio, 9.88 to 1.*

## Meets the Demand for Power Economy

Power economy recommends the high speed "prime mover"—the electric motor. And power economy recommends the unit drive—a motor to its machine.

But many machines—conveyors, elevators, agitators, screens—require a slow drive.

With the Jones Speed Reducer, the power economies of the electric motor and the unit drive are yours.

No belts and pulleys, sprockets and chains to take up valuable space, catch dirt and grit, cause bearing trouble, power losses—and accidents to the men.

Compact, fully housed mechanism running in an always clean bath of oil; mounted on a single base with the motor—no slide rails or alignment problem—it is the neat, space and power saving reduction unit, endorsed by modern engineering practice. Send for the informative Catalogue No. 26.

## JAMES WORM GEARS

Worm Gears are ideal for many types of drive.

While their construction limits them to comparatively light loads, within a certain range and on certain service they are the best units to use.

They have the advantage of large reduction in a minimum of space and they run with a smooth, sliding contact, securing an evenness in operation that cannot be attained with spur or bevel gears.

Our experience in the manufacture of gears not only enables us to make an excellent unit mechanically, but it has taught us the most advantageous uses of all types of gears.

Let us recommend the proper gear for your service. If worm gears may be used, we can suggest the proper unit.

Our engineering department is at your disposal.

**"GEAR PROBLEMS"**

Established 1895

This ugly looking brute is called *Amphibious Dinosaur Brontosaurus*. Ten million years ago he lived and disported himself among the luxurious vegetation of the jurassic period.

For the edification of twentieth century mankind scientists have fabricated an exact restoration from the fossil skeleton found near Medicine Bow, Wyoming and now on exhibit at the Museum of Natural History, New York.

The eyes, head, neck, hips, stomach, sides and tail are made to move in a realistic manner so that the monster actually appears to BREATHE AGAIN!

Great percision was necessary to produce this real life effect. It is accomplished through the use of ten electric motors installed inside the body, with the speeds stepped down to the proper figure by

## Foote IXL Speed Reducers.

This rather unusual application only serves to demonstrate the almost limitless uses found in modern industry for these simple, compact, efficient and safe speed reduction units.

Our new 79 page Speed Reducer Book contains a world of valuable and indispensable information on Speed Reduction Problems. Every Factory Manager, Superintendent and Engineer should have one. Sent Free on request.

*Here are just a few of the many DIAMOND standard and special roller chains*

## **DIAMOND <sup>High</sup> or <sup>Low</sup> Speed Roller Chains** **Standard Sizes to Meet Every Need**

BY specializing for thirty-four years, in the manufacture of one type of chain, we have brought DIAMOND roller chains to their present state of perfection in design and construction.

In addition, we have developed so complete a line of standard and special chains, that today there is a DIAMOND roller chain of correct size for practically every requirement of power transmission, elevating and conveying.

For both *high speed* and *low speed* service—years of unflinching performance in virtually every industry, have demonstrated the ability of these chains to meet all demands of efficiency, economy and reliability.

Out of this experience, we have acquired an absolute knowledge of the capabilities of roller chains and of their correct application. They are not applied indiscriminately but are recommended only for installations where roller chains are known to give better results than other types of power transmission. May we help solve YOUR problem?

**DIAMOND CHAIN & MFG. CO. Indianapolis, U.S.A.**

## Like Running with Your Emergency Brake on

Did you ever drive your motor car with the emergency brake on? Then you know just the "drag" that you are putting on your shaft and prime mover with old-fashioned bearings.

And it would be expensive, too, to operate your car with the emergency brake on, wouldn't it? Imagine then the bill you are paying for using old-fashioned bearings.

Put in Sells Roller Bearings; right in your present hangers, post hangers and pillow blocks. It's an overnight job. Incidentally, you will find the difference in your coal bill and cinder pile; if you use electric current, in the Kilowatt hours consumed.

Let us talk with you about substituting Sells Bearings. We have an Engineering Department right ready now to go to work with you.

**Royersford Foundry & Machine Co.**  
60 N. 5th St., Philadelphia, Pa.

***The ROYERSFORD LINE***

# GURNEY BALL BEARINGS

—for all uses

No matter what the requirement, there is a Gurney Ball Bearing especially made for that purpose.

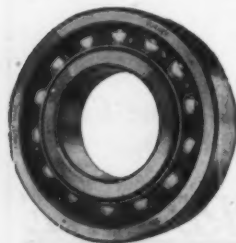

Gurney Maximum Service-Maximum Capacity type bearings, including Radial, Radio-Thrust, Duplex and Double Row bearings, have the peculiar merit not found in any other design of ball bearing in that they have the maximum number of balls of maximum diameter for any given size of bearing, thereby giving maximum capacity with minimum unit stresses in materials. These bearings are suited for heavy loads and hard service at all speeds.

Type "C" Deep Groove bearings have deep, uninterrupted raceways and will take light thrust loads from either, or both directions and are especially suited for the ever growing demand for light loads at high speeds.

We have a type for your needs—write for the assistance of our engineers.

# "They've Never Been Touched"

IN checking up the various Timken-equipped conveyors installed within the last few years, it is surprising how often one hears: "The bearings have never been touched!"

Coupled with this remark are others, equally interesting.

"We only grease once a year, now."

"The rolls are all running freely."

"These conveyors have been in constant operation every working day since they were installed."

There are many reasons behind these statements. Six conveyor manufacturers, who have standardized on Timken Bearings, will be glad to give you the reasons. Let us put you in touch with these manufacturers.

Hyatt equipped Lewis-Shepard Jacklift handling cement blocks. Easy lifting and easy rolling.

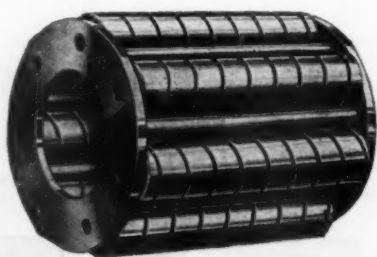

## Built Right For Hard Service

**T**HE demands of present day handling methods call for equipment well designed and constructed of high grade materials—capable of performing creditably under adverse conditions and actual abuse.

An index of the quality and of the ability of Lewis-Shepard lift trucks and stackers to stand the gaff is the Hyatt roller bearings with which they are equipped.

Manufacturers and users have proved the value of these bearings. They are agreed that bearings which permit smoother operation, yield substantial economies and provide the strength necessary for heavy duty and long life are not only well worth having—they are a virtual necessity.

When buying equipment for your plant or warehouse be sure that it operates on Hyatt bearings. That is a real guaranty of reliable money-saving performance.

one that would mean thousands of dollars yearly in additional profits, through savings effected by more economical material handling—with modern, efficient Link-Belt conveying equipment.

Just as Ford, Willys-Overland and many other prominent manufacturers find Link-Belt equipment a means to increased, lower-cost production, so you may find similar economies possible in your plant.

At your service are experienced Link-Belt engineers, backed by an organization competent to design methods and equipment to fit your production needs. Ask for particulars. Address nearest Link-Belt office.

*Conveyors like this, built with rugged Rex Chain, are aiding in the production of Buick, Dodge Brothers, Ford, Nash, Paige, Studebaker and many other motor cars*

*Among the major industries served by Rex Conveyors are:*

Automotive  
Steel  
Cement  
Fertilizer  
Canning  
Glass Tire  
Power Plants  
Grain Elevators  
Warehouses  
Flour Packing  
Railroads  
and Many Others

## Doing more work with less effort

In those plants noted for straight-line, economical production you will find many Rex Conveyors speeding up the movement of materials and helping turn out more work with less effort.

Rex Conveyors save productive as well as indirect labor. They also effect big economies in inventory and in floor space.

Our engineers will work with you in getting the type of conveyor best suited to your material handling requirements. They have had extensive experience in many industries, and can adapt to your plant types of conveyors that have been highly successful elsewhere.

Send for valuable handbook on conveyors. It is free to engineers and executives. Mail the coupon today!

## The Engineering Societies Library

ONE of the largest collections of engineering literature in the world is that found in the Engineering Societies Library, 29 West 39th Street, New York.

It comprises 150,000 volumes, including many rare and valuable reference works not readily accessible elsewhere. Over 1,300 technical journals and magazines are regularly received, including practically every important engineering journal in the civil, mechanical, electrical, and mining fields.

The library is open from 9 a.m. to 10 p.m. with trained librarians in constant attendance. Its resources are at the service of the engineering and scientific public.

# **SHEPARD** ELECTRIC CRANES & HOISTS

Shepard Cage Operated Electric Hoists running on Shepard Transfer Cranes, which convey coal from car to storage to boiler room.

## Cut Power Production Costs

Executives report remarkable savings handling coal and ashes with Shepard Equipment. Applied to any plant, large or small, it lowers power production cost by "putting coal in the boiler room" at a very low figure, and by removing ashes at a substantial saving.

### 400% saved

For instance, F. J. Helbling, Chief Engineer of Consolidated Ice Co., Philadelphia, reports "400% saving of ash handling equipment," using a Shepard Lift-About as shown below.

The Shepard line includes electric cranes and hoists in capacities of 500 pounds to 30 tons. It is backed by over 20 years of experience of the largest manufacturer of electric hoists in America. Write for descriptive bulletins. Our engineers are at your service.

1/2" SAMPLES

When You Buy a J&L~you get production ~n

# Shop Problems

This is the first of a series of pamphlets on the work of Your Shop and Our Shop. They will be published at longer or shorter intervals and in the following order:

- |                         |                                   |
|-------------------------|-----------------------------------|
| 1. Equipment            | 5. Training Workers               |
| 2. Bar Work             | 6. Designing Parts for Production |
| 3. Chucking Work        | 7. Threaded Work                  |
| 4. Controlling Overhead |                                   |

The problems of our shops of average size are different, and we have neglected them. This is unfortunate, for the small and moderate-sized plants play a mighty part in carrying on the work of today. They outnumber the high-production places 100 to 1, and it is probable these medium-sized shops employ in the aggregate a much greater number of workmen. It is for these reasons that we are inviting your attention back to the every-day work of the every-day manufacturer and workman, with the hope of thereby rendering a

useful service in this important field.

We are using our own shops, the shops in which the "J & L" Flat Turret Lathe has been built for more than thirty years, as the basis of our illustrative material. Not all the work described comes from there. It does come from other shops of a similar character, doing work in a similar way. The methods described have proved successful, whatever their source. They may be adapted to the needs of your shop, or they may not; but whether or no, they should have suggestive value.

*We will exhibit the Hartness Dies, Hartness Screw Thread Comparator and Flanders Ground Taps at the Power Show, Grand Central Palace, New York, December 1-6*

Employee safety turns on the Hollow Screw. Drive pulleys turn on the Hollow Screw. The service-life of expensive tool-units turns on the Hollow Screw.

Such vital parts of machine operation turn on your hollow screws, that the *30% stronger* ALLEN is none *too* strong to insure continuous running.

But while there may be only one kind of set screw for *you*, there are two kinds sold:—the cold-drawn "Allens," and others.

Sometimes the "others" get mixed in with orders for "Allens," and if you're having trouble with set screws just follow the slogan in our trade-mark.

## What the Hele-Shaw Pump will do for your machine

Actual applications of the Hele-Shaw Pump to a wide variety of machines, engines and machine tools show conclusively the important operating advantages and economies that it brings about.

The general advantages of the Hele-Shaw equipped machine or engine are:

1. Exceptionally sensitive control.
2. Extreme flexibility for meeting a wide range of operating conditions.
3. Increased productive capacity.
4. Smoother action.
5. Greater accuracy and better work.
6. Longer life and reduced maintenance.
7. Constant speed prime mover.
8. Reduced power consumption.
9. Greater over-all efficiency.
10. Greater safety.

In addition, the Hele-Shaw equipped machine has these special advantages over machines equipped with fixed stroke pumps

1. Greater compactness due to elimination of the accumulator.
2. Elimination of need of by-passing the fluid.
3. Continuous operation at a constant speed regardless of the pressure and volume at which it is operating, doing away with the necessity of frequent starting and stopping.

These big advantages are the result of novel and ingenious design—the outstanding feature of which is a variable stroke by means of which the discharge can be instantly varied both in volume and direction.

The profusely illustrated catalog gives full details. All designers, builders and owners of machines, engines and machine tools should have a copy of this catalog. Write for yours—today!

## It is a Profit-Paying Proposition to buy, and use "Universal" Boring Machines

Our Service Men report that almost without exception our customers are enthusiastic about the great saving in cost of production that they are making with our type of Boring Machine over the old machines and old methods.

One of our Service Men reports that Machine No. 4510 is not only giving good satisfaction, but that the Works' Manager made the statement that it would pay for itself, in cost saving, in fifteen months.

This Machine will be a profitable one to use for at least fifteen years.

*"Where Accuracy Counts, We Win."*

**UNIVERSAL BORING MACHINE COMPANY**  
HUDSON, MASS., U. S. A.

Inspecting Agathon  
Sheet Steel

## Inspection of Agathon Sheets

**O**NLY years of careful training and a complete knowledge of the ultimate use of Agathon Sheet Steel, make it possible for these men to distinguish the defects that are objectionable to users of this grade of sheets.

Careful inspection of each sheet by these highly trained men, insures shipment of clean, smooth, highly polished material; and modern pyrometer control of all annealing furnaces, eliminates the possibility of any variation in drawing and forming qualities.

Agathon Sheets have an enviable reputation among Motor Car Builders, Body Manufacturers, Stamping Plants, Steel Furniture Manufacturers, etc., who demand the highest grade sheet possible to produce.

## Making Them Right

These castings are part of a steam meter. In service they are exposed to strain and to the temperature and moisture of live steam.

The original equipment included two tin base brackets. Severe breakage, however, demanded a stronger and better suited alloy.

We die cast them of aluminum bronze—a copper base alloy that resists corrosion and fatigue under strain and high temperature.

Aluminum bronze has a tensile strength of 70,000 lbs. per sq. in. Its Brinnell hardness number is 100–110 and it offers a most remarkable resistance to alternating stresses.

We specialize in aluminum bronze, and in die and sand castings that present unusual problems.

# Uniform

Uniformity in dimensions, finish and physical properties is basically essential, if die-cast economies are to be realized to the utmost.

Doehler experience, equipment, organization and thoroughness of inspection combine to give every Doehler customer an unequaled protection against the losses which come from departure from an absolute standard.

This security is one of the intangible values which are an inherent factor in every Doehler Die-Casting—which are made up to a standard and never down to a competitive level.

## Important Publications Issued by The American Society of Mechanical Engineers

### MECHANICAL ENGINEERING

Published Monthly

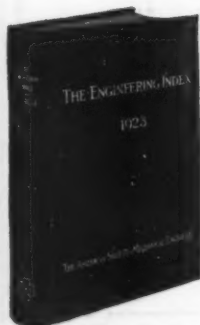

This publication is the leading technical journal of America devoted to mechanical engineering practice in its broader phases.

It contains original technical papers and articles of the most authoritative character dealing with all departments of mechanical engineering, Survey of Engineering Progress, signed editorials and special articles on matters of current interest, monthly installments of The Engineering Index, etc.

Subscription \$5.00 per annum, 75c additional for Canadian postage; \$1.50 additional for foreign postage.

### The Engineering Index

(Trade Mark Registered)

Published Annually

An Indexed Yearly Digest of the Technical Press of the World. Contains more than 19,000, descriptive references on over 5,000 subjects treated in engineering publications from every quarter of the globe.

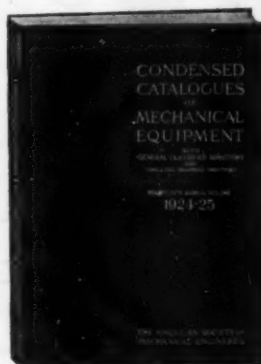

1923 Volume \$7.00. To members \$6.00.  
1922 Volume, \$6.00 a copy. To members \$5.00.

1923 and 1922 Volumes, \$12.00. To members \$10.00.

1923, 1922, 1921 and 1920 Volumes, \$20.00. To members \$16.00.

The Society is prepared to supply photostatic copies, white printing on brown background, of any of the articles listed in the Engineering Index. Price of each photostat (up to 11 x 14 in. in size) 25 cents plus postage.

### Condensed Catalogues of Mechanical Equipment With General Classified Directory

Published Annually

Comprising condensed, uniformly presented and illustrated catalogue information covering the products of leading manufacturers of various classes of mechanical equipment; a Buyer's Guide containing 3,900 subject headings with the names and addresses of more than 4,400 firms; a classified list covering lines of practice of 527 consulting engineers.

1924-25 Volume issued Oct. 1, 1924, \$5.00 a copy. To members, \$4.00.

### Transactions of the A.S.M.E.

Published Annually

Contains the most valuable papers and discussions presented at regular (Annual and Spring) meetings of the Society; also all technical reports of Committees.

1922 Transactions (Volume 44) published Sept. 1923, Half Morocco Binding, price \$8.00. (To libraries and members — when additional copies are requested \$6.00.)

**THE AMERICAN SOCIETY OF  
MECHANICAL ENGINEERS**  
29 West 39th Street New York

Local Sections are established and conduct professional, civic and social activities in the following 62 centres:

Akron	Erie	Ontario
Atlanta	Hartford	Toronto
Baltimore	Houston	Oregon
Birmingham	Indianapolis	Portland
Boston	Inland Empire	Peninsula (Grand Rapids)
Bridgeport	Spokane, Wash.	Philadelphia
Buffalo	Kansas City	Pittsburgh
Carolinas Section	Knoxville	Plainfield
Charlotte	Lehigh Valley	Providence
Branch	Bethlehem, Pa.	Rochester
Greenville	Los Angeles	St. Louis
Branch	Louisville	St. Paul
Raleigh	Memphis	San Francisco
Branch	Meriden	Syracuse
Central Penn.	Metropolitan	Toledo
Sylvania	New York City	Tri-Cities
State College	Mid Continent	Moline, Ill.
Chattanooga	Tulsa, Okla.	Utah
Chicago	Milwaukee	Utah
Cincinnati	Minneapolis	Virginia
Cleveland	Nebraska	Richmond
Colorado	Lincoln	Washington, D. C.
Denver	New Britain	Waterbury
Columbus	New Haven	Western Massachusetts
Detroit	New Orleans	Springfield
Eastern New York	North Texas	Western Washington
Schenectady Branch	(Dallas)	Seattle
		Worcester

Reports of these activities appear currently in the A.S.M.E. NEWS

THE heating plant at Savin Hill, estate of Bayard Tuckerman at Hamilton, Mass., where the Prince of Wales paid a brief visit in October, consists of two number forty-four Mills Water Tube Steam Boilers made by the H. B. Smith Company. Bigelow & Wadsworth, Architects; H. E. Whitten Company, Heating Contractors.

**Which flue temperature would you recommend?**

THE flue temperature tells the story of what has been done by the boiler in burning the coal. It shows the owner whether he is wasting fuel or getting his money's worth.

Take our No. 44 Mills Water Tube Steam Boiler for an example. If we rated this in the way that is in danger of becoming common practice, and on the basis of such a rating No. 44 were selected, the flue temperature, *with the building properly heated*, would be at least 500° Fah. This is much less than it would be with any competing boiler under similar circumstances.

Our rating, however, is sound and conservative. It is based upon the area of the fire surface, and a knowledge of how many B. T. Us. a unit area can absorb. Hence the flue temperature is only approximately 400° Fah.

**Burns less coal**

—saves money for owner

WHEN Smith Boilers are installed according to our ratings, the firing period is longer and less coal per hour per square foot of grate surface is burned. The fire surface is adequate in area to absorb heat with the greatest efficiency.

The difference in fuel consumption in the example above would be tremendous—if selected on the basis of the first rating, 50% more coal per square foot of grate per hour would be burned than on the actual Smith Co. rating.

**Our ratings protect the architect**

WHEN you specify a Smith Boiler according to Smith rating there is no complaint later because of excessive fuel consumption. Our ratings represent a service which protects the architect's reputation.

\* \* \* \* \*

THE Mills Water Tube Steam Boiler will burn anthracite coal, oil, gas and coke. The water tubes are vertical. An exceptionally large percent of the fire surface is exposed to the direct radiant heat of the fire. Cleaning is easy. Small dimension of water tubes facilitates quick heating which is especially suitable for schools and other public buildings where heat has to be generated quickly in the morning.

We make boilers for steam, hot water and vapor heating; radiators, and hot water supply boilers. Types for all buildings, from bungalows to large office and public buildings. Write us for catalogue.

**THE H. B. SMITH COMPANY**

Dept. H-1, Westfield, Massachusetts

Sales Offices and Warehouses at

## Every Instrument— A Precision Instrument

Whether drawing instrument or pantograph, planimeter or t-square, all Weber instruments, are alike in one respect—precision. And precision is of paramount importance in the drafting room or school room. That's why architects, engineers, draftsmen and instructors make the Weber Catalog their buying guide. From past experience they know that any instrument, whatsoever, selected from its pages, will be a model of accuracy and precision. You too will find the Weber Catalog a far more satisfactory method than haphazard shopping around. If you have not a copy of the Weber Catalog write to dept. M. E.

### F. WEBER CO.

## The Engineering Societies Library

ONE of the largest collections of engineering litera-  
ture in the world is that found in the Engineering  
Societies Library, 29 West 39th Street, New York.

It comprises 150,000 volumes, including many rare  
and valuable reference works not readily accessible else-  
where. Over 1,300 technical journals and magazines  
are regularly received, including practically every impor-  
tant engineering journal in the civil, mechanical, elec-  
trical, and mining fields.

The library is open from 9 a.m. to 10  
p.m. with trained librarians in constant  
attendance. Its resources are at the service  
of the engineering and scientific public.

Wanted and For Sale

Classified advertisements under this heading in MECHANICAL ENGINEERING are inserted at the rate of 50 cents a line; 40 cents a line to members of A.S.M.E. Eight words to the line average. Minimum insertion charge, 5 line basis; maximum 20 lines. No display matter carried. Copy must be in hand not later than the 6th of the month preceding date of publication.

**BOSTON REPRESENTATIVE**—Member A.S.M.E. with established office centrally located in Boston desires to act for manufacturer of high grade equipment as representative, sales agent or office manager. Best of references given. Address EX-560, care this Journal.

**SPECIAL MACHINE AND TOOL COMPANY** with established trade needs Mechanical Engineer with executive ability to enter firm. Small capital required. Excellent prospects of larger machine trade. EX-559, care this Journal.

**WANTED AUTOMOBILE ACCESSORIES:** A large manufacturing organization desires to take on and market several new automotive products, in which forged and stamped parts predominate. Give brief information regarding patent protection, state of development, market prospects, etc., outlining the merit of your proposition. Address EX-489, care this Journal.

**FACTORIES** for sale or lease. Have professional engineers with considerable plant experience and who can therefore better appreciate your requirements aid you in locating a suitable factory. Technical Service Company, Woolworth Building, New York City. Telephone Whitehall 8412.

**ENGINEER WANTED**—Mining or Mechanical Engineer wanted. We have an extraordinary opportunity for an engineer of large calibre, to become Vice-President of our corporation. We are making a new product which involves a vast tonnage of steel. This is a rare opportunity for a man who can supply the highest references and \$25,000 for investment. Address EX-556, care this Journal.

**MECHANICAL ENGINEER**, experienced in industrial plants, mechanical equipment, architectural construction, desires to invest \$2,000 with services in established organization or profitable proposition. Highest references assured. Address, EX-563, care this Journal.

**FOR SALE:** Set of 32 volumes of Transactions A.S.M.E. from 1891 (vol. XIII) to 1922 (vol. 45) inclusive. Address EX-562, care this Journal.

**INVENTOR** of unique and efficient heat regulating device desires to make connections with a manufacturer who has the facilities and financial resources to manufacture and market such a device. Address EX-561, care this Journal.

**NEW PRODUCT WANTED**—A completely equipped machine shop located in the middle west desires to add one or more new products to its present line of manufacture. The equipment and organization of this plant permit the economical manufacture of a wide variety of products, ranging from small simple devices to large complicated mechanisms. Concern is well known in both the Machine Tool and Special Machinery industries. Address EX-555, care this Journal.

**CANADIAN MANUFACTURING FACILITIES.** We have a machine shop at Walkerville, just outside of Windsor, Ontario, where we manufacture our own devices for the Canadian trade. We solicit inquiries for manufacturing on turret lathes, engine lathes, milling machines, pattern work, manufacturing to comply with patent law, etc. Permanent connections preferred. Barco Manufacturing Company, 1801 Winnetmac Avenue, Chicago, Illinois.

## Are you interested in the subject of Preferred Numbers?

If you are, you will want a copy of  
**SIZE STANDARDIZATION by PREFERRED NUMBERS**  
By C. F. HIRSHFELD and C. H. BERRY

In this paper the authors have not only pictured the present status of the preferred number idea but have done so in such a way as to point out its advantages and also its complications and dangers.

Some thirty pages are devoted to discussions from the point of view of a number of industries. These discussions have been secured with the cooperation of the American Engineering Standards Committee and are by leading representatives of some of the following fields:

*Electrical manufacturing and construction; building design and construction; manual and automatic telephony and telegraphy; governmental research and de-*

*velopment work; railway construction and manufacturing practice; hardware; the lumber trade; bolts, nuts and rivets; military ordnance; machine tools, gages; automotive products; structural steel sections; illuminating practice; and management.*

In France and Germany the application of preferred numbers is regarded as one of the most important achievements in the field of standardizations and Messrs. Hirshfeld's and Berry's paper is presented as a background for the study of the subject in connection with American conditions and problems. Graphs and tables illustrate the points brought out.

**Price \$1.00**

# IDEAL WARMTH *for Schools*

*From an etching by GEORGE A. PICKEN*

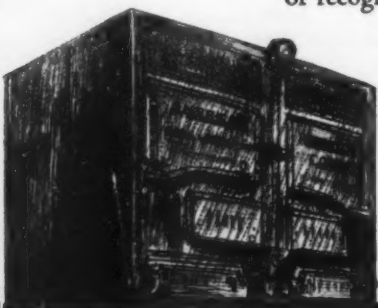

Edison School, Rochester, Minn. Heated with T-79-12 IDEAL Smokeless Boiler.

**I**F THE HEATING PLANT for home, office or factory is important, for a school it is vital. In great city and small town, everywhere, IDEAL warmth is making keener minds for American youth.

IDEAL 79" Water Tube Boilers, singly or in batteries, profitably displace old-fashioned one-piece boilers, save one-fourth to one-half the space. They are of cast-iron type and possess many features of recognized superiority.

Sectional construction—easily installed in any building, old or new. Short vertical tubes—economical, quick steaming. Non-rusting cast-iron tubes—outlast the building. Equipped with IDEAL Smoke Oxidizer, if desired; will comply with any smoke ordinance. Burn any fuel—coke, anthracite, bituminous. Permanently heat-insulated with metallic asbestos-lined jacket; no expensive brick setting. Easy firing. Low water line. Low pressure.

The 79" Boilers are of A.S.M.E. Code construction. Sizes, 84,000 to 21,600 sq. ft. steam, or 13,440 to 34,560 sq. ft. water. Write Dept. T288 for complete information.

**IDEAL BOILERS**  
COAL • OIL • GAS  
**and AMERICAN RADIATORS**  
*save fuel*

# ROSS

## CONDENSERS

Surface—Low Level Jet—  
Barometric—Distilling.

## COOLERS

For Oil, water and all liquids.

## EXPANSION JOINTS

Crosshead-Guided and  
Internally-Guided.

## DE-AERATORS

## EVAPORATORS

## HEAT EXCHANGERS

## HEATERS

Bleeder—high and low pressure,  
Boiler Feed—Chemical—Hot Water  
System — Oil — Storage — Sugar  
Juice.

## STRAINERS

Duplex, continuous service type.

## THE POWER SHOW - AND PROGRESS

*"Better  
than  
Specified"*

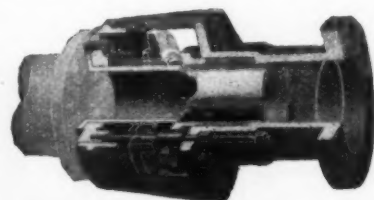

## Ross True Counter Current Heat Exchanger

**PROGRESS**—the spirit behind the POWER SHOW is one of forward movement in the betterment of engineering products.

**PROGRESS**—the dominating factor in all Ross products is one of better equipment for a given purpose. The Ross Heat Exchanger, for instance — the only true counter current exchanger offered—the greatest rate of heat exchange—the greatest value for the money.

**PROGRESS**—Ross is never content to rest on past laurels — better and better all the time—the best is none too good. Ross products, in thousands of plants, bear testimony to this fact in every moment of operation.

## Ross Expansion Joints

## *"Pipe Line Life Insurance"*

Crosshead and Internally-Guided Expansion Joints insure perfect alignment and eliminate pipe line warps or strains being transmitted to the packing. They stay *tight*.

All sizes—for all duties.

If it's Ross—it's *always* "better than specified."

*Agents in all principal cities*

## Looking into Troughing Idler Construction

To watch them running, all troughing idlers look pretty much alike. Down inside is where the frictional resistance comes and this is quickly followed by excessive wear and idler trouble. Looking into your idler construction is, therefore very much worth while.

The inside of the pulley of a Brownhoist roller bearing idler clearly indicates two of its superiorities—the never failing service of its Timken bearings and the positive lubrication system that requires attention only once a year.

The many good features of both Brownhoist roller and plain bearing idlers are described in Catalogue M-24, which has recently been published. Send for a copy for your files.

**The Brown Hoisting Machinery Co.**  
*Cleveland, Ohio*

Branches: New York, Chicago, Pittsburgh, New Orleans,  
San Francisco, London, Eng.

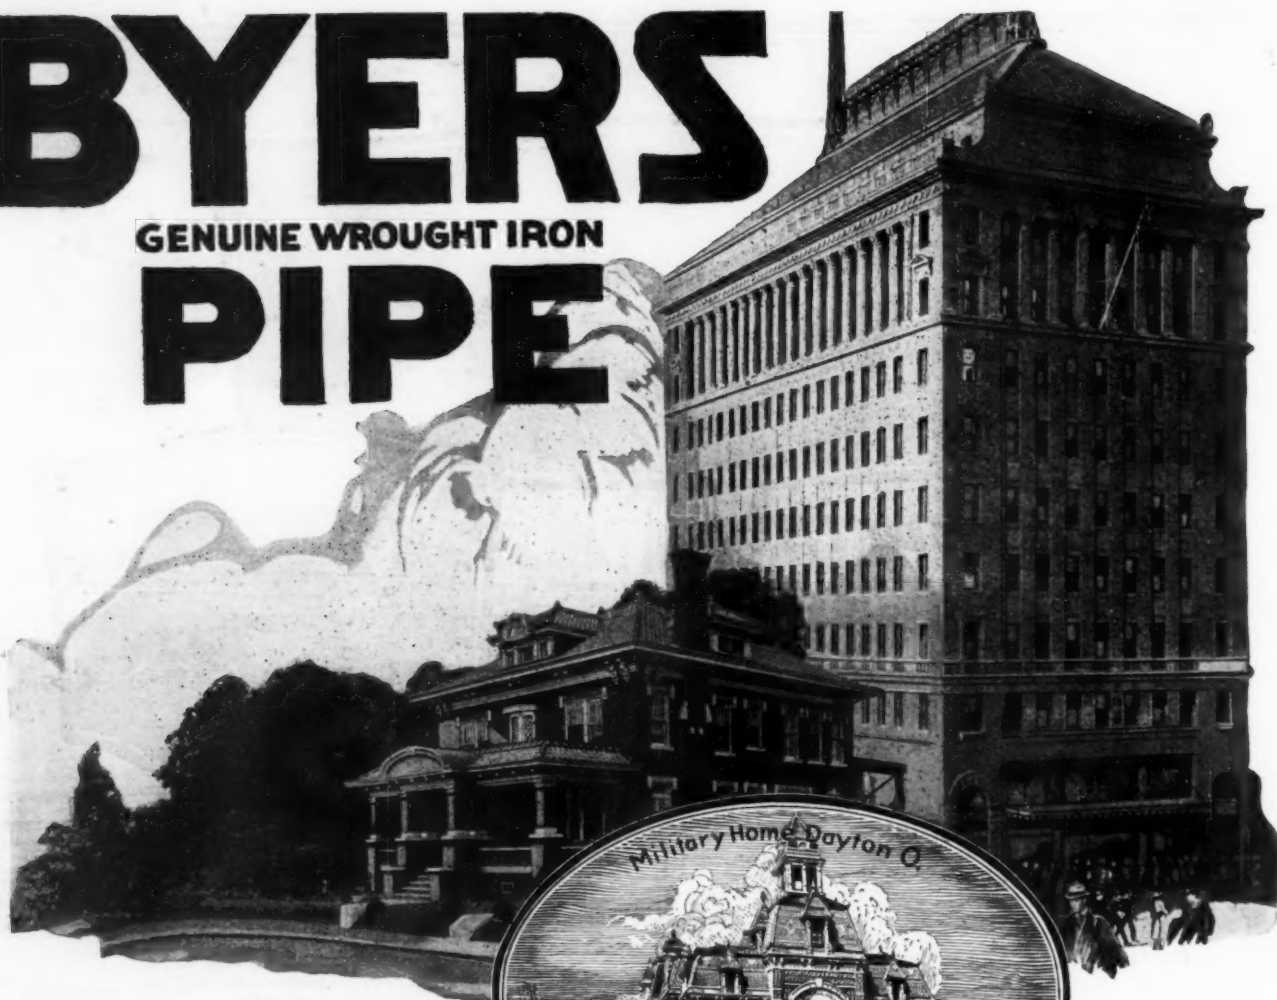

1. Cold drawn seamless steel tubing.
2. Hole in shaft for greasing bearings, causing grease to be forced through the bearing to the outside of pulley.
3. Cast iron head pressed into steel tube.
4. Steel washer pressed into cast iron head forming dust protection for Timken roller bearings.
5. Timken roller bearings.
6. Hollow shaft made of cold drawn seamless steel tubing.
7. Large grease chamber, requires filling only once a year.

## GENUINE WROUGHT IRON PIPE

Old building in oval belongs to Military Home, Dayton, Ohio, the home of thousands of Civil War Veterans. Many miles of Byers pipe laid underground and installed in the buildings, is in good condition after nearly half a century of service.

RIGHT: San Joaquin Light & Power Company, Fresno, California. Engineers and Builders: The R. F. Felchin Company. Byers pipe for heating system.

LEFT: Residence at Wheeling, W. Va. Architect: Albert F. Dayton. Byers pipe for Plumbing and Heating.

## Spending a Dollar to Save Ten

**T**HE durability of a plumbing, heating or power system depends, above all, on the pipe. Year in and year out, corrosion is viciously attacking the pipe metal from within. The smallest leak spells expense and damage tenfold greater than the cost of the pipe.

Byers pipe is made of genuine old-fashioned wrought iron, incorporating layer upon layer of microscopic silicate bands which protect the metal from corrosion. These barriers against rust and

destruction, while entirely absent in cheaper pipe, are responsible for the long lasting qualities which have made Byers pipe famous. In every city, you may see buildings in which Byers pipe has given a lifetime of service and is still in good condition.

When you build, make sure that Byers pipe is installed in the plumbing, heating and other pipe systems. Every extra dollar spent for Byers pipe, saves ten dollars in future repairs.

*"On the Trail of Byers Pipe" contains illustrations of well-known old buildings in which Byers pipe was installed upwards of 30 and 40 years ago. Copy free on request*

## "An Excellent Service— Fills a Real Need"

**M**ODESTY forbids us to repeat many of the enthusiastic words for New Departure Engineering Data constantly coming to us.

At present more than 6,500 engineers and designers in the machinery and automotive industries maintain these Ball Bearing Data Books as an active part of their reference libraries and look forward to the receipt monthly of bulletins to add to or revise existing data.

Offered without charge or obligation, but reserved to technical men who can use the material to advantage.

**The New Departure Mfg. Company**  
Detroit                      Bristol, Conn.                      Chicago

### We Invite You to Witness

The Wizardry of New Departure Steel Balls at the "Power Show," New York, December 1-6.

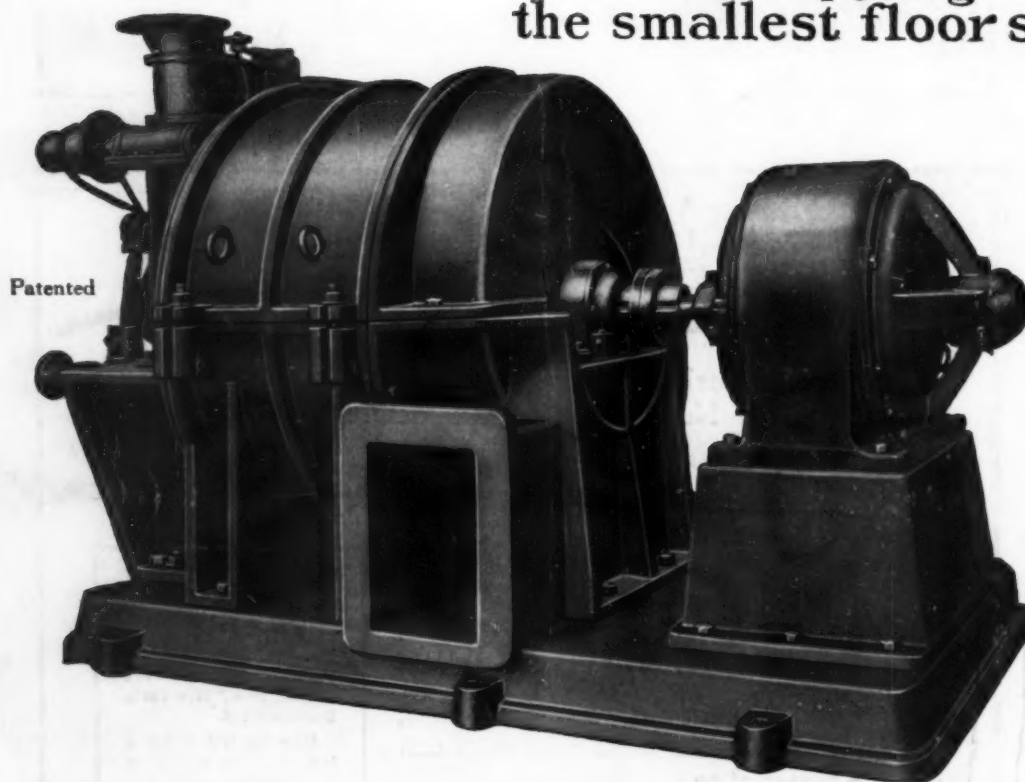

Here we will utilize a factory test for exhibition demonstration of the uniform quality and precision of steel balls used in New Departure Ball Bearings.
